## The Nuclear Bible: A Nuclear Armed Drone?

**Intro:** Should an attack transpire at the Super Bowl, it will most likely come from a method that not many suspect. Could a major terror strike be launched by a Pakistani drone outfitted with a nuclear weapon? The U.S. has not only lost multiple drones over Pakistan, but they have recently given the technology and drones to Pakistan. Theoretically, these drones could fly relatively undetected past the Super Bowl's "No Fly Zone" and straight into prime time TV for all America to see.

**Title/Headline:** *Unmanned Aerial Vehicle (UAV)*

**Abstract:** A drone or an Unmanned Aerial Vehicle (UAV), is an aircraft that flies without a human crew on board the aircraft. UAVs were historically simple drones that were remotely piloted aircraft, but autonomous control is increasingly being employed in UAVs. UAVs come in two varieties: some are controlled from a remote location, and others fly autonomously based on pre-programmed flight plans using more complex dynamic automation systems. **Some drones, such as the HALE (high altitude, long endurance) can fly at over 30,000 with indefinite range** (Wikipedia, 2010).

**Title/Headline:** *Global Hawk Goes Down: Palmdale-Built Drone Crashes On Pakistan Mission*

**Abstract:** A Palmdale-built Global Hawk reconnaissance aircraft reportedly crashed Wednesday in Pakistan during a mission supporting the Afghanistan campaign. The unmanned aircraft was flying a routine mission when it crashed at 9:05 a.m. Pacific Daily Time - night in Pakistan. **An investigation has begun into the cause; however, the cause of the crash was not a result of hostile fire defense officials said.** Defense officials would not disclose the country where the crash occurred, but Associated Press (AP) quoting unnamed Pentagon officials, said it occurred in Pakistan. **Defense officials also indicated to AP that the crash might have been caused by an engine failure. The incident was the second crash of a Global Hawk during Operation Enduring Freedom.** In December, a Global Hawk crashed while returning to base from a mission. Defense officials would not disclose where that crash occurred, citing host nation sensitivity. The December crash was attributed to an improperly installed bolt that caused a control rod to fail. The Global Hawk is a high-altitude, long-endurance reconnaissance aircraft being developed for the Air Force. **Controlled by computer, the unmanned aircraft can fly 1,200 miles, linger over its target for 24 hours at nearly twice the altitude of a passenger jetliner, and then fly back.** Global Hawks' radar is capable of detecting objects 100 miles away, and its cameras provide still images clear enough to identify targets as far away as 30 miles. **The Global Hawk aircraft are being pressed into service even though they are still in the development stage. Six Global Hawk aircraft have been built by Northrop Grumman thus far, but three have been lost in crashes - two in support of the Afghanistan campaign and one during a test mission out of Edwards Air Force Base.** Two aircraft are at Edwards supporting the program's flight test efforts. The location of the other aircraft has not been disclosed, but it is reportedly being used in support of Operation Enduring Freedom (Skeen, 2002).

**Title/Headline:** *U.S. Drone Shot Down in Pakistan*

**Abstract:** **An American drone was shot down over the volatile Pakistani tribal area, according to a local resident and a Pakistani intelligence official, though U.S. officials deny losing any aircraft.** If true, it would be the first time a spy plane has crashed over Pakistan after thousands of flights designed to target senior Al Qaeda and Taliban officials (Khan, Schiffrin, Karl, & Martinez, 2008).

**Date:** March 7, 2009  
**Source:** The New York Times, Associated Press  
**Title/Headline:** *Drone Crash In Pakistan Reported*

**Abstract:** Pakistani officials said they were investigating reports that a remotely piloted American plane had crashed Saturday in a northwest tribal region. The planes are believed to be operated by the Central Intelligence Agency and often carry out missile strikes against suspected militants in Pakistan. An army spokesman, Maj. Gen. Athar Abbas, said the reports of a plane down in the village of Angoor Ada were under investigation. Two intelligence officials, speaking on condition of anonymity because they were not authorized to speak to the news media, said their agents had yet to locate any wreckage at the site. Col. Greg Julian, the top United States military spokesman in Afghanistan, said he could not comment on the crash report (The New York Times, 2009).

**WIRED**

**Date:** April 8, 2009  
**Source:** Wired Magazine, Noah Shachtman  
**Title/Headline:** *Pakistan To America: Give Us The Killer Drones*

**Abstract:** When last we left America's drone war over Pakistan, the local government seemed resigned to idea of the United States launching its unmanned air force from Pakistani soil, on targets within Pakistan, without Islamabad's permission. All the ministers asked was that America respect their "red line" — and keep U.S. ground forces out of their country. **But the red line may have suddenly shifted, from human troops to robots in the sky.** In a meeting yesterday with U.S. Joint Chiefs of Staff Chairman Admiral Michael Mullen, top Pakistani officials allegedly demanded that America stop the unmanned attacks and "shift the drone technology and authority to the Pakistan Army," according to Pakistan's *Dawn* newspaper. "We did talk about drones and let me be very frank, there is a gap," Foreign Minister Shah Mehmood Qureshi tells Reuters. Pakistani leaders have huffed about the drones in public before — only to cooperate in secret with the robotic aircraft strikes. But these requests are a bit different. Rather than demand the drones stop flying, the leaders are asking for control of the aircraft. **"We would much prefer that the U.S. share its intelligence and give us the weapons, drones and missiles that will allow us to take care of this problem on our own,"** Pakistani president Asif Ali Zardari tells the *Independent*. "These drone attacks are counter-productive." Meanwhile, the attacks continue. An unmanned aircraft fired a pair of missiles today into a vehicle in the town of Gangi Khel. Four suspected militants were killed. "It's the third such strike this month and the fourteenth inside Pakistan in 2009, according to the *Long War Journal*. Gangi Khel is thought to be under the control of Pakistani Taliban leader Maulvi Nazir. **In an interview earlier this week with al-Qaeda's propaganda wing, Nazir practically begged the Americans to come after him — declaring his intents to wage terror worldwide, and calling President Barack Obama a "black ass."** A week earlier, Nazir's ally Baitullah Mehsud threatened to "launch an attack in Washington." Which, of course, makes the idea of America giving up her killer drones all the more remote (Shachtman, 2009).

**Date:** January 22, 2010  
**Source:** Press TV  
**Title/Headline:** *US To Equip Pakistan With Low-Tech Drones*

**Abstract:** U.S. Defense Secretary Robert Gates said that Washington is considering supplying Pakistan with unarmed drone aircraft in an attempt to boost the "war on terror." "We are in partnership with the Pakistani military and we are working to give them their own intelligence, surveillance and reconnaissance vehicles, both aircraft and drones," Gates said. **According to the Friday edition of New York Times, the Shadow surveillance drone appears to be a compromise aimed at enticing Pakistan further into the war** (Press TV, 2010).

**Date:** January 24, 2010  
**Source:** Telegraph  
**Title/Headline:** *Pakistani Tribesmen 'Shoot Down' US Drone*

**Abstract:** An unmanned US drone crashed after reportedly being shot down in Pakistan's lawless tribal area near the Afghan border. Local tribesmen in North Waziristan were reported on Sunday to have been seen congratulating each other. Gunfire had been heard shortly before the drone crashed. The Pakistani army rejected similar claims after a drone crashed in neighboring South Waziristan in 2008, saying it was a technical problem (Telegraph, 2010).

**Date:** January 27, 2010  
**Source:** The Nation  
**Title/Headline:** *Taliban Claim Downing 2nd US Drone*

**Abstract:** Pakistani tribesman shot down another US unmanned spy plane through anti-aircraft gun in North Waziristan region. According to sources, four US drone aircrafts were hovering over different parts of Waziristan when the tribesmen shot fire at them with anti-aircraft gun. As a result one of the aircrafts crashed in Miranshah area. According to an eyewitness, the plane's wreckage fell into Afghanistan's area. **This was the second drone plane, which was shot down by tribesmen this week** (The Nation, 2010).

**Date:** January 14, 2011

**Source:** Wikipedia

**Title/Headline:** *The Green Hornet*

**Abstract:** *The Green Hornet* is an upcoming 2011 superhero film, based on the character of the same name created by George W. Trendle and Fran Striker. Directed by Michel Gondry, the film stars Seth Rogen in the title role, who also co-wrote the screenplay with Evan Goldberg. Supporting actors include Jay Chou as Kato, Christoph Waltz, Cameron Diaz, Edward Furlong, Edward James Olmos, Angela Bassett, David Harbour and Tom Wilkinson. The film is scheduled to be released in North America and the United Kingdom on January 14, 2011 and in Australia on January 20, 2011, which will also include RealD Cinema and IMAX 3D (Wikipedia, 2010).

**Interestingly, the blockbuster movie that will open about two weeks prior to the 2011 Super Bowl is *The Green Hornet*! A green Pakistani drone cruising around the Super Bowl will get a chorus of cheers before everybody in the greater Dallas area goes nite nite.**

**The \$1,000,000 Question: Will the nuke be in the drone, or, is it already in Cowboy Stadium?**

**Conclusion:** Regardless of whether any drones nuke the Super Bowl or any other event for that matter, the people of Afghanistan, Iraq, and now Pakistan have suffered tremendously at the hands of these death machines. Many innocent civilians have been literally blown away by a machine that generally is controlled by someone thousands of miles from home. Drones are inhumane, anti-human, and should be outlawed immediately. Latest word: Miami-Dade county of Florida has now purchases their own drones, and it's only a matter of time before they are armed. The *Terminator II* Skynet terminator scenario is coming true!

## The Nuclear Bible: Alex Jones & Super Bowl Sunday

**Intro:** There are many people within the so called “Truth Movement” who question the motives and actions of Alex Jones. For those unfamiliar with Alex Jones, he is the founder of Infowars.com and PrisonPlanet.com, and the self-proclaimed grand-daddy of the 9/11 Truth Movement. Jones has made countless documentaries, the most famous of which are *Terrorstorm*, *End Game*, *The Obama Deception* and *Fall of the Republic*. While I have personally enjoyed listening to his syndicated radio show via podcast, I too have long had my suspicions regarding his true motives and his rather odd and suspicious behavior at times. While I do respect Alex for helping me wake up to my current reality, I fear that Mr. Jones may be part of a greater sinister plot. While I pray that I am wrong, I feel that it is my duty to inform the American public of a potentially deadly and explosive situation. If my suspicions are wrong and unwarranted, I will personally ask Alex Jones for his forgiveness.

Devil's Messiah?

The following evidence leads me to the conclusion that Alex Emerick Jones may be a Zionist Globalist tool determined to... **“Prematurely Ejaculate the 2<sup>nd</sup> American Revolution!”**

While I don't necessarily like the aforementioned label, I am unable to think of a more fitting term regarding Alex Jones that the American people would understand. The logic concerning Mr. Alex Jones is as follows:

**The Y2K Scare:** During the Y2K scare of 2000, Alex Jones attempted to whip the American people into a frenzied panic and subsequent riot after Alex Jones repeatedly lied and exaggerated the events of the day. From his Texas studio, Alex spewed unverifiable news and propaganda that Russian had launched a preemptive nuclear strike on America. This madness lasted for hours. The late Bill Cooper took Alex Jones to task regarding this radio broadcast and was subsequently gunned down months later. Please Google or YouTube Bill Cooper/Alex Jones and do your own research. The fear is that Alex Jones may instruct millions of young Americans to riot during a post nuclear attack. Many Americans believe that another 9/11 false-flag event will happen, but in the case of a nuclear attacks, the Globalists have set up Pakistan as the scapegoat, and therefore perpetrators of the riots will me demonized as terrorists, while the U.S. government attempts to regain some credibility

**Super Bowl Sunday Radio Broadcast (February 6, 2011):** Like Y2K, it appears that Alex Jones' mission is to goad the American public into a full-scale riot. Should a nuke detonate at the Super Bowl, Alex will be on the radio. According to Jones, he started doing Sunday radio broadcasts three years ago which indicates that Jones may have been let in on the Super Bowl Conspiracy. The Sunday evening show just happens to coincide with the exact time that the Super Bowl is being played and should a nuclear terror event occur, Alex Jones will be live on the radio for people to hear him in. Since Alex has been right on many previous issues, but it is imperative to warn the American people:

### **DO NOT TO LISTEN TO ALEX JONES FOR INSTRUCTIONS**

Jones' instruction and orders may come at the sheer detriment of the American People. Since Alex has the top rated alternative news show in the World, we can assume that millions of people will tune it should a massive terror event transpire. The fear is that Alex will hype the severity of terror and potential U.S. Government response in order to get the American people to riot, thus ushering in Martial Law and the eventual deportation of millions to the FEMA concentration camps. On Friday, October 29, 2010, Alex Jones stated on his radio show that he has a new affiliate, AM 1630, KKGM, which covers Dallas, Fort Worth, and Arlington, Texas. In Alex Jones' words, it's a "Big, Big, Big, Station."

**Demonization of William "Bill" Cooper:** On the day of 9/11, Bill Cooper warned America that Alex Jones was a disinformation agent, sent to provoke violence in the midst of a national tragedy. Cooper repeatedly told Americans NOT TO LISTEN TO ALEX JONES. Subsequently, Bill Cooper was gunned down weeks later, and despite his assassination, Alex Jones repeatedly demonizes Cooper every opportunity he gets. William "Bill" Cooper was a real American Patriot, and although no human is perfect, Cooper did the best to inform Americans about Jones' true goal. Please Google Cooper's 9/11 broadcast and have a listen for yourself. As if demonizing Cooper wasn't bad enough, Alex has been advertising two bio weapons books on his radio show with the names "Pale Horse" and "Red Horse" which are quite similar to Bill Cooper's book entitled *Behold The Pale Horse*. While this may seem like a harmless gesture, rest assured, it is a calculated attempt to confuse listeners and steer them away from Cooper's book.

**William "Bill" Cooper's Book: *Behold A Pale Horse***

Free Online @: [http://www.fmh-child.org/Behold\\_A\\_Pale\\_Horse.pdf](http://www.fmh-child.org/Behold_A_Pale_Horse.pdf)

**Alex Jones Is COINTELPRO:** If there was any doubt that Alex Jones is an agent provocateur, he showed his true colors at an Austin protest where Jones took a bull horn and purposely disrupted an event by WeAreChange. The next day, Jones went on the air and lied blatantly about the events of the day. This video can be found on YouTube, and it shows that Jones has zero respect for any fellow truthers, and that his goal is not to unite, but rather divide.

**The Political Assassination of Debra Medina:** During the heat of Debra Medina's campaign, Alex Jones stated, "We can't believe anything she says if she gets in office if she'll flip flop like this", and with that, the Infowarriors (what Infowars listeners call themselves), attacked Debra Medina from all angles and sunk her bid for the Texas Governorship. The reason: Medina didn't state publicly that she concurred that 9/11 was an Inside Job. Alex Jones took her out of context and politically assassinated her, a win for Rick Perry and the Globalists that Alex Jones allegedly fights against.

**Money Bombs:** Alex Jones has repeatedly drained money from his listeners with repeated "Money Bombs", which is just a different label for what Jim and Tammy Fay Baker did to the sheep that followed them. These Money Bombs are to allegedly build his 3<sup>rd</sup> studio in as many years, and regardless if partially true, it is an obvious personal money grab. After all, should Jones betray the American public, he must get all the money he can before he twists the knife in the back of America.

**Beta Testing Infowars Radio:** About six months prior to Super Bowl XLV, Alex Jones started a rather disturbing trend: Beta Testing his Infowars radio listeners on a regular basis. Jones orders his listeners to Google search terms, and through Google Trends, Jones can see how many of his listeners heed his commands. While this may seem innocent on the surface, it is clear that Jones & Co. are gaging how people will obey him. When Jones give the command to attack on Super Bowl Sunday, many listeners will obey an attack the police and military, playing right into the Globalist's hand. Other forms of Beta Testing may have been the Obama poster campaign, whereby Jones ordered his listeners world-wide to print and hang millions of Obama posters like the one posted above. To his credit, Jones was able to get people to act from Tokyo to London, and from L.A. to New York. Interestingly, Obama is anything but a socialist. Obama's policies are Bush policies, and are more fascist and Nazi, than socialist, another piece of disinformation. Should a nuclear terror attack transpire, Alex Jones MAY give the instructions to attack police or military targets, thus resulting in a major crackdown. What Alex Jones asks his audience to do next is anybody's guess, but we do not assume that this BETA testing of his listeners will stop until after the Super Bowl.

The Essential Alex Jones 5-DVD Collection (Actual Infowars Info)

~~\$59.9~~

\$

\$24.95 **SALE**

**Infowars DVD Blowout:** As listeners of the Alex Jones' Show know, Alex has been blowing out his entire DVD inventory starting a couple months ago and based on the current trend, this is likely to continue until February 6, 2010. Jones, a man who won't even let people copy and resell his DVDs (despite claiming he's all about the message rather than the money), all of a sudden is blowing out his DVD's at cost! Alex has even stated that he is "losing money", but is now selling the DVDs for \$5, when they go for around \$30. Obviously, after a betrayal, they DVDs will be worthless.

**Alex Jones & Violence:** The increasingly violent rhetoric from Jones has reached an all-time high, and exactly 60 days prior to Super Bowl XLV, this rhetoric was taken up a notch or two when Jones stated that he is that he is "oiling his guns"! Jones has also made statements that he is getting ready for fireworks and preparing for battle. On top of this disturbing trend, Alex has allowed Globalist tool Porter Stansbury to advertise the following:

**America's Most Important Day in 50 Years...**  
**It will change the way you travel... shop... invest... and even retire.**  
Watch the eye-opening video presentation [HERE](#). **WARNING: Viewer discretion advised**

**This video, which Jones begs his audience to watch, is an obvious clue that something major will happen in America, and at the very least is a form of terrorism itself.**

**NWO Terminology:** The terminology used in the titles of his films such as Police State, End Game, Terrorstorm, Fall of the Republic, etc., are all negative NWO terms, and thus begs the question; who is Alex Jones really working for? You would think that Jones, an alleged patriot, would name his film with positive, uplifting, and anti-globalist names, but it's quite the opposite.

<u>Year</u>	<u>Film Title</u>
1998	America: Destroyed by Design
1999	Police State 2000
2000	Police State II: The Takeover
2002	911: The Road to Tyranny
2002	The Masters of Terror: Exposed
2003	Matrix of Evil
2003	Police State 3: Total Enslavement
2004	American Dictators: Documenting the Staged Election of 2004
2005	Martial Law 9-11: Rise of the Police State
2005	The Order of Death
2006	Terrorstorm: A History of Government- Sponsored Terrorism
2007	Endgame: Blueprint for Global Enslavement
2008	Fabled Enemies
2009	Fall of the Republic: Vol. 1, The Presidency of Barack H. Obama
2010	Police State IV: The Rise of FEMA

**The 11 Obsession:** Alex Jones obsession with number 11 may also indicate that he is part of the establishment, rather than a rebel with a cause. His show starts at 11am, a rather odd time for a radio broadcast, and many stories over the years revolve around Top 11 Reasons, Trends, Facts, etc. Jones made a point of harping on the 1/11/2011 date, and followed up his comments by stating that numerology is like astrology; there is nothing to it. Please see the chapter of the numerology of 26 & 11 for more information. While Alex Jones is a very private man, we can gain some insight into his allegiances and loyalties based on the fact that Alex may even be Jewish himself, because he is married to a woman of Jewish/Israeli decent, thus making his children of Jewish. Please see chapter entitled “Israel & Zionism” for information regarding the relevance of this information.

**Right Time at the Right Place:** Alex Jones may be the luckiest man on Earth, or he may just be a Zionist shill. The following incidents appear staged in an attempt to give Jones the needed street cred that he needs in order to be an effective Judas. As luck would have it, Jones was able to sneak into the Bohemian Grove, by simply stating, "We just told them, we were with the Hillbillies, that's where the Bushes stay, you know, because we have Texas accents." In an ironic twist, that may indeed be a true statement. Jones was also arrested for asking the governor of Texas, George W. Bush, a question. For all to see and on live TV, Jones was handcuffed and escorted out of the press conference. This happened as well at a Texas DMV (Department of Motor Vehicles) when Jones was arrested in a public spectacle. Again, while heading to Canada, Jones was allegedly detained at the airport, but was only freed when the local press came to cover the arrest. Years later, Alex Jones bull-horned Fox News anchorman Geraldo Rivera, and was also arrested on Live TV in front of a national TV audience.

**Charlie Sheen, Jesse Ventura, Willie Nelson & Joe Rogan**

**Alex Jones Goes Hollywood:** AJ's sudden rise to fame in Hollywood and his TV appearances raises the question: If AJ was a true rebel against the system, why all the Zionist love? Alex Jones has routinely claimed that he was offered Glenn Beck's job, but that he has refused. He has also stated on numerous occasions that he has "met people" at or near the top and that he has inside information from unnamed sources. While this may very well be true, we DO NOT KNOW whether he has succumbed to their offer, or if he accepted and is just not telling us.

**V for Victory Campaign:** Alex Jones getting his audience ready for War as of Sunday January 23, 2011

**9/11 was an Inside Job:** Alex Jones made famous this term with t-shirt, slogan, stickers, etc. Reality is, 9/11 was a Zionist Job. Please see Chapter 44: *Israeli Coup D'état of America* for more information.

**The “Revolution” Concert:** The recent phenomenon of celebrities, politicians, and other prominent people singing the Revolution tune has reached a crescendo and appears to be part of a grand conspiracy to trick Americans into thinking they have the majority, and therefore will be successful in a real Revolution. Jones appears to be playing his part in this concert of deception with Alex Jones, Geraldo Rivera (Fox News), Glenn Beck (Fox News), Lord Christopher Monkton (UK), Judge Napolitano (Fox News), Lou Dobbs (formerly of CNN), Charlie Sheen (actor), Jesse Ventura (former governor of Minnesota and Navy Seal), George Noorey (Coast to Coast AM), Alan Watt, David Icke (UK), Dr. Sheeri Tenpenny (Skull & Bones), Max Keiser (France), Gerald Celente (Trends Research), Bob Chapman, Eric “Mancow Muller, Ted Anderson (GCN owner), Webster Griffin Tarpley (World Crisis Radio), and countless others, with the main catalyst being 9/11 Truth.

**The Ron Paul Deception:** Alex Jones states that he knows a lot of Free Masons, people in high places, Hollywood celebrities, and has had Ron Paul (suspected Free Mason) on his show every month for over 12 years now. The Powers that Be, create an incident (9/11) that is an obvious lie, and then offer the so called leaders to foment a revolution so that the establishment can identify, track, arrest, and detain real activists that want to change the system. In order to pull off an operation of such magnitude, you would need a spotless leader with a perfectly clean voting record so that the people believe that a real change is possible, hence Ron Paul.

#### **A Few Points to Consider:**

- The photos here clearly show Ron Paul using Masonic signs and shaking hands exactly as the Masons do
- Ron Paul spoke at Free Mason Georgetown University surrounded by Free Masonry symbology
- Ron Paul’s father was a Free Mason and Dr. Paul has said many times that he respects the Free Masons, and that he has been to many of the open meetings in his district
- Ron Paul’s wife Laura is a member of the Velasco Order of the Eastern Star and maintains her membership in the Freeport area lodge
- Ron Paul’s daughters Lori and Joy were Rainbow Girls, another organization associated with Free Masonry
- Ron Paul denies that 9/11 was carried out by criminal elements in the U.S. Israeli governments, something quite elementary to understand

Obviously, the aforementioned facts do not make Ron Paul a Free Mason, but it does make it probable. It appears that these people seem to be working in tandem, in order to give Americans the false sense that they have the majority. While it is true that people are waking up, it is a process, and these characters seem to be obsessed prematurely ejaculate the 2<sup>nd</sup> America Revolution. A brilliant plan if I may say so.

**No Love:** Alex Jones exhibits no love and no real empathy for his listeners or his callers who hold on line for hours while Jones repeats disinformation. And, when he does take their calls, he usually hijacks the call and misrepresents what they were trying to say. Judge a tree by its fruits, and the first activist that Alex Jones embraced or promoted would be his first. Clearly, his actions speak louder than his words. Alex routinely hangs up, cuts off, or hijacks callers that bring up Bill Cooper or topics that He does not want discussed. Although Alex promotes his radio program as open, many topics are ignored or swept under the rug.

**Conclusion:** As the Legendary Bob Marley would say... **“Dat der Alex Jones ain’t got no Positive Vibrations man!”**

## **The Nuclear Bible: Author David Chase Taylor**

David Chase Taylor is a graduate of San Diego State University (SDSU), where he received his Bachelor's Degree in Communication, and is currently a pro-active journalist living abroad in Europe.

After voting for George W. Bush in the 2000 and 2004 elections, David, a life-long Republican, was horrified to find out in 2007 that the 9/11 Terror Attacks were actually perpetrated by criminal elements within the U.S. and Israeli governments, rather than former CIA creature Osama bin Laden.

Since his shocking epiphany, David founded the first known official 9/11 Truth Group at an NCAA University, and has worked tirelessly to spread the message of 9/11 Truth to the World via websites, protests, concerts, flyers, and by bringing prominent member of the 9/11 Truth community to SDSU such as Dr. David Ray Griffin, Dr. Steven Jones, Richard Gage (Architects & Engineers for 9/11 Truth), Daniel Sunjata (actor), and Dylan Avery (Loose Change).

David's initial interest in Nuclear Terror came during a 2007 political science class at SDSU taught by Professor Ronald J. Bee who circulated the CFR propaganda piece entitled "7 Minutes to Midnight" which disseminated the inherent dangers of Muslim terrorists using a nuclear weapon on American soil.

However, it wasn't until 2009 that David realized that a 9/11 type false-flag nuclear terror attack was imminent when his combined love of sports and politics came together in an unprecedented fashion. Since this realization, David took it upon himself to research and write *The Nuclear Bible: A False-Flag Nuclear Terror Conspiracy* in a desperate attempt to stop this nuclear holocaust from transpiring.

**If you find the information within *The Nuclear Bible* alarming, relevant, and reliable, please see to it that it is forwarded to all:**

- 1) **Public Officials:** Local, State, Federal & International (police, sheriff, FBI, CIA, politicians)
- 2) **News Media:** Local, National & International (TV, radio, newspapers, and internet)
- 3) **Sports Media:** Local, State, National & International
- 4) **The Public:** Classmates, Colleagues, Family, Friends, Neighbors & Fellow Church Goers
- 5) **Texas:** Businesses, Churches, Sports Bars, Local Governments in the Dallas/Arlington, Texas area
- 6) **NFL Athletes:** Whether they are on the Packers or Steelers, forward this information to any known current or retired NFL players

**SAVE, PRINT & FORWARD TODAY:** Due to the unreliability of the internet, especially in the case of a nuclear terror attack, please download and print a physical hard copy of *The Nuclear Bible: A False-Flag Nuclear Terror Conspiracy* today!

**For Media and Publishing related issues, please contact David Chase Taylor at:**

## The Nuclear Bible: Martial Law & FEMA Concentration Camps

**Intro:** The following U.S. Laws regarding the treatment, detainment, harassment, interrogation, and potential execution of American Citizens is alarming and quite frightening. Please take the time to research these claims for yourself and share this information with your friends, family, colleagues, and co-workers.

**Date:** 1956 – Present

**Source:** Wikipedia, FBI (Federal Bureau of Investigation)

**Name/Title:** COINTELPRO

**Abstract:** COINTELPRO (Counter Intelligence Program): A series of covert, and often illegal, projects conducted by the United States Federal Bureau of Investigation (FBI) aimed at surveilling, infiltrating, discrediting, and disrupting domestic political organizations. COINTELPRO tactics included discrediting targets through psychological warfare such as planting false reports in the media, smearing through forged letters, harassment, wrongful imprisonment, and extralegal violence and assassination. Covert operations under COINTELPRO took place between 1956 and 1971, however the FBI has used covert operations against domestic political groups since its inception. The FBI's stated motivation at the time was "protecting national security, preventing violence, and maintaining the existing social and political order." **FBI records show that 85% of COINTELPRO resources targeted groups and individuals that the FBI deemed "subversive," including communist and socialist organizations; organizations and individuals associated with the civil rights movement, including Dr. Martin Luther King, Jr. and others associated with the Southern Christian Leadership Conference, the National Association for the Advancement of Colored People, and the Congress of Racial Equality and other civil rights organizations; black nationalist groups; the American Indian Movement; a broad range of organizations labeled "New Left", including Students for a Democratic Society and the Weathermen; almost all groups protesting the Vietnam War, as well as individual student demonstrators with no group affiliation; the National Lawyers Guild; organizations and individuals associated with the women's rights movement; nationalist groups such as those "seeking independence for Puerto Rico;" and additional notable Americans, such as Dr. Albert Einstein. FBI Director J. Edgar Hoover issued directives governing COINTELPRO, ordering FBI agents to "expose, disrupt, misdirect, discredit, or otherwise neutralize" the activities of these movements and their leaders (Wikipedia, 2010).**

**Name/Title:** Readiness Exercise 1984 (Rex 84)

**Abstract:** Short for *Readiness Exercise 1984*, is a contingency plan developed by the United States federal government to suspend the United States Constitution, declare martial law, place military commanders in charge of state and local governments, and detain large numbers of American citizens who were deemed to be "national security threats", in the event that the President declared a "State of Domestic National Emergency". The plan stated that events that might cause such a declaration would be widespread U.S. opposition to a U.S. military invasion abroad, such as if the United States were to directly invade Central America. To combat what the government perceived as "subversive activities", the plan also authorized the military to direct ordered movements of civilian populations at state and regional levels. **Rex-84 was written by Lieutenant Colonel Oliver North, who was both the NSC White House Aide and NSC liaison to FEMA, and John Brinkerhoff, the deputy director of "national preparedness" programs for FEMA.** They patterned the plan on a 1970 report written by FEMA chief Louis Giuffrida, at the Army War College, which proposed the detention of up to 21 million "American Negroes", if there were a black militant uprising in the United States. Existence of a master military contingency plan (of which REX-84 was a part), "Garden Plot" and a similar earlier exercise, "Lantern Spike" were originally revealed by journalist Ron Ridenhour, who summarized his findings in "Garden Plot and the New Action Army." Rex 84 was publicly mentioned during the Iran-Contra Hearings in 1987. Exercises similar to Rex 84 happen regularly. **For example, from 1967 to 1971 the FBI kept a list of over 100,000 persons to be rounded up as subversive, dubbed the "ADEX" list. The basic facts about Rex 84 and other contingency planning readiness exercises—and the potential threat they pose to civil liberties if fully implemented in a real operation—are taken seriously by scholars and civil libertarians (Wikipedia, 2010).**

**Name/Title:** *Violent Radicalization and Homegrown Terrorism Prevention Act of 2007*

**Abstract:** A bill sponsored by Rep. Jane Harman (D-CA) in the 110th United States Congress. **Its stated purpose is to deal with "homegrown terrorism and violent radicalization" by establishing a national commission, establishing a center for study, and cooperating with other nations.** The bill was introduced to the House on April 19 2007, and passed on Oct 23, 2007. It was introduced to the Senate on August 2, 2007 as S-1959. The bill defines some terms including "violent radicalization," "homegrown terrorism," and "ideologically based violence," which have provoked controversy from some quarters (Wikipedia, 2010).

**Name/Title:** *National Security and Homeland Security Presidential Directive 51*

**Abstract:** **National Security Presidential Directive: NSPD 51/Homeland Security Presidential Directive HSPD-20**, sometimes called simply "Executive Directive 51" for short, was created and signed by United States President George W. Bush on May 4, 2007, is a Presidential Directive which **claims power to execute procedures for continuity of the federal government in the event of a "catastrophic emergency".** Such an emergency is construed as "any incident, regardless of location, that results in extraordinary levels of mass casualties, damage, or disruption severely affecting the U.S. population, infrastructure, environment, economy, or government functions." The unclassified portion of the directive was posted on the White House website on May 9, 2007, without any further announcement or press briefings (Wikipedia, 2010).

**KBR/Halliburton) Railroad Cars for Human Transportation to FEMA Camps**

**Date:** February 4, 2008

**Source:** San Francisco Chronicle, Lewis Seiler, Dan Hamburg

**Title/Headline:** *Rule By Fear Or Rule By Law?*

**Abstract:** Since 9/11, and seemingly without the notice of most Americans, the federal government has assumed the authority to institute martial law, arrest a wide swath of dissidents (citizen and noncitizen alike), and detain people without legal or constitutional recourse in the event of "an emergency influx of immigrants in the U.S., or to support the rapid development of new programs." Beginning in 1999, the government has entered into a series of single-bid contracts with Halliburton subsidiary Kellogg, Brown and Root (KBR) to build detention camps at undisclosed locations within the United States. The government has also contracted with several companies to build thousands of railcars, some reportedly equipped with shackles, ostensibly to transport detainees. According to diplomat and author Peter Dale Scott, the KBR contract is part of a Homeland Security plan titled **ENDGAME**, which sets as its goal the removal of "all removable aliens" and "potential terrorists." Fraud-busters such as Rep. Henry Waxman, D-Los Angeles, have complained about these contracts, saying that more taxpayer dollars should not go to taxpayer-gouging Halliburton. But the real question is: **What kind of "new programs" require the construction and refurbishment of detention facilities in nearly every state of the union with the capacity to house perhaps millions of people?** Sect. 1042 of the 2007 National Defense Authorization Act (NDAA), "Use of the Armed Forces in Major Public Emergencies," gives the executive the power to invoke martial law. For the first time in more than a century, the president is now authorized to use the military in response to "a natural disaster, a disease outbreak, a terrorist attack or any other condition in which the President determines that domestic violence has occurred to the extent that state officials cannot maintain public order." The Military Commissions Act of 2006, rammed through Congress just before the 2006 midterm elections, allows for the indefinite imprisonment of anyone who donates money to a charity that turns up on a list of "terrorist" organizations, or who speaks out against the government's policies. The law calls for secret trials for citizens and noncitizens alike. Also in 2007, the White House quietly issued National Security Presidential Directive 51 (NSPD-51), to ensure "continuity of government" in the event of what the document vaguely calls a "catastrophic emergency." **Should the president determine that such an emergency has occurred, he and he alone is empowered to do whatever he deems necessary to ensure "continuity of government."** This could include everything from canceling elections to suspending the Constitution to launching a nuclear attack. Congress has yet to hold a single hearing on NSPD-51. U.S. Rep. Jane Harman, D-Venice (Los Angeles County) has come up with a new way to expand the domestic "war on terror." Her **Violent Radicalization and Homegrown Terrorism Prevention Act of 2007 (HR1955)**, which passed the House by the lopsided vote of 404-6, would set up a commission to "examine and report upon the facts and causes" of so-called violent radicalism and extremist ideology, then make legislative recommendations on combating it. According to commentary in the Baltimore Sun, Rep. Harman and her colleagues from both sides of the aisle believe the country faces a native brand of terrorism, and needs a commission with sweeping investigative power to combat it. A clue as to where Harman's commission might be aiming is the Animal Enterprise Terrorism Act, a law that labels those who "engage in sit-ins, civil disobedience, trespass, or any other crime in the name of animal rights" as terrorists. **Other groups in the crosshairs could be anti-abortion protesters, anti-tax agitators, immigration activists, environmentalists, peace demonstrators, Second Amendment rights supporters ... the list goes on and on.** According to author Naomi Wolf, the National Counterterrorism Center holds the names of roughly 775,000 "terror suspects" with the number increasing by 20,000 per month. **What could the government be contemplating that**

leads it to make contingency plans to detain without recourse millions of its own citizens? The Constitution does not allow the executive to have unchecked power under any circumstances. The people must not allow the president to use the war on terrorism to rule by fear instead of by law (Seiler & Hamburg, 2008).

**Date:** 2010

**Source:** Wikipedia, The Whitehouse

**Name/Title:** *The Enemy Belligerent Interrogation, Detention, And Prosecution Act Of 2010*

**Abstract:** **The Enemy Belligerent Interrogation, Detention, and Prosecution Act of 2010** (S. 3081) is a bill introduced by United States Senator John McCain, sponsored by Joe Lieberman and eight other Republican Senators. Its counterpart in the House is H.R. 4892, introduced by Howard McKeon (R-CA). **According to the bill's official summary, the bill requires that any person who is arrested on suspicion of terrorism against the United States or its coalition partners be placed in military custody for the purposes of initial interrogation and determination of status as an "unprivileged enemy belligerent". Such determination is to be made within 48 hours.**

**The Bill proceeds to define an "unprivileged enemy belligerent" as an individual who:**

1. Has engaged in hostilities against the United States or its coalition partners;
2. Has purposely and materially supported hostilities against the United States or its coalition partners; or
3. Was a part of al Qaeda at the time of capture.

**The bill authorizes the President to establish a "high-value detainee interrogation group" consisting of executive branch personnel with expertise in national security, terrorism, intelligence, interrogation, or law enforcement to perform the interrogation and status determination.** The bill defines that the paramount purpose of such interrogations is the protection of U.S. civilians and facilities through thorough and professional interrogation for intelligence purposes. It further prohibits the use of Department of Justice (DOJ) appropriated funds to prosecute an unprivileged enemy belligerent in an Article III court. **Finally, the bill allows for the detention of a person who is deemed to be an unprivileged enemy belligerent without criminal charges or trial for the duration of hostilities against the United States or its coalition partners in which the individual has engaged or which the individual has purposely and materially supported.** S.3081 was co-sponsored in the Senate by: Scott Brown [MA], Saxby Chambliss [GA], James Inhofe [OK], George LeMieux [FL], Jeff Sessions [AL], John Thune [SD], David Vitter [LA], and Roger Wicker [MS] (Wikipedia, 2010).

**Source:** Infowars, Aaron Dykes

**Title/Headline:** *Bombshell: FEMA Camps Confirmed*

**Abstract:** **Former Gov. Jesse Ventura and his crew at *Conspiracy Theory* have blown the FEMA camp issue wide open in a truly groundbreaking episode from the program's second season on TruTV. The "Police State" episode proves once and for all that the feds have trained to take on American citizens, planned for riots and disasters and made preparations to maintain order at any cost.** Tune in this Friday, Nov. 12 at 10 PM Eastern/ 9 PM Central and leave the denial at the door. This powerful episode is the largest and most in-depth investigation into FEMA camps to date— and it is scheduled to air on television. **Radio host and filmmaker Alex Jones returns to the series yet again, as the team takes you to confirmed on-the-ground facilities, confronts the legislators who authorized FEMA camps and breaks down the full-scale technologically-integrated police state that includes Fusion Centers, FEMA, the Department of Homeland Security and more.** At one of many real and verified FEMA locations, Jesse Ventura and Alex Jones approach a "Residential Center" run by Homeland Security in central Texas where they find locked doors, double-fences and escape warnings around the entire perimeter. Further inside the facility, they witness a playground complex, swings and slides for children. The crew walks up to the front door and attempts to get some answers. But the officials refuse to either confirm or deny the facility's purpose, including whether or not American citizens are being held inside. **However, our past investigations into this facility reveal that it has confined both children and adults, including immigrants, refugee seekers and American citizens. Despite hundreds of government documents identifying emergency and contingency plans, including plans to deal with mass fatalities, insurrection, internment and quarantines, Ventura and his team repeatedly encounter outrageous denial and avoidance by officials at every level. The mainstream media have avoided and downplayed these on-the-record plans for FEMA Camps and Homeland Security Emergency Facilities for years.** Clearly, it is not meant to be a public relations talking point, and it is no surprise that members of Congress, including those who wrote the bill to create FEMA camps in America, are reluctant to discuss the matter. So, Jesse Ventura, former Mayor and Governor, descends upon Washington to confront two important figures behind H.R. 645, the National Emergency Centers Establishment Act. Despite going through official channels, Ventura finds that Jim Gerlach (P-Pennsylvania) repeatedly "ducks" TV cameras and refuses to answer questions about H.R. 645. **Another Congressman who co-sponsored the bill starkly admits that FEMA camps exist, but rationalizes that they were put in place to deal with "happy children."** This bizarre admission is another confirmation that Congress and the leadership in Washington are out of touch with the oppressive measures that have been authorized against the American people. Later, Ventura and Jones visit the Deep South and discover what appears to be an active cover-up to keep them from the truth. **Outside the Atlanta, Georgia area is another confirmed location in FEMA's disaster preparation network. They pay a visit to a facility storing thousands of plastic coffins where video has already confirmed the coffins in large numbers. Ventura and Jones discover upon arrival that a convoy of trucks has just left hauling away the evidence— thousands and thousands of liners the facility wanted to keep out of the way of cameras and public knowledge. Various plastic coffin locations affiliated with FEMA, as well as plans for mass graves and large-scale fatalities, have been previously exposed and reported upon— including photographs sent by**

an Infowars listener of an Alabama facility in 2009 with thousands and thousands of plastic coffin liners. Why then would the officials in Georgia engage in such a desperate and hurried cover-up? Further, the plans are already confirmed. **DMORT and other divisions of Homeland Security have a contingency-structure in place to deal with mass fatalities and outbreaks in times of pandemics, natural disasters, terrorist attacks, national emergency or other disasters. Elements of these plans are in place on record, and coordinated via the 10 FEMA regions in the United States and via the “Fusion Centers” that are popping up at the Federal, State and Local levels all across the nation to spy on ordinary citizens. Concerned about the fact that these programs admittedly monitor ‘returning veterans,’ ‘Ron Paul, Bob Barr and Chuck Baldwin supporters’ and beyond, the TV show contacted a Fusion Center spokesman to find out more about why they are targeting ordinary Americans.** Spokesman Lance Clem told the show point blank that these domestic intelligence gathering centers have no oversight. **Clem shockingly admitted, “We police ourselves.”** The show’s producers have told Alex behind the scenes that this episode turned out to be the most exciting from its entire Second Season line-up. It not only confronts the FEMA camp issue head on, but uncovers significant reason to worry about the actions of Homeland Security and other agencies. At location after location, it is clear that its administrators are nervous to discuss what they are preparing, but it is clear from their records and public documents that they are preparing for something big.

**From TruTv’s Episode Guide:** “It’s been said the government has a plan to declare martial law and round up millions of United State citizens into concentration camps. Jesse may have found a conspiracy in plain sight as he investigates the proliferation of law enforcement Fusion Centers around the country. And they may be connected to hundreds of detention centers ready to accept prisoners at the stroke of a Presidential pen” (Dykes, 2010).

The following documentaries cover the aforementioned topics in great detail and are great tools to educate yourself and your fellow Americans about the current situation regarding FEMA and their plan for American Citizens. These films document real FEMA Concentration Camps in America with on the ground investigating, admissions, interviews, documents, and video footage of the actual camps. These videos can be found for free on Google or YouTube.

**WARNING: DO NOT GO TO ANY GOVERNMENT FACILITY, CAMP, OR PRISON AT ANY TIME, UNDER ANY CIRCUMSTANCE, OR FOR ANY REASON.**

**Camp FEMA**

**Police State 4: The Rise of FEMA**

**Enemy of the State**

**Conclusion:** “They came first for the Communists, and I didn't speak up because I wasn't a Communist. Then they came for the trade unionists, and I didn't speak up because I wasn't a trade unionist. Then they came for the Jews, and I didn't speak up because I wasn't a Jew. Then they came for me and by that time no one was left to speak up.” ~**Pastor Martin Niemöller**

**We are all in this together and as one of our Founding Fathers Benjamin Franklin once stated:** “We must hang together, gentlemen...else, we shall most assuredly hang separately.”

"The power of the Executive to cast a man into prison without formulating any charge known to the law, and particularly to deny him the judgment of his peers, is in the highest degree odious and is the foundation of all totalitarian government whether Nazi or Communist." ~**Winston Churchill** (November 21, 1943)

## The Nuclear Bible: Nuclear Aftermath of America

**Intro:** Should a nuclear terror attack transpire at the Super Bowl, or any other target for that matter, it is almost certain that martial law will be declared in United States. Should this occur, it would be the second time that martial law was declared in the last 10+ years. Just prior to 9/11, Jeb Bush, brother to George W. Bush and son of George H.W. Bush, declared martial law in Florida four days prior to 9/11 when he signed Florida Executive Order No. 01-261. As detailed, martial law and the destruction of the U.S. Constitution has been planned for quite some time now.

**Date:** September 7, 2001

**Source:** Prison Planet, State Of Florida, Jeb Bush

**Title/Headline:** *Executive Order Number 01-261*

**Abstract:** "I hereby delegate to The Adjutant General of the State of Florida all necessary authority, within approved budgetary appropriations or grants, to order members of the Florida National Guard into active service, as defined by Section 250.27, Florida Statutes, for the purpose of training to support law-enforcement personnel and emergency-management personnel in the event of civil disturbances or natural disasters and to provide training support to law-enforcement personnel and community-based organizations relating to counter drug operations. This Executive Order shall remain in full force and effect until the earlier of its revocation or June 30, 2003". Section 3, of Florida Executive Order No. 01-261, states that the Florida National Guard may order selected members on to state active duty for service to the State of Florida pursuant to Section 250.06(4), Florida Statutes, to assist FDLE in performing port security training and inspections. **Based on the potential massive damage to life and property that may result from an act of terrorism** at a Florida port, the necessity to protect life and property from such acts of terrorism, and inhibiting the smuggling of illegal drugs into the State of Florida, the use of the Florida National Guard to support FDLE in accomplishing port security training and inspections is "extraordinary support to law enforcement" as used in Section 250.06(4), Florida Statutes. **The precedence and training for martial law in the state of Florida has already been implemented** (Prison Planet, 2001).

Tommy Ray Franks

**Date:** November 21, 2003

**Source:** Newsmax, John O. Edwards

**Title/Headline:** *Gen. Franks Doubts Constitution Will Survive WMD Attack*

**Abstract:** Former U.S. Gen. Tommy Franks says that if the United States is hit with a weapon of mass destruction that inflicts large casualties, the Constitution will likely be discarded in favor of a military form of government. The former commander of the military's Central Command warned that if terrorists succeeded in using a weapon of mass destruction (WMD) against the U.S. or one of our allies, it would likely have catastrophic consequences for our cherished republican form of government. **Discussing the hypothetical dangers posed to the U.S. in the wake of Sept. 11**, Franks said that "the worst thing that could happen" is if terrorists acquire and then use a biological, chemical or nuclear weapon that inflicts heavy casualties. If that happens, Franks said, "... the Western world, the free world, loses what it cherishes most, and that is freedom and liberty we've seen for a couple of hundred years in this grand experiment that we call democracy." Franks then offered "in a practical sense" what he thinks would happen in the aftermath of such an attack. **"It means the potential of a weapon of mass destruction and a terrorist, massive, casualty-producing event somewhere in the Western world – it may be in the United States of America – that causes our population to question our own Constitution and to begin to militarize our country in order to avoid a repeat of another mass, casualty-producing event. Which in fact, then begins to unravel the fabric of our Constitution. Two steps, very, very important."** But Franks' scenario goes much further. He is the first high-ranking official to openly speculate that the Constitution could be scrapped in favor of a military form of government. Franks ended his interview with a less-than-optimistic note. "It's not in the history of civilization for peace ever to reign. Never has in the history of man... **I doubt that we'll ever have a time when the world will actually be at peace**" (Edwards, 2003).

San Francisco Chronicle

**Date:** May 11, 2007

**Source:** San Francisco Chronicle, James Sterngold

**Title/Headline:** *Contingencies For Nuclear Terrorist Attack: Government Working Up Plan To Prevent Chaos In Wake Of Bombing Of Major City*

**Abstract:** As concerns grow that terrorists might attack a major American city with a nuclear bomb, a high-level group of government and military officials has been quietly preparing an emergency survival program that would include the building of bomb shelters, steps to prevent panicked evacuations and the possible suspension of some civil liberties. Many experts say the likelihood of al Qaeda or some other terrorist group producing a working nuclear weapon with illicitly obtained weapons-grade fuel is not large, but such a strike would be far more lethal, frightening and disruptive than the attacks of Sept. 11, 2001. Not only could the numbers killed and wounded be far higher, but the explosion could, experts say, ignite widespread fires, shut down most transportation, halt much economic activity and cause a possible disintegration of government order. The efforts to prepare a detailed blueprint for survival took a step forward last month when senior government and military officials and other experts, organized by a joint Stanford-Harvard program called the Preventive Defense Project, met behind closed doors in Washington for a day-long workshop. **The session, called "The Day After," was premised on the idea that efforts focusing on preventing such a strike were no longer enough, and that the prospect of a collapse of government order was so great if there were an attack that the country needed to begin preparing an emergency program.** One of the participants, retired Vice Adm. Roger Rufe, is a senior official at the Department of Homeland Security who is currently designing the government's nuclear attack response plan. The organizers of the nonpartisan project, Stanford's William Perry, a secretary of defense in the Clinton administration, and Harvard's Ashton Carter, a senior Defense Department official during the Clinton years, assumed the detonation of a bomb similar in size to the weapon that destroyed Hiroshima in World War II. Such a weapon, with a force of around 10 to 15 kilotons, is small compared with most Cold War-era warheads, but is roughly the yield of a relatively simple bomb. That would be considerably more powerful and lethal than a so-called dirty bomb, which is a conventional explosive packed with some dangerous radioactive material that would be dispersed by the explosion. **The 41 participants -- including the directors of the country's two nuclear weapons laboratories, Homeland Security officials, a number of top military commanders and former government officials -- discussed how all levels of government ought to respond to protect the country from a second nuclear attack, to limit health problems from the radioactive fallout and to restore civil order.** Comments inside the session were confidential, but a number of the participants described their views and the ideas exchanged. A paper the organizers are writing, summarizing their recommendations, **urges local governments and individuals to build underground bomb shelters, much as people did in the early days of the Cold War; encourages authorities who survive to prevent evacuation of at least some of the areas attacked for three days to avoid roadway paralysis and damage from exposure to radioactive fallout; and proposes suspending regulations on radiation exposure so that first responders would be able to act, even if that caused higher cancer rates. "The public at large will expect that their government had thought through this possibility and to have planned for it,"** Carter said in an interview. "This kind of an event would be unprecedented. We have had glimpses of something like this with Hiroshima, and glimpses with 9/11 and with Katrina. But those are only glimpses." **Perhaps the most sobering issue discussed was the possibility of a chaotic, long-term crisis triggered by fears that the attackers might have more bombs. Such uncertainty could sow panic nationwide. "If one bomb goes off, there are likely to be more to follow,"** Carter said. "This fact, that nuclear terrorism will appear as a syndrome rather than a single episode, has major consequences." It would, he added, require powerful government intervention to force people to do something many may resist -- staying put. Fred Ikle, a former Defense Department official in the Reagan administration who authored a book last year urging attack preparation, "Annihilation from Within," said that **the government should plan how it could restrict civil liberties and enforce a sort of martial law in the aftermath of a nuclear attack, but also have guidelines for how those liberties could be restored later.** That prospect underscored a central divide among participants at the recent meeting, several said. Some participants argued that the federal government needs to educate first responders and other officials as quickly as possible on how to act even if transportation and communication systems break down, as seems likely, and if the government is unable to issue orders. **"There was a clear consensus that a nuclear bomb detonated in the United States or a friendly country would be an earth-shaking event, and we need to know how we will respond beforehand,"** said Ikle. "I wish we had started earlier, because this kind of planning can make an important difference." But others said the meeting made it clear that the results of any attack would be so devastating and the turmoil so difficult to control, if not impossible, that the lesson should have been that the U.S. government needs to place a far greater emphasis on prevention. **"Your cities would empty and people would completely lose confidence in the ability of the government to protect them,"** said Steve Fetter, dean of the School of Public Policy at the University of Maryland. **"You'd have nothing that resembles our current social order. I'm not sure any preparation can be sufficient to deal with that."** Fetter added, "We have to hold current policymakers more responsible" for taking all out measures to prevent a nuclear attack. Raymond Jeanloz, a nuclear weapons expert at UC Berkeley and a government adviser on nuclear issues, said that California might be better prepared than most states because of long-standing plans for dealing with earthquakes and other natural disasters. Those plans, he said, could be a useful model for first responders. He added, as others did, that the dislocation and **panic caused by a nuclear strike could make any responses unpredictable. "The most difficult thing is the fear that this kind of planning, even talking about it, can cause,"** Jeanloz said. Michael May, a former director of the Lawrence Livermore National Laboratory, defended the survival planning, saying that people should get used to the idea that such a crisis, while dire, could be managed -- a key step in restoring calm. **"You have to demystify the nuclear issue,"** said May, who now teaches at Stanford's Center for International Security and Cooperation. **"By talking about this, you take away the feeling of helplessness"** (Sterngold, 2007).

**Date:** February 14, 2008

**Source:** United States Northern Command (NORTHCOM)

**Title/Headline:** *U.S. Northern Command, Canada Command Establish New Bilateral Civil Assistance Plan*

**Abstract:** The US signed an agreement which allows for the deployment of US troops inside Canada. There was no official announcement nor was there a formal decision at the governmental level. The agreement, which raises far reaching issues of national sovereignty, was not between the two governments. It was signed by military commanding officers. U.S. Northern Command (NORTHCOM) released a statement confirming that the agreement had been signed between US NORTHCOM and Canada Command, namely between the military commands of each country. Canada Command was established in February 2006. U.S. Air Force Gen. Gene Renuart, commander of North American Aerospace Defense Command and U.S. Northern Command, and Canadian Air Force Lt.-Gen. Marc Dumais, commander of Canada Command, have signed a **Civil Assistance Plan that allows the military from one nation to support the armed forces of the other nation during a civil emergency.** “This document is a unique, bilateral military plan to align our respective national military plans to respond quickly to the other nation's requests for military support of civil authorities,” Renuart said. “Unity of effort during bilateral support for civil support operations such as floods, forest fires, hurricanes, earthquakes and effects of a terrorist attack, in order to save lives, prevent human suffering and mitigate damage to property, is of the highest importance, and we need to be able to have forces that are flexible and adaptive to support rapid decision-making in a collaborative environment.” “**The signing of this plan is an important symbol of the already strong working relationship between Canada Command and U.S. Northern Command,**” Dumais said. “Our commands were created by our respective governments to respond to the defense and security challenges of the twenty-first century, and we both realize that these and other challenges are best met through cooperation between friends.” The plan recognizes the role of each nation's lead federal agency for emergency preparedness, which in the **United States is the Department of Homeland Security and in Canada is Public Safety Canada.** The plan facilitates the military-to-military support of civil authorities once government authorities have agreed on an appropriate response (NORTHCOM, 2008).

**Date:** March 25, 2008

**Source:** Washington Post, Jay Davis

**Title/Headline:** *After A Nuclear 9/11*

**Abstract:** The appearance of nuclear weapons materials on the black market is a growing global concern, and it is crucial that the United States reinforce its team of nuclear forensics experts and modernize its forensics tools to prepare for or respond to a possible nuclear terrorist attack. Large quantities of nuclear materials are inadequately secured in several countries, including Russia and Pakistan. **Since 1993, there have been more than 1,300 incidents of illicit trafficking of nuclear materials, including plutonium and highly enriched uranium, both of which can be used to develop an atomic bomb. And these are only the incidents we know about. It is quite possible that a terrorist group could acquire enough nuclear material to build a bomb.** Nuclear materials have been discovered by border patrols, seized in police raids from India to, as recently as last fall, Slovakia, and even hidden in a flower garden in Hanover, Germany. With enough stolen material, only a few specialists would be needed to build a nuclear weapon. After that, terrorists would lack only a truck to deliver it. **If a terrorist group were to detonate a nuclear weapon on U.S. soil, the FBI, CIA, Department of Homeland Security and the nation's national labs would race to track down those responsible and prevent any further detonations by that group.** After the Sept. 11 attacks, the time between the fall of the twin towers and our response in Afghanistan was less than one month. **But current U.S. nuclear forensics capability -- which involves analyzing nuclear radiation and isotopic signatures -- can't guarantee definitive information within a month of an attack.** Fibers, fingerprints, hair samples, a truck axle -- all standard forensics clues -- would have been vaporized in the explosion. **Only two primary pieces of evidence would remain: radiation and isotopic signatures. Radiation and isotopic signatures are the scents that nuclear forensics scientists use to hunt terrorists. Within a few hours, they would know whether the bomb was made of plutonium or uranium, a crucial first step in narrowing the investigation.** Within hours to weeks, they would determine key details about the original nuclear material and then estimate the size, weight and complexity of the bomb. Over the next several months, they might be able to identify the source country and the terrorists' pathway into the United States. **But in our post-Sept. 11 world, we won't have months to respond. There would be enormous pressure to rapidly identify the terrorists and the chain of events leading up to the attack.** With a few changes, the speed and accuracy of nuclear forensics could be significantly improved. First, we should update our 20th-century program to confront 21st-century enemies. Much of our field and laboratory equipment dates to the Cold War. So do most of our personnel. We need to develop and manufacture advanced, automated radiation analysis equipment that can be deployed to the field and is backed up by improved laboratory measurement. We need enhanced computer simulation and modeling capabilities. **And we need to establish a federal initiative to reinvigorate the field of nuclear chemistry.** Second, international collaboration is essential. Nuclear material can have a unique signature depending on its source reactor or fuel facility. A shared and appropriately accessible international database of nuclear samples can help to more quickly match debris from an explosion with its original source. Third, we must consider what it will take for the world to believe our analysis. The U.S. intelligence community's failures in assessing weapons of mass destruction in Iraq could well result in international skepticism regarding any nuclear forensics investigation we might perform. A group of recognized experts not associated with our federal investigation should be established to provide independent validation of the forensics analysis. **Finally, we need to manage expectations and prepare for the inevitable political pressure to respond quickly after an attack.** Through realistic drills, our leaders can become aware of the strengths and limitations of the nation's nuclear forensics capability. Even with these changes, forensics analysis will take time, and results will not be immediately conclusive. Our leaders must recognize that, at times, decisions may need to be deferred or made amid uncertainty. **There has been some good news. Some countries, including Pakistan, are strengthening the critical programs that lock down nuclear material at its source.** But we must take additional steps, in case plutonium or uranium slips past the gate (Davis, 2008).

**Source:** CQ Politics, Jeff Stein

**Title/Headline:** *D.C. Homeland Security Chief Predicts Chaos In Event of Nuke Attack*

**Abstract:** Darrell Darnell, director of the District of Columbia's Homeland Security and Emergency Management Agency, says **there would be "a lot of panic, a lot of chaos" if a small nuclear bomb detonated near the White House, which would most likely prevent an evacuation of the city as radiation spread.**

**Jeff Stein:** Who's in charge during in a major emergency in the city?

**Darrell Darnell:** Well, I think we all operate under the Incident Command system, to have consistency and commonality among different agencies at the federal, state and local level responding to an event. So who's in charge would depend on the event, and who we believe is most qualified agency-slash-person to lead that event. So it's not just a matter of saying it's a certain federal, state or local person, but who's best qualified to handle that event. And it usually depends on who is first on the scene. The first person on the scene is the incident commander, until someone else comes on the scene, who's most qualified. And that's how the incident command is determined.

**Jeff Stein:** Who would be in charge if a small nuclear bomb went off downtown?

**Darrell Darnell:** Well, again, the incident really drives who's in charge, who takes charge. Obviously, the local government has a big responsibility in the incident you just described, you're going to have a large federal presence simply because the resources to deal with that only the federal government has.

**Jeff Stein:** Well, you have the fire trucks, ambulances.

**Darrell Darnell:** We have those types of things. But obviously in a nuclear event you're going to have a huge swath of area.

**Jeff Stein:** What would happen if a small nuke went off near the White House right now? You'd have an immediate area of damage, but then other things, like a radiation plume moving right toward your office. It could be there in 10 minutes, so you guys would be radiated here.

**Darrell Darnell:** Yeah.

**Jeff Stein:** So if it happened right now what would you do?

**Darrell Darnell:** If it happened right now, the first thing we would do is notify some federal officials and get some assets that would help us provide immediate assistance, to get as many people away from ground zero, if you will, try to do the best thing we can to coordinate that area so that no one gets into it. We have plume modeling equipment here in our office. So I would ask my plume-modeling folks to as quickly as they can let me know where that plume is going to be, so we can start evacuating people. We would be sending out text alerts, a reverse 911, to anyone in the district who has a listed telephone number, explaining to them what actions to take, which areas to evacuate. We would also immediately pick up our emergency hot line to all the emergency agencies explaining to them what happened, where we are trying to evacuate people to, such as VDOT, so we can start our evacuation routes to West Virginia, Delaware, North Carolina.

**Jeff Stein:** What about "sheltering in place," as its called. The federal government says it has plans for its employees to shelter in place, and have stockpiled supplies there, but when we reported on it a few years ago, most of them didn't have supplies and the employees hadn't ever heard of it.

**Darrell Darnell:** In the last year the National Capital Planning Commission has been working on sheltering in place and a capital evacuation plan. We've identified the shelters for people to go to, but one of the challenges in any incident is getting people to understand whether to shelter in place. So what we've done is — again, the reverse 911 text messaging system, if you sign up for that at the 72hours.dc.gov Web site that we have. What we'll try to do is to get people information on whether they should shelter in place, whether they should go to a shelter, or whether they should evacuate. We'll try to get that information out to them. We're also working with businesses. In fact, we just made contact with the Business Improvement District on security plans for the buildings, for evacuation and shelter plans. We already have some basic information on our Web site they can download, and

we're trying to get more fidelity to that, and to work with the business owners as well as the building managers where they can have the training and education with the people who reside in their buildings. But you know, the private entities, we can't force them to do that.

**Jeff Stein:** Are the shelters marked, like yellow radiation signs on the nuclear war shelters during the Cold War?

**Darrell Darnell:** Our shelters are marked within the District government. We've identified 39 shelters within the District government that we own. You can go on our Web site and get a list of where those shelters are, as well as our evacuation routes. You can put in your address and it will tell you the closest shelter and evacuation route.

**Jeff Stein:** Yes, but in a power outage, the electricity is out, and during an emergency I'm not thinking about going to my computer, especially if I'm in a blast area. So if I'm not online, how do I find out where to go?

**Darrell Darnell:** This past March we sent out 150,000 brochures to everyone who is a District resident, so you should have gotten one, that laid out what the evacuation plan was. And do you subscribe to The Washington Post? You should have gotten one.

**Jeff Stein:** Was it in the Sunday plastic packet of ads?

**Darrell Darnell:** Yes.

**Jeff Stein:** I throw those away.

**Darrell Darnell:** Well, I can't help you if you throw it in the trash.

**Jeff Stein:** Is that it? Is that enough to get the word out?

**Darrell Darnell:** No, it's not, but we're trying to use every means we can. We send them into the homes, we hand them out at community meetings. In fact, I think we've put out about 400 of these brochures at community meetings in the last month alone. We do the mailings, we do the 72hours.dc.gov Web site, we have individual brochures that we're going to be putting out in libraries, District office buildings, basically anywhere there's a large traffic of people going in and out of the facilities. So we're trying to use every medium we have to get the word out. Again, if people throw the information out, I'm not sure how we can control that.

**Jeff Stein:** I'm not trying to pick on you, but let's say people are smart enough to save their brochure. Are they going to be thinking, "Where's my brochure?" after a nuclear attack?

**Darrell Darnell:** Well, we try to do as much as we can. We have a very active community plan. We do community-based training within the neighborhoods, with certain qualified civilian emergency response teams.

**Jeff Stein:** Are you going to have table-top exercises based on that scenario?

**Darrell Darnell:** Yes.

**Jeff Stein:** Or have you had table tops on that scenario?

**Darrell Darnell:** Yes, we have.

**Jeff Stein:** So when it actually happened, it didn't work out very well. The reality was different.

**Darrell Darnell:** Well, table top is never going to simulate the real things. Having said that, there are lot of scenarios we can simulate because we can go to a training facility or something like that. It's very difficult to simulate the power going instantaneously out and grid locking traffic. I'm open to any suggestions if you have any (Stein, 2008).

**Title/Headline:** *'Continuity of Government' Planning: War, Terror and the Supplanting of the U.S. Constitution*

**Abstract:** In July 1987, during the Iran-Contra Hearings grilling of Oliver North, the American public got a glimpse of "highly sensitive" emergency planning North had been involved in. **Ostensibly these were emergency plans to suspend the American constitution in the event of a nuclear attack** (a legitimate concern). But press accounts alleged that the planning was for a more generalized suspension of the constitution. As part of its routine Iran-contra coverage, the following exchange was printed in the New York Times, but without journalistic comment or follow-up.

**Congressman Jack Brooks:** Colonel North, in your work at the N.S.C. were you not assigned, at one time, to work on plans for the continuity of government in the event of a major disaster?

**Brendan Sullivan** [North's counsel, agitatedly]: Mr. Chairman?

**Senator Daniel Inouye:** I believe that question touches upon a highly sensitive and classified area so may I request that you not touch upon that?

**Congressman Jack Brooks:** I was particularly concerned, Mr. Chairman, because I read in Miami papers, and several others, that there had been a plan developed, by that same agency, a contingency plan in the event of emergency, that would suspend the American constitution. And I was deeply concerned about it and wondered if that was an area in which he had worked. I believe that it was and I wanted to get his confirmation.

**Senator Daniel Inouye:** May I most respectfully request that that matter not be touched upon at this stage. If we wish to get into this, I'm certain arrangements can be made for an executive session. But we have never heard if there was or was not an executive session, or if the rest of Congress was ever aware of the matter.

According to James Bamford, **"The existence of the secret government was so closely held that Congress was completely bypassed."** Key individuals in Congress were almost certainly aware. Brooks was responding to a story by Alfonzo Chardy in the Miami Herald. Chardy's story alleged that Oliver North was involved with the Federal Emergency Management Agency (FEMA) in plans to take over federal, state and local functions during a national emergency. This planning for "Continuity of Government" (COG) called for "suspension of the Constitution, turning control of the government over to the Federal Emergency Management Agency, emergency appointment of military commanders to run state and local governments and declaration of martial law." To my knowledge no one in the public (including myself) attached enough importance to the Chardy story. Chardy himself suggested that Reagan's Attorney General, William French Smith, had intervened to stop the COG plan from being presented to the President. Seven years later, in 1994, Tim Weiner reported in the New York Times that what he called **"The Doomsday Project" – the search for "ways to keep the Government running after a sustained nuclear attack on Washington" – had "less than six months to live."** To say that nuclear attack planning was over was correct. But this statement was also very misleading. On the basis of Weiner's report, the first two books on COG planning, by James Bamford and James Mann, books otherwise excellent and well-informed, reported that COG planning had been abandoned. They were wrong. Mann and Bamford did report that, from the beginning, **two of the key COG planners on the secret committee were Dick Cheney and Donald Rumsfeld, the two men who implemented COG under 9/11. What they and Weiner did not report was that under Reagan the purpose of COG planning had officially changed: it was no longer for arrangements "after a nuclear war," but for any "national security emergency."** This was defined in Executive Order 12656 of 1988 as: "any occurrence, including natural disaster, military attack, technological emergency, or other emergency, that seriously degrades or seriously threatens the national security of the United States." **In other words extraordinary emergency measures, originally designed for an America devastated in a nuclear attack, were now to be applied to anything the White House considered an emergency.** Thus Cheney and Rumsfeld continued their secret planning when Clinton was president; both men, both Republicans, were heads of major corporations and not even in the government at that time. Moreover, Andrew Cockburn claims that the Clinton administration, according to a Pentagon source, had "no idea what was going on." The expanded application of COG to any emergency was envisaged as early as 1984, when, according to Boston Globe reporter Ross Gelbspan, **Lt. Col. Oliver North was working with officials of the Federal Emergency Management Agency . . . to draw up a secret contingency plan to surveil political dissenters and to arrange for the detention of hundreds of thousands of undocumented aliens in case of an unspecified national emergency. The plan, part of which was codenamed Rex 84, called for the suspension of the Constitution under a number of scenarios, including a U.S. invasion of Nicaragua.** Clearly 9/11 met the conditions for the imposition of COG measures, and we know for certain that COG planning was instituted on that day in 2001, before the last plane had crashed in Pennsylvania. The 9/11 Report confirms this twice, on pages 38 and 326. It was under the auspices of COG that Bush stayed out of Washington on that day, and other government leaders like Paul Wolfowitz were swiftly evacuated to Site R, inside a hollowed out mountain near Camp David. **What few have recognized is that, nearly a decade later, some aspects of COG remain in effect. COG plans are still authorized by a proclamation of emergency that has been extended each year by presidential authority, most recently by President Obama in September 2009.** COG plans are also the probable source for the 1000-page Patriot Act presented to Congress five days after 9/11, and also for the Department of Homeland Security's Project Endgame — a ten-year plan, initiated in September 2001, to expand detention camps, at a cost of \$400 million in Fiscal Year 2007 alone. At the same time we have seen the implementation of the plans outlined by Chardy in 1987: the warrantless detentions that Oliver North had planned for in **Rex 1984, the warrantless eavesdropping that is their logical counterpart, and the militarization of the domestic United States under a new military command, NORTHCOM. Through NORTHCOM the U.S. Army now is engaged with local enforcement to control America, in the same way that through CENTCOM it is engaged with local enforcement to control Afghanistan and Iraq.** We learned that COG planning was still active in 2007, when President Bush issued National Security Presidential Directive 51 (NSPD 51). **This, for the sixth time, extended for one year the emergency proclaimed on September 14, 2001.** It empowered the President to personally ensure "continuity of government" in the event of any "catastrophic emergency." He announced that NSPD 51 contains "classified Continuity Annexes" which shall "be protected from unauthorized disclosure." Under pressure from his 9/11 truth constituents, Congressman Peter DeFazio of the Homeland Security Committee twice requested to see these Annexes, the second time in a letter signed by the Chair of his committee. His request was denied. The National Emergencies Act, one of the post-Watergate reforms that Vice-President Cheney so abhorred, specifies that: **"Not later than six months after a national emergency is declared, and not later than the end of each six-month period thereafter that such emergency continues, each House of Congress shall meet to consider a vote on a joint resolution to determine whether that emergency shall be terminated"** (50 U.S.C. 1622, 2002). Yet in nine years Congress has not once met to discuss the State of Emergency declared by George W. Bush in response to 9/11, a State of Emergency that remains in effect today. Appeals to the Congress to meet its responsibilities to review COG have fallen on deaf ears. It is clear that the planning by Cheney, Rumsfeld and others in the last two decades was not confined to an immediate response to 9/11. The 1000-page Patriot Act, dropped on Congress as promptly as the Tonkin Gulf Resolution had been back in 1964, is still with us; Congress has never seriously challenged it, and Obama quietly extended it on February 27 of this year. **We should not forget that the Patriot Act was only passed after lethal anthrax letters were mailed to two crucial Democratic Senators – Senators Daschle and Leahy – who had initially questioned the bill. After the anthrax letters, however, they withdrew their initial opposition. Someone —**

we still do not know who – must have planned those anthrax letters well in advance. This is a fact most Americans do not want to think about. **Someone also must have planned the unusual number of war games taking place on 9/11. COG planners and FEMA had been involved in war games planning over the previous two decades; and on 9/11 FEMA was again involved with other agencies in preparing for Operation Tripod, a bioterrorism exercise in New York City.** Someone also must have planned the new more restrictive instructions, **on June 1, 2001, determining that military interceptions of hijacked aircraft had to be approved “at the highest levels of government” (i.e. the President, Vice-President, or Secretary of Defense).** The Report attributes this order to a JCS Memo of June 1, 2001, entitled “Aircraft Piracy (Hijacking) and Destruction of Derelict Airborne Objects.” But the written requirements had been less restrictive before June 1, 2001, and I am informed that the change was quietly revoked the following December. In The Road to 9/11 I suggest the change in the JCS memo came from the National Preparedness Review in which President Bush authorized Vice-President Cheney, together with FEMA, “to tackle the... task of dealing with terrorist attacks.” **Not noticed by the press was the fact that Cheney and FEMA had already been working on COG planning as a team throughout the 1980s and 1990s.** Weiner’s article persuaded authors James Mann and James Bamford that Reagan’s COG plans had now been abandoned, because “there was, it seemed, no longer any enemy in the world capable of . . . decapitating America’s leadership.” **In fact, however, only one phase of COG planning had been terminated, a Pentagon program for response to a nuclear attack.** Instead, according to author Andrew Cockburn, a new target was found: **Although the exercises continued, still budgeted at over \$200 million a year in the Clinton era, the vanished Soviets were now replaced by terrorists.** . . . There were other changes, too. In earlier times the specialists selected to run the “shadow government” had been drawn from across the political spectrum, Democrats and Republicans alike. But now, down in the bunkers, Rumsfeld found himself in politically congenial company, the players’ roster being filled almost exclusively with Republican hawks. . . . **“You could say this was a secret government-in-waiting.** The Clinton administration was extraordinarily inattentive, [they had] no idea what was going on.” **The Pentagon official’s description of a “secret government-in-waiting” (which still included both Cheney and Rumsfeld) is very close to the standard definition of a cabal, as a group of persons secretly united to bring about a change or overthrow of government.** In the same era Cheney and Rumsfeld projected change also by their public lobbying, through the Project for the New American Century, for a more militant Middle East policy. **In light of how COG was actually implemented in 2001, one can legitimately suspect that, however interested this group had been in continuity of government under Reagan, under Clinton the focus of Cheney’s and Rumsfeld’s COG planning was now a change of government** (Scott, 2010).

**Like 9/11, it is essential for the Federal Government to have “heroes” and heroines” to parade in front of the public on television in the weeks and months after an attack. Unfortunately, just like 9/11, there is a high probability that scores of first responders will perish in the radiation and chaos.**

**Title/Headline:** *Medical Preparedness And Response To Nuclear Terrorism*

**Abstract:** The medical and public health community is still in its infancy in terms of preparedness for the detonation of a nuclear device. Today, detonation of a compact, portable nuclear device by a small group of terrorists is a real threat. These devices, known by a variety of names—suitcase nukes, mini-nukes, or improvised nuclear devices (INDs)—are small enough to put in a backpack or suitcase and can yield an explosion of up to 20 kilotons.

**Challenges To Emergency Medical Response:** All nuclear detonations result in significant structural and environmental destruction from the blast, heat, and radiation. The level of physical destruction in and beyond the response area and the potential loss of critical medical infrastructure in surrounding areas at relatively remote distances will create significant barriers to normal emergency medical responses. In addition, **dangerous levels of radiation in the immediate response area and downwind from the radiation plume will make it difficult to respond rapidly to victims of the blast.** Operational and logistical problems with the delivery of supplies, patient transport, and emergency communication will further complicate emergency medical response. **The medical effects will be catastrophic, both for people in the immediate area and for people within a radius of several miles.** Survivability in the short and intermediate term will depend on the degree and type of physical injury combined with the degree of exposure to radiation (Waselenko et al., 2004). **The radiation effects will have immediate, delayed, and long-term health consequences for both victims and emergency response personnel.** Under any scenario that includes the release of a nuclear weapon, there will be thousands, possibly tens of thousands, of casualties. In the immediate aftermath, there will be an urgent need for a large number of specialized beds for patients with burns, blunt and penetrating trauma, eye injuries, and other injuries that would quickly overwhelm the existing overtaxed health system.

**Preparing For The Worst:** Since the horrific events of September 11, 2001, the nation has been working toward improving preparedness to threats to public health ranging from infectious diseases to weapons of mass destruction. Preparing for any emergency begins with asking “what if” security officials fail to prevent the release of a biological or chemical weapon or the detonation of an IND in an urban area or a highly populated American city. **The medical and public health community is still in its infancy in preparing to respond to such an unthinkable event (IOM, 2009).** The detonation of an IND would cause a level of destruction and risk to health that would be a mega-disaster of national significance (Figure 1). In such an attack, federal authorities would have to be immediately engaged in the emergency response and not wait for requests from state or local officials, as they would in a typical

scenario. **Medical preparedness for a nuclear detonation will require using all of the measures taken for many types of natural and manmade disasters. It will also require a radical change in thinking about how we provide emergency medical care. Finally, because this would be an intentional attack, planners must include preparations to respond to multiple detonations or the release of biological or chemical weapons.** These challenges will require an all-hazards approach to emergency medical preparedness, which will be only one component in the general emergency response plan for a major disaster.

**Response Plans For Weapons Of Mass Destruction:** One of the earliest efforts to plan for responding to weapons of mass destruction was the Metropolitan Medical Response System Program (MMRS), which was started in 1995. This federal program was an early attempt to encourage integrated planning for large-scale disasters in several urban cities. **The intent was to link first responders (e.g., police, fire, and emergency medical services) with public health and emergency management officials.** Many other public and nonpublic efforts have been undertaken by a variety of federal, state, and local agencies to prevent, mitigate, or respond to the threat of a nuclear weapon. **The Urban Area Security Initiative (UASI), for example, provided funds to multiple urban areas to address preparedness specifically for detonation of a nuclear weapon.** The program was designed to improve capabilities and preparedness planning in response to improvised explosive devices in high-density, high-threat urban areas.

**Health Effects Of A 10-Kiloton Nuclear Device:** Because there have been few experimental ground-level detonations, most of what we know comes from sophisticated models estimating the effects of an IND. **Based on these models, current estimates for a 10-kiloton release (a small suitcase bomb) are about 40,000 to 50,000 people killed within the first 24 hours from blast effects and burns and more than 130,000 injured from radioactive fallout (Marrs, 2007).** Factors that modelers use to estimate human casualties include population density, time of day, geographic location, wind speed, and so on. **Thus, even with conservative estimates, the health care system would quickly be overwhelmed (Bell and Dallas, 2007).** The immediate types of injuries sustained from an explosion of this type would include a combination of blast, burn, and penetrating traumas. For initial survivors, acute and chronic radiation illness would be another problem, which, when combined with traumatic injuries, is known to increase mortality (Flynn, 2006).

**The First 72 Hours:** The management goal in a typical disaster is to move from chaos to controlled disorder as quickly as possible. **In a disaster like an IND, the period of chaos would be magnified because of fear, the size of the affected area, and the loss of local response capacity, that is, responders who are used to working together.** Traditional preparedness planning is based on the assumption that local communities will be the responders for the first 48 to 72 hours. Thus planning focuses on optimizing the response until outside assistance arrives, as needed. The mobilization of meaningful federal assistance is expected to take from 48 to 72 hours. **The explosion of an IND or other weapon of mass destruction, however, would be immediately understood as an event of national importance, and local, state, and federal planners must harmonize their plans in a way that immediately nationalizes the response.** Although the local community may be on its own for some period of time for logistical reasons, **it is clear that, without immediate nationalization, there cannot be a reasonable emergency medical response.** Because of the loss of a significant amount of the local critical infrastructure (e.g., ambulances, hospitals and clinics, and associated personnel), the response plan should be designed to use regional and national health resources for the most severely affected patients. **Medical standards of care may also change dramatically, under appropriate medical supervision and ethical guidelines, in disaster situations.** For example, critically ill patients might have to be treated in a school gymnasium instead of a hospital because of the volume of patients, **and non-physician caregivers might be authorized to give injections and perform other procedures, even minor surgical procedures (IOM, 2010).** **First responders will have to address the early loss of command and control and operational communications** (mostly because of blast or burn effects, less so from the electromagnetic pulse). Situational threat awareness, accurate weather information, and the status of the medical system infrastructure are critical pieces of information essential for effective control and command of the medical response. Risk communication to the public will be a major challenge; messages must be clear, consistent, and as accurate as possible. **Maintaining public trust will be of great importance for health officials, who will have to make difficult decisions based on incomplete information. Managing fear, post traumatic stress disorders, as well as traditional mental health concerns (e.g., depression) will also be critical (Koenig et al., 2005).** In an emergency, immediate care (first aid) is often provided by bystanders and others in the general area of the event. In the case of an IND explosion, however, the area will be contaminated with radiation, and **even able-bodied survivors may be unable or unwilling to assist because of concerns about the risk of lethal exposure.** Significant search and rescue may also be delayed because of contamination of the site. The decontamination of victims will be an essential medical procedure, not only to protect patients, but also to protect care providers from continued radiation exposure. In general, however, most experts recommend that emergency care not be delayed because of fear of a contaminated patient. **Removing a patient's clothing will usually reduce the amount of contamination by 90 percent.**

**Conclusion:** Ensuring that an emergency medical system can respond to a nuclear emergency requires a proactive, nontraditional approach to disaster planning and response. This can be accomplished within the traditional framework of all-hazard planning, **but it will require immediate recognition of the national nature of the emergency, an "all in" response from the beginning, and complex decisions in response to an emergency that has elements of different types of disasters. The prospect of responding under continued threat of multiple intentional detonations or the use of conventional or unconventional weapons could further complicate the situation.** Moving successfully from chaos to controlled disorder will require that emergency planners effectively integrate response to the unique challenges of a particular event with the medical response scenario. **In the event of the unthinkable, even a resilient community will be slow to recover (Benjamin, 2010).**

**Source:** Press TV

**Title/Headline:** *US Intelligence 'Mushroomed' After 9/11*

**Abstract:** The September 11, 2001 terrorist attacks kicked off the establishment of a sprawling intelligence community in the US with no way to head off its mushrooming growth. Following two years of investigation, *The Washington Post* came to the conclusion on

that since 2001, **the bureaucracy has turned to be "so unwieldy and so secretive that no one knows how much money it costs, how many people it employs, how many programs exist within it or exactly how many agencies do the same work."** The paper said its findings suggested that around 1,271 government organizations and 1,931 private companies were involved in counterterrorism-related programs, and together they occupied 33 building complexes already built or under construction. The space could embrace nearly three Pentagons or 22 US Capitol buildings, it said. **"There has been so much growth since 9/11 that getting your arms around that -- not just for the DNI [Director of National Intelligence], but for any individual, for the director of the CIA, for the secretary of defense - is a challenge,"** Defense Secretary Robert Gates told the *Post*. The probe also referred to the gigantic redundancy and waste generated by the enormous bureaucracy. According to the report, **the US leads its homeland security and intelligence programs from some 10,000 locations across the country. This is while, Washington uses 51 federal and military commands located in 15 US cities to track money shipments by terrorist networks.** The various agencies involved in the job produce a whopping 50,000 intelligence reports annually, "many" of which "are routinely ignored," said the *Post*. Alleged al-Qaeda terrorists conducted a series of coordinated attacks on the US soil in September 2001. The attacks gave the US and its allies the excuse to send troops to Afghanistan, where they claimed was the al-Qaeda hub at the time. The so-called global war on terrorism has so far cost the American taxpayers billions of dollars (Press TV, 2010).

**Title/Headline:** *The Call For A Military Coup*

**Abstract:** Two recent calls for a military coup brings the prospect of martial law in America into a singular and fresh perspective. In 2007, black political analyst, Thomas Sowell, lamenting the undermining of traditional values and the promotion of diversity in America by politicians, educators, and media moguls, remarked, **"I can't help wondering if the day may yet come when the only thing that can save this country is a military coup."** Two years later, former adviser to the Carter administration, John L Perry, outlined the possibility that America's military could "intervene" as a last resort to resolve the "Obama problem." Backed by financier Richard Mellon Scaife, the musing Perry appealed to the Constitution to suggest the legality of a military coup: **"Top military officers can see the Constitution they are sworn to defend being trampled on. These officers swear to defend the Constitution against all enemies, foreign and domestic. Unlike enlisted personnel, they do not swear to obey the orders of the president."** In a recent interview, Ex-Green Beret Joe Cortina, put forth that Congress has placed itself under the yoke of International Jewry and its Jewish-American agents at home. Thus, Cortina argues, because **Capitol Hill has subverted the military oath to defend the Constitution against "foreign and domestic enemies," the military is under no obligation to obey a civilian authority that has been usurped by Jewish interests acting as agents of a foreign state.** In fact, President John F Kennedy and Attorney General Robert Kennedy attempted to have the American Zionist Council, (the parent organization of AIPAC), registered under the Foreign Agents Registration Act, but the power of Jewry was stronger than these two high ranking and powerful executive officers. **Millions of Americans, although oblivious to the Jewish takeover of America, are awakening to the trashing of the US Constitution as protested by the Tea Party movement.** And with the increasing disgust with the elitism of the unconstitutional Federal Reserve Bank, popular support of Ron Paul, now head of the House Monetary Policy Subcommittee, giving clout to his war on the Fed, is at an all time high. **But what the "Constitution lovers" fail to recognize is that with 99.9% of our politicians having sold their souls to Jewish money — and with three Jews serving on the Supreme Court — the prospect for "ending the Fed" or "restoring the Constitution" is impossible.** Thus, the call for a military coup takes on a whole new favorable face. For the feasibility of the Officer Corps shutting down the Fed, canceling all debts on the grounds of the Fed lending counterfeit money, and establishing a National Bank that coins its own money, lends a pleasing savor to the prospect of a military restoration of America. **When Hitler came to power in 1933, Germany was bankrupt and plagued by high unemployment while hyper-inflation had depleted its national Treasury. Germany had no choice but to resign itself to what was imposed upon them by the Versailles Treaty — debt slavery under international Jewish bankers.** But in 1933, when the National Socialists were elected by popular vote, the much-loved Fuhrer freed the Germans from the Jewish yoke. **Hitler began a public works program wherein workers were paid certificates of credit which were essentially receipts for labor delivered to the government. Hitler said, "For every mark issued, we require the equivalent of a mark's worth of work."** These receipts, called "Labor Treasury Certificates," (not unlike the currency framework of Alexander Hamilton's credit system and Lincoln's greenback solution), thwarted international Jewry's monetary system, (not unlike the Fed's currency arrangement now plaguing America.) **Hitler's revival of the nation's economy was short-lived due to Jewry's declaring a global boycott of Germany and enlisting a universal revenge on German independence from its control.** View Entire Story Here, Here, & Here. Indeed, while the allies enjoyed a military victory over the German uprising against Jewry, the political victory of Jewish hegemony over Europe and America solidified. **But, a "military & political victory" in the form of a coup, liberating America from its slavery to Jewry, could bring fresh hopes to a nation in economic collapse and deep internal crisis** (Kapner, 2010).

**Conclusion:** The aftermath of a nuclear attack, no matter how devastating, is NO reason to suspend the U.S. Constitution, declare martial law, incarcerate citizens, or pass any draconian laws. Based on the information available, the individuals that promote this un-free post-nuclear America are in fact the very individuals that have the motives, the money, and the opportunity to carry out a false-flag nuclear terror attack in the first place. While many will die in a nuclear attack, the death toll will most likely be under 1 million people. That leaves us as least 299 million people to make sure that America, our Bill of Rights, our Constitution, and our way of life continue for centuries to come.

**"Whenever any form of government becomes destructive of these ends life, liberty, and the pursuit of happiness it is the right of the people to alter or abolish it, and to institute new government." ~Thomas Jefferson**

## The Nuclear Bible: Nuclear Blackjack

**Intro:** The 45<sup>th</sup> NFL Super Bowl is February 6, 2011 in Arlington (Dallas), Texas. If one takes the date of the game (02/06/2011) and you add at the numbers (2+6+2+11=21) you get Black Jack. A coincidence?

**Blackjack Attack** appears to have a nuclear detonation along with statues frozen in time. Very Sodom and Gomorrahish

**Date:** March 2, 2005

**Title/Headline:** *Blackjack Attack: Playing The Pro's Way*

**Abstract:** The most important book available to blackjack aficionados since Beat the Dealer by Ed Thorp, **Blackjack Attack** has been praised by every prominent blackjack expert. In it, Schlesinger answers virtually all of the thorny mathematical questions that have puzzled serious players for years: optimal betting, camouflage, risk analysis, team play, systems comparison, and much more. With twice as much material as its predecessor, this third edition contains new studies bound to intrigue even the most knowledgeable pro, including a complete reexamination of the late **Peter Griffin's work**, and the publication of the most accurate basic strategy and effects of removal charts ever devised (Amazon, 2005).

**Date:** January 16, 2009

**Title/Headline:** *Bizarre And Offensive Online Gallery Fearmongers For Terror Attacks In London, NYC*

**Abstract:** A bizarre, anonymous and offensive picture gallery currently appearing on the website of the London Telegraph newspaper that tells the story of a terrorist nuke attack on London has left many asking questions about its origin and meaning. The slide show features on a section dedicated to art, culture, film and music but seemingly holds no artistic credence whatsoever, comprising merely of a series of crude pictures designed to instill fear into the viewer. The only purpose of the gallery is presumably just a continuation of the incessant drone of fearmongering **propaganda from the establishment media and authorities about the imminent inevitability of a mass casualty terror attack**. Entitled “Blackjack,” the gallery begins with a date, June 20 at 2pm, followed by an MI5 logo and the text “MI5 report warns government of imminent terrorist attack”. This certainly makes sense because **MI5 and MI6 have proven themselves adept at controlling terrorist groups and carrying out attacks in the past, including paying Al-Qaeda \$100,000 in the mid-80's in a failed attempt to assassinate Libyan leader Muammar Gaddafi**. After we learn that the attack will be the work of “home grown extremists, Islamists and Christian doomsday cultists,” the date switches to **June 21 at 12pm as a nuclear bomb is loaded onto a white van in London**. As Cryptogon.com notes, the “fictitious” attack occurs during the Summer solstice, the name on the side of the van is **New Dawn Presentations and the logo is the Sun**. The white van also harks back to the Kingstar (controlled demolition company) van that was pictured near the exploded bus after the 7/7 London bombings. **After citizens panic buy groceries and flee London in droves, on June 22 at 8:03am, the nuke explodes in central London**. The images then show the devastation in the aftermath of the attack as the Houses of Parliament, Buckingham Palace and Big Ben lay in ruins. This is only the end of part one and in part two we are promised similar devastation with an image of millions fleeing New York City. **This disgusting and pointless “gallery” cannot be classed as culture, art or anything of the sort – it is nothing more than gratuitous and macabre pornography for those in establishment**, and believe me there are many, that yearn for another 9/11 or worse in order to unravel their contemptuous political agenda. What kind of sick mind created this and why was it allowed to feature so prominently on a major UK newspaper website? **This is vile, vulgar propaganda and downright offensive, especially to the millions of people who live in London and New York City and have already suffered terrorist attacks, both of which were carried out with the complete complicity of the British and U.S. governments, within the past decade** (Watson, 2009).

**Date:** January 26, 2009

**Source:** Prison Plane, Paul Joseph Watson

**Title/Headline:** *Blackjack Part 2: Telegraph Continues To Run Vulgar Propaganda*

**Abstract:** Despite calls, questions and complaints to the UK Telegraph as to the purpose and origins of a bizarre, offensive and crudely put together “photo gallery” depicting a nuclear attack on London, the newspaper is now featuring **part two of “Blackjack” on its website, which portrays six major cities being nuked before a fascist “Union of North America” is implemented**. As we revealed in our previous story, the first installment of the gallery featured on a section of the Telegraph website dedicated to art, culture, film and music but seemingly held no artistic credence whatsoever, comprising merely of a series of crude pictures designed to instill fear into the viewer. The series of images is also replete with occult symbols with which those who have researched the Illuminati will be familiar. In the second part

of the series, **at 8:03am on June 22nd six cities, New York City, Washington DC, Toronto, Mexico City, Portland, and Los Angeles, all suffer a nuclear attack as mushroom clouds are depicted rising over the skyscrapers.** The crumbling remains of the cities are shown one week later. The final few images show a revised US flag with five stars in the middle, with black fighter jets roaring overhead as well as a “Department of Homeland Security Emergency Transmission” which tells people to “Stay at home and await further instructions”. The logo on the bottom right of the mock screenshot is of a Nazi-style eagle below the words “UNION OF NORTH AMERICA”. At the bottom of the logo are the words “Norvus Ordo Seclorum” or alternatively “Norvus Ordo Emporium” (the resolution isn’t high enough to make out the last word). **Norvus Ordo Seclorum translates as “new order of the ages” or more traditionally, “new world order”.** Presumably the message being sent is that a series of nuclear terror attacks will bring in a fascist style world government which will be headed by a union of America, Canada, Mexico and Britain. What on earth is the purpose of this “photo gallery”, who is the author and why is it being featured on a major UK newspaper website with no explanation whatsoever? Without proper clarification, this amounts to nothing more than bizarre fearmongering and propaganda. **It is also downright offensive to people who live in the seven cities being depicted as targets for the nuclear attacks.** According to readers who contacted and questioned the Telegraph as to the origin and meaning of the picture gallery, the response was belligerent and hostile. “I just called the Telegraph about the Blackjack Nuke scenario story they posted on their website,” wrote David Icke forum member “free at last”. **“No one wanted to talk about it and then after speaking to four different people the last guy got snotty and hung up the phone.”** “There is something behind this, they never even tried to play it down, just got aggressive with me.” “When I called he practically wanted to interrogate me on the phone and got very wound up that I dared to inquire about it, Who are you? What’s your business? I was asked and slammed the phone down on me,” he added. Another forum member who called the Telegraph was told “who are you and of what concern is this of YOURS?” “I informed him I was a concerned reader, it did not matter where I was from and I required some information re: the source of this “story”, an explanation as to why it was the LEAD story and how it was deemed “culture”. “I also asked “who is the regulators body that governs online content and how do I contact them?” ... He never answered this one.” Others who called the Telegraph received the same aggressive, interrogative overreaction when they asked about the gallery. But the questions need to keep being asked. This so-called “gallery” has no artistic merit whatsoever, so what is it doing in the “arts and culture” section of a major British newspaper? **Part 2 cannot even be considered to have a plot, it just shows a series of major cities being nuked and then amateurish photo-shopped images of Nazi-style symbols on flags and police uniforms. Is someone’s sick fantasy being afforded exposure on a major UK newspaper website or are we being prepared for something?** The rude and hostile response to people who have attempted to get clarification from the Telegraph only deepens the mystery (Watson, 2009).

**Date:** February 5, 2010

**Source:** Infowars, Steve Watson

**Title/Headline:** *Blackjack Part 3: Telegraph Continues Propaganda Piece, Depicts Concentration Camps, Martial Law*

**Abstract:** The London Telegraph is continuing to run a crude propaganda piece in it’s arts and culture section that depicts nuclear attacks on major cities, the formation of a world government, and a police state crackdown on citizens complete with concentration camps and the implementation of martial law. Now a third installment of the baffling piece depicts the fallout of nuclear attacks on London, New York City, Washington DC, Toronto, Mexico City, Portland, and Los Angeles. This time the piece has been photoshopped in the style of a comic book, perhaps in a poor attempt to give it the impression that it has some artistic merit. The Telegraph received a great deal of complaints after our first two articles. One of the first images shows a map marked “Teardrop – Eyes only” which features the flag of the newly formed “Union of North America” (UNA) – a new government composed of America, Canada, Mexico and Britain. Some men in suits, presumably representatives of the “UNA” are looking at map and “the glasseye reports”, which constitute the scale of destruction wrought on the attacked cities. These men seem to be pleased with situation stating “this has exceeded our wildest expectations” and calling for “phase 2”. **Clearly from this we are supposed to deduce that these men, representatives of the new world government, are somehow involved in the events that have taken place,** despite the fact that we were told religious extremist terrorists were the culprits. The next set of images depict an announcement by the UNA to citizens everywhere that the union has begun carrying out military attacks on China, Syria and Iran, who are now apparently somehow also to blame for the earlier nuclear attacks. What is the point of “Operation Blackjack”, why does it continue to run in the “arts and culture” section of a major British newspaper? Is someone’s sick fantasy being afforded exposure on a major UK newspaper website or are we being prepared for something? **Could it be that in the fictionalization of false flag terror, the creation of detention centers and the push for global government, someone is attempting to relegate such real world issues to the pages of a comic book?** As we previously highlighted, the rude and hostile response to people who have attempted to get clarification from the Telegraph only deepens the mystery (Watson, 2010).

## The Nuclear Bible: Nuclear Dictator Barrack Hussein Obama

**Intro:** Starting as early as Barack Obama's 2008 Democratic Presidential campaign against then New York Senator Hillary Clinton, Obama has been stating that the U.S. must attack Pakistan. Along with the warmongering rhetoric, Obama has acted in a rather bi-polar manner regarding the development and use of nuclear weapons in a preemptive strike against "terrorists". Should a nuclear attack occur at the Super Bowl on February 6, 2011, it will occur during Black History month, making it even harder for Americans to question Obama's decisions without being labeled as racist. Unfortunately, Obama will make the worst kind of history as he openly retaliates in a nuclear manner against Pakistan and others defenseless Middle Eastern nations. Obama's decision to retaliate against nuclear terror with nuclear terror will kill millions and will make Obama the most infamous U.S. President ever, and will eventually be used by Globalists to further drive a stake into the heart of race relations in America. After a preemptive nuclear attack, with no real evidence (like 9/11), the U.S.'s global reputation will be soiled to the point of no return. At this point, a lot of ignorant and racist people will lash out at African Americans due to Obama's genocidal policies, playing right into the hands of the Globalist's Divide and Conquer dialectic. One thing can be sure, Obama was chosen to play this part, and is likely destined to become the 1<sup>st</sup> Nuclear Dictator the World has ever seen. While it is impossible to know for sure, Obama's codename may be "Blackjack", which just happens to be the name of Chapter 21.

**Title/Headline:** *Obama, Clinton In New Flap, Over Nuclear Weapons*

**Abstract:** During the 2008 Democratic Presidential election, **Barack Obama ruled out the use of nuclear weapons to go after Al Qaeda or Taliban targets in Afghanistan or Pakistan** Obama, a first-term senator from Illinois, told a reporter after a Capitol Hill event that he **would not use nuclear weapons in those countries, an aide said "His position could not be more clear,"** said Obama spokeswoman Jen Psaki. **"He would not consider using nuclear weapons to fight terror targets in Afghanistan and Pakistan."** That position came a day after Obama vowed he would be willing to strike Al Qaeda targets inside Pakistan with or without the approval of the government of Pakistani President Pervez Musharraf. 2008 Democratic presidential candidate Chris Dodd, a senator from Connecticut, also criticized Obama, saying that over the last several days, "Senator Obama's assertions about foreign and military affairs have been, frankly, confusing and confused. He has made threats he should not make and made unwise categorical statements about military options." **"We are facing a dangerous and complicated world. The next president will require a level of understanding and judgment unprecedented in American history to address these challenges"** Dodd said (Holland, 2007).

**Date:** July 16, 2008

**Source:** CNN, Alexander Mooney

**Title/Headline:** *Obama Says Time To Rid World of Nuclear Weapons*

**Abstract:** Sen. Barack Obama on Wednesday said he wants to rid the world of nuclear weapons and pledged to fight emerging threats posed by biological and cyber-terrorism. **"It's time to send a clear message to the world: America seeks a world with no nuclear weapons," the White House hopefully said. "As long as nuclear weapons exist, we'll retain a strong deterrent. But we'll make the goal of eliminating all nuclear weapons a central element in our nuclear policy."** The remarks, delivered at Purdue University in Indiana before a roundtable discussion with foreign policy experts, come as the senator from Illinois is preparing for a trip abroad. Obama also is seeking to gain traction on national security issues. In a fact sheet distributed to reporters, Obama's campaign said he will work to eliminate all nuclear weapons, but will not commit the United States to giving them up while other states retain them. Going after one of John McCain's signature issues, the war in Iraq, the presumptive Democratic presidential nominee said invading the country after the September 11, 2001, attacks has allowed other emerging threats to develop. **"Instead of taking aggressive steps to secure the world's most dangerous technology, we have spent almost a trillion dollars to occupy a country in the heart of the Middle East that no longer had any weapons of mass destruction,"** he said. **"It's time to update our national security strategy to stay one step ahead of the terrorists -- to see clearly the emerging threats of our young century and to take action to make the American people more safe and secure. "It's time to look ahead -- at the dangers of today and tomorrow rather than those of yesterday. America cannot afford another president who doesn't understand the threats that confront us now and in the future,"** he said. Obama, who plans to visit Europe and the Middle East this month, said nuclear terrorism is "the gravest danger we face," and said he would seek to rally international support to place increased pressure on Iran and North Korea over their apparent nuclear ambitions. **"Both of these nations have a history of support for terror,"** he said. **"Both should face strong and increasing sanctions if they refuse to verifiably abandon their illicit nuclear programs. And both demand sustained, aggressive and direct diplomatic attention from the United States, and that's what I'll provide as president."** The presidential candidate also pledged to protect the country from the threat of biological and cyber attacks. **"We know that the successful deployment of a biological weapon -- whether it is sprayed into our cities or spread through our food supply -- could kill tens of thousands of Americans and deal a crushing blow to our economy,"** he said. The campaign also said

**Obama will seek to secure all nuclear weapons materials in four years and to increase funding by \$1 billion a year to make sure nuclear weapons are removed from vulnerable sites around the world.** The scene of Obama's remarks was no accident -- Indiana is a state that has long voted Republican in presidential elections but one the Democrat's campaign is hoping to make competitive this cycle. Taking part in the roundtable discussion with Obama was Indiana's Democratic U.S. senator, Evan Bayh, a popular figure from a powerful political family. Obama also went out of his way to praise Indiana's other senator, Republican Dick Lugar. The two teamed up in the Senate on legislation seeking to curb the threat of loose nuclear weapons. Former Sen. Sam Nunn of Georgia also joined Obama in the discussion. Nunn is considered one of the most respected Democratic voices on national security issues and, along with Bayh, is said to be on Obama's short list for vice president. Shortly after Obama concluded his remarks, the McCain campaign released a letter signed by 10 retired admirals and generals touting the senator from Arizona's national security credentials. **"This country has learned the peril of treating terrorists and their state sponsors as little more than a law enforcement problem,"** the letter said. **"We are unanimous in our view that the failures of the past should not be repeated, and we believe that John McCain's long record of national service, and his demonstrated judgment on matters of national security, make clear who can best defend this country abroad, and assure peace and prosperity at home."** The retired military officials who signed the letter were Navy Adm. Ronald J. Hays, Navy Adm. James L. Holloway, Navy Adm. Jerome L. Johnson, Marine Corps. Gen. P.X. Kelley, Army Gen. James J. Lindsay, Air Force Gen. John Michael Loh, Navy Adm. Leighton W. Smith, Army Gen. Carl Stiner, Coast Guard Vice Adm. Donald C. "Deese" Thompson and Coast Guard Vice Adm. Howard B. Thorsen (Mooney, 2008).

**Title:** Albright Agrees: Terrorists Will Test Obama

**Abstract:** Former Secretary of State, Madeline Albright, confirmed Joe Biden notion that Obama would be tested by a generated international crisis. When talking to CNN's John Roberts she stated, **"It's just a statement of fact. In my book, I talk about the fact that there are a lot of big issues out there, but also something unexpected. You always have to be prepared for that"** (Pedraza, 2008).

**Date:** November 11, 2008

**Source:** NPR News

**Title:** *Madeleine Albright Has Advice For Obama*

**Abstract:** NPR reported that Madeline Albright stated the following: **"I think that the big issues are still how to fight terrorism without creating more terrorists, how to deal with the broken nuclear non-proliferation system, how to restore the good name of democracy, how to deal with the negative aspects of globalization, the growing gap between the rich and the poor. And all those issues - energy, environment, food prices - they have not gone away. And then, as I said in my book, you have to expect the unexpected. So, there's - I'm so glad we have Barack Obama to deal with the issues because this is going to be a very hard presidency** (NPR, 2008).

**Title/Headline:** *Barack Obama Is Warned To Beware Of A 'Huge Threat' From Al-Qaeda*

**Abstract:** Security officials fear a 'spectacular' during the transition period. Barack Obama is being given ominous advice from leaders on both sides of the Atlantic to brace himself for an early assault from terrorists. General Michael Hayden, director of the CIA, this week acknowledged that there were dangers during a presidential transition when new officials were coming in and getting accustomed to the challenges. But he added that no "real or artificial spike" in intercepted transmissions from terror suspects had been detected. President Bush has repeatedly described the acute vulnerability of the US during a transition. **The Bush Administration has been defined largely by the 9/11 attacks, which came within a year of his taking office. His aides have pointed to al-Qaeda's first assault on the World Trade Centre, which occurred little more than a month after Bill Clinton became President in 1993.** There was an alleged attempt to bomb Glasgow airport in Gordon Brown's first days in Downing Street and a London nightclub attack was narrowly thwarted. Lord West of Spithead, the Home Office Security Minister, spoke recently of a "huge threat", saying: **"There is another great plot building up again and we are monitoring this."** Intelligence chiefs on both sides of the Atlantic have indicated that such warnings refer more to a general sense of foreboding than fear of an imminent or specific plan. **Referring to the attacks in 1993 and 2001, General Hayden told a Washington think-tank on Thursday night: "For some people two data points create a trend line. For others, there may be more hesitation to call it that."** He said that the chief danger comes from remote areas in Pakistan that border Afghanistan. **"Today virtually every major terrorist threat that my agency is aware of has threads back to the tribal areas. Whether it's command and control, training, direction, money, capabilities, there is a connection to the Fata [Pakistan's Federally Administered Tribal Areas]."** General Hayden said that al-Qaeda remained a "determined, adaptive enemy" operating "from its safe haven in Pakistan". He added: **"If there is a major attack on this country it will bear the fingerprints of al-Qaeda."** He said that the border region remained the base of al-Qaeda's leadership, which had developed a more durable structure and a deep reserve of skilled operatives. **"Al-Qaeda, operating from its safe haven in Pakistan's tribal areas, remains the most clear and present danger to the safety of the United States,"** General Hayden said. The hunt for al-Qaeda leader Osama bin Laden "is very much at the top of CIA's priority list," he added. **"Because of his iconic stature, his death or capture clearly would have a significant impact on the confidence of his followers."** The CIA chief also suggested that the terror group was seeking to recruit Western-looking operatives who would not cause attention if they were standing in airport screening queues. Hours after he spoke, a suspected US missile attack killed 12 people in Pakistan, including five foreigners. Such strikes are hugely controversial, with Islamabad claiming that they fuel anti-American extremist groups. But Mr Obama has been clear that he wants to pursue al-Qaeda aggressively across the Afghan border. **In Britain, security officials say that there is genuine concern that al-Qaeda will attempt a "spectacular" in the transition period, but suggest**

that it may be aimed more at Mr Bush than Mr Obama. “As far as we know there is nothing from the intelligence world to indicate that anything has changed dramatically in recent months to put us on alert for an attack at the moment,” a source said. The present threat level is “severe”, which is the second-highest alert status. But a senior counterterrorism official suggested last month that this should be regarded as “the severe end of severe”. This would point to Britain facing a terrorist threat nearly as high as the period in the summer of 2005 when terrorists killed 52 people on London’s transport network on July 7 and attempted a similar attack on July 21. Britain and the US are sharing all intelligence on suspected terrorist activity because of the high risk of a plot involving transatlantic flights. Al-Qaeda is understood still to be obsessed with mounting an attack using passenger airliners. **There have also been warnings of al-Qaeda interest in developing a chemical, biological, radiological or nuclear (CBRN) device. The US has anti-CBRN units on constant patrol in main cities. Al-Qaeda is known to be experimenting with biological agents, particularly anthrax, which they acquire from dead animals and then create cultures. The key man involved in these experiments is Abou Kabbah al-Masri, who was engaged in the biological trials including tests on rabbits that were uncovered in Afghanistan when the Taleban were overrun after the US invasion in 2001.** James Lewis, a security expert with the Centre of Strategic and International Studies in Washington, said that al-Qaeda may wish to provoke a reaction from the next US Administration designed to show the rest of the world that “America is still the evil crusader”. Last month Joe Biden, the Vice-President-elect, told campaign donors: “**Watch, we’re going to have an international crisis, a generated crisis, to test the mettle [of Mr Obama].**” Mr Lewis said that many Muslims were intrigued by Mr Obama’s arrival in the White House and “there may be political downsides” in attacking America too early. “It is hard to fathom the level of sophistication of their operatives and whether the chatter we intercept is dissent or intent. If they are going to do something, they may wait until after the inauguration. “At present there are policemen standing on policemen at possible targets. That won’t be the case three months into the new administration” (Baldwin & Evans).

**Title/Headline:** *Pakistan And Its Nuclear Weapons Loom Large Over Obama Administration*

**Abstract:** Pakistan and its nuclear weapons are back in the centre of the U.S. foreign policy frame as a steady stream of reports from think tanks and newspapers build the case for President-elect Barack Obama to recognise and act urgently with regard to the potential threat from the troubled state. The New York Times Magazine in an extensive article headlined Obama’s Worst Pakistan Nightmare says the biggest fear is not Islamist militants taking control of the border regions. **It’s what happens if the country’s nuclear arsenal falls into the wrong hands.** And it then takes a trip to the Chaklala garrison where the headquarters of Strategic Plans Division, the branch of the Pakistani government charged with protecting its growing arsenal of nuclear weapons, are located and led by Khalid Kidwai, a former army general. “**In the second nuclear age, what happens or fails to happen in Kidwai’s modest compound may prove far more likely to save or lose an American city than the billions of dollars the United States spends each year maintaining a nuclear arsenal that will almost certainly never be used, or the thousands of lives and hundreds of billions of dollars we have spent in Iraq and Afghanistan to close down sanctuaries for terrorists,**” writes David E. Sanger, author of a forthcoming book: “The Inheritance: The World Obama Confronts and the Challenges to American Power”. **The article quotes a Bush administration official as saying there were two ways Pakistan’s weapons could fall into the wrong hands. One was when the Pakistani military was moving its tactical weapons closer to the frontlines when it could be much more vulnerable to seizure by militants.** A time of heightened tensions with India, as is the situation now following the attacks in Mumbai, would be a top reason for Pakistan to begin moving its weapons. Could that be one of the objectives of the Mumbai attacks, the New York Times asks. A second route for al Qaeda would be to infiltrate Pakistan’s nuclear labs, put in sleeper cells and then squirrel away the material. “**It is relatively easy to teach Kidwai’s security personnel how to lock down warheads and store them separately from trigger devices and missiles, training that the United States has conducted, largely in secret, at a cost of almost \$100 million.**” “It is a lot harder for the Americans to keep track of nuclear material being produced inside laboratories, where it is easier for the Pakistanis to underreport how much nuclear material has been produced, how much is in storage or how much might be ‘stuck in the pipes’ during the laborious enrichment process.” And it would be nearly impossible to stop engineers from walking out the door with the knowledge of how to produce fuel and bomb designs. Last month, the blue-ribbon Commission on Prevention of Weapons of Mass Destruction Proliferation and Terrorism submitted its report, with its members making clear that for sheer scariness nothing could compete with what they heard in a series of top-level intelligence about the risk of Pakistan’s nuclear technology going awry. “**Were one to map terrorism and weapons of mass destruction today, all roads would intersect in Pakistan. It has nuclear weapons and a history of unstable governments, and parts of its territory are currently a safe haven for al Qaeda and other terrorists,**” the commission said. It added that it had singled out Pakistan because it believed it constituted a serious challenge to America’s short-term and medium-term security. “**Pakistan is an ally, but there is a grave danger it could also be an unwitting source of a terrorist attack on the United States — possibly with weapons of mass destruction,**” it said, adding it must top the list of priorities for the next President and Congress. Does this steady drumbeat of reports in the days leading up to Obama’s inauguration foreshadow an even more activist, muscular policy toward Pakistan? Reading through these reports - there is another by Shuja Nawaz urging the new administration to **declare Pakistan’s Federally Administered Tribal Areas as part of America’s Afghan war theatre because it is the most dangerous spot on earth** - you would think the India-Pakistan tensions of the past month are a sideshow. For all of New Delhi’s fulminations against Pakistan and the sense of outrage over the Mumbai attacks, the pressure it can bring to bear on its troubled neighbour is limited compared with America’s. But is this all justified or is there a bit of hype here? The New York Times article quotes Kidwai, the former general with the keys to the nuclear arsenal, as saying that its security systems were foolproof. “**Please grant to Pakistan that if we can make nuclear weapons, we can also make them safe,**” he says. And as he points out, should the United States really be giving lectures on nuclear safety when **the U.S. Air Force lost track of some of its own weapons in 2007 for 36 hours, flying them around unguarded to air bases and leaving them by the side of the tarmac?** Or how can you be so sure about U.S. intelligence establishment reports about Pakistan’s arsenal being at risk, when it was so wrong about Iraq’s nuclear weapons? (Reuters, 2009).

**Title/Headline:** *Has President Obama, the Constitutional Lawyer, Committed Open Treason?*

**Abstract:** When the president of the United States, Barack H. Obama accepted rotating status as chairman of the United Nations Security Council, he committed high treason... not only a direct violation of article 1 section 9 clause 8 of the Constitution for the United States of America, which states emphatically: “No title of nobility shall be granted by the United States; and no person holding any office of profit or trust under them, shall without consent of Congress accept of any present, emolument, office, or title, of any kind whatever, from any King, Prince, or foreign State.” But this act by the President also has violated the 13th article of amendment that was duly ratified by March of 1819, but with secrecy and by active subterfuge, it was replaced by Lincoln’s 14th amendment right after the Civil War. This duly ratified original 13th amendment states the following: “If any citizen of the United States shall accept, claim, receive, or retain any title of nobility or honour, or shall without the consent of Congress, accept and retain any present, pension, office, or emolument of any kind whatever, from any emperor, king, prince, or foreign power, such person shall cease to be a citizen of the United States, and shall be incapable of holding any office of trust or profit under them, or either of them.” Article 1 section 9 describes what shall not be allowed, but, it puts forth no punishment for such actions on the part of an elected government official... the original 13th amendment however, which was proposed in 1810... and some would say was a large part of the reason for the War of 1812, not only states that an elected government official cannot accept this kind of gratuity or office, but also states, if so done, the official would lose all possibility of office present and future, as well as citizenship, and if the circumstances are grave enough could be tried for treason and ultimately hung. In either case I do not recall there having been a bill, resolution, or memorial, put forth by Congress, granting this president its permission for accepting the position of chairman of the Security Council of the United Nations... **Without this permission and open discussion about it, prior to the granting of the permission... President Barack H. Obama is in violation of article 1 section 9 clause 8 of the Constitution for the United States of America... at the very least.** The creation of the United Nations at the Presidio in San Francisco in 1945, was done by treaty power. **It is not part of the United States in any way other than by treaty in the form of an international “Peace” treaty. The Constitution states that treaties are considered part of Constitutional law when they are enacted by an act of Congress and signed by the president.** They are not etched in stone however, and as with all treaties, as was addressed in 1803 by the Supreme Court in the landmark Marbury vs Madison, which states that a law, (by law I mean act of Congress, and no treaty can become law without an Act of Congress), cannot void the Constitution. **The Constitution however can void any law including treaties, if that law is repugnant to the Constitution. When Obama took the position of Chairman of the UN Security Council... he violated Article 1 Section 9 Clause 8 by accepting leadership in an organization that is clearly at odds with the Constitution for the United States of America (Coyote, 2009).**

**Source:** The European Union Times

**Title/Headline:** *Prepare For Rebellion, Obama Orders US-Canadian Troops*

**Abstract:** Kremlin position papers presented to Prime Minister Putin today on his upcoming meeting with NATO Secretary General Anders Fogh Rasmussen state that the European-US military alliance has authorized an ‘emergency request’ from President Obama to utilize American and Canadian NATO troops to put down what is expected to be a “rebellion” after the expected January, 2010 ‘declaration of bankruptcy’ by the State of California. According to these reports, Obama’s fears of rebellion are due to the economic health of California (the United States largest State) after the 3rd largest US State, New York, declared a ‘fiscal emergency’ and refused to release to its cities and towns over \$750 Million due them this past week with the Governor of New York, David Paterson, declaring “I can’t say this enough: The state has run out of money.” New York’s fiscal crisis, however, pales in comparison to California’s, where new economic data points to its expected 5-year budget deficit reaching the staggering amount of over \$100 Billion which Russian economists warn will result in budget cuts so steep as to create ‘social chaos’ among this States 36 million citizens. **Reports from the United States are, indeed, confirming the mass movement of military supplies and thousands of Canadian Special Forces Troops to California from the Canadian Forces Base of Petawawa to join their American military**

counterparts, with 'secondary' reports stating that at least 1,000 tanks are massing their too. Russian Military Analysts are further warning in this report that Obama has decided to implement the feared RAND Corporation (one of the most powerful research arms of the US Military-Industrial-Homeland Security Complex) police state 'blueprint' titled "Stability Police Force for the United States: Justification and Creating U.S. Capabilities" that has been modeled on the Nazi German secret police forces organization Geheime Staatspolizei (Gestapo) meant to 'control and demoralize' any opposition to the state. Even worse for these American people is the legalization process currently embedded in their new health care legislation which will see everyone of them becoming virtual slaves of their government, and as warned about by the Fox News Service in their report titled "Be Afraid, Be Very Afraid of Obama's Latest Big Brother Plan" and which says: "Under the Democrats' national health care scheme not only would OPM be charged with overseeing and administering federal employees health care but they will have the added charge of administering civilian federal health care as well. What does that mean? Basically, that Americans will be treated as "civil servants." Are you starting to see the danger? The more government seeks to control our lives the more Orwellian it gets. This "big brother" mentality that "government knows best" and that it is their mission to provide cradle to grave "care" of its citizens will doom America as we know it. Under such a system the individual becomes meaningless and the state becomes the entity upon which we are all forced to rely." Unfortunately, with or without these Americans succumbing to the loss of their Nation through the establishment of a police state, their fate appears to have already been sealed as new reports are showing that by their continued saving they are failing to provide China with the money needed through the buying of goods to purchase US bonds to keep them afloat, and which has led to the incredible circumstance of the United States, through its Federal Reserve and other financial entities, becoming the largest buyers of their own debt. Not being seen in all of these dire events by the American people is that their present collapse as an independent Nation was engineered by their own President Obama, who working in concert with the previous President, George Bush, sold them out to Wall Street by packing his administration with banking insiders have, literally, pillaged the entire economic future of the United States for the benefit of their elite classes and, incredibly, supported these once collapsing banks with over \$352 Billion in drug money. And so grave has it become for ordinary Americans that new reports are now showing that in what was once the most powerful Nation on Earth, there now exists an 'epidemic' of child hunger and one their fastest growing cities is a tent-town of newly homeless named "Obamaville" in a stark reminder of the thousands of shanty towns named Hoovervilles built during the Great Depression. For those American people believing their propaganda media reports that a recovery is underway they couldn't be more mistaken, as newly released data shows that of the millions of jobs lost these past 2 years almost all of them are permanent. And, as always, these people are being kept from knowing the full and brutal truth of their economic collapse with reports also showing that the latest unemployment figures released by the US government were faked. But to the greatest fears of these Americans should be the newly released information showing that US scientists have perfected, for the first time in history, a new drugless technique to wipe from these people's minds their very own memories, and as we can read: "In a scientific experiment that brings to mind the memory-erasing escapade in the 2004 film "Eternal Sunshine of the Spotless Mind," scientists have blocked fearful recollections in human participants, sans drugs. The results challenge the view that our long-term memories are fixed and resistant to change." Russian Military Psychologists have long warned that the West's longest term plan to control their soon to be rebellious populations lie in memory altering techniques such as are being perfected in the United States and due to be deployed through their mass media in radio programmes, television, and movie broadcasts outlets as these Nations past reliance on the drugging of their citizens through mass fluoridation is becoming more and more ineffectual. Important to note too is that the economic collapse of the United States is just one of the catastrophic dangers they are facing, as this past week the giant plant genetics company Bayer admitted in a US Federal Court that it has been "unable to control the spread of its genetically-engineered organisms despite 'the best practices' to stop widespread contamination" and which may very well see the destruction of the American's ability to feed themselves as these 'monster plants' reap their destruction on Nature. To all of these events, it is not in our knowing if the American people will awaken from their self induced slumber to arise, as they have many times throughout their history, to reclaim for themselves what is now rapidly being stolen from them. But, and if their present actions are a predictor to what they may do in the future, one can only fear for them as they are marched in lockstep towards an abyss they only fail to see because they won't open their eyes (The European Union Times, 2009).

**Title/Headline:** *Giuliani Says No 'Domestic Terror Attacks' Under Bush*

**Abstract:** Echoing recent comments from former Bush administration officials, Rudy Giuliani defended former President George Bush's record on terrorism Friday, saying the country was not subjected to domestic terror attacks when he was in office. "We had no domestic attacks under Bush; we've had one under Obama," Giuliani said on ABC's Good Morning America. Democrats and other political observers were quick to question Giuliani's comments, wondering how the former New York City mayor would classify the attacks of September 11, 2001, as well as Richard Reid's attempted shoe-bombing in late 2001. "Giuliani seems to have forgotten about the Sept. 11, 2001 attacks and shoe bomber Richard Reid," ABC's George Stephanopoulos, who conducted the Giuliani interview, wrote on his

blog. Giuliani's comments are similar to those of former White House Press Secretary Dana Perino and former Dick Cheney aide Mary Matalin, both of whom have said in recent weeks no terrorism attacks occurred under Bush. **"We did not have a terrorist attack on our country during President Bush's term,"** Perino told Fox News last November. **In December, Mary Matalin - a former senior adviser to Vice President Dick Cheney - made comments that seemed to place the 9/11 attacks under President Clinton's watch. "We inherited a recession from President Clinton and we inherited the most tragic attack on our own soil in our nation's history,"** Matalin a CNN analyst, told John King on CNN's "State of the Union" last month (Mooney, 2008).

**Title/Headline:** *President Obama Signs Executive Order Establishing Council of Governor*

**Abstract:** Obama signed an Executive Order establishing a Council of Governors to **strengthen further the partnership between the Federal Government and State Governments to protect our Nation against all types of hazards.** When appointed, the Council will be reviewing such matters as involving the National Guard of the various States; homeland defense; civil support; **synchronization and integration of State and Federal military activities in the United States;** and other matters of mutual interest pertaining to National Guard, homeland defense, and civil support activities. **The bipartisan Council will be composed of Ten State Governors who will be selected by the President to serve two year terms.** In selecting the Governors to the Council, the White House will solicit input from Governors and Governors' associations. Once chosen, the Council will have no more than five members from the same party and represent the Nation as a whole. Federal members of the Council include the **Secretary of Defense, the Secretary of Homeland Security, the Assistant to the President for Homeland Security and Counterterrorism, the Assistant to the President for Intergovernmental Affairs and Public Engagement, the Assistant Secretary of Defense for Homeland Defense and Americas' Security Affairs, the U.S. Northern Command Commander, the Commandant of the Coast Guard, and the Chief of the National Guard Bureau.** The Secretary of Defense will designate an Executive Director for the Council. The Council of Governors will provide an invaluable Senior Administration forum for exchanging views with State and local officials on strengthening our National resilience and the homeland defense and civil support challenges facing our Nation today and in the future. The formation of the Council of Governors was required by the Fiscal Year 2008 National Defense Authorization Act which stated, **"The President shall establish a bipartisan Council of Governors to advise the Secretary of Defense, the Secretary of Homeland Security, and the White House Homeland Security Council** on matters related to the National Guard and civil support missions" (Whitehouse, 2010).

**Title/Headline:** *Obama's First State Of The Union Speech In Scheduling Limbo*

**Abstract:** President Obama's first State of the Union address should be coming soon -- but exactly how soon is still anyone's guess. The speech has already sparked protests for potential scheduling conflicts with TV's most popular programs. **The White House has announced that the president won't deliver the address on the same night as the premiere of "Lost,"** relieving the legions of fans of the popular ABC series, which is scheduled to debut Feb. 2. As of Tuesday, the **White House still had not said when it will come, though a senior congressional leadership aide told Fox News that Obama is planning to speak in the week after the Super Bowl, Feb. 7.** Obama apparently is trying to give congressional Democrats more time to finish negotiations on a final health care bill, so he can tout it in his speech. The House passed its version in November and the Senate on Christmas Eve. But negotiators are struggling to find common ground between the versions, which differ in how to pay for the entitlement program, among other sticking issues (Clark, 2010).

**Barrack Obama suspended the State of the Union speech till after Super Bowl, then changed his mind, and then changed his mind yet again. In a turnabout never seen before by a sitting U.S. President, Obama was the latest in giving a State of the Union speech, flip-flopping on the date more than once indicating that there was some internal discussion as to whether they would nuke the Super Bowl in 2010 or 2011. Obama gave his speech on January 27, 2009, rather than after the February 7<sup>th</sup>, 2010, Super Bowl date.**

**Date:** January 20, 2010

**Source:** Bloomberg News, Lorraine Woellert

**Title/Headline:** *FBI Chief Tells Congress Terrorist Threat Grows More Worrisome*

**Abstract:** The head of the FBI said the threat of a terrorist attack against the U.S. is becoming more worrisome "with each passing day." Robert Mueller, director of the Federal Bureau of Investigation, told the Senate Judiciary Committee that law enforcement agencies have disrupted several plots in the past year as terrorists "remain determined to strike the United States." "As the Christmas Day attempted bombing illustrates, the threats we face are becoming more diverse and more dangerous with each passing day," Mueller testified. **"We not only face threats from al-Qaeda, but also from self-directed groups not part of al-Qaeda's formal structure."** The Obama administration admitted mistakes in failing to stop an alleged bomber before he boarded a Christmas Day flight to Detroit. Several congressional committees are probing security lapses in the Dec. 25 incident. Umar Farouk Abdulmutallab, a 23-year-old Nigerian, has been charged with trying to destroy Northwest Flight 253 and kill its 290 passengers as the plane approached Detroit. He has pleaded not guilty. **"We acknowledge that errors were made and that processes need to be improved,"** Patrick Kennedy, a State Department undersecretary, told the Judiciary Committee. At one point, a U.S. embassy employee misspelled the Abdulmutallab's name, helping him avoid detection. "We slipped up," Kennedy said. The plot failed when the explosives he was carrying failed to detonate and passengers and crew aboard the flight restrained him. A White House report released Jan. 7 said **"there was not a comprehensive or functioning process for tracking terrorist threat reporting and actions taken"** that would hold agencies accountable for running

down leads. "It can be tempting to forget that it is always easier to connect the dots in hindsight," said Senate Judiciary Chairman Patrick Leahy, a Democrat from Vermont. "It was not our intelligence agencies who first raised the alarm about the suspect who tried to blow up the Northwest Airlines flight. It was the suspect's own father, a Nigerian, who turned him in." Homeland Security Secretary Janet Napolitano is set to appear before the Senate Homeland Security and Governmental Affairs Committee today. The Senate Foreign Relations Committee, Commerce Committee and Select Committee on Intelligence are also scheduled to hear from administration officials this week. **Mueller said the U.S. faces threats from "homegrown terrorists" who live in the communities they attack and train on their own. He said law enforcement agencies have disrupted terrorist plots in Georgia, Illinois, Massachusetts, Minnesota, Colorado, Texas and elsewhere in the past year. "We cannot discount the lone offender threat here at home -- the individual who may take up arms and strike without notice," Mueller said (Woellert, 2010).**

**Title/Headline:** *Obama Gets 'F' on Stopping Spread Of Weapons Of Mass Destruction*

**Abstract:** A bipartisan, independent commission on stopping the spread of weapons of mass destruction says that the Obama administration has failed in its first year in office to do enough to prevent a germ weapons attack on America or to respond quickly and effectively should such an attack occur. In a 19-page report card being published Tuesday, the Commission on the Prevention of Weapons of Mass Destruction, Proliferation and Terrorism, chaired by former Senators Bob Graham, a Democrat from Florida, and Jim Talent, a Missouri Republican, gives the new administration the grade of "F" for failing to take key steps the commission outlined just over a year ago in its initial report. Specifically, the commission concludes that the Obama administration, like the three administrations before it, has failed to pay consistent and urgent attention to increasing the nation's ability to respond quickly and effectively to a germ attack that would inflict massive casualties on the nation. **The commission repeated its warning that unless nations acted decisively and urgently, it was more likely than not that a WMD will be used in a terrorist attack somewhere in the world by the end of 2013, and that the terrorists' weapon of choice would be biological, rather than nuclear.** The administration's delayed response to the H1N1 virus, the report concludes, demonstrated that the United States was "woefully behind in its ability to rapidly produce rapidly vaccines and therapeutics, essential steps for adequately responding to a biological threat, whether natural or man-made." Even with time to prepare, the report noted, the epidemic peaked "before most Americans had access to vaccine." And a bio-attack, it warned, would have no such warning. The administration's lack of urgency was also reflected in its lack of priority on producing and distributing enough vaccines and other medical countermeasures for Americans, its reluctance to insist that hospitals have enough surge capacity to treat people who would be infected in a bioterror attack, and the lack of a national plan to coordinate federal, state and local efforts following a bioterror strike, the document asserts. **Ultimately, the commission chairman and vice chairman say, the "lack of preparedness" and "consistent lack of action" reflect "a failure of the U.S. government to grasp the threat of biological weapons."** Unlike its effort to prevent a nuclear attack, the Obama administration has shown "no equal sense of urgency" about preventing or responding to germ warfare that might cause comparable death and suffering, the commission concludes. **The report assigns 17 grades that it says highlight the issues of greatest priority in protecting Americans from WMD. The commission gave the administration a "D+" for its efforts to tighten oversight of high-containment labs in which experiments involving the deadliest pathogens are conducted.** There were still far too many Federal, state, and local agencies regulating germs in sometimes conflicting ways, it states. The commission also gave Congress a failing grade for failing to consolidate the estimated 82 to 108 committees and subcommittees that oversee some part of the Department of Homeland Security. **"Virtually no progress has been made since consolidation was first recommended by the 9/11 Commission in 2004," the report asserts.** The Obama administration disputed the findings of the report Tuesday, arguing that the president has accomplished a "great deal" in his first year in office. **White House spokesman Nick Shapiro cited a recently signed executive order establishing "federal capability to rapidly provide medical countermeasures to supplement state and local response in the event of a large-scale biological attack."** He said Obama would launch a new initiative aimed at addressing potential "public health threats" during his State of the Union address Wednesday. The Graham/Talent WMD Commission, as it is known, is a legacy of the 9/11 Commission, which recommended its creation to examine WMD proliferation threats in its own report. **In December, 2008, the WMD commission concluded in its final report that American national security faced ever growing threats from unconventional weapons, and from biological weapons in particular. Its report, "World at Risk," unanimously concluded that bioterrorism was the most likely WMD threat the nation confronted given the exponential growth of biological technology and the stated desire of Al Qaeda and other terrorist groups to acquire such weapons.** It called upon the administration to take 13 steps to reduce America's vulnerability to such an attack. The new report card assesses the progress that the Obama administration has made in implementing its recommendations. **The report is not uniformly negative. It gives the Administration high marks -- an "A" -- for the reviews it has conducted into how best to store and secure dangerous pathogens, and two "A-minus" grades for appointing a WMD coordinator and restructuring how the White House oversees homeland security issues.** But it warns that such steps are not commensurate with the threat the nation faces from terrorist groups searching for unconventional weapons in asymmetrical warfare. Robert Kadlec, President Bush's former special adviser on bio-defense policy, declined to comment on the commission's failing grade in the area in which he worked, saying there was still "ample opportunity to provide more focus and resources" for bio-preparedness in the administration's remaining three years. **"This is a hard problem which deserves high priority," he said. Two defenders of the administration's policies, both of whom asked not to be identified by name because they were speaking without authorization, said that the Obama White House gave bio-defense and countering nuclear**

proliferation high priority. One official said that Obama's second presidential security directive -- the first being the reorganization of the White House national security apparatus -- mapped out a national strategy to defend the nation against biological attacks. He also predicted that the administration would seek increases in its new budget for bio-defense and global surveillance programs. Having been extended for one more year of work in 2009, the 9-member WMD Commission is disbanding after issuing this final report card. **But staff members said that its chairman and vice-chairman intend to form a non-profit organization to continue pressing the government to do more to counter WMD threats** (Miller, 2010).

**Title/Headline:** *After Pledging To 'Reverse' Their Spread, Obama Increases Nuclear Weapons Budget*

**Abstract:** "I have embraced the vision of John F. Kennedy and Ronald Reagan through a strategy that reverses the spread of [nuclear] weapons, and seeks a world without them," President Barack Obama claimed during his first State of the Union speech. "To reduce our stockpiles and launchers, while ensuring our deterrent, the United States and Russia are completing negotiations on the farthest-reaching arms control treaty in nearly two decades." Yet, **in the budget the Obama White House will send to Congress on Monday, the administration proposes a 10 percent spending increase on the nation's nuclear weapons budget, bringing the total to roughly \$7 billion**, according to McClatchy Newspapers. In a Friday op-ed published by *The Wall Street Journal*, Vice President Joseph Biden claimed that the increase is due in large part to the decay in nuclear stockpiles over the last decade, due mainly to neglect by the Bush administration. **"For as long as nuclear weapons are required to defend our country and our allies, we will maintain a safe, secure and effective nuclear arsenal,"** he wrote. **"The budget we will submit to Congress on Monday both reverses this decline and enables us to implement the president's nuclear-security agenda. These goals are intertwined."** The increased funding would also be used to modernize old facilities and retain the necessary staff to track nonproliferation issues and ensure weapons reduction agreements are upheld, McClatchy added. **"Our budget request is just one of several closely related and equally important initiatives giving life to the president's Prague agenda,"** Biden explained. "Others include completing the New START agreement with Russia, releasing the Nuclear Posture Review on March 1, holding the Nuclear Security Summit in April, and pursuing ratification and entry into force of the Comprehensive Test Ban Treaty." "Fascinating point: it took a Democratic president and a Democratic Congress to modernize the stockpile," The Atlantic's Marc Ambinder noted. **"The Bush administration's efforts in this regard failed. It remains to be seen how and whether the administration ties this achievement into a larger narrative about nonproliferation and national security"** (Webster, 2010).

**Title/Headline:** *Democrats Vulnerable on Terrorism, Republicans Say*

**Abstract:** **Republicans say they see weakness in President Barack Obama's approach to fighting terrorism -- and a winning issue for themselves in the November congressional elections. While Republicans have criticized Obama's national-security policies since he took office, the intensity has picked up in recent weeks.** They have focused on the administration's handling of the attempted Christmas bombing of a Northwest Airlines flight and the government's plans to try terrorism suspects in civilian courts. **The top Republican on the Senate Judiciary Committee, Jeff Sessions of Alabama, issued at least 15 statements assailing Obama's policies for combating terrorism.** Representative Lamar Smith of Texas, the top Republican on the House Judiciary Committee, said in an interview. Americans **"will vote for people who are strong on protecting American lives."** Obama administration officials in recent days have sought to blunt the Republicans' attacks by appearing on television talk shows and briefing reporters. **U.S. Attorney General Eric Holder sent letters to lawmakers today defending the administration's handling of the attempted Christmas day bombing.** Obama devoted part of his Jan. 27 State of the Union speech to showing he is focused on terrorist threats. "Let's put aside the schoolyard taunts about who's tough," Obama said. **The administration has been "filling unacceptable gaps" uncovered by the failed Christmas attack with better airline security,** he said, adding that hundreds of Al Qaeda fighters have been killed or captured in the last year. **Former Vice President Dick Cheney has repeatedly faulted Obama's plans to close the Guantanamo Bay, Cuba, prison for suspected terrorists and his rejection of waterboarding, or simulated drowning,** in interrogations Republicans said the Massachusetts vote, along with a nationwide poll by National Public Radio, indicate the issue is resonating. Respondents were almost evenly split on the question of whether **Obama's policies**

**have made the U.S. less safe.** The poll of 800 likely voters conducted Jan. 20-23 had a margin of error of plus or minus 3.46 percentage points. "It's a good potential issue to use in our fall campaigns," said Newhouse. **Republicans have focused on the administration's handling of Umar Farouk Abdulmutallab, accused of carrying explosives on the Dec. 25 Detroit-bound flight.** Sessions and 21 other Republican senators sent a letter to Obama saying Abdulmutallab shouldn't be tried in civilian court. They criticized authorities for reading him his rights and pursuing a criminal case, saying it may have "resulted in a missed opportunity to collect timely intelligence." **Obama said there was a "systemic failure" that allowed a suspect linked to an Al Qaeda group to board the plane.** Still, the administration said there's no indication any additional information would have been extracted in the military-justice system. **The administration has a "blind spot when it comes to prosecuting" the war on terror,** said Mitch McConnell of Kentucky, the Senate Republican leader, at a speech in Washington today. **The attempted plane bombing was "the most egregious example, but it was no isolated case."** Ken Gude, associate director of the international rights and responsibility program at the Center for American Progress, cited a fundraising letter sent by Representative Pete Hoekstra of Michigan, the top Republican on the intelligence committee. **It described the Obama administration as "weak-kneed liberals who have recently tried to bring Guantanamo Bay terrorists right here to Michigan!"** The administration needs to do more to sell its record to the public, Gude said (Blum, 2010).

**Title/Headline:** *Obama Anti-Terror Adviser Lashes Out At Lawmakers*

**Abstract:** President Barack Obama's top counterterrorism adviser lashed out at U.S. lawmakers, accusing them of using national security issues as a "political football" for their own gains. Republicans have accused the Obama administration of making mistakes in the handling of the arrest of Nigerian Umar Farouk Abdulmutallab, 23, who is accused of trying to blow up a Detroit-bound plan on Christmas Day. **"Quite frankly I'm tiring of politicians using national security issues such as terrorism as political football.** They're going out there, they're unknowing of the facts, and they're making charges and allegations that are not anchored in reality," John Brennan told NBC's "Meet the Press." **By charging Abdulmutallab in a criminal court and giving him legal rights, Republicans have argued that it prevented the intelligence community from obtaining information from him on al Qaeda and possible future U.S. terrorist attacks.** Brennan revealed that he briefed Republican lawmakers, including Senator Christopher Bond, the top Republican on the Senate intelligence committee, soon after the arrest on the handling of the suspect and they did not raise any concerns. "They were told about the fact of that cooperation as well as some information he was sharing," Brennan said. **"None of those individuals raised any concerns with me at that point. They didn't say, is he going into military custody? Is he going to be Mirandized?"** In a statement, Bond said if Brennan had told him of plans to read the suspect his legal rights, commonly called Miranda rights in the United States, he would have told him it was a mistake. **"The truth is that the administration did not even consult our intelligence chiefs ... so it's absurd to try to blame congressional leaders for this dangerous decision that gave terrorists a five-week head-start to cover their tracks,"** Bond said. Brennan said he would not compromise investigations by revealing sensitive intelligence information. **"There have been instances where information is shared with the Hill and we see it in the paper the next day,"** Brennan said, adding that FBI officials had appropriately handled the arrest. **"Those counterterrorism professionals deserve the support of our Congress and, rather than second-guessing what they are doing on the ground,"** he said. The office of House Republican Leader John Boehner said in a statement that Brennan made a short phone call to the lawmaker on Christmas Day but did not say the suspect would be read his Miranda rights. **"The courtesy call certainly does not remotely qualify as a 'briefing,'"** Boehner's office said, adding that Brennan gave "no substantive information" on the arrest (Reuters, 2010).

**Title/Headline:** *Palin: US Needs Commander, Not Professor*

**Abstract:** Former Republican vice presidential nominee Sarah Palin has sharply criticized US President Barack Obama over his national security policies. Speaking at a national convention of the "Tea Party" movement Saturday night, Palin slammed the first African American president of the US for his handling of the so-called war on terror. **She said that the Obama administration does not seem to understand the war on terror in the way it handled the recent attempt to bomb an airliner on Christmas Day.** Targeting the Democratic president, Palin boasted that it is time America had a commander in chief, not a professor at a lectern. Observers have described Palin as political novice who is gravely illiterate in international politics but very good at reading pre-rehearsed speeches, filled with negative rhetoric, aimed at mocking the political opposition. On economic recession, the Republican John McCain's running mate in the 2008 presidential election described Obama's proposed 2011 budget as 'immoral' for increasing the national debt, reiterating that the nation is drowning in debt. The convention in Nashville brought together hundreds of activists from the Tea Party group, which hopes to make a splash in the 2010 congressional elections and beyond. All 435 seats of the House of Representatives and more than a third of the 100 Senate seats are up for grabs next November. Democrats currently hold the majority in both houses. The movement takes its name from the historic protest against British taxation, the Boston Tea Party, one of the triggers of the American Revolution against the British colonial rule. **"This is the movement and America is ready for another revolution and you are a part of this,"** boasted Palin. McCain and Palin lost heavily to Obama in the 2008 presidential election, leaving the Grand Old Party floundering and leaderless. Palin was blamed by many Republicans for the landslide defeat of the Republican ticket due to her ignorance of international and current affairs. Amid speculations that Palin might make a bid for presidency in 2012, she brushed aside her own political ambitions saying that everyone had a role to play. **"You don't need a proclaimed leader as if we are all a bunch of sheep and looking for a leader to progress this movement,"** she said. Recent reports indicate that Palin received advice from her husband, a fisherman, in governing the State of Alaska (Press TV, 2010).

**Title/Headline:** *Joestradamus: Biden Predicts Large-Scale Terror Attack On U.S. 'Unlikely'*

**Abstract:** Vice President Joe Biden made his latest eyebrow-furrowing prediction declaring confidently that another Sept. 11-size terror attack is "unlikely" in the U.S., despite signs that Al Qaeda and other terrorist groups are actively planning more attacks. Top intelligence officials told congressional lawmakers early this month that the terror network can be expected to try another attack in the next three to six months. But Biden, interviewed on CNN, downplayed the risk. **"Look, let me put it this way. The idea of there being a massive attack in the United States like 9/11 is unlikely, in my view,"** the vice president said. "What's happening, particularly with Al Qaeda and the Arabian Peninsula, they have decided to move in the direction of much more small-bore but devastatingly frightening attacks," he said on Wednesday. **"The concern relates to somebody like a shoe bomber or the underpants bomber, the Christmas attack or someone just strapping a backpack on them with explosives that are indigenous"** (Fox News, 2010).

**Jonathan Karl:** Another thing from the vice president, he also addressed the possibility of another 9/11-style attack. (Video Clip Starts)

**Joe Biden:** The idea of there being a massive attack in the United States like 9/11 is unlikely, in my view. But if you see what's happening, particularly with Al Qaida in the Arabian Peninsula, **they have decided to move in a direction of much more small-bore, but devastatingly frightening attacks.** (Video Clip Ends)

**Jonathan Karl:** Is he right?

**Dick Cheney:** I don't think so. And I would point to a study that was released just within the last week or two up at the Kennedy School at Harvard by a gentleman -- Mowatt-Larssen's his name, I believe. He was CIA for 23 years, director of intelligence at the Energy Department for a long time, that looks at this whole question of weapons of mass destruction and Al Qaida and comes to the conclusion that **there's a very high threat that Al Qaida is trying very hard to acquire a weapon of mass destruction and, if they're successful in acquiring it, that they will use it.** I think he's right. I think, in fact, the situation with respect to Al Qaida to say that, you know, that was a big attack we had on 9/11, but it's not likely again, I just think that's dead wrong. I think the biggest strategic threat the United States faces today is **the possibility of another 9/11 with a nuclear weapon or a biological agent of some kind, and I think Al Qaida is out there even as we meet trying to figure out how to do that.**

**Jonathan Karl:** And do you think that the Obama administration is taking enough serious steps to prevent that?

**Dick Cheney:** **I think they need to do everything they can to prevent it.** And if the mindset is it's not likely, then it's difficult to mobilize the resources and get people to give it the kind of priority that it deserves (Madrak, 2010).

**Title/Headline:** *Dueling VPs: Biden, Cheney Parry On Terror*

**Abstract:** Vice President Dick Cheney's comments contending that President Barack Obama is "trying to pretend" that the U.S. is not at war with terrorists. Cheney stated that, "To say that, you know, that was a big attack we had on 9/11, but it's not likely again, I just think that's dead wrong. **I think the biggest strategic threat the United States faces today is the possibility of another 9/11 with a nuclear weapon or a biological agent of some kind, and I think Al Qaeda is out there even as we meet trying to figure out how to do that.**" Cheney said the administration needs to do everything possible to prevent that, "And if the mindset is 'It's not likely,' then it's difficult to mobilize the resources and get people to give it the kind of priority that it deserves." These comments came in response to Vice President Joe Biden's statement that **"The threat of al Qaeda acquiring control of a nuclear weapon is legitimate but unlikely."** Biden went on to state, "The reason why I do not think it's likely, is because of all the resources we have put on this, considerably more than the last administration did, to see to it that it will not happen. **We agree, the worst nightmare is the possession of nuclear weapons or a radiological weapon by Al Qaeda,**" Biden added that, "The reason it's unlikely is because we have been relentless, absolutely relentless in isolating al Qaeda. I don't know what Dick doesn't understand. **The worry is legitimate. The reason why I do not think it's likely is because of all the resources we have put on this, considerably more than the last administration did, to see to it that it will not happen"** (CBS News, 2010).

**Title/Headline:** *The Dangers Of Nuclear War: U.S.-Russian Nuke Deal No Cure For Real Threat*

**Abstract:** After nearly a year's negotiations, the U.S. and Russian governments finally reached an agreement on further reduction and limitation of nuclear weapon arms. The agreement will be signed on April 8, limiting the total number of warheads to less than 1,550. Overall, it is good for world peace and stability as well as the prevention of nuclear proliferation, but we shouldn't be over-optimistic about the treaty. The motivations behind the treaty are clear. Russia is opposed to the U.S. missile defense system and its deployment in Eastern Europe. The U.S. continues to expand the scope of the missile defense system, which constitutes a real threat to Russia in Eastern Europe. With 95 percent of the world's total nuclear warheads, the U.S. and Russia are the world's two largest nuclear powers. Russia has more than 14,000 missiles and the U.S. has more than 9,000. This remains one of the few areas where the former U.S.'s national strength is as great as ever, so the U.S. is active in working toward compromise in this field. Yet the treaty has its problems. In the existing agreements, the number of nuclear warheads was limited to between 1,500 and 2,200. This new agreement itself has no new breakthroughs and has not met the expectations of the international community. Half a year ago, the limit of 1,500 was proposed, but in the end, it became 1,550, no big breakthrough at all. **The most fundamental problem is that the provisions do not eliminate nuclear weapons but instead change their level of readiness. Nuclear weapons have three states of readiness: fully equipped and ready to be fired, readied but with the head and body separated, and finally, in storage conditions with the warhead removed.** This treaty reduces the number of fully equipped nuclear weapons to less than 1,550, but the excess missiles will not be destroyed, only moved to a different state of readiness. **They could be activated and re-weaponized in only a short span of time.** Despite the agreement, the U.S. also continues to work on developing new nuclear weapons itself. While some are being moved from the frontlines, lighter, more accurate weapons are being developed, as well as so-called bunker-busters designed to penetrate deeply into the Earth. **The U.S.-Russian agreement only limits bilateral development, but the real concern is the spread of nuclear weapons worldwide.** The U.S. is planning to hold a nuclear safety summit on April 13 where the core issue is the nuclear non-proliferation. **Once nuclear technology spreads, and especially if terrorist organizations get their hands on nuclear materials, the consequences are unpredictable, and it is in every country's interests to prevent this.** U.S. standards on nuclear proliferation are also inconsistent. **It gives tacit approval to Israel's nuclear weapons program, and makes no effort to discourage Japan from stockpiling raw materials that could, in theory, produce thousands of nuclear weapons.** In contrast, the U.S. has been particularly sensitive to Iran and North Korea. Iran has not tested nuclear weapons, but claims to developing civilian nuclear facilities. However, the U.S. has been strongly working for sanctions against it as a consequence and even considering military actions. Out of political considerations, the U.S. has adopted two completely different standards on the use of nuclear technology by various nations. **To make a convincing case for non-proliferation, the U.S. should apply the same standards to every country** (Guoan, 2010).

**Title/Headline:** *Obama Calls Nuke Terrorism The Top Threat To US*

**Abstract:** Rewriting America's nuclear strategy, the White House announced a fundamental shift that calls the spread of atomic weapons to rogue states or terrorists a worse threat than the nuclear Armageddon feared during the Cold War. The Obama administration is suddenly moving on multiple fronts with a goal of limiting the threat of a catastrophic international conflict, although it's not yet clear how far and how fast the rest of the world is ready to follow. In releasing the results of an in-depth nuclear strategy review, **President Barack Obama said his administration would narrow the circumstances in which the U.S. might launch a nuclear strike, that it would forgo the development of new nuclear warheads and would seek even deeper reductions in American and Russian arsenals.** His defense secretary, Robert Gates, said the focus would now be on terror groups such as al-Qaida as well as North Korea's nuclear buildup and Iran's nuclear ambitions. **"For the first time, preventing nuclear proliferation and nuclear terrorism is now at the top of America's nuclear agenda,"** Obama said, distancing his administration from the decades-long U.S. focus on arms competition with Russia and on the threat posed by nuclear missiles on hair-trigger alert. **"The greatest threat to U.S. and global security is no longer a nuclear exchange between nations, but nuclear terrorism by violent extremists and nuclear proliferation to an increasing number of states,"** he said, spelling out the core theme of the new strategy. Obama's announcement set the stage for his trip to Prague Thursday to sign a new arms reduction agreement with Russia. **And it precedes a gathering in Washington next Monday of government leaders from more than 40 countries to discuss improving safeguards against terrorists acquiring nuclear bombs.** In May, the White House will once again help lead the call for disarmament at the United Nations in New York during an international conference on strengthening the Nuclear Non-Proliferation Treaty. Congressional Democrats hailed Tuesday's announcement, but some Republicans said it could weaken the nation's defense. Rep. Buck McKeon of California, the top Republican on the House Armed Services Committee, said the policy change could carry "clear consequences" for security and he was troubled by **"some of the language and perceived signals imbedded" in the policy.** Two leading Senate voices on nuclear strategy, Arizona Republicans John McCain and Jon Kyl, criticized the Obama policy's restrictions on using nuclear arms to retaliate against a chemical or biological attack. **"The Obama Administration must clarify that we will take no option off the table to deter attacks against the American people and our allies,"** the senators said in a joint statement. From the start of his term in office, Obama has put halting the spread of atomic arms near the top of

his defense priorities. But during his first year he failed to achieve a significant breakthrough on arguably the two biggest threats: Iran and North Korea. Obama's current push for arms control initiatives is designed to strengthen international support for strengthened nonproliferation efforts. **"Given al-Qaida's continued quest for nuclear weapons, Iran's ongoing nuclear efforts and North Korea's proliferation, this focus is appropriate and, indeed, an essential change from previous" policy, Gates said. In presenting the results of the administration's policy review, Gates said a central aim was to reduce the role of nuclear weapons in U.S. defense strategy. That will include removing some of the intentional ambiguity about the circumstances under which the U.S. would launch a nuclear strike,** Gates told reporters at the Pentagon. "If a non-nuclear weapons state is in compliance with the Non-Proliferation Treaty and its obligations, the U.S. pledges not to use or threaten to use nuclear weapons against it," Gates said. **If, however, such a state were to use chemical or biological weapons against the U.S. or its allies, "it would face the prospect of a devastating conventional," or non-nuclear, military response. That is not a major departure from the policy of past administrations, but it is slightly more forthright about which potential aggressors might fear a nuclear strike, and which might not. "This is not a breakthrough; it's a common-sense refinement"** of U.S. policy, said Daryl Kimball, president of the Arms Control Association. Gates said Iran and North Korea in particular should view the new U.S. policy as a strong message about their behavior. **"If you're not going to play by the rules, if you're going to be a proliferator, then all options are on the table in terms of how we deal with you,"** he said. The major review of nuclear policy was the first since 2001 and only the third since the end of the Cold War. The version produced in December 2001 came just three months after the Sept. 11 terrorist attacks. **With the threat of terrorism in mind, Gates said the U.S. is not closing the door to the nuclear option. "Given the catastrophic potential of biological weapons and the rapid pace of biotechnology development, the United States reserves the right to make any adjustment to this policy that may be warranted by the evolution and proliferation of biological weapons,"** the defense chief said. Some private nuclear weapons experts said Obama should have gone further to reduce reliance on U.S. nuclear weapons as a deterrent. **"There's no real indication of the deep shifts in thinking necessary to begin giving up the nuclear fix,"** said Paul Ingram, executive director of the British American Security Information Council. U.S. allies, however, welcomed the outcome. **"The right signal at the right time,"** said Italian Foreign Minister Franco Frattini. Sharon Squassoni, a nonproliferation expert at the Center for Strategic and International Studies, said the administration's overall approach to nuclear policy, as spelled out by Obama and Gates, is clearer than those of previous administrations. **The reworked policy, she said, is a "significant but not radical departure"** (Burns & Flaherty, 2010).

**Title/Headline:** *Obama: Nuclear Terrorism Is 'The Single Biggest Threat' To U.S.*

**Abstract:** President Obama issued a grim warning Sunday about the threat of nuclear terrorism, as he kicked off three days of summitry by holding a string of meetings with five world leaders. **"If there was ever a detonation in New York City, or London, or Johannesburg, the ramifications economically, politically and from a security perspective would be devastating,"** Obama said before meeting with South African President Jacob Zuma. Obama's meetings with Zuma and four other leaders came on the eve of the Nuclear Security Summit in Washington, D.C. **The prospect of nuclear terrorism is "the single biggest threat to U.S. security, both short-term, medium-term and long-term,"** Obama said. **"This is something that could change the security landscape of this country and around the world for years to come." Al-Qaeda and other terrorist organizations are seeking a nuclear device, Obama said, "a weapon of mass destruction that they have no compunction at using."** Terrorism is the focus of the Nuclear Security Summit, which features leaders from nearly 50 nations. Obama is seeking global cooperation on isolating non-secure nuclear materials that could be used to make a weapon. **His five meetings Sunday included one with India Prime Minister Manmohan Singh. They discussed the civil nuclear energy agreement India signed with the United States in 2006, as well as the nuclear weapons program of India's neighbor and rival, Pakistan -- another country on Obama's agenda for today.** Obama also met with President Nursultan Nazarbayev of Kazakhstan, which is one of the world's largest producers of uranium; enriched uranium can be used to make nuclear weapons. In addition to Zuma of South Africa, the president also met with Prime Minister Syed Yusuf Raza Gilani of Pakistan; and acting President Goodluck Jonathan of Nigeria. All the meetings were at Blair House, the guest residence across the street from the White House. Before Singh left India, he said: **"I expect the summit to focus on nuclear terrorism and proliferation of sensitive nuclear materials and technologies. ... India has a well-developed indigenous nuclear energy program, which dates back six decades. We have an impeccable record of security, safety and non-proliferation which reflects our conduct as a responsible nuclear power."** Meanwhile, President Nazarbayev said before leaving Kazakhstan: "I have come to share with President Obama and other heads of state the bold plan Kazakhstan implemented to reduce and prevent the threat of nuclear terrorism through nuclear disarmament, non-proliferation, and peaceful civilian power use. It has worked well for Kazakhstan and it can work for the rest of the world." **South Africa is another example of a country that has given up the ability to make nuclear weapons. Before the meeting with Zuma, Obama said he hopes South Africa can "guide other countries down a similar direction of non-proliferation"** (USA Today, 2010).

**Title/Headline:** *Is Obama's Nuclear Security Summit More Than A Symbolic Gesture?*

**Abstract:** World leaders from 47 nations convene this week in Washington, D.C., for the Nuclear Security Summit, a gathering that the Obama administration hopes will raise awareness about the threats of nuclear arms getting into the hands of terrorists or "rogue" nations. But even as the nuclear agenda takes center stage, many experts doubt whether the nuclear summit is all that it's hyped up to be, and whether it will yield any concrete results. **President Obama said Sunday the goal of the nuclear summit is to discuss the terrorist threat and getting countries to lock down their nuclear weapons in a specific time frame.** The Obama administration itself has pledged to try to "secure all vulnerable materials" within four years and is hoping the summit will spark a case for preventive action among others. **"If there was ever a detonation in New York City or London or Johannesburg, the ramifications economically, politically, and from a security perspective would be devastating,"** Obama said on the eve of the summit. **"And we know that organizations like al**

**Qaeda are in the process of trying to secure a nuclear weapon -- a weapon of mass destruction that they have no compunction of using."** Secretary of State Hillary Clinton said last week that the nuclear summit would be the largest of its kind hosted by a U.S. president since the U.N. conference in 1945. But even as Obama brings the issue of nuclear security and disarmament into the spotlight -- first with the release of the new U.S. nuclear policy, and then the U.S.-Russia arms reduction agreement -- he faces significant challenges from two fronts. Internationally, U.S. allies such as India, Pakistan and Israel have been resistant to signing the Nuclear Nonproliferation Treaty, citing national security concerns. The view in many countries is that this week's treaty signing aside, if the United States and Russia -- which together account for 95 percent of the world's nuclear arsenal and material -- cannot cut their nuclear stockpile, why should they be forced to? "No one is willing to step up and say, 'Yea, I'm part of the problem here,'" said former national security official Ivan Oelrich, now vice president of the Strategic Security Program at the Federation of American Scientists. **The "U.S. and Russia have to lead the way in major reductions." Participant countries will also likely be looking to the United States for accountability.** Henry Sokolsi, executive director of the Nonproliferation Policy Education Center, argues that if the United States is going to try to persuade other countries, it needs to shift its own policy at home too. **"I just think it's disrespectful to these countries," he said. "Each country has its own problems. If we're not helping them on that, how can we expect them to not rely on them [nuclear weapons] to feel secure? We rely on them. Why should they be any different?"** Domestically, the partisan rift on Capitol Hill means possibly a tough fight ahead for Obama's nuclear agenda. **Critics of the new nuclear policy released last week complain that it gives a free pass to countries such as Iran and North Korea, and Republican senators are already taking aim at the U.S.-Russia arms treaty that was signed last week, saying it hurts U.S. security interests.** The general consensus is that the treaty will eventually be ratified by the end of the year, but the issue is likely to be the subject of a heated political debate for much longer. "He has a political opposition that's willing to use these reasonable but actually quite modest steps forward as political ammunition, and they widely misconstrue them to make cheap political shots," Sokolsi said. "If your political opposition is willing to exploit that, it's a tough battle to fight." Even before the summit got off the ground, tensions were evident. On Thursday, Israel said Prime Minister Benjamin Netanyahu would not be attending, reportedly because of suggestions that some attendees would use the summit to criticize its nuclear program. The fact that one of the United States' closest allies will not be in attendance is likely to put pressure on the United States. **"In practical terms, it may not have a lot of significance," said Christopher Ford, director for the Center for Technology and Global Security at the Hudson Institute, and a former special representative for nuclear nonproliferation in the Bush administration. But, "politically, it's not a good thing to call a giant international conference to show world unanimity and have that unanimity be so chopped away before the opening gavel."** Ford said the summit is a good way to bring together different world leaders to discuss a common threat, but what it means to achieve remains blurry. **"It seems to be in a large part a consciousness-raising exercise. Those are not bad, but they are not things that haven't been worked on in the past either," he said. "It strikes me as a lot of effort for a not of lot of payoff. ... People will have to get a whole lot more serious than saying nice things at a summit."** Iran will likely be at the top of the president's agenda during the summit. The country's president, Mahmoud Ahmedinejad, only mocked Obama after the U.S.-Russia treaty, despite warnings of sanctions against it. Just on Friday, Iran unveiled what it called its third generation of centrifuges for nuclear enrichment. **"If Iran decides to acquire and deploy a nuclear weapon then you're likely to see a cascade effect where other countries will think they might have to exercise a nuclear option, including perhaps Saudi Arabia, Egypt, Turkey and others in the region,"** said former ambassador Richard Burt, who was the negotiator for the first Strategic Arms Reduction Treaty. **"That would be in my view ... be a show stopper." Others said the summit should avoid focusing solely on Iran but emphasize more how countries can come together to establish global standards. "I don't think this should be turned into an Iran-bashing situation,"** said Oelrich, who believes Iran is a long way from becoming a nuclear power. "One of the things that we'll try to do is ... establish new international norms -- what is acceptable behavior, should nuclear weapons be legitimate instruments of national power." **Obama is bringing up the nuclear agenda at a time when very few Americans tend to think about it as a global threat. Barely half of Americans see nuclear terrorism as a top-level threat and most doubt a two-day summit of world leaders in Washington will do much to address it.** Just 12 percent of Americans in a new ABC News/Washington Post poll called the chance that terrorists could obtain nuclear weapons "the single biggest threat the world faces." **"Young people in college were not even born when the Berlin Wall fell, and so they are not really cognizant of the Cold War and what that meant,"** said Valerie Plame, former CIA covert agent best known for being the subject of an identity leak. Plame, who is included in a documentary called "Countdown to Zero" about the dangers of a nuclear world, said her work showed there is a real danger of nuclear weapons falling into the wrong hands. "Now, truly, the genie is out of the bottle and you have the possibility that terrorists ... could be stealing a bomb or buying a bomb," she said. **"The nexus of terrorism and nuclear weapons, it's absolutely terrifying." But not everyone is convinced nuclear terrorism is as important a threat. "Though the president keeps saying the most severe threat is nuclear terrorism, with all due respect it is not the most imminent threat,"** Sokolski said. "There is no specific intelligence that someone is going to steal a nuclear weapon. There is a general concern and anxiety about this, and probably it's warranted, but as to what you can do about it it's not clear" (Khan, 2010).

**Title/Headlines:** *Gibbs: Obama Sees Loose Nuke Material As No. 1 Security Threat*

**Abstract:** President Obama sees the possibility of nuclear material falling into the hands of terrorists as the "number one security threat" in the world, White House Press Secretary Robert Gibbs said Monday, at the start of the nuclear security summit in Washington. The president, who is trying to enlist the help of dozens of countries in reducing that threat, capped off a day of one-on-one meetings with Chinese President Hu Jintao Monday afternoon. That followed a meeting with Ukrainian President Viktor Yanukovich, after which the White House announced Ukraine had committed to purging its highly enriched uranium stockpile by 2012. But officials stressed that the immediate purpose of the summit is not so much to disarm states as to keep nuclear material as far away as possible from terrorist groups. **"The threat of nuclear terrorism is real. It is serious. It is growing, and it constitutes one of the greatest threats to our national security and, indeed, to global security,"** Obama's top counterterrorism adviser John Brennan said. **"The ability to obtain a nuclear weapon and to use it is the ultimate and most prized goal of terrorist groups."** The danger posed by loose nuclear material is the theme of the dinner formally kicking off the summit Monday night. **While the historic two-day gathering of leaders from 47**

countries is not expected to result in any major strategy shifts, officials said it serves to get world leaders on the same page about tackling this threat. Defense Secretary Robert Gates said securing loose material and halting the spread of nuclear weapons is "an area that people talk about a lot but frankly there hasn't been the kind of concerted international attention." The design of the summit, one of the largest international gatherings ever held on U.S. soil, still leaves Obama's hands tied in some big areas. Iran and North Korea -- the two countries whose rogue nuclear programs have been front-and-center in the global debate -- were not invited, though their nuclear programs are expected to be part of the discussion. **And India and Pakistan -- countries whose competition for nuclear material could develop into a Cold War-style weapons buildup -- are not expected to get heavy scrutiny. Pakistan is of particular concern, given its volatile location and the thriving presence of both Al Qaeda and the Taliban within its borders.** Lawrence Korb, assistant secretary of defense during the Reagan administration, said world leaders are going to need to deal with the dynamic between those two countries. He said Pakistan will continue to build up its nuclear stockpile as long as it harbors concerns about India's development. **"Even if you succeed here in this conference, if you don't deal with the situation between India and Pakistan, it can cause you a lot of problems," Korb told Fox News. He said an agreement signed under the second Bush administration that allows the U.S. to share nuclear technology with India only agitated the problem. "This is something that has to be on the agenda," he said, "because Pakistan will never stop as long as they think India is trying to get ahead of them. ... because while we worry about terrorism, they worry about India."** Ilan Berman, vice president of the American Foreign Policy Council, said pushing issues like Pakistan's and Iran's nuclear programs to the side could "undermine" the meeting. **"If Iran does (acquire nuclear-weapons capability) ... it really throws a monkey wrench into the entire purpose of this summit, which is to make sure that nuclear material is less available rather than more available to terrorists,"** he said. But the Obama administration, in the lead-up to the summit, has placed more emphasis on the danger posed by rogue terror groups than the danger posed by rogue states (Fox News, 2010).

**Title/Headline:** *Obama Presses Nations To Lock Down Nuclear Material, Tries To Make Headway On Iran*

**Abstract:** President Obama pressed world leaders Tuesday to double down on efforts to secure loose nuclear material, saying that in a "cruel irony" the risk of nuclear attack has only increased since the end of the Cold War because terror groups are bent on scrounging up leftover material to fashion a weapon. His remarks at the opening session of the nuclear security summit in Washington, D.C., came as he tried to make headway in addressing the nuclear program of one of the key nations not in attendance -- Iran. **The Obama administration is putting more emphasis at the summit on the threat posed by terrorist groups than that posed by individual states' nuclear programs -- though the president on Tuesday addressed the concern that "dozens of nations" have nuclear material that could be sold or stolen, and used by groups like Al Qaeda. "In short, it is increasingly clear that the danger of nuclear terrorism is one of the greatest threats to global security -- to our collective security,"** Obama said. He also announced that South Korea would host the next nuclear summit in two years. **U.N. Ambassador Mohammad Khazee on Monday declared Obama's new nuclear policy, which excludes Iran from a U.S. pledge not to use nuclear weapons against countries that do not have them, an act of "state terrorism" because it threatens nations with weapons of mass destruction.** Meanwhile, the Ukrainians, who gave a major boost to arms control in 1994 when they agreed to surrender the nuclear weapons they inherited in the collapse of the Soviet Union, agreed to get rid of their weapons-grade fuel by 2012. Some details are yet to be worked out, including how and where to dispose of the nuclear fuel, White House press secretary Robert Gibbs said. The material could be sent to the U.S. or Russia, but he declined to specify the amount, other than to say it was enough to make several nuclear weapons. The focus of the summit is tons of plutonium and highly enriched uranium are believed to be insufficiently protected from international criminal gangs and terrorist organizations. **A new report from a Harvard nonproliferation expert, for example, finds that Pakistan's small but growing stockpile faces "immense" threats and is the world's least secure from theft or attack. However, Pakistani Prime Minister Yusuf Raza Gilani said his country's nuclear weapons are well-guarded. The officials at the summit are expected to sign a joint declaration to guide future work toward locking away and cleansing the globe of materials still too easily accessible to terrorists** (Fox News, 2010).

**Title/Headline:** *Obama Gives Dire Warning At Start Of Nuclear Summit*

**Abstract:** Reporting from Washington — Calling for a "new mindset" among world leaders, President Obama on Tuesday opened the working session of his international nuclear summit with dire warnings about terrorist efforts to get their hands on nuclear weapons. **Networks such as Al Qaeda have tried to acquire the material for a nuclear weapon, the president told the assembly, predicting that if they were to succeed, "they would surely use it. "Were they to do so, it would be a catastrophe for the world, causing extraordinary loss of life and striking a major blow at global peace and stability,"** Obama said. **"It is increasingly clear that the danger of nuclear terrorism is one of the greatest threats to global security, to our collective security."** It was a dark reminder the president's team has been sounding all week in public remarks, as well as in one-on-one conversations between Obama and other leaders during the last three days. Obama opened with it Tuesday as the plenary session with leaders of 46 other nations and international agencies came to order for the president's summit in Washington. **At the top of the agenda is how to lock down nuclear material and arms to make sure terrorists can't threaten the world community or individual nations with an atomic attack.** The White House is hoping that Obama will be able to announce specific steps toward the goal of nuclear security by the time of an afternoon news conference expected after the summit concludes. **Already, the leaders of Chile, Ukraine and Canada have promised to reduce their stockpiles of enriched uranium that can be used in the manufacture of nuclear weapons.** Summit organizers at the White House also hope to release a communique after the end of the meeting. **One of the working provisions of the agreement would set a goal of securing loose materials around the world within the next four years.** Unclear at the start of business Tuesday morning is whether the leaders will move closer to supporting imposition of sanctions against Iran, an effort which Obama and Western allies are leading in hopes of curbing

that nation's nuclear program. Two decades after the end of the Cold War, Obama said, the "cruel irony of history" is that the risk of nuclear attack has gone up even as the risk of nuclear confrontation between nations has decreased. "Nuclear materials that could be sold or stolen and fashioned into a nuclear weapon exist in dozens of nations," Obama said. "Just the smallest amount of plutonium -- about the size of an apple -- could kill and injure hundreds of thousands of innocent people." World leaders must do more than talk, he said -- they must act to promote security. "It requires a new mindset," Obama said, "that we summon the will, as nations, as partners, to do what this moment in history demands" (Parsons, 2010).

**Title/Headline:** *U.S. A Popular Destination For The World's Unwanted Nuclear Supply*

**Abstract:** Give me your tired, your poor, your fissile material yearning to be downgraded. The United States rapidly is becoming the hottest destination for unwanted nuclear fuel, as the Obama administration steps up efforts to relieve other countries of their weapons-grade nuclear supplies. President Obama is pressing other nations to give up the material in an effort to keep it as far away from terror groups as possible. That was the No. 1 goal of this week's nuclear security summit in Washington. More often than not, any country that agrees to give up years' worth of enriched uranium is sending the radioactive material to the United States. **The nuclear material is typically kept at one of two facilities: the Savannah River Site near Aiken, S.C., or the Y-12 National Security Complex in Oak Ridge, Tenn.** This raises concerns about cost, since the U.S. devotes millions of dollars to converting the material. And it could raise questions about security, too. U.S. officials insist the supply is safer in the United States than anywhere else in the world, and they say the U.S. is best-equipped to handle it. **"We certainly have the most secure facilities in the world and we have the technological ability to actually do the removals,"** said a National Nuclear Security Administration official. Three more countries announced transfer agreements at the D.C. summit -- Canada and Mexico both agreed to ship back highly enriched uranium that was originally from the United States, and Ukraine agreed to purge its weapons-grade nuclear supply by 2012. White House Press Secretary Robert Gibbs said Monday that it's not been determined where Ukraine's material will go, but he made the case for the United States to house it. **"I think the American people feel wholly more confident that the material of which not a huge amount can destroy an entire city ... that that material is under safe lock and key and guard in this country, rather than potentially floating around somewhere else,"** Gibbs said. If Ukraine sends its nuclear material here, it will continue a new phase in the United States' role in storing the world's nuclear supply. **For years, the United States has taken back from other countries highly enriched uranium that originated in the U.S.** According to the National Nuclear Security Administration, well over one ton of the stuff has been returned from more than 30 countries. But early last year, the NNSA allowed taking nuclear fuel that did not originate in the United States. The first country to fall under this new policy was Chile, which just finished shipping its highly enriched uranium to America ahead of the D.C. summit. **That material originated in France and Great Britain, not the United States.** "That's the first of its kind," the NNSA official said. **The trend will continue if the United States takes Ukraine's nuclear material, which originated in Russia.** Under typical agreements with other countries, the United States takes their highly enriched uranium in exchange for low-enriched uranium that can be used for peaceful purposes. **The United States then takes the highly enriched uranium and downgrades it for future use, storing it at the sites in Tennessee and South Carolina, which the NNSA official said are "highly guarded."** That supply, after being blended with other materials making it unsuitable for a weapon, can later be used as fuel at commercial power plants. Chilean President Sebastian Pinera, in an interview with Fox News, said Monday that his country shipped out the fuel "in order to keep it safe." **"Both the U.S. and Chile are very much concerned about the danger with any kind of nuclear weapons falling in the wrong hands,"** Pinera said. Justin Logan, a foreign policy analyst with the Cato Institute, agreed that the United States has the capacity and the secure facilities to store the material safely. But he said the U.S. has become somewhat of a victim of the urgency it has placed on the problem, assuming the bulk of the costs associated with converting the material. **"The default position is, if this is the high priority for you, you get to bear a large chunk of the costs,"** Logan said. **"I certainly think it would be better if the costs were defrayed more equitably."** Obama has requested \$559 million, or a 68 percent increase, for next year's budget for the Global Threat Reduction Initiative -- the NNSA arm tasked with handling the high-risk nuclear material around the world. Logan said the risk of nuclear terrorism is not as high as some make it out to be. But he said even a "marginal decrease" in risk may be worth the price of sending the material to the United States for storage and processing. **So far, the NNSA has completely "cleaned out" weapons-grade nuclear material from 18 countries, including Chile** (Berger, 2010).

**This article begs the question: Why now? Should a nuclear detonation occur at the Super Bowl in Arlington (Dallas), Texas, it is highly likely that the individuals and organizations designated to clean up the nuclear radiation will also be disposing of nuclear waste from other countries, thus passing the bill to the American taxpayer.**

**Title/Headline:** *FACT CHECK: Obama Skips Fine Print In Nuke Speech (No Longer Available)*

**Abstract:** President Barack Obama laid out a nightmare scenario on Tuesday -- a terrorist with atomic bomb materials no bigger than an apple who could launch an attack killing hundreds of thousands of people. In doing so, Obama skimmed on details that make that kind of attack a more remote danger than he implied in his brief opening remarks to more than 40 world leaders, even as he got the broad picture right. **The gathering, called by Obama, was intended to focus global attention on the problem of nuclear materials that could fall into the wrong hands.** Here's a look at the facts behind Obama's outline of the threat from nuclear terrorism: **OBAMA:** Said in comparing today's threat to that during the Cold War: “The risk of a nuclear confrontation between nations has gone down, but the risk of nuclear attack has gone up.” **THE FACTS:** Yes, the bleak Cold War vision of mutual annihilation is all but gone now, and in its place is a new kind of risk. **But linking the two, as he did, implies that the outcome from both scenarios is comparable.** He is correct that the numerical risk of an attack is higher now simply because there is so much material stockpiled and so many ways it could be misused. **Yet the consequences are more limited now than from a nuclear exchange between superpowers with thousands of warheads each. The more likely scenario now is a limited attack confined to one city rather than global nuclear winter.** **OBAMA:** Said nuclear materials that could be stolen or sold for use as a weapon exist in dozens of nations. **THE FACTS:** Correct. Arms control experts count roughly 40 nations with either weapons stocks or other nuclear facilities or material that could be misused. In most cases, however, the material or facilities are under what those nations claim is sufficient control. **OBAMA:** “Just the smallest amount of plutonium -- about the size of an apple -- could kill and injure hundreds of thousands of innocent people.” **THE FACTS:** The apple might be a nice visual, but perhaps a little misleading. Brookings Institution arms control expert Steven Pifer, largely agreeing with Obama, has one quibble: He says such a package would be closer to the size of a grapefruit. **More broadly, it is true that highly trained scientists and engineers with specialized equipment could fashion a small bomb that, as Obama said, could kill hundreds of thousands. But the facilities and technique needed to do so are presumed to be beyond the current reach of most terrorist groups or militant movements.** The scenario of a miniature but extraordinarily lethal bomb is hardly impossible, nonproliferation experts say, but probably represents less of a risk than a terrorist group getting hold of 50-80 pounds of enriched uranium and fashioning a crude device that would be larger and harder to conceal. Such a crude device might, however, be just as deadly. **OBAMA:** “Terrorist networks such as al-Qaida have tried to acquire the material for a nuclear weapon, and if they ever succeeded, they would surely use it.” **THE FACTS:** Al-Qaida's desire for at least crude nuclear capability is taken as a given, although Obama and other U.S. officials have not spelled out exactly how the terrorist network has pursued atomic weapons so far (Gearan, 2010).

**Title/Headline:** *Obama: ‘Real Progress’ At Nuclear Summit*

**Abstract:** President Obama said Tuesday that the 47-nation nuclear security summit he convened raised global awareness of the threat of nuclear terrorism and yielded commitments to better secure nuclear arsenals and materials. However, Obama was unable to declare a breakthrough with China and Russia on imposing tougher sanctions against Iran over its nuclear ambitions. He acknowledged that the final communique unanimously adopted by the summit participants was non-binding but said the steps announced this week showed that nations were seriously committed to the issue of keeping nuclear materials out of the hands of terrorists “who would surely use them.” “We’ve made real progress in building a safer world,” Obama said. **During the summit, the United States and Russia signed an update to a 2000 agreement intended to eliminate weapons-grade plutonium from their military programs. Secretary of State Hillary Rodham Clinton said the agreement commits each country to “irreversibly and transparently” dispose of at least 34 metric tons of weapons-grade plutonium, enough for 17,000 nuclear weapons.** In addition, Russian President Dmitry Medvedev confirmed plans to close a plutonium production reactor in the Siberian city of Zheleznogorsk, the White House said. **Obama called it an “important step forward.”** Earlier, the United States, Canada and Mexico agreed to work to convert the fuel at Mexico's nuclear research reactor to a lower grade of uranium unsuitable for nuclear weapons, the White House announced (CNN, 2010).

**Title/Headline:** *Critics: Obama Admin Hying Terrorist Nuclear Risk*

**Abstract:** The Obama administration is warning that the danger of a terrorist attack with nuclear weapons is increasing, but U.S. officials say the claim is not based on new intelligence and questioned whether the threat is being overstated. President Obama said in a speech before the 47-nation Nuclear Security Summit, that “the risk of a nuclear confrontation between nations has gone down, but the risk of nuclear attack has gone up.” The two-day meeting concluded with an agreement by participants to take steps to prevent non-state actors like al Qaeda from obtaining nuclear weapons, either through theft of existing weapons or through making their own

with pilfered nuclear material. **The joint statement called nuclear terrorism one of the most challenging threats to international security and called for tougher security to prevent terrorists, criminals and others from acquiring nuclear goods.** But Henry Sokolski, a member of the congressional Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism, said that **there is no specific intelligence on ongoing terrorist procurement of nuclear material.** "We were given briefings and when we tried to find specific intelligence on the threat of any known terrorist efforts to get a bomb, the answer was we did not have any." Mr. Obama told reporters that there was a range of views on the danger but that all the conferees **"agreed on the urgency and seriousness of the threat."** Mr. Sokolski said the idea that "we know that this is eminent has got to be somehow informed conjecture and apprehension, [but] it is not driven by any specific intelligence per se." **"We have reasons to believe this and to be worried, but we don't have specific intelligence about terrorist efforts to get the bomb,"** he said. "So we have to do general efforts to guard against his possibility, like securing the material everywhere." A senior U.S. intelligence official also dismissed the administration's assertion that the threat of nuclear terrorism is growing. **"The threat has been there,"** the official said. **"But there is no new intelligence."** **The official said the administration appears to be inflating the danger in ways similar to what critics of the Bush administration charged with regard to Iraq:** hyping intelligence to support its policies. The official said one likely motivation for the administration's new emphasis on preventing nuclear terrorism is to further the president's goal of eliminating nuclear weapons. **While the U.S. nuclear arsenal would be useful in retaliating against a sovereign state, it would be less so against a terrorist group.** But if the latter is the world's major nuclear threat, the official explained, then the U.S. giving up its weapons seems less risky. The new focus on nuclear terrorism emerged recently in the Nuclear Posture Review report made public last week that **identified nuclear terrorism as "today's most immediate and extreme danger."** By contrast, the latest CIA report to Congress on arms proliferation suggested that the threat from nuclear terrorism had diminished. **It stated that several terrorist groups, including al Qaeda, "probably remain interested" in chemical, biological, radiological and nuclear arms** "but not necessarily in all four of those capabilities." Additionally, the report, made public last month, said terrorists "aim to use these agents against Western targets, especially in Iraq and Afghanistan." The military's blueprint for future conflicts, **"Joint Operating Environment 2010,"** stated that terrorists obtaining nuclear weapons or other mass-destruction arms is a "possibility" and said a major worry is that extremists could seize power in Pakistan and gain access to its nuclear arsenal. **The Joint Forces Command report warned that devastating biological weapons attacks by nations or terrorist groups could produce "terror on the scale of a nuclear attack."** John Brennan, the White House's chief counterterrorism adviser, told reporters Monday that the threat of nuclear terrorism "is real, it is serious, it is growing, and it constitutes one of the greatest threats to our national security and, indeed, to global security." A National Security Council spokesman declined to provide further information on Mr. Brennan's or the president's statement that the nuclear terrorist threat is growing. Mr. Brennan said **al Qaeda has sought a nuclear weapon for the past 15 years and that its efforts continue today. Al Qaeda is seeking "highly enriched uranium or separated plutonium" for a weapon that would give the Islamist group "the ability not only to threaten our security and world order in an unprecedented manner, but also to kill and injure many thousands of innocent men, women and children, which is al Qaeda's sole agenda,"** Mr. Brennan said. **Al Qaeda's efforts to obtain nuclear weapons in the past have included reports that the group tried to purchase a stolen weapon in the former Soviet Union, and that it has worked with Pakistani nuclear scientists.** Former CIA Director George J. Tenet disclosed in his recent memoir that a Pakistani nongovernmental organization, **Umma Tameer-e-Nau,** was used as cover for a covert program to send Pakistani nuclear scientists to work with al Qaeda's nuclear weapons team when it was granted safe haven in Afghanistan before 2001 (Gertz & Lake, 2010).

Title/Headlines: *Too Much Mr. Nice Guy On Nuclear Disarmament*

**Abstract:** There are three ways in which I believe recent decisions by the Obama administration are, unintentionally, actually fostering the proliferation of nuclear weapons rather than constraining them. When judging the various policies President Obama has put forth in recent weeks to move toward zero nuclear weapons, we should bear in mind the old dictum of Justice Oliver Wendell Holmes Jr. — to really understand the law, “look at it as a bad man, who cares only for the material consequences which such knowledge enables him to predict.” First, the president and others have proposed to enhance nonproliferation by sequestering nuclear material into one international depository. The idea is that those who need enriched uranium for peaceful means can obtain it from this facility as needed if they promise not to continue down the path of making weapons-grade material. More advanced reactor design may someday lower the proliferation risk. But this is also in the future. We should not look at how the current nonproliferation regime would work through the eyes of, say, the Irish. We should look at it through the eyes of the governing powers in Iran and North Korea or like regimes who are inclined to secretly pursue weapons-grade material. In the world we live in, they are entirely capable of working hard to exploit the current regime or a future one in pursuit of nuclear weapons. The Non-Proliferation Treaty as it currently exists grew out of President Eisenhower’s “Atoms for Peace” program in the 1950s. It actually encourages countries that obtain nuclear reactors to produce electricity to also enrich uranium. The problem is that if a country enriches uranium up to 3 percent, which is suitable to generate electricity, it has done nearly three-quarters of the work needed to move along the road to 90 percent enrichment, which is what is required to make a bomb. Once a country reaches that higher level of enrichment, the weapons are the relatively easy part. A simple “shotgun” device like the bomb the U.S. dropped on Hiroshima is unfortunately, quite easy to design and construct. (That is why the 2007 National Intelligence Estimate that said Iran had halted its effort to build a nuclear weapon was deceptive. It gave the impression that the Iranians had halted what was most important to get to the nuclear bomb threshold — enriching uranium. But they were doing that in spades. They had possibly merely halted weapons design work.) Either by withdrawing from the NPT — and thus avoiding monitoring — or by secretly placing their facility in a mountain, Iran or like-minded regimes elsewhere can process enough low-enriched uranium up to the 90 percent enrichment level it needs for a weapon. The first Iranian bomb doesn’t have to be that sophisticated. Something that goes boom and sends a mushroom cloud up in the northern Iranian desert — even if it would not fit into the nose cone of a Scud — would still make Iran a nuclear power. That would change the world. Like Iran, other countries — including Venezuela and Saudi Arabia — say they want “peaceful” nuclear power for electricity. Given their vast oil resources, that is patent nonsense. They want a reactor in order to get on the road to highly enriched uranium and bomb material. If we persist in sponsoring nuclear energy exports from the United States as well as other countries so that nations can have the technology for today’s light-water reactors — which gets them into the fuel cycle — we will become the Johnny Appleseed of nuclear weapons. If the United States is helping spread light-water reactors and thus enriched uranium around the world in the name of peaceful atomic energy, it is creating a huge and dangerous problem. Second, President Obama’s “Nuclear Posture Review,” which seeks to limit the circumstances in which the United States might use nuclear weapons, embodies hesitancy with respect to deterrence. Some of the allies who once could rely on the United States to protect them from attack through “extended deterrence” may now doubt whether the U.S. nuclear umbrella still covers them. If, under Obama’s new policy, an ally is attacked by biological weapons, the United States is going to have to do a study to first see if whoever attacked is observing the NPT or not, since we will not now hit back with nukes if the attackers belong to the NPT and are not in violation of it. The idea is that if the United States just continually takes steps in good faith to clarify and reduce the circumstances in which we would use nuclear weapons to protect our allies, then the world may progress toward being nuclear-free. However, the incentives could work just the opposite way. Some friends and allies who felt protected under America’s nuclear umbrella are now going to start planning alternatives “just in case. Right after the North Korean nuclear test, a Japanese official was asked if that test meant Japan would move to nuclear weapons. They do, after all, have tons of plutonium available from their nuclear energy program. “No,” he said, “we have the mutual security treaty with the United States and we trust the Americans.... But,” he added, “if we decided to have a nuclear weapon it would take less than 200 days to produce it.” Third, as a result of President Obama’s new policies, it won’t be just our worried allies who might move toward obtaining their own nuclear weapons, but our enemies as well. The United States has gone from something like 8,000 deployed weapons a decade ago to around 2,000 now. We are at present engaged in reducing another few hundred. I haven’t heard anybody in Syria or Burma saying, “Hey, that means we will never need nuclear weapons.” There’s one thing Osama bin Laden has said that is true: When people look at a strong horse and a weak horse, they like the strong horse better. From the standpoint of a Syria, Iran or North Korea, the fact that the United States is holding out the dream of zero nuclear weapons and forswearing modernization even as they progress toward their own weapons makes the U.S. look more like the weak horse. For these reasons, I’m afraid that enemies of the United States, some of whom have relations with terrorist groups, will be more, not less, inclined to move toward obtaining nuclear weapons. In my judgment, we are not being smart about proliferation by moving in the direction President Obama has taken. Proliferation is going to be more, not less, of a problem (Woolsey, 2010).

**Title/Headline:** *Radical Cleric On CIA Hit List Taunts U.S. Military And Obama: On the Run in Yemen, Anwar Al-Awlaki Says "Ominous Clouds Gathering"*

**Abstract:** The radical Muslim cleric Anwar Al-Awlaki, whose killing has been approved by President Barack Obama, today taunted the American President and the United States military in an audio address posted online. "Imperial hubris is leading America to its fate: a war of attrition, a continuous hemorrhage that would end with the fall and splintering of the United States of America," said Awlaki. The site for the audio message features a picture of him juxtaposed with those Major Nidal Hassan, accused of the Ft. Hood shootings, and Omar Farouq Abdulmutallab, charged with the attempted bombing of an American jetliner on Christmas Day, 2009. A U.S. counter-terrorism official said there's no reason to believe the voice on the tape isn't Awlaki, and said the message contained "well-worn themes of hatred, violence and attempts at fear mongering. It's not just extremist bravado, it's trash." The American born and educated cleric also called on Muslims in the U.S. to do as he did in waging jihad against the U.S. "I could not reconcile between living in the US and being a Muslim, and I eventually came to the conclusion that jihad against America is binding upon myself, just as it is binding on every other able Muslim," said Awlaki in the message, speaking in English. Awlaki has been on the run since late last year when he was linked with both Major Hassan and Abdulmutallab. U.S. officials have told ABC News and other news agencies that the President approved efforts to target Awlaki with a missile strike in Yemen, where he is believed to be hiding (Ross, 2010).

**Title/Headline:** *Obama Faces Growing Credibility Crisis*

**Abstract:** Robert Gibbs, Barack Obama's chief spokesman, got into hot water this week for daring to speak the truth – that the Democrats could lose control of the House of Representatives in November. But it could be even worse than that. Contrary to pretty much every projection until now, Democratic control of the Senate is also starting to come into question. **While Mr. Obama's approval ratings have continued to fall, and now hover at dangerously close to 40 per cent** according an ABC-Washington Post poll the fate of his former colleagues in the Senate looks even worse. "If you ask me where the silver lining is for President Obama, I have to say I cannot see one," says Bill Galston, a former Clinton official, who has been predicting for months the Democrats could lose the House. "Just as BP's failure to cap the well has been so damaging, Obama's failure to cap unemployment will be his undoing. There is nothing he can do to affect the jobless rate before November." Astonishingly, 55 per cent of citizens think Mr Obama is a "socialist" against only 39 per cent who do not share that diagnosis. The same poll shows 48 per cent support for Republicans against just 42 per cent for Democrats. The numbers are eerily similar to 2006, except that it was George W. Bush's Republicans who were on the receiving end four years ago. "The bottom line here is that Americans don't believe in President Obama's leadership," says Rob Shapiro, another former Clinton official and a supporter of Mr Obama. "He has to find some way between now and November of demonstrating that he is a leader who can command confidence and, short of a 9/11 event or an Oklahoma City bombing, I can't think of how he could do that." "I never thought I would say this, but even I'm unsure what President Obama really believes," says the adviser. "Instead of outsourcing decisions to Congress, he should spell out his bottom line. That is what leaders are for" (Luce, 2010).

**Title/Headline:** *Obama Wants 40% Reduction In Nuclear Arsenal*

**Abstract:** A US government document revealed that the Obama administration is planning to cut the US nuclear stockpile by up to 40% by 2021. The Department of Energy document provides details of the reductions that President Barack Obama called for on a path to

eliminating nuclear weapons. **The reductions continue a trajectory of cuts that already reduced US stockpiles by about 75% since 1989. In May the administration said it had 5,113 nuclear warheads in its stockpile. The new document said the administration would like to reduce that number to a range of 3,000 to 3,500.** The document was presented to Congress in May and posted yesterday on the websites of the Federation of American Scientists and the Union of Concerned Scientists (The Independent, 2010).

**Source:** UPI

**Title/Headline:** *Report: U.S. Needs Nuclear 'Forensics'*

**Abstract:** The United States is losing the nuclear forensics skills that could help identify the source of a nuclear weapon used in a terrorist attack, a report says. The highly specialized detective work, called nuclear attribution, studies clues from fallout and radioactive debris to discover the identity of the attacker and the source or manufacturer of the weapon, a National Research Council study published last week said. Arguing that nuclear terrorism is a serious, long-term threat to the United States, federal officials have sought to improve such analytic skills in recent years. **The NRC report, requested by the Department of Homeland Security, the Defense Department and the National Nuclear Security Administration, found U.S. forensic abilities "fragile, under resourced and, in some respects, deteriorating."** "Without strong leadership, careful planning and additional funds, these capabilities will decline," the report warned. Most of those capabilities are in the laboratories that maintain the nation's nuclear arsenal that had their heyday during the cold war but are now struggling to attract personnel, get funding for projects and establish new identities, the report said (UPI, 2010).

**Conveniently, right before the planned nuclear terror attack at the Super Bowl, the U.S. no money for nuclear forensic scientists. This is perfect, for the U.S: can attack Pakistan without knowing 100% that the nuke came from there!**

**Title/Headline:** *Is The US Administration Planning A Nuclear Holocaust?*

**Abstract:** The US and its allies are preparing to launch a nuclear war directed against Iran with devastating consequences. This military adventure in the real sense of the word threatens the future of humanity. While one can conceptualize the loss of life and destruction resulting from present-day wars including Iraq and Afghanistan, it is impossible to fully comprehend the devastation which might result from a Third World War, using "new technologies" and advanced weapons, until it occurs and becomes a reality. The international community has endorsed nuclear war in the name of World Peace. "Making the World safer" is the justification for launching a military operation which could potentially result in a nuclear holocaust. But nuclear holocausts are not front page news! In the words of Mordechai Vanunu, **The Israeli government is preparing to use nuclear weapons in its next war with the Islamic world. Here where I live, people often talk of the Holocaust. But each and every nuclear bomb is a Holocaust in itself. It can kill, devastate cities, destroy entire peoples. Realities are turned upside down. In a twisted logic, a "humanitarian war" using tactical nuclear weapons, which according to "expert scientific opinion" are "harmless to the surrounding civilian population" is upheld as a means to protecting Israel and the Western World from a nuclear attack.** America's mini-nukes with an explosive capacity of up to six times a Hiroshima bomb are upheld by authoritative scientific opinion as a humanitarian bomb, whereas Iran's nonexistent nuclear weapons are branded as an indisputable threat to global security. **When a US sponsored nuclear war become an "instrument of peace", condoned and accepted by the World's institutions and the highest authority, including the United Nations, there is no turning back: human society has indelibly been precipitated headlong onto the path of self-destruction.** The following article first published in February 2006 under the title *Is the Bush Administration Planning a Nuclear Holocaust? Will the US launch "Mini-nukes" against Iran in Retaliation for Tehran's "Non-compliance"?* documents in detail America's doctrine of preemptive nuclear war, including war plans directed against Iran. **What is important to underscore is that five years ago, these war preparations were already in an advanced stage of readiness. The operational procedures for launching a nuclear war under the umbrella of US Strategic Command are examined.** We are at a dangerous crossroads: The rules and guidelines governing the use nuclear weapons have been "liberalized" (i.e. "deregulated" in relation to those prevailing during the Cold War era).

#### **The New Doctrine States:**

*Command, Control, and Coordination (CCC) regarding the use of nuclear weapons should be "flexible", allowing geographic combat commanders to decide if and when to use of nuclear weapons: "Geographic combat commanders would be in charge of Theater Nuclear Operations (TNO), with a mandate not only to implement but also to formulate command decisions pertaining to nuclear weapons." (Doctrine for Joint Nuclear Operations Doctrine )*

**We have reached a critical turning point in our history. It is absolutely essential that people accross the land, nationally and internationally, understand the gravity of the present situation and act forcefully against their governments to reverse the tide of war (Chossudovsky, 2010).**

**Title/Headline:** *United States Could 'Absorb' Another Terror Attack, Obama Says in Woodward Book*

**Abstract:** President Obama, after being warned repeatedly by his advisers about the threat of another terror attack on U.S. soil, said in an interview two months ago that the United States could "absorb" another strike. The comment was included in the new book by journalist Bob Woodward, "Obama's Wars," excerpts of which were reported by The Washington Post and The New York Times. The book depicts the contentious debate the Obama administration endured to craft a new strategy in Afghanistan. According to the Post, Obama spent the bulk of the exhaustive sessions pressing for an exit strategy and resisting efforts to prolong and escalate the war. Despite warnings of another attack, he suggested the United States could weather a new strike. **"We can absorb a terrorist attack. We'll do everything we can to prevent it, but even a 9/11, even the biggest attack ever . . . we absorbed it and we are stronger," Obama reportedly said.** According to the book, Obama said, "I have two years with the public on this" and pressed advisers for ways to avoid a big escalation in the Afghanistan war. The comment on absorbing an attack drew tough criticism Wednesday from Liz Cheney, daughter of former Vice President Cheney and chairwoman of Keep America Safe. **"This comment suggests an alarming fatalism on the part of President Obama and his administration,"** she said in a statement. **"Once again the president seems either unwilling or unable to do what it takes to keep this nation safe. The president owes the American people an explanation"** (Fox News, 2010).

**Title/Headline:** *Will Obama Force America To "Absorb A Terror Attack" To Save His Presidency?*

**Abstract:** President Obama's ominous claim that America can "absorb" a terror attack will have many fearing that staging some kind of false flag event will be the only way the government can overturn the massive resistance to big government that has grown exponentially since Obama took office. During an interview with journalist Bob Woodward, **the president said, "We can absorb a terrorist attack. We'll do everything we can to prevent it, but even a 9/11, even the biggest attack ever...we absorbed it and we are stronger"** (Watson & Jones, 2010).

**Date:** September 23, 2010

**Source:** Jones Report, Aaron Dykes

**Title/Headline:** *Obama Admin Predicts Small Scale Terror...In Time For Elections, Again?*

**Abstract:** "Terrorism" concerns necessarily hinge on fear, and it is now completely predictable that an otherwise unpopular Obama Administration would roll out the threat of terror to bolster support for the 2010 elections. The Washington Post reports that the *"Risk of small-scale attacks by al-Qaeda and its allies is rising, officials say"* in concert with comments from Obama about absorbing a terror attack, and hyperbolic comments by Secretary of Homeland Security Janet Napolitano before Congress that al Qaeda is recruiting for homeland attacks.

*The Washington Post: Al-Qaeda and its allies are likely to attempt small-scale, less sophisticated terrorist attacks in the United States, senior Obama administration officials said Wednesday, noting that it's extremely difficult to detect such threats in advance. "Unlike large-scale, coordinated, catastrophic attacks, executing smaller-scale attacks requires less planning and fewer pre-operational steps," said Homeland Security Secretary Janet Napolitano, testifying before the Senate Homeland Security and Governmental Affairs Committee. "Accordingly, there are fewer opportunities to detect such an attack before it occurs."*

The main thrust of these timely "warnings" is to scare the public, not to share intelligence analysis. It is clear from the context that there is no basis for expecting an attack-- the 'evidence' cited by Napolitano & co. includes reference to the attempted "underwear bombing" on a flight to Detroit-- proven to be a falsehood, as eyewitnesses on the plane contradict the official account. Homeland Security also cites the 'failed' Times Square car bombing-- an incident that didn't include any real explosives or any connection to terrorism or al Qaeda at all. Napolitano further links this terror threat with the alleged "rise" of domestic extremism, which has never been qualified or demonstrated, but only hyped via the MIAC and Homeland Security reports issued by DHS earlier in the Obama Administration. Those reports merely speculate that incidents will likely occur based on blanket-mass profiling-- a mirror of the Administration's current attempt to spark worry and fear. It is the same move the Bush Administration admittedly used for political expediency post-9/11. Recall that so-called Bin Laden tapes would consistently emerge just prior to key elections or that the terror alert levels would be elevated to re-enforce the fear in the populace for purely political purposes. CIA officials have now admitted to faking Bin Laden videos. Is it any wonder Obama would now discuss absorbing a terror attack in the U.S. or that Homeland Security head Janet Napolitano would revive the script of homeland terror threats and the pre-programmed idea of small-scale al Qaeda attacks? **Is it a coincidence that Obama advisor Robert Shapiro suggested this summer that only a large-scale terror attack could counter President Obama's "credibility crisis": "He has to find some way between now and November of demonstrating that he is a leader who can command confidence and, short of a 9/11 event or an Oklahoma City bombing, I can't think of how he could do that."** 9/11 was obviously a ace-card in the Bush Administration's public relations deck; the Oklahoma City Bombing bolstered Bill Clinton's image for a second term. Would the Obama Administration use an attack any differently? Who orchestrates these talking points and baseless forecasts of terror? Why is Republican Sen. Lindsay Graham simultaneously also cynically stating that another terror attack is imminent? **Political expediency, not the omnipresence of al Qaeda, is the only logical answer. If the administration has verifiable intel, it should prevent the attacks, not try to score political points** (Dykes, 2010).

**Title/Headline:** *October Surprise: Terror Hysteria Recycled In Election Ploy*

**Abstract:** The establishment media is giving full court press to announcements from US and European authorities that airport lobbies are being targeted for terror attacks in a recycled version of the laughable 2007 incident in which two mental deficient set fire to a jeep outside Glasgow airport, a non-event that authorities hyped beyond all recognition amidst a similar wave of hysteria to that which we're witnessing now. The October surprise has arrived, and it's a contrived and cynical ploy to frighten Americans into putting their trust back in the government by waving the familiar boogeyman of the outside threat. **"Among the possible targets in the suspected European terror plot are pre-security areas in at least five major European airports, a law enforcement official told ABC News. Authorities believe terror teams are preparing to mount a commando like attack featuring small units and small firearms modeled after the Mumbai attack two years ago."** Constant references to the Mumbai attack, transport hubs, airport lobbies and other "soft target" chatter provide a reasonably clear indication as to who is really behind the ceaseless intensity of terror fearmongering we've been subjected to over the last week. Since it ultimately emerged that the mastermind behind the Mumbai massacre was CIA agent David Headley, warnings from the same intelligence agencies about similar attacks being planned should be treated as a direct threat. **Throughout the 60's, 70's and 80's, the Central Intelligence Agency played a key role in Operation Gladio, a program of false flag terror attacks on soft targets that were designed to demonize political opposition and "force the public to turn to the state to ask for greater security," according to the testimony of Gladio agent Vincenzo Vinciguerra. In 2000, an Italian Senate investigation found that the 1980 Bologna train bombing, which killed 85 people, was carried out by "men inside Italian state institutions and ... men linked to the structures of United States intelligence."** In attempting to "force the public to turn to the state to ask for greater security," the establishment hopes to derail the momentum of Tea Party candidates like Rand Paul and Sharron Angle, whose entire campaigns are built on the premise of turning away from the state and giving power back to the individual. Manipulating voters by threatening terror worked for the Republicans in 2004, but the Democrats might have to go a step further if they hope to use it as a deciding factor in 2010. The threat of airport lobbies being targeted is another giveaway. **The last time this occurred was in summer 2007, when two amateur mental deficient, described as "Krazy Klown jihadis" by bomb experts, set fire to some petrol outside Glasgow airport in a pathetic attempt to stage a terror attack. Although people like former Scotland Yard detective John O'Connor described the botched attacks as "hopeless," "incompetent" "almost laughable," and amounting to nothing more than a bonfire, while others labeled the incident "slapstick idiocy," the corporate media reacted in exactly the same way they're behaving now, by ludicrously overhyping the incident as some kind of deadly Al-Qaeda wave of terror. Never forget that the media and the government have been totally discredited over and over again by their complicity in issuing phony terror alerts designed to manipulate elections and frighten the public into slavish acquiescence. Just as former Homeland Security chief Tom Ridge admitted that DHS would issue fake terror alerts shortly before elections in a bid to influence the outcome during the Bush era, the Obama administration is mimicking the same tactic.** The reality is that accident causing deer, peanut allergies and swimming pools are all more likely to seal your fate than a terrorist attack. As Ohio State University's John Mueller concludes in a report entitled A False Sense Of Insecurity, **"For all the attention it evokes, terrorism actually causes rather little damage and the likelihood that any individual will become a victim in most places is microscopic."** But the sensationalist media, the power hungry government and the salivating "experts" who head up profitable anti-terror companies all need to feed the beast and they'll exploit every morsel on offer. **Terrorism can only be effective if the relatively minor acts of violence that are perpetrated are given false prominence and artificially inflated to the point where the dread of what's coming next fundamentally alters the way we go about our lives, travel, commerce, and the way we treat others, until we ultimately acquiesce to the terrorist's goal – relinquishing our freedoms and living in fear.** Since that is the very definition of terrorism, recent events only confirm that the terrorists have already won and that their victory was secured with the enthusiastic support of the government and the media. **"Authorities have detected a dramatic increase in online chatter among jihadist websites the last week, in what experts believe could be other terrorists banning together in anticipation of terror attack plans in Europe and hoping to engage themselves in prospective plots,"** reports ABC News. Don't be fooled, the government has blatantly seized upon some keyboard-warrior bluff spouted by Muslims on Internet forums and used it as a propaganda tool to try and frighten people into voting the establishment back into power, be they Democrats or Republicans. **Following the FBI raids on anti-war activists last week, it's clear that the Obama administration now considers its political adversaries as both those on the left who have abandoned their support for Obama over his continuation of Bush's wars, and those on the right who have sworn to resist the seemingly ceaseless march of statism.** This probably equates to about 70 or 80 per cent of politically active Americans who are now labeled "domestic terrorists" by their own government. Recall that the Department of Defense now considers any form of protest as "low level terrorism". As we have seen from the MIAC report, the spying case in Pennsylvania, and a host of others in recent years, the federal government defines "terrorist propaganda" as any material critical of the state. Conservatives who have dismissed government-sponsored terror as an invention of the loony conspiracy fringe better brush up on the history of Northwoods, Operation Gladio, 9/11, and the Oklahoma City Bombing, because the Obama administration is by all means ruthless enough to stage a false flag attack and use it to demolish the reputation of the Tea Party, just as Bill Clinton exploited the FBI-directed OKC bombing to go after talk radio and the patriot movement in the 90's. Indeed, it was only two months ago that former Clinton advisor Robert Shapiro wrote in the Financial Times that the only thing that could save Obama's tenuous grip on power was a terror attack on the scale of Oklahoma City or 9/11. While the terror alerts about amateur jihadis in caves planning to bomb airport lobbies may be contrived, don't be fooled into thinking that people like Rahm Emanuel, the knife-wielding son of a former Irgun terrorist who bombed hotels, won't be prepared to resort to desperate measures in a bid to neutralize the snowballing success of an anti-establishment political climate which threatens to seriously impinge upon the power monopoly of the Washington elite, the Israeli lobby, and the rest of the new world order kingpins who are sitting ever more uncomfortably in their ivory towers as the election gets closer and closer (Watson, 2010).

**Source:** Guardian, Simon Tisdall, Richard Norton-Taylor

**Title/Headline:** *Barack Obama Accused Of Exaggerating Terror Threat For Political Gain*

**Abstract:** A US terror alert issued this week about al-Qaida plots to attack targets in western Europe was politically motivated and not based on credible new information, senior Pakistani diplomats and European intelligence officials have told the Guardian. The non-specific US warning, which despite its vagueness led Britain, France and other countries to raise their overseas terror alert levels, was an attempt to justify a recent escalation in US drone and helicopter attacks inside Pakistan that have "set the country on fire", said Wajid Shamsul Hasan, the high commissioner to Britain. **Hasan, a veteran diplomat who is close to Pakistan's president, suggested the Obama administration was playing politics with the terror threat before next month's midterm congressional elections, in which the Republicans are expected to make big gains.** He also claimed President Obama was reacting to pressure to demonstrate that his Afghan war strategy and this year's troop surge, which are unpopular with the American public, were necessary. **"I will not deny the fact that there may be internal political dynamics, including the forthcoming midterm American elections. If the Americans have definite information about terrorists and al-Qaida people, we should be provided [with] that and we could go after them ourselves,"** Hasan said. "Such reports are a mixture of frustrations, ineptitude and lack of appreciation of ground realities. **Any attempt to infringe the sovereignty of Pakistan would not bring about stability in Afghanistan, which is presumably the primary objective of the American and Nato forces.**" Dismissing claims of a developed, co-ordinated plot aimed at Britain, France and Germany, European intelligence officials also pointed the finger at the US, and specifically at the White House. **"To stitch together [the terror plot claims] in a seamless narrative is nonsensical,"** said one well-placed official. While Abdul Jabbar, a Briton, and others killed by an American drone strike on 8 September in North Waziristan, in Pakistan's tribal areas, were heard discussing co-ordinated plots, including possible "commando-style" attacks on prominent buildings and tourist sites in European capitals, security and intelligence officials said the plots were nowhere near fruition. The officials did not deny the men, and other foreign-born jihadi recruits who travel to the tribal areas for indoctrination and training, represented a potentially serious threat. **"You have discussions about all sorts of things – that does not necessarily mean there is anything concrete. It is not easy to set up groups,"** said one counter-terrorism official. By making it clear that the US drone strikes were pre-emptive, and were not in any way combating an imminent threat, European officials raised fresh questions – this time directly involving a British national – about the legality of the attacks, which could be viewed as assassinations. They said Washington was the "driver" behind claims about a series of "commando-style" plots and that the CIA – perhaps because it was worried about provoking unwelcome attention to its drone strikes – was also extremely annoyed by the publicity given to them. **The plot claims, which western intelligence agencies were aware of for months, were leaked last week to the American media. They were followed by a spate of what security and intelligence officials said were exaggerated claims in the British media, a US state department warning to American citizens to be vigilant when visiting Britain, France, and Germany, a "tit for tat" warning by France to its citizens visiting the UK, and alerts issued by the Swedish and Japanese governments.** Thomas de Maizière, Germany's interior minister, publicly expressed his scepticism about the US terror warning, saying he saw no sign of an imminent attack on Germany. **He described the danger to Germany as "hypothetical". The sharp rise in US unmanned drone attacks in Pakistan's tribal areas, coupled with several cross-border raids by American helicopter gunships that culminated in the killing of two Frontier Corps soldiers last week, was destabilising Pakistan,** Hasan said. **"Why are they putting so much pressure on us? It is a threat to the democratic system ... But people in Pakistan feel Washington does not care."** American actions were "obviously" linked to Obama's decision to set a timetable for leaving Afghanistan. **The US leader had "jumped the gun" and now "the Americans are in a hurry". He said fears were growing in Pakistan that the US was planning a bombing campaign using fixed-wing aircraft as well as drones in North Waziristan.** Hasan said Washington politicians failed to understand how much the US needed Pakistan in the "war on terror". Nor did they realise that public anger over repeated US infringements of Pakistani sovereignty could boil over into attacks on American personnel and interests that the government might not be able to control. **"The government does not want to go down this road,"** he said. **"But people feel abused. If they [the Americans] kill someone again, they will react. There is a figure that there are 3,000 American personnel in Pakistan. They would be very easy targets."** Hasan said American personnel stationed at the Pakistani air force base at Jacobabad, on the border between Sindh and Baluchistan provinces, could be vulnerable if the situation deteriorated further. The US requested the use of Jacobabad, and other bases at Dalbandin and Pasni, after the 9/11 attacks, and has maintained a military presence there ever since. Another Pakistani diplomat said Jacobabad was the main centre of operations for CIA and US army drones, which are ultimately controlled from America. **"They have hangars there. That's where they fly from and that's where they return."** The drone operations began in June 2004 with the tacit, reluctant agreement and involvement of the Pakistani authorities but were now in effect running beyond Pakistan's control, the diplomat suggested. **"We have always denied it in the past. But everybody knows this is happening. We need to wake up,"** the official said. A US official said: **"Our allies have been briefed on the nature of the threat and the intelligence that led to the travel alert and everyone understands this cannot be taken lightly. "To try to ascribe any political motivation is misguided and irresponsible"** (Tisdall, & Norton-Taylor, 2010).

**Title/Headline:** *EXCLUSIVE: Al Qaeda Leader Dined At The Pentagon Just Months After 9/11*

**Abstract:** Anwar Al-Awlaki may be the first American on the CIA's kill or capture list, but he was also a lunch guest of military

brass at the Pentagon within months of the Sept. 11, 2001, terror attacks, Fox News has learned. Documents exclusively obtained by Fox News, including an FBI interview conducted after the Fort Hood shooting in November 2009, state that Awlaki was taken to the Pentagon as part of the military's outreach to the Muslim community in the immediate aftermath of the attacks. The incident was flagged by a current Defense Department employee who came forward and told investigators she helped arrange the meeting after she saw Awlaki speak in Alexandria, Va. The employee "attended this talk and while she arrived late she recalls being impressed by this imam. He condemned Al Qaeda and the terrorist attacks. During his talk he was 'harassed' by members of the audience and suffered it well," reads one document. According to the documents, obtained as part of an ongoing investigation by the specials unit "Fox News Reporting," there was a push within the Defense Department to reach out to the Muslim community. "At that period in time, the secretary of the Army (redacted) was eager to have a presentation from a moderate Muslim." In addition, Awlaki "was considered to be an 'up and coming' member of the Islamic community. After her vetting, Aulaqi (Awlaki) was invited to and attended a luncheon at the Pentagon in the secretary of the Army's Office of Government Counsel." Awlaki, a Yemeni-American who was born in Las Cruces, N.M., was interviewed at least four times by the FBI in the first week after the attacks because of his ties to the three hijackers Nawaf al-Hazmi, Khalid al-Mihdhar and Hani Hanjour. The three hijackers were all onboard Flight 77 that slammed into the Pentagon. Awlaki is now believed to be hiding in Yemen after he was linked to the alleged Ft. Hood shooter Major Nidal Malik Hasan, who e-mailed Awlaki prior to the attack. Sources told Fox News that Awlaki, who is a former Muslim chaplain at George Washington University, met with the Christmas Day bomber Umar Farouk Abdulmutallab in Yemen and was the middle-man between the young Nigerian and the bombmaker. Awlaki was also said to inspire would-be Times Square bomber Faisal Shahzad. Apparently, none of the FBI's information about Awlaki was shared with the Pentagon. Former Army Secretary Tommy White, who led the Army in 2001, said he doesn't have any recollection of the luncheon or any contact with Awlaki. "If this was a luncheon at the Office of Government Counsel, I would not necessarily be there," he said. The Pentagon has offered no explanation of how a man, now on the CIA kills or capture list, ended up at a special lunch for Muslim outreach. After repeated requests for comment on the vetting process beginning on October 13th, an Army spokesman insisted Wednesday that the lunch was not an Army event. "The Army has found no evidence that the Army either sponsored or participated in the event described in this report," spokesman Thomas Collins said. Collins also noted that the FBI document referred to the "Office of Government Counsel" but should read "Office of General Counsel." Collins said he believed the event was sponsored by the office of the Secretary of Defense. A spokeswoman there said she would look into it and get back to Fox News. A former high-ranking FBI agent told Fox News that at the time Awlaki went to lunch at the Pentagon, there was tremendous "arrogance" about the vetting process at the Pentagon. "They vetted people politically and showed indifference toward security and intelligence advice of others," the former agent said (Herridge, 2010).

**Obviously, the war on terror is a fraud. Bin Laden and now Awlaki have been linked to the CIA.**

**Title/Headline:** Report: Clinton Lost Nuclear 'Biscuit'

**Abstract:** Retired Army Gen. Hugh Shelton wrote in his memoirs that former President Clinton misplaced the nuclear launch card for a couple months, reportedly not the first time a president has dropped the ball for the nuclear "football." "At one point during the Clinton administration, the codes were actually missing. That's a big deal, a gargantuan deal," the former Joint Chiefs of Staff chairman wrote in his new book, "Without Hesitation: The Odyssey of an American Warrior." ABC News recounted the incident with Clinton on Wednesday night, but the revelation is not new. Lt. Col. Robert Patterson, who was responsible for carrying around the "football" -- or the briefcase that serves a mobile strategic defense system, made a similar accusation seven years ago in his book "Dereliction of Duty." At the time, Patterson described how Clinton misplaced the card for months, confessing the loss after being asked to provide the card so it could be replaced with an updated code. ABC noted that a similar claim was made about former President Jimmy Carter, who was said to have left the card with the launch codes in a suit sent to the dry cleaner (Fox News, 2010).

**It appears that Carter and Clinton, both Democrats, are being demonized in the press in an attempt to make Democrats look weak when it comes to nuclear issues and national defense, thus paving the way for Obama to not look out of place when a nuclear attack happens on his watch**

**Date:** October 27, 2010

**Source:** Justin Fishel

**Title/Headline:** *Officials Insist Nukes Lost On Weekend Could Have Been Used If Needed*

**Abstract:** The U.S. military temporarily lost contact with 50 nuclear armed missiles over the weekend, but Defense Department officials insist that the missiles could have been launched at any time if needed. A military official from Global Strike Command said Wednesday that early on Saturday morning five ground control centers at Warren Air Force Base, each of which has launch control for the same 50 nuclear armed intercontinental ballistic missiles, experienced a communication glitch that caused them all to lose contact with the 50 nukes for about 45 minutes. The Air Force could have, if needed, launched any of these 50 missiles using a separate air platform, which this official could not discuss in detail because of its classified status. The United States Air Force has a total of 450 active ICBMs in the country. **Four of the control centers came back on line within an hour, but one of them is still off-line while experts attempt to diagnose the technical breakdown. Officials are confident this was not a result of human error.** This official said there are even more redundancies beyond the air platform, which are also classified in nature. **"At no time was the wartime readiness compromised,"** this official said. Military leadership, including Secretary of the Air Force Mike Donly, Chairman of the Joint Chiefs of Staff Mike Mullen and Defense Secretary Robert Gates were briefed on the issue over the weekend. **The White House declined to comment when the President Obama might have learned of the communication breakdown** (Fishel, 2010).

**Title/Headline:** *Iran: US Allots \$100bn To Nukes*

**Abstract:** Iran has criticized the United States for allocating \$100 billion to proliferation of its nuclear weapons, saying it contradicts Washington's claim of supporting a nuke-free world. Iran's Ambassador to the United Nations Mohammad Khazaei condemned the US nuclear double standards, saying Washington advocates a nuclear-free world on the one hand, while it continues to develop and modernize its nuclear arsenal on the other. **"The US plan to develop and modernize nuclear weapons ... to which a budget of more than one hundred billion dollars is allocated, is in direct contradiction to the White House slogans on a nuke-free world,"** Khazaei told the UN General Assembly's Disarmament Committee. The Iranian envoy also referred to the US nuclear bombardment of the Japanese cities of Hiroshima and Nagasaki, saying the existence of thousands of nuclear warheads in the arsenals of nuclear countries continues to cast a "shadow of fear" over the world. In April 2010, the New START was signed by the US and Russia. Under the new treaty, each side within seven years would be barred from deploying more than 1,550 strategic warheads or 700 launchers but neither side would have to eliminate large numbers of weapons to meet the new limits. Arms control advocates say the treaty does not go far enough in reducing the dangerous weapons on both sides. **The Pentagon's move to spend millions to rejuvenate its nuclear warheads is runs counter to the White House's "nuclear free world" motto** (Press TV, 2010).

**Date:** November 16, 2010

**Source:** The Guardian, Julian Borger

**Title/Headline:** *Barack Obama's Hopes For A Nuclear-Free World Fading Fast*

**Abstract:** Barack Obama's hopes of reshaping US foreign policy stand on the brink of failure tonight, after two of his most cherished initiatives — nuclear disarmament and better relations with Moscow — were dealt serious setbacks. According to a leaked Nato document seen by the Guardian, a move to withdraw US tactical nuclear weapons from Europe has been omitted from the alliance's draft strategic doctrine, due to be adopted by a summit this weekend in Lisbon. Meanwhile in Washington, a Republican leader in the Senate signalled that the nuclear arms control treaty Obama signed in April with Russian president Dmitry Medvedev is unlikely be ratified this year. Most observers say that if the treaty — known as New Start — is delayed until next year, it will be as good as dead, as the Democratic majority in the Senate will be even thinner by then, following the party's losses in the midterm elections. **Together the setbacks mark a new low point for Obama's ambitions, set out in a landmark 2009 speech in Prague, to set the world on a path to abolition of nuclear weapons. They also rob the president of the main concrete achievement so far in his bid to "reset" US-Russian relations.** In the absence of progress in the Middle East or Iranian compromise over its nuclear ambitions, the developments threaten to eclipse Obama's legacy in foreign policy. "All this stuff was integrated — the nuclear package and the Russian relationship," said Steven Clemons, policy analyst at the New America Foundation. **"In terms of the long-term international significance it's the most important thing Obama has done, and it has just come apart."** In the latest draft of Nato's "new strategic concept", seen by the Guardian, nuclear weapons remain at the core of Nato doctrine, and an attempt to withdraw an estimated 200 American B-61 nuclear bombs from Europe, a legacy of the cold war, is not mentioned. Germany, the Netherlands and Belgium — who all have B-61 bombs on their soil — had pushed to have the tactical weapons removed, with the encouragement of supporters of disarmament in the Obama camp including the US ambassador to Nato, Ivo Daalder. However, in a victory for France, which led a rearguard action against diluting nuclear deterrence in Nato doctrine, the draft strategic concept states that the weapons would only be removed as a trade-off with Moscow. **"In any future reductions, our aim should be to seek Russian agreement to increase transparency on its nuclear weapons in Europe and relocate these weapons away from the territory of Nato members," the draft states. "Any further steps must take into account the disparity with the greater Russian stockpile of short-range nuclear weapons."** Advocates of disarmament still hope the door to withdrawal could be left open in another strategic review, possibly next year. But Daryl Kimball, the head of the

Arms Control Association, said the Lisbon document represented a lost opportunity for the alliance. "Nato does not need these weapons against any of the 21st century threats we face," Kimball said. **"The weapons raise the risk of nuclear terrorism, and their presence makes it harder to convince Russia to cut its own tactical arsenal."** US and Russian negotiators had been expected to discuss tactical weapons in the next round of arms control talks, but those talks will almost certainly not take place if the New Start treaty is shelved. **The White House had hoped the Senate would ratify the treaty in its lame-duck session currently underway, before newly-elected Republican senators take their seats in January. However, the administration still needed some Republican support to get the 67 votes required for ratification. In a last-ditch move last week, it offered to spend an extra \$4 bn (£2.5 bn) on modernisation of the existing nuclear arsenal — an effort to placate the Republican whip, Jon Kyl. However, Senator Kyl issued a statement tonight saying he still did not think the treaty could be passed in the lame-duck session,** "given the combination of other work Congress must do and the complex and unresolved issues related to Start and modernisation." **Some Democrats were still hoping tonight the statement could be a bluff aimed at extracting yet more funding for America's nuclear labs. Others, however, saw it as a slammed door, and a reflection of Republican determination to make Obama a one-term president and erase his legacy.** Paul Ingram, head of the British American Security Information Council (Basic), said Obama's radical vision of "a world without nuclear weapons" laid out in his Prague speech was now fading. **"I wouldn't say it was dead. It's in emergency resuscitation," Ingram said. "If there is hope no, it's not coming from Washington. The leadership of this is not going to come from Washington" (Borger, 2010).**

**Title/Headline:** *Nato's Tactical Nuclear Weapons: The New Doctrine*

**Abstract:** Arms controls advocates and nuclear weapons experts are divided over whether Nato's new strategic concept represents a step towards disarmament. There is a debate underway among nuclear folk over whether Nato's new strategic concept, adopted in Lisbon, is a glass half-full or half-empty from the point of view of disarmament. Front and centre are up to 200 American B-61 bombs stored in six bases in five European countries. The tactical weapons have long served a symbolic rather than a military purpose in the post-Cold War world, and three of their host nations - Germany, Netherlands and Belgium - have been pushing for their removal as an expression of Barack Obama's self-declared mission to pursue gradual but determined disarmament. **Nobody expected the new strategic concept to sweep them away, but many arms control advocates anticipated that it might at least open the door a crack for their future departure. So did it?** In the "no" corner are the Arms Control Association and the British American Security Information Council (Basic) who have issued a joint statement describing the new doctrine as a "conservative, backward-looking" document and "a missed opportunity". Two nuclear policy experts have since weighed in, suggesting that the doctrine is not nearly as bad for disarmament as it could have been, and that it does leave room for further steps. **Hans Kristensen at the Federation of American Scientists calls it "one step forward and a half step back", while Martin Butcher at the Nato Monitor, argues that "overall this could have been much less , positive". Who's right? It depends how you parse the language. More importantly, perhaps, it depends what happens in the bigger picture.** If the New Start treaty dies in the Senate, it is hard to see where the momentum for reducing Nato and Russian tactical weapons is going to come from any time soon. That may have to await terminal obsolescence over the next decade or so (Borger, 2010).

**Title/Headline:** *Rove Accidentally Predicts Obama Reelection*

**Abstract:**

**Van Susteren:** Secretary of State Hillary Clinton says that she's going to stay through I think this administration which is another two years and then leave. Um, she said she's not going to run for President, she's out. What are your thoughts? You think we'll see her as a contender, and will she finish the last two years of this administration?

**Rove:** Oh, I think she definitely will finish the last two years. I don't think she's going to run in 2012. That's even duplicitous for a Clinton. I'm not certain that I agree, that I accept what she said about she's not going to be a candidate in 2016. I think she will.

**Van Susteren:** I meant '16, I meant '16.

**Rove:** Yeah, I suspect she will be a candidate. **She's going to think about being a candidate in 2016. And we'll know by about 2014. If she leaves the administration in 2014 or 2015 in order to give herself a chance to write a book about her experiences and reconnect with the grassroots then she might entertain it.** She'll be younger in 2016 than John McCain was when he ran and she will, I suspect, be a big presence on the Democrat (sic) scene.

So Rove thinks Barack Obama will be President in 2014 and 2015? Whoooooops. I'm sure that'll disappoint his colleagues at Fox, half of whom seem to be candidates for President themselves (Lewison, 2010).

**Conclusion:** President Obama's job approval rating has fallen to 47 percent in the latest Gallup poll, the lowest ever recorded for any president at this point in his term. With his popularity in the toilet, we can only imagine what his handlers and puppet masters have in store for him. Obama's predecessor, George W. Bush, also had terrible approval rating, but after the terror attacks of September 11th 2001, Bush's approval numbers skyrocketed (Sammon, 2009). It should be noted that **Barack Obama is the New World Order's "Closer"**, and should a nuclear terror attack occur, Obama will have the public support to basically attack, invade, and occupy any nation that fails to comply with the United States and the United Nations demands.

**Should Nuclear Terror come to pass, we should expect nothing short of World War III.**

## The Nuclear Bible: Nuclear Hijack: Top Secret

**Intro:** According to the Nuclear Threat Initiative (NTI): A terrorist organization can acquire a nuclear explosive only:

- By obtaining an intact nuclear weapon from a national stockpile
- By obtaining fissile material from stocks that were produced in highly advanced industrial facilities and then making the fissile material into a nuclear explosive (NTI, 2010).

The greatest fears of the NTI came true on August 29, 2007, except that it has occurred within the United States, not an Islamic country. The following story has been shelved from the beginning, and wasn't even written about until September 23, 2007. At the time, George W. Bush was in the White House and Dick Cheney was Vice President. Although the Air Force has stated that the thermonuclear weapons have been recovered, the deaths of at least (10) U.S. Air Force servicemen have died in rather mysterious ways. Remember, there are 6 live nuclear warheads missing and it's never been in the news! Ask yourself why?

The  
Washington  
Post

**Date:** September 23, 2007

**Source:** Washington Post, Joby Warrick, Michael Pincus

**Title/Headline:** *Missteps In The Bunker*

**Abstract:** Just after 9 a.m. on Aug. 29, a group of U.S. airmen entered a sod-covered bunker on North Dakota's Minot Air Force Base with orders to collect a set of unarmed cruise missiles bound for a weapons graveyard. They quickly pulled out a dozen cylinders, all of which appeared identical from a cursory glance, and hauled them along Bomber Boulevard to a waiting B-52 bomber. The airmen attached the gray missiles to the plane's wings, six on each side. After eyeballing the missiles on the right side, a flight officer signed a manifest that listed a dozen unarmed AGM-129 missiles. The officer did not notice that the six on the left contained nuclear warheads, each with the destructive power of up to 10 Hiroshima bombs. That detail would escape notice for an astounding 36 hours, during which the missiles were flown across the country to a Louisiana air base that had no idea nuclear warheads were coming. It was the first known flight by a nuclear-armed bomber over U.S. airspace, without special high-level authorization, in nearly 40 years. By 5:12 p.m., the B-52 was fully loaded. The plane then sat on the tarmac overnight without special guards, protected for 15 hours by only the base's exterior chain-link fence and roving security patrols. Air Force rules required members of the jet's flight crew to examine all of the missiles and warheads before the plane took off. But in this instance, just one person examined only the six unarmed missiles and inexplicably skipped the armed missiles on the left, according to officials familiar with the probe. It would be another nine hours -- until 8:30 p.m. -- before a Barksdale ground crew turned up at the parked aircraft to begin removing the missiles. At 8:45, 15 minutes into the task, a separate missile transport crew arrived in trucks. One of these airmen noticed something unusual about the missiles. Within an hour, a skeptical supervisor had examined them and ordered them secured. "It is more significant than people first realized, and the more you look at it, the stranger it is," said Joseph Cirincione, director for nuclear policy at the Center for American Progress think tank and the author of a history of nuclear weapons. "These weapons -- the equivalent of 60 Hiroshimas -- were out of authorized command and control for more than a day." Last year, the Air Force eliminated a separate nuclear-operations directorate known informally as the N Staff, which closely tracked the maintenance and security of nuclear weapons in the United States and other NATO countries. Currently, nuclear and space operations are combined in a single directorate. Air Force officials say the change was part of a service-wide reorganization and did not reflect diminished importance of nuclear operations. Linton F. Brooks, who resigned in January as director of the National Nuclear Security Administration. Brooks, who oversaw billions of dollars in U.S. spending to help Russia secure its nuclear stockpile, said the mishandling of U.S. warheads indicates that "something went seriously wrong." A former Air Force senior master sergeant wrote separately that "mistakes were made at the lowest level of supervision and this snowballed into the one of the biggest mistakes in USAF history. I am still scratching my head wondering how this could [have] happened" (Warrick & Pincus, 2007).

**Date:** October 19, 2007

**Source:** Daily Mail

**Title/Headline:** *Air Chiefs Face Court After ARMED Nuclear Missiles Were Flown Across U.S.*

**Abstract:** At least five U.S. Air Force commanders are facing criminal charges for allowing armed nuclear cruise missiles to be flown across America. The officers, one a colonel, have been relieved of their command following an investigation into what has been

described as the worst breach of weapons security for 40 years. The alert on August 29 involved a B-52 Stratofortress bomber being flown 1,500 miles from North Dakota to Louisiana with six armed nuclear warheads in launch position below its wings. Each one had ten times the destructive force of the bomb dropped on Hiroshima (Daily Mail, 2007).

**Dave Lindorff of the Baltimore Chronicle published the following story regarding the so called "loose nukes" and the subsequent death of six of the individuals involved. Why this has not made national headlines is quite disturbing, and may play into a nuclear terror attack should one happen. When this event occurred Bush and Cheney were still in the White House, and this was during a time when similarly like today, the current administration was beating the wars drums against Iran. We do not know if these missing nuclear weapons were ever fully recovered, and we probably will never know due to the death of these men.**

**Date:** October 29, 2007

**Source:** Global Research, *Mahdi Darius Nazemroaya*

**Title/Headline:** *In Tribute: 9 Minot And Barksdale AFB Airmen, 2007*

**Abstract:** According to a wide range of reports, several nuclear bombs were "lost" for 36 hours after taking off August 29/30, 2007 on a "cross-country journey" across the U.S., from U.S.A.F Base Minot in North Dakota to U.S.A.F. Base Barksdale in Louisiana. Reportedly, in total there were six W80-1 nuclear warheads armed on AGM-129 Advanced Cruise Missiles (ACMs) that were "lost." The story was first reported by the Military Times, after military servicemen leaked the story. **It is also worth noting that on August 27, 2007, just days before the "lost" nukes incident, three B-52 Bombers were performing special missions under the direct authorization of General Moseley, the Chief of Staff of the U.S. Air Force.** The exercise was reported as being an aerial information and image gathering mission. The base at Minot is also home of the 91st Space Wings, a unit under the command of Air Force Space Command (AFSPC). According to official reports, the **U.S. Air Force pilots did not know that they were carrying weapons of mass destruction (WMDs).** Once in Louisiana, they also left the nuclear weapons unsecured on the runway for several hours. U.S. Air Force Deputy Chief of Staff for Operations, Plans, and Requirements, Major-General **Richard Y. Newton III commented on the incident, saying there was an "unprecedented" series of procedural errors, which revealed "an erosion of adherence to weapons-handling standards".** These statements are misleading. The lax security was not the result of procedural negligence within the U.S. Air Force, but rather the consequence of a deliberate tampering of these procedures. **If a soldier, marine, airman, or sailor were even to be issued a rifle and rifle magazine - weaponry of a far lesser significance, danger, and cost - there is a strict signing and accountability process that involves a chain of command and paperwork.** This is part of the set of military checks and balances used by all the services within the U.S. Armed Forces. Military servicemen qualified to speak on the subject will confirm that there is a stringent nuclear weapons handling procedure. **There is a rigorous, almost inflexible, chain of command in regards to the handling of nuclear weapons and not just any soldier, sailor, airman, or marine is allowed to handle nuclear weapons. Only servicemen specialized in specific handling and loading procedures, are perm certified to handle, access and load nuclear warheads.** Every service personnel that moves or even touches these weapons must sign a tracking paper and has total accountability for their movement. There is good reason for the paperwork behind moving these weapons. **The military officers that order the movement of nuclear weapons, including base commanders, must also fill out paper forms. In other words, unauthorized removal of nuclear weapons would be virtually impossible to accomplish unless the chain of command were bypassed, involving, in this case, the deliberate tampering of the paperwork and tracking procedures.** The strategic bombers that carried the nuclear weapons also could not fly with their loaded nuclear weaponry without the authorization of senior military officials and the base commander. **The go-ahead authorization of senior military officials must be transmitted to the servicemen that upload the nuclear weapons. Without this authorization no flights can take place.** In the case of the missing nukes, orders were given and flight permission was granted. Once again, any competent and eligible U.S. Air Force member can certify that this is the standard procedure.

**There are two important questions to be answered in relation to the "lost" nukes incident:**

- 1) Who gave the order to arm the W80-1 thermonuclear warheads on the AGM-129 Advanced Cruise Missiles (ACMs)?
- 2) At what level in the military hierarchy did this order originate? How was the order transmitted down the command chain?
- 3) If this was not a procedural error, what was the underlying military-political objective sought by those who gave the orders?

**The Impossibility of "Losing" Nuclear Weapons:** As Robert Stormer, a former U.S. lieutenant-commander in the U.S. Navy, has commented: "Press reports initially cited the Air Force mistake of flying nuclear weapons over the United States in violation of Air Force standing orders and international treaties, while completely missing the more important major issues, such as how six nuclear cruise missiles got loose to begin with." Stormer also makes a key point, which is not exactly a secret: "There is a strict chain of custody for all such weapons. Nuclear weapons handling is spelled out in great detail in Air Force regulations, to the credit of that service. Every person who orders the movement of these weapons, handles them, breaks seals or moves any nuclear weapon must sign off for tracking purposes. Two armed munitions specialists are required to work as a team with all nuclear weapons. All individuals working with nuclear weapons must meet very strict security standards and be tested for loyalty - this is known as a '[Nuclear Weapons] Personnel Reliability Program [DoDD 5210 42]'. They work in restricted areas within eyeshot of one another and are reviewed constantly." Stormer unwraps the whole Pentagon cover-up by pointing out some logical facts and military procedures. First he reveals that: "All security forces assigned [to handle and protect nuclear weapons] are authorized to use deadly force to protect the weapons from any threat [including would-be thieves]." He then points out a physical reality that can not be shrugged aside: "Nor does anyone quickly move a 1-ton cruise missile - or forget about six of them, as reported by some news outlets, especially cruise missiles loaded with high explosives." He further explains another physical and procedural reality about nuclear weapons assembly: "The United States also does not transport nuclear weapons meant for elimination attached to their launch vehicles under the wings of a combat aircraft. The procedure is to separate the warhead from the missile, encase the warhead and transport it by

military cargo aircraft to a repository - not an operational bomber base that just happens to be the staging area for Middle Eastern operations."

**This last point raises the question of what were the nuclear weapons meant for? In this context, Stomrer puts forth the following list of important questions to which he demands an answer:**

- 1) Why, and for what ostensible purpose, were these nuclear weapons taken to Barksdale?
- 2) How long was it before the error was discovered?
- 3) How many mistakes and errors were made, and how many needed to be made, for this to happen?
- 4) How many and which security protocols were overlooked?
- 5) How many and which safety procedures were bypassed or ignored?
- 6) How many other nuclear command and control non-observations of procedure have there been?
- 7) What is Congress going to do to better oversee U.S. nuclear command and control?
- 8) How does this incident relate to concern for reliability of control over nuclear weapons and nuclear materials in Russia, Pakistan and elsewhere?
- 9) Does the Bush administration, as some news reports suggest, have plans to attack Iran with nuclear weapons?

**It is a matter of perception, whether it is "clear" or "unclear", as to why the nuclear warheads had not been removed beforehand from the missiles. For those who have been observing these series of "unclear" events it is becoming "clear" that a criminal government is at the helm of the United States.** There was no way that the six nuclear missiles could have been "mistakenly" loaded, especially when their separate warheads had to be affixed to the missiles by individuals specialized in such a momentous task. **It is also being claimed that military teams in both U.S.A.F. Base Minot and U.S.A.F. Base Barksdale made major "procedural errors".** What are the probabilities of this occurring simultaneously in two locations? It is also worth noting that original reports from military sources talked about only five of the six nuclear warheads from Minot being accounted for in Barksdale. Nuclear warheads are also kept in specialized storage areas or bunkers. Moreover, nuclear weapons are not being decommissioned at Barksdale.

**The Role of the Nuclear Weapons Surety Program: What happened to Electronic Monitoring?:** The Nuclear Weapons Surety Program is a joint program between the U.S. Department of Defence and the U.S. Department of Energy. The National Security Agency (NSA) is also involved as well as other U.S. federal government agencies. The Nuclear Weapons System Safety Program is part of this program, which involves a monitoring and safeguards regime for the U.S. nuclear arsenal. The Nuclear Weapons Security Standard falls under the Nuclear Weapons Surety Program and is in place to disallow any "unauthorized access to nuclear weapons; prevent damage or sabotage to nuclear weapons; prevent loss of custody; and prevent, to the maximum extent possible, radiological contamination caused by unauthorized acts." **Under this or these safeguards system there also exists a rigorous control of use scheme, which is tied to the military chain of command and the White House.**

**'Command and Control' (C2) and 'Use Control':** 'Use control' is a set of security measures designed to prevent unauthorized access to nuclear weapons. These measures involve weapons design features, operational procedures, security, and system safety rules. 'Command and Control' or 'C2' involves the Office of the President of the United States of America. C2 is an established line of command, which is tied to the White House. **Without it, nuclear weapons cannot be deployed or armed as they were in U.S.A.F. Base Minot. It is these two control elements that establish the basis of authorization through which "absolute control of nuclear weapons" is maintained "at all times."** In addition to the checks and balances in place in regards to handling nuclear weapons, the Defence Threat Reduction Agency (DTRA) and its partners manually and electronically inspect and monitor all U.S. nuclear weapons through the Nuclear Weapon Status Information Systems.

**More Unanswered Questions: What Happened to the Computerized Tracking System?:** The Nuclear Management Information Systems "interface with each other and provide [the U.S. Department of Defence] with the ability to track the location of nuclear weapons and components from cradle-to-grave [meaning from when they are made to when they are decommissioned]." The Military Times also makes an omission that exposes the official narrative as false and indicates that the event was not just a mistake: "The Defense Department uses a computerized tracking program to keep tabs on each one of its nuclear warheads, said Hans Kristensen, director of the Nuclear Information Project at the Federation of American Scientists. **For the six warheads to make it onto the B-52, each one would have had to be signed out of its storage bunker and transported to the bomber.**" **This is where the chain of command in regards to military officers falls into play. If any of the stocked inventories of nuclear weapons are moved to an authorized location they will be noticed and tracked by the DTRA and will require the relevant authorization.** There is also a code system involved that is tied to the chain of command. The fact that the incident only apparently became known to the U.S. Air Force when military personnel reported it, suggests that either the nuclear weapons were ordered to be moved or that the electronic tracking devices had been removed or tampered with. This scenario would need the involvement of individuals with expertise in military electronics or for those responsible for the monitoring of nuclear weapons to look the other way or both.

**Mysterious Deaths in the United States Air Force: Whitewash and Cover-up:** Several military personnel died under mysterious circumstances shortly before and after the incident. There are now questions regarding the fate of these individuals in the U.S. Air Force who could have had relationships in one way or another to the incident or possibly have been directly involved. It is also necessary to state that there is no proof that these deaths are linked to the August flight from Minot to Barksdale in question. Citizens for Legitimate Government has pointed towards the involvement of the U.S. Air Force in a cover-up and has linked several deaths of U.S. servicemen to the incident. Lori Price has also stated for Citizens for a Legitimate Government that **"you need about fourteen signatures to get an**

### **armed nuke on a B-52."**

Based on several news sources, including the U.S. military, we provide below a detailed review of these mysterious and untimely deaths of U.S. servicemen.

**Todd Blue**

**Airman 1st Class Todd Blue went on leave days after the nuclear weapons were "lost." Blue died under questionable timing while on leave, visiting his family in Wytheville, Virginia at the age of 20 on September 10, 2007.** He was a response force member assigned to the 5th Security Forces Squadron. What does this mean? **Airman Todd Blue occupied a key position in weapons systems security at Minot.** At Minot U.S.A.F. Base the 5th Security Forces Squadron to which he belonged was responsible for base entry requirements and a particular section, the Weapons System Security section, was responsible for preventing the unauthorized removal of military property. The latter is responsible for security of all priority resources, meaning the security of nuclear weapons. In other words not only did the 5th Security Forces Squadron keep eyes on what entered and left Minot, but they kept an eye on and monitored the nuclear weapons.

**Captain John Frueh**

**U.S. Air Force Captain John Frueh is another serviceman who could have been indirectly connected to the "lost" nuclear weapons.** He was reported as being last seen with a GPS device, camera, and camcorder being carried with him in a backpack. Local police in Oregon and the F.B.I. seemed to be looking for him for days. His family also felt that something bad had happened to him. **On September 8, 2007 Captain Frueh was found dead in Washington State, near his abandoned rental car, after the Portland Police Department contacted the Skamania County Sheriff's Officer.** The last time he spoke with his family was August 30, 2007. He had arrived from Florida to attend a wedding that he never showed up at. The Oregonian reported that "Authorities in Portland found no activity on his credit or bank cards since [Frueh] was last seen (...) [and that] the last call from his cell phone was made at 12:28 p.m. [August 30, 2007] from Mill Plain Boulevard and Interstate 205 in Vancouver [Washington State]." His background was in meteorology and the study of the atmosphere and weather. He was also reported to be a U.S. Air Force pararescue officer. He was also a major-select candidate, which means he was selected for a promotion as a U.S. Air Force major, but was not officially promoted. U.S.A.F. Special Operations Command has its headquarters in Hurlburt Field, Florida and is one of nine major Air Force commands. It is also the U.S. Air Force's component of U.S. Special Operations Command, a unified command located at MacDill Air Force Base, which is also in Florida. The force provides special operations forces for worldwide deployment and assignment to regional unified commands, such as CENTCOM. Its missions include conduct of global special operations. These operations - and this is where careful attention should be paid - range from "precision application of firepower, such as nuclear weapons," to infiltration, exfiltration (the removal of "devices," supplies, spies, special agents, or units from enemy territory), re-supply and refuelling of special operational elements. In Captain Frueh's case his death is questionable too. The U.S. Air Force would not let a missing persons' investigation go forward by the police without conducting its own investigation. Usually the different service branches of the U.S. military would investigate for missing servicemen, to see if these individuals are Absent Without Authorized Leave (AWAL) or have deserted, before an individual's case is handed over to the police. **Senior Airman Clint Huff: Another military weatherman, along with his wife, also died after August 30, 2007., Huff, who belonged to the 26th Operational Weather Squadron and his wife Linda Huff died in a motorcycle accident on September 15, 2007.** The husband and wife fatality happened on Shreveport-Blanchard Highway, near U.S.A.F. Base Barksdale, when according to the Caddo Parish Sheriff's Officer a Pontiac Aztec, a medium-sized SUV, initiated a left turn at the same time that the couple attempted to pass on a no passing zone and collided.

**Weston Kissel**

**First-Lieutenant Weston Kissel: A B-52H Stratofortress Bomber pilot, also died in a reported Tennessee motorcycle accident.** This was while he was on leave in, less than two months from the nuclear B-52 flights, on July 17, 2007. His death came after another single-vehicle accident by another Minot serviceman, Senior Airman Adam Barrs.

**Adam Barrs**

Senior Airman Barrs died as a passenger in a vehicle being driven by Airman 1st Class Stephen Garrett, also from Minot. Garrett, also belongs to the 5th Aircraft Maintenance Squadron. **The death of Barrs was reported as being part of a single-vehicle car accident. Associated Press reports state that "[Minot] Base officials say 20-year-old Barrs was a passenger in a vehicle that failed to negotiate a curve, hit an approach, hit a tree and started on fire late Tuesday [July 3, 2007] night." Barrs was pronounced dead on the scene of the accident, while Garrett was taken the hospital with no updates released by the U.S. Air Force.** Adam Barrs also belonged to the 5th Aircraft Maintenance Squadron, where he was responsible for the maintenance and securing of the electronic communicational and navigation mission systems aboard the B-52H Stratofortresses on base. The 5th Aircraft Maintenance Squadron is also one of the units that are responsible for loading and unloading weaponry onto the B-52H Stratofortresses. The deaths of Kissel and Barrs could be dismissed as irrelevant because they occurred prior to the incident. **However, Barrs and Kissel could have been in one way or another connected to the advanced planning of the special operation, prior to the incident (special operations are not planned in a few days and may take months and even longer). There is, of course, no proof and only an independent investigation will be able to reveal whether these deaths are connected to the incident.** If there was an internal and secretive operation bypassing most military personnel, a few men in key positions would have to have been involved over a period of time prior to the August 29/30, 2007 flight. **Senior Airman Barrs, due to his expertise in communication and navigational systems, could potentially have been involved in the preparations that would have allowed the nuclear weapons to escape detection by military surveillance and be ready for takeoff.**

**Reprimands, Replacements and Reassignments in the U.S.A.F. Chain of Command:** Senior officers, including three colonels and a lieutenant-colonel, are among seventy personnel that will reportedly be disciplined for negligence and for allowing a B-52H Stratofortress Bomber to fly across the U.S. carrying six nuclear-armed cruise missiles that should never have been loaded under its wings. **According to the Military Times, George W. Bush Jr. had been swiftly informed.** This is a lockstep procedure. This illustrates the importance tied to the authorization needed for handling nuclear weapons. This is part of a two-way process in regards to authorization from the White House. The commander of the 5th Munitions Squadron and the commander of the 5th Bomb Wing, Colonel Bruce Emig, have been replaced along with a series of other senior officers. This implies that the U.S. Air Force chain of command is directly involved in this event. None of these senior officers have been authorized to speak or make statements, according to U.S. military sources. Will any of these officers receive lucrative departure packages? Have they been reassigned? More generally, the nature of the reprimands directed against senior officers involved has not been fully disclosed. The "memory" of the incident is being erased through a reorganization of the ranks and a purge at U.S.A.F. Base Minot. **The streamlining of the chain of command as well as the mysterious deaths of personnel who could have been involved in the incident, raise a series of far-reaching questions.** There are several important issues regarding the senior officers' chain of command at Minot, which will be addressed in this article. Once again, the most important questions in regards to the missing nukes are: **Who gave the orders and authorization for the operation and what were the underlying objectives of loading armed nuclear missiles?**

*Other Mysterious Deaths: Was the Missing Nukes Incident connected to US War Plans directed against Iran?:*

**Charles D. Riechers**

**A U.S. Air Force official, Charles D. Riechers, has been found dead on October 14, 2007. Riechers was a retired Air Force officer and master navigator specializing in electronic warfare.** He was a member of the Senior Executive Service of the U.S. Air Force, and was the Principal Deputy Assistant Secretary of the Air Force for Acquisition and Management. A description of his duties includes "providing sound expert advice and guidance on acquisition and procurement policies, as well as formulating, reviewing and, as assigned, execution of plans, programs and policies relating to organization, function, operation and improvement of the Air Force's acquisition system." He apparently killed himself by running his car's engine inside his suburban garage in Virginia. The death of Charles D. Riechers has been casually linked by The Washington Post to his involvement in fraudulent activities and embezzlement. The Washington Post reported that the Air Force had asked defense contractor, Commonwealth Research Institute (C.R.I.), to give him a job with no known duties while he waited for official clearance for his promoted rank in the Pentagon. **Riechers is quoted as saying: "I really didn't do anything for C.R.I.," and "I [still] got a paycheck from them."** The question, of course, was whether the contractor might expect favours in return upon his assignment to the Pentagon last January. A mysterious suicide letter expressing shame was subsequently reported; the letter was reportedly from a man who had already admitted without shame that he was receiving money for doing nothing. This was known to the U.S. Senate, which had approved his promotion. In a report featured by Pravda, Russian **Intelligence analysts have said that the reported suicide of Charles D. Riechers was a cover-up and that he was murdered because of his involvement in the controversial flight of nuclear weapons over the continental United States. Pravda reports that "Russian Intelligence Analysts are reporting today that American War Leaders have 'suicided' [sic] one of their Top US Air Force Officials Charles D. Riechers as the rift growing between the U.S. War Leaders and their Top Military Officers over a nuclear attack on Iran appears to be nearing open warfare."** According to the Pravda report, the incident was linked to an operation to smuggle nuclear

weapons away from the U.S. military in connection to launching a war against Iran. The Commonwealth Research Institute (CRI), a registered non-profit organization is a subsidiary of Concurrent Technologies, which is registered with the IRS as a tax-exempt charity, which is run by Daniel Richard DeVos. DeVos is also an associate of John P. Murtha, who was investigated by the F.B.I. for his Saudi links. Certainly the ties of the Commonwealth Research Institute (CRI), a non-profit organization working for the Pentagon, are questionable and the organization could be a front for internal operations that bypass most military personnel. **The case appears to be part of an internal operation that was being kept a secret from most of the U.S. military, but what for?**

**General Russell Elliot Dougherty**

**More than a month before the death of Riechers, General Russell Elliot Dougherty a retired flag officer, was also reported to have died on September 7, 2007** at his home in Falcon Landing military retirement community in Potomac Falls located in Arlington, Virginia. **He once was one of the most senior individuals responsible for the nuclear arsenal of the U.S. military and also the former commander of Strategic Air Command (SAC) and director of the Joint Strategic Target Planning Staff, which identified nuclear targets worldwide amongst its responsibilities.** At Minot next to his obituary was a military information notice on suicide, telling servicepersons what the signs of suicide are. Russell Dougherty in the course of his military career in the U.S. Air Force had dealt with the issues pertaining to Mutual Assured Destruction (MAD), full spectrum dominance, how to defeat the enemy and avoid a nuclear war, other uses for nuclear weaponry, Nuclear Primacy for the U.S., and tackling the effects of the wind and weather - due to their unpredictable natures - on the use of nuclear weapons. The fact that the nuclear warheads were attached to the nuclear cruise missiles could mean that someone wanted to take the weapons in one step or to use them right away.

**Timely Appointments at U.S.A.F. Base Minot:** Several of the commanding officers at Minot were freshly appointed in June, 2007. This may have been part of standard procedures, but the timing should not be ignored.

**Colonel Robert D. Critchlow:** Was transferred, just before the incident, from the Pentagon to Minot and appointed commanding officer for the 91st Operations Group, a missileer unit and the operational backbone of the 91st Space Wing. In Washington, D.C. he was involved in research for the Congressional Research Services and later posted into Air Force Nuclear Response and Homeland Defence **Colonel Myron L. Freeman:** Was transferred from Japan to Minot in June, 2007. Colonel Freeman was appointed as the commander of the 91st Security Forces Group, which is responsible for securing Minot's nuclear arsenal.

**Colonel Gregory S. Tims:** Was also appointed as deputy commander or vice-commander of the 91st Space Wing in June, 2007. However, Colonel Tims was transferred to Minot from California almost a year before.

**Chief Master Sergeant Mark R. Clark:** One of the most senior non-commissioned officers (NCOs) or non-commissioned members (NCMs), Clark was also transferred to U.S.A.F. Base Minot from Nebraska in July, 2007.

**Colonel Roosevelt Allen:** Was also transferred to Minot from Washington, D.C. to become commander of the 5th Medical Group.

**Colonel Bruce Emig:** The now-former commander of the 5th Bomb Wing, was also transferred to Minot from U.S.A.F. Base Ellsworth in South Dakota in June, 2007. Colonel Emig was also the base commander of Minot.

**Colonel Cynthia M. Lundell:** The now-former group commander for the 5th Maintenance Group, the unit responsible for loading and unloading weaponry onto the B-52H Stratofortresses was also freshly transferred from a NATO post in Western Europe in June, 2007. Were these appointments temporary? Were any of these appointments related to the six "lost" nuclear missiles

**George W. Bush**

**Prior to the Missing Nukes Incident, Minot Airmen Meet with the President and the U.S. Air Force Chief of Staff.** On June 15, 2007, George W. Bush Jr. met senior officers from U.S.A.F. Base Minot at U.S.A.F. Base McConnell in Wichita, Kansas during a visit to Boeing's Integrated Defense Systems facility. Amongst them was Major Daniel Giacomazza of the 5th Operational Support Squadron. Senator Patrick Roberts of Kansas was also present. "While he chaired the Senate Intelligence Committee from 2002 to 2007, [Senator] Roberts stonewalled attempts to investigate everything from the manipulation of intelligence in the rush to war in Iraq, President Bush's warrantless wiretaps, and even allegations of the use of torture by the CIA," according to Associated Press (AP) reports. The same report also indicates that the U.S. President was in Wichita for a political fundraiser, and stopped at a new Boys and Girls Club of America to defray the costs of getting to Wichita via Air Force One for Senator Roberts' campaign. Military sources have reported that a B-52H

Stratofortress was flown to Wichita so that Boeing's engineers could take a look in order to make adjustments to the war planes for a new military program. Nothing has been reported about any private meetings between President Bush Jr. or any of his presidential staff and the personnel from Minot. However, reports have been made of meetings between military families and the U.S. President in his office on Air Force One. General Moseley, the Air Force Chief of Staff, had previously visited Minot on March 14-15, 2007, a month before Minot airmen went to Wichita. If a secret mission was being prepared, these events could have played a role in the recruiting phases for an important internal special operation. Following their recruitment, Minot servicemen could have symbolically met General Moseley or White House officials to understand that the mission was being sanctioned by the highest ranks and offices in the United States.

**Orders had to Come from the Top: Treason of the Highest Order:** Orders had to come from higher up. The operation would not have been possible without the involvement of more than one individual in the highest ranks of the U.S. Air Force command structure and the Pentagon. The only way to bypass these separate chains of command is "to be above them" (from higher up), as well as have the possibility of directly overseeing their implementation. These orders would then have been communicated to lower levels in the US Air Force command chain in different locations, to allow for a so-called "oversight" to proceed. The alternative to this is "an alternative chain of command," although this also needs someone in the highest ranks of office to organize and oversee. The post given to Riechers was politically motivated, given his track record in the U.S. Air Force. Riechers had been in a position of responsibility in the U.S. Air Force special operational support activities; something he had in common with Russell Dougherty, the former SAC commander. He would have been one of the best suited individuals for making arrangements in the case of an alternative command structure for a secretive nuclear operation. Moreover, he already had a record of corrupt behaviour through his involvement with the Commonwealth Research Institute. The possible involvement of U.S. Air Force weathermen and special operatives raises many questions as to what exactly was the objective of making the nuclear weapons disappear.

**The Investigation:** The U.S. Air Force has publicly stated that it has made a "mistake," which is very unusual and almost unprecedented for a military organization that tries to continually assure the American public of their safety. The fact that seventy or more military personnel have been punished in the case of the "lost" nuclear weapons does not mean, however, that the senior commanding officers responsible for having carried out the special operation will be identified and punished. Quite the opposite. The investigation could indeed result in a camouflage of the chain of command, where lower-ranking military personnel are accused and court-martialed, with a view to ultimately protecting those in high office who have committed an act of treason. The series of deaths mentioned above, may have no ties whatsoever with the the August flight in question from Minot to Barksdale, but the issues of command, monitoring, and authorization cannot be overlooked or ignored. The American people have before them a case of treason that involves the highest offices of government and most probably the offices of the President and the Vice-President. Once again, the "C2" process involves the Office of the President and Commander-in-Chief. It is an established line of command, without which nuclear weapons could not have been deployed or armed as they were in U.S.A.F. Base Minot. It is this command element that establishes the basis of authorization through which "absolute control of nuclear weapons" is maintained "at all times." With time it is possible that military servicemen and servicewomen may come forward with more information. However, in the meantime, there has been a streamlining of military personnel at U.S.A.F. Minot. Base personnel have become dispersed and reassigned to other locations. If they on the grounds of loyalty to their country, the United States of America, come forward and reveal what has taken place, they are to be saluted with full honour by all ranks. As George Orwell said, "In a time of universal deceit, telling the truth becomes a revolutionary act," and indeed these are deceitful times. The fact that U.S. Air Force officers came forward and reported this incident is contrary to U.S. military procedures, regulations, and laws. The U.S. military will never release any information that will risk or damage its reputation. Any information in regards to nuclear weapons can not be released without prior consultations with and authorization by the White House. **The nuclear weapons were armed and moved deliberately. Orders had to have come from the highest echelons of the U.S. government. The question is what exactly were they meant for? Were they part of a war agenda or something else?**

**Bush Threatens Iran with Nuclear Weapons:** What adds intrigue to an understanding of the missing nukes, are the international events and war games taking place just after the "lost" nuclear weapons incident, not to mention the President's ongoing threats to attack Iran with nuclear weapons and Vice President Cheney's repeated warnings that a second large scale terrorist attack on America is under preparation, with the support of Iran. In the U.S., under the Vigilant Shield 2008 war games (initiated in September, 2007) and the TOPOFF anti-terrorism exercises, some form of nuclear terrorist attack on American soil had been envisaged. The roles of Russia and China had also been contemplated. The latter would be "a likely scenario" had the U.S. attacked Iran and as a result Russia and China had decided to intervene. Under Vigilant Shield 2007, held in 2006, the possibility of a nuclear war with Iran's allies, Russia and China, had been contemplated in the war games scenario. The Kremlin has responded by holding its own war games. An unveiled threat to trigger World War Three has been the response of George W. Bush Jr. to Russia's statements warning that a U.S. sponsored war with Iran, could result in an escalating World War III scenario. The six nuclear warheads were not meant for use in theatre operations against Iran. This is obvious because if they were then they would have been deployed via the proper procedural routes without the need to hide anything. Besides, there are already theatre-level nuclear weapons ready and armed in Europe and the Middle East for any possible Middle Eastern mission. There was something more to the incident. It is also worth noting that the Israelis launched an attack on an alleged Syrian nuclear facility that both Tel Aviv and the White House claim was constructed with the assistance of North Korea. This event has been used, through official statements and media disinformation, to draw a Syria-Iran-North Korea nuclear proliferation axis. In regards to the case of the missing nuclear weapons, weathermen and military personnel with an expertise in space and missile components were involved. The incident took place during a time when the U.S. missile shield projects in Eastern Europe and Eastern Asia, directed against Russia and China, were raising international tensions and alarms. On October 23, 2007, President Bush Jr. stated: "The need for missile defence in Europe is real and I believe it's urgent." Nuclear warfare, the militarization of space, and "the missile shield" are interrelated military processes. The overtones of Nuclear Primacy are hanging in the air. One of the goals of the U.S. military has been to effectively shield itself from a potential Russian or potential Russian and Chinese nuclear response to a nuclear "First Strike" from the U.S. military. The militarization of space is also deeply linked to this military project. Like their advanced knowledge about the U.S. missile shield project, Russian and Chinese officials have got wind of these ambitions and are fully aware of what the U.S. intends to do (Nazemroaya, 2007).

**Title/Headline:** *The Mystery Of Minot: Loose Nukes And A Cluster Of Dead Airmen Raise Troubling Questions*

**Abstract:** The unauthorized Aug. 29, 2007 cross-country flight of a B-52H Stratofortress armed with six nuclear-tipped AGM-29 Advanced Cruise missiles, which saw these 150-kiloton warheads go missing for 36 hours. So far, the Pentagon, which has launched two separate investigations into the incident, seems to be assuming that it is dealing with the comedy version, saying that some incredible “mistake” led to nuclear weapons being taken inadvertently from a weapons-storage bunker, loaded into launch position on a bomber, and flown from North Dakota to Louisiana. Pentagon investigators have completely ignored a peculiar cluster of six deaths, during the weeks immediately preceding and following the flight, of personnel at the two Air Force bases involved in the incident and Air Force Command Operations headquarters. The problem with this theory is that dummy warheads don’t look the same as the real thing. The real warheads, called W80-1’s, are shiny silver, which is clearly visible through postage-stamp-sized windows on the nosecone covers that protect them on the missiles. In addition, the mounted warheads are encased in a red covering as a second precaution. **Apparently the nukes (which can be set to explode at between 5 kilotons and 150 kilotons) were easily spotted by a Barksdale AFB ground crew when they went out to the plane on the tarmac hours after it landed.** If the Barksdale ground crew, which had no reason to suspect it was looking at nuclear-tipped missiles, easily spotted the “error,” why did everyone at Minot miss it, as claimed? **Clearly, whoever loaded the six nukes on one B-52 wing pod, and whoever mounted that pod on the wing, knew or should have known that they were dealing with nukes—and absconded an order from the highest authority in Washington, loading such nukes on a bomber was against all policy.** The odds of randomly putting six nukes all on one pod, and six dummies on the other, are 1:924. And how curious that the pilot, who is supposed to check all 12 missiles before flying, checked only the pod containing the dummy warheads. Various experts familiar with nuclear-weapons-handling protocols express astonishment at what happened on Aug. 29 and 30. After all, over the course of more than six decades, the protocols for handling nuclear arms have called for at least two people at every step, with paper trails, bar codes, and real-time computer tracking of every warhead in the arsenal. Nothing like this has been known to have happened before. Air Force Gen. Eugene Habiger, who served as US Strategic Command chief from 1996 to 1998, told the Post, **“I have been in the nuclear business since 1966 and am not aware of any incident more disturbing.”** Philip Coyle, a senior advisor at the Center for Defense Information who served as assistant secretary of defense in the Clinton administration, calls the incident “astonishing” and “unbelievable.” **He says, “This wasn’t just a mistake. I’ve counted, and at least 20 things had to have gone wrong for this to have occurred.”** Meanwhile, there are those six deaths. On July 20, 1st Lt. Weston Kissel, a 28-year-old B-52 pilot from Minot, died in a motorcycle accident while on home leave in Tennessee. Another Minot B-52 pilot, 20-year-old Adam Barrs, died on July 5 in Minot when a car he was riding in, driven by another Minot airman, Stephen Garrett, went off the road, hit a tree, and caught fire. Airman Garrett was brought to the hospital in critical condition and has since been charged with negligent homicide. Two more Air Force personnel, Senior Airman Clint Huff, 29, of Barksdale AFB, and his wife Linda died on Sept. 15 in nearby Shreveport, Louisiana, when Huff reportedly attempted to pass a van in a no-passing zone on his motorcycle, and the van made a left-hand turn, striking them. Then there are two reported suicides, which both occurred within days of the flight. One involved Todd Blue, a 20-year-old airman who was in a unit that guarded weapons at Minot. He reportedly shot himself in the head on Sept. 11 while on a visit to his family in Wytheville, Virginia. Local police investigators termed his death a suicide. The second suicide, on Aug. 30, was John Frueh, a Special Forces weather commando at the Air Force’s Special Operations command headquartered at Hurlburt AFB in Florida. Frueh, 33, a married father of two who had just received approval for promotion from captain to major, reportedly flew from Florida to Portland, Oregon, for a friend’s wedding. He never showed up. Instead, he called on Aug. 29, the day the missiles were loaded, from an interstate pull-off just outside Portland to say he was going for a hike in a park nearby. (It is not clear why he was at a highway rest stop as he had no car.) A day later, back in Portland, he rented a car at the airport, again calling his family. After he failed to appear at the wedding, his family filed a missing person’s report with the Portland police. The Sheriff’s Department in remote Skamania County, Washington, found Frueh’s rental car ten days later on the side of a road nearly 120 miles from the airport in a remote area of Badger Peak. **Search dogs found his body in the woods. His death was ruled a suicide, though neither the sheriff’s investigator nor the medical examiner would give details.** What makes this alleged suicide odd, however, is that the sheriff reports that Frueh had with him a knapsack containing a GPS locator and a videocam—odd equipment for someone intent on ending his life. Of course, it could be that all six of these deaths are coincidences—all just accidents and personal tragedies. But when they occur around the time six nuclear-tipped missiles go missing in a bizarre incident, the likes of which the Pentagon hasn’t seen before, one would think investigators would be on those cases like vultures on carrion. In fact, police and medical examiners in the Frueh and Blue cases say no federal investigators, whether from DOD or FBI, have called them. **Worse still, because the B-52 incident got so little media attention—no coverage in most local news—none of those investigating the accidents and suicides even knew about it or about the other deaths.** “It would have been interesting to know all that when I was examining Mr. Blue’s body,” says coroner Mike Stoker, “but no one told me about any of it or asked me about him.” “If we had known that several people had died under questionable circumstances, it might have affected how we’d look at a body,” says Don Phillips, the sheriff’s deputy who investigated the Frueh death. “But nobody from the federal government has ever contacted us about this.” “Certainly, in a case like this, the suicides should be a red flag,” says Hans Kristensen, a nuclear-affairs expert with the Federation of American Scientists. **It’s wild speculation to think that there might be some connection between the deaths and the incident, but it certainly should be investigated”** (Lindorff, 2007).

**Source:** Faustus

**Title/Headline:** *Oh, It Was The John P. Wheeler III Who Was Involved In The Barksdale-Minot Incident Who Was Found In A Landfill!*

**Abstract:** So Wayne Madsen tips me to this tip on John Wheeler III, whose name I didn't recognize: **John Wheeler III, special assistant to Air Force Secretary during the 2007 B-52 nuke incident at Minot, found dead in Delaware landfill. Homicide concluded.** Last seen on Amtrak from DC on Dec. 28. Dealing with neocons can be hazardous to one's health. **Not the first suspicious Air Force death as reported by WMR. A bit more digging, so you have somewhere to start, brings me to Sodahead's rather levelheaded opinion: What the "news" is not telling you is -Wheeler was the assistant to the Secretary of the Air Force in the George W. Bush Administration. It was the Secretary of the Air Force who discovered that Richard Cheney had set up an alternative chain of command to the nuclear weapons wing of the AF.** In the process, six minutemen missiles [sic] armed with nuclear warheads were secretly transported from Minot AFB to Barksdale AFB. **The later is the chief staging base for the Middle East war. The alarm system for the weapons was deactivated for the transport, something that not even the base commander could authorize.** The orders had to have come from above. Many point to Cheney. Before the warheads could be flown via B-52 to the Iraq/Iran theater, the Secretary of the Air Force ordered the stand-down of all B-52 flights. **When he discovered the alternative chain of command to Cheney, he fired all military personnel who were involved. Cheney was said to have been livid. The Secretary ordered an investigation of what the AF press release called an oversight, and 70 enlisted men and 5 officers were removed from the Minot nuclear system. At the same time, people involved began to die mysteriously. Wheeler is only the latest casualty (Faustus, 2011).**

**Conclusion:** Should a nuclear attack occur, it is likely that the nuclear warhead will have originated from the Minot nuclear hijack, as depicted in Chapter 21: *Blackjack*. This theft will likely be the root cause of World War III, and the crime will eventually be blamed on the good people of the United States, which will be subsequently demonized like the German people post World War II.

## The Nuclear Bible: Nuclear Terror & LIVE TV

**Intro:** Spectacular terrorism demands an audience, and there is no better place for it than LIVE TV. Images of terror must be burned into the minds of the masses in order to have their desired effect, and the more people watching the better. On 9/11, there was an ever growing television audience due to the staggered events of the day (Flight 11, Flight 175, Flight 93, & the Pentagon Attack) that climaxed with the controlled demolition of Building 7. Unlike 9/11, the Super Bowl, the World Cup, and the summer Olympics, already have a massive sitting audience in the millions, if not hundreds of millions.

**This is key, because the 30-60 second lifespan of a nuclear detonation demands that the audience already be present in order to effectively terrorize them. Super Bowl 2011 (XLV) will likely be the most watched television show, ever. Let's make sure the real terrorists never get their diabolical plan off the ground. Be part of history, and do your part to stop this madness.**

**Adding to the hype of the 2011 Super Bowl (XLV) are the following storylines:**

- The reemergence of the Green Bay Packers as an NFL powerhouse
- Ben Roethlisberger and the Steelers chance for Super Bowl Trophy # 7
- Due to the impending 2011 NFL Lockout, it may be the last Super Bowl in a few years

Aside from the aforementioned facts about both teams, Green Bay, (Birthplace of Pro Football) and Pittsburgh are two cities rich in American football history and tradition, and the NFL is already calling Super Bowl XLV a clash of title towns. The Packers obviously represent the cornerstone franchise of the NFL with 11 NFL Championships and 3 Super Bowls, while the Steelers symbolically signify the men and woman of Blue Collar America as well as the most dominate NFL team of the modern era. On top of all the history is the fact that Super Bowl 2011 (XLV) will be played in Texas, the mecca of football. Should Dallas, Texas, the Packers and the Steelers get nuked at the Super Bowl, a wave of indignation will sweep America and the drums of war won't even have to be played.

**Title/Headline:** *Thrilling Finish to Super Bowl XLIII Leads to Highest TV Ratings*

**Abstract:** Unlike many other championship sporting events which have declined over time, *Super Bowl* TV ratings have not only held up well, but after a generation of fairly flat results, have begun growing again in the past 4 years (Gorman, 2009). Nielsen Media Research now says that **the February 1, 2009, Super Bowl between the Pittsburgh Steelers and Arizona Cardinals was the most-watched in history. Nielsen said 98.7 million [over 1/3 of the U.S. population] people, on average, were watching Pittsburgh's 27-23 victory Sunday night. That beats the 97.5 million who watched the 2008 game, which held the record for the most popular Super Bowl.** On Monday, Nielsen had reported that this year's game had 95.4 million viewers -- impressive but not a record-setter. Nielsen explained the discrepancy of more than 3 million viewers by saying a more complete check of their records revealed additional viewership on some digital tier networks. The company hadn't been aware that they were showing the game (NFL, 2009).

**Date:** February 8, 2010

**Title/Headline:** *Super Bowl XLIV Beats 'M-A-S-H' Finale For U.S. Viewership Record*

#### Most-Watched Television Programs In The United States (total viewers)

Game:	Date:	Viewers:
Superbowl XLV	February 6, 2011	?
Superbowl XLIV	February 7, 2010	153.4 Million
Superbowl XLIII	February 1, 2009	151.6 Million
Superbowl XLII	February 3, 2008	148.3 Million
Superbowl XXXVIII	February 1, 2004	144.4 Million
Superbowl XL	February 5, 2006	141.4 Million

**Abstract:** The New Orleans Saints' 31-17 victory over the Indianapolis Colts in Super Bowl XLIV was watched by an average of more than 106 million people, surpassing the 1983 finale of "M-A-S-H" to become the most-watched program in U.S. television history, the Nielsen Co. Compelling story lines involving the city of New Orleans and its ongoing recovery from Hurricane Katrina, as well as Colts quarterback Peyton Manning's attempt at a second Super Bowl ring propelled viewership of Sunday's game in Miami Gardens, Fla. Football ratings have been strong all season. **"It was one of those magical moments that you don't often see in sports,"** said Sean McManus, president of CBS News and Sports. **Nielsen estimated Monday that 106.5 million people watched the Super Bowl on average and 151.6 million tuned in overall.** The "M-A-S-H" record was an average of 105.97 million. There are more American homes with television sets now (114.9 million) than there were in 1983 (83.3 million). An estimated 77 percent of homes with TVs on were watching "M-A-S-H" in 1983, compared with the audience share of 68 percent for the Super Bowl. **Nielsen also measures only the United States, and it's possible that some World Cup soccer games were seen more worldwide. Accurate measurement of television audiences outside the U.S. is spotty at best.** The Mid-Atlantic blizzard also helped CBS. After New Orleans, the highest-rated market was snowbound Washington D.C., Nielsen said. More people watched the game from their homes in that area instead of going to parties or bars, and Nielsen does a much better job counting viewers in homes than outside of them. "Bad weather in the Northeast and good weather in Florida was a good combination for us," McManus said (NFL, 2010).

**Title/Headline:** *Could 2010 World Cup Final Be The Most Watched Event In History?*

**Abstract:** The World Cup final has always been one of the most watched events on the planet with viewers from New York to Nepal tuning in to see soccer's elite in action. But now football's world governing body FIFA hopes Sunday's final between the Netherlands and Spain will prove to be the most watched event of all-time, after early research suggests the 2010 edition hosted by South Africa has garnered the biggest television audience yet. **"We don't want to speculate in numbers but we're hoping this will be the biggest [event] ever,"** Niclas Ericson, FIFA's director of television, said in a press conference from Soccer City Stadium, the final's venue. **"We think it will be bigger than the 2006 World Cup final which had an audience somewhere in the region of around 700 million,"** he added. **The record to beat is that set by the opening ceremony of the Beijing Olympic Games, when in 2008 a global audience of one billion** watched at least some part of the extravaganza unfolding in the Chinese capital. Kevin Alavy, a director of Futures Sport + Entertainment, a global sport research and evaluation consultancy, told CNN that sport had an attraction few other events could match. **"The most watched events in history, by some margin, are the opening ceremony of the Olympics Games and the World Cup final. Historical events, like the inauguration of Barack Obama or the funeral of Princess Diana for example may be important from a cultural and historical perspective, but they simply don't have the same scale of television audiences that mass sport events can generate,"** he said. Alavy added that for any record attempt the Chinese market was now crucial. "Historically the World Cup final always drew more figures than anything else, however, when the Olympics took place in... the most populous nation in the world the viewing figures went through the roof. **"Our research found that there was a global audience of 593 million people who watched the opening ceremony live, while 320 million watched the World Cup final in Germany in 2006,"** Alavy said. However, Ericson said the international reach of the World Cup had grown significantly since 2006. **"I think this is the first time we have managed to place the rights in every single television territory -- right from the small Pacific islands, to small countries in Asia and Africa -- we have covered everywhere. "The kick off time has maximized the viewership in America and in Africa. In market share we have seen big increases in major territories, therefore we feel confident in saying that we'll have much higher figures than those for Germany.** On top of the audience growth in television markets Ericson added there were hundreds of thousands who had watched at public viewing venues or on other platforms that had not been counted, factors that needed to be taken into account (Wyatt, 2010).

**Just on time, NASA will launch the Discovery Space Shuttle as the eye the sky which will ensure that the entire World get a bird's eye view of the nuclear detonation from space.**

**Source:** Fox News, Denise Chow

**Title/Headline:** *NASA Delays Shuttle Discovery's Final Launch To February*

**Abstract:** NASA has postponed the launch of space shuttle Discovery's final mission to no sooner than early February – the latest in a long string of delays that have kept the spacecraft grounded for over than a month. Discovery is now slated to launch no earlier than Feb. 3, giving NASA engineers more time to complete work to analyze why small cracks developed in the shuttle's huge external fuel tank. The cracks have since been repaired, but NASA wants to be sure that similar issues don't pose future concerns. "The teams have done a very thorough job of looking at the data at hand, but we're coming to a point in the investigation where we have to do something different," NASA's space operations chief Bill Gerstenmaier said in a news briefing today. Shuttle program managers met yesterday (Dec. 2) to evaluate the repairs made to Discovery's 15-story fuel tank following the initial scrubbed launch attempt on Nov. 5. **Discovery is ready to launch in early February, NASA will have from Feb. 3 to Feb. 10 to attempt a liftoff within that window. Engineers at NASA's Kennedy Space Center in Cape Canaveral, Fla., have been performing tests and gathering data to try to determine what caused the cracks that were found on the metal ribs of the shuttle's external tank. Yet, even with the extensive amount of available information, the teams have been unable to clearly identify the root cause. "We're at a point where there's no obvious answer as to what occurred, and what that means is that we have to take the next step," said John Shannon, NASA space shuttle program manager. "We have to do that through demonstration. Analysis is not going to get us there. Analysis can only get you so far – it's time to go test."** NASA will now perform a fueling test, in which gauges and other instrumentation are attached to Discovery's external tank as it sits on the launch pad. This will allow technicians to gather precise measurements of the type of stress exerted on certain areas of the tank as it is loaded with cryogenic propellant. Engineering teams will be able to monitor how the repairs stand up to the harsh thermal conditions during tanking, and whether or not similar cracks form in the process. **"Understanding the thermal environment is critical to understanding the stress level in it," Shannon said. "We have to go to that next level and really understand the problem. This will also help determine what our screening criteria [are] to fly the tank confidently."** NASA officials said that the delay until February will not negatively impact space station operations, other shuttle launch opportunities, or the space agency's budget. "We have sufficient margin to go ahead and work all the activities from a budget standpoint," Gerstenmaier said. **"We haven't really pushed or upset anything from an overall budget standpoint." If Discovery launches in early February, the final flight of space shuttle Endeavour – the STS-134 mission – will likely move from its original Feb. 27 date into early April.** Discovery's launch has been delayed since early November due to technical and weather-related issues. **The shuttle's planned 11-day mission will deliver a storage room and Robonaut 2, a humanoid robot, to the International Space Station. Two spacewalks are also planned. The mission will be the 39th and last flight for Discovery. It is one of NASA's two final scheduled shuttle flights before the orbiter fleet is retired in 2011. NASA is hoping to launch an additional shuttle flight around June, but is still awaiting final funding approval from a congressional appropriations committee (Chow, 2010).**

**To get an even greater audience at the Super Bowl, neo-con and Zionist shill Bill O'Reilly will interview U.S. President Barack Obama before the big game. More importantly, it will be what Obama says after the game that will matter. Let's collectively make sure he never gets the chance to grandstand after a nuclear detonation.**

## The Nuclear Bible: Nuclear Terror Books

**Intro:** The way that fiction/faction represents reality is absolutely stunning, especially regarding books on nuclear terrorism.

### Books On Nuclear Terrorism:

1991: *The Sum Of All Fears*

2001: *Bin Laden: The Man Who Declared War On America*

2002: *The New Face Of Terrorism: Threats From Weapons Of Mass Destruction*

2002: *American Jihad: The Terrorists Living Among*

2003: *Islam: America's Trojan Horse*

2004: *Terror Tracker: An Odyssey Into Pure Fear*

2004: *Nuclear Terror: The Ultimate Preventable Catastrophe*

2004: *Osama's Revenge: The Next 9/11*

2005: *The Al Qaeda Connection: International Terrorism, Organized Crime And The Coming Apocalypse*

2005: *King Of The Bombs*

2005: *Countdown To Terror: The Top Secret Information That Could Prevent The Next Terrorist Attack On America...And How The CIA Has Ignored It*

2005: *The Four Faces Of Nuclear Terrorism*

2006: *Dunces Of Doomsday: 10 Blunders That Gave Rise To Radical Islam, Terrorist Regimes, And The Threat Of An American Hiroshima*

2006: *Countering Terrorism And WMD: Creating A Global Counter-Terrorism Network*

2007: *The Day of Islam: The Annihilation of America And The Western World.*

2007: *The Nuclear Jihadist: The True Story Of The Man Who Sold The World's Most Dangerous Secrets...And How We Could Have Stopped Him*

2008: *The Challenge Of Nuclear Terror*

2008: *Will The Terrorists Go Nuclear?*

2009: *One Second After*

2009: *The American Hiroshima: Osama's Plan For A Nuclear Attack, And One Man's Attempt To Warn America*

2009: *Atomic Obsession: Nuclear Alarmism From Hiroshima To Al Qaeda*

2010: *The Overton Window*

It all started, fictionally of course, in the *Sum of All Fears*, where the nuke and the Super Bowl were forever intertwined.

**Title:** *The Sum of All Fears* (Fiction)

**Date:** 1991

**Publisher:** Putnam

**Author:** Tom Clancy

**Abstract:** *The Sum of all Fears* is a geopolitical thriller written by Tom Clancy. The plot describes a group of **Muslim extremists terrorists from Popular Front for the Liberation of Palestine that come across a lost nuclear bomb**. They eventually manage to recover it and construct their own version using the plutonium as fissile material with the help of a disenfranchised East German physicist named Manfred Fromm. With Fromm's expertise, the group is able to enhance the weapon and turn it into a thermonuclear device. **The terrorists decide to use the weapon at the Super Bowl in Denver, Colorado**. The terrorists' goal is to start a nuclear war between the U.S. and the Soviet Union (Wikipedia, 2010).

**Title:** *Bin Laden: The Man Who Declared War On America* (Non-Fiction)

**Date:** September 24, 2001

**Publisher:** Prima Lifestyles

**Author:** Yossef Bodansky

**Abstract:** The Saudi millionaire militant **Osama Bin Laden** and **Pakistan's Inter Services Intelligence (ISI)** have struck a deal under which the so-called **Mujaheddin** will carry out **spectacular terrorist strikes** in the heart of India in return for the ISI's support, protection and sponsorship, according to a new book on the world's most-wanted terrorist. The deal, solidified in Spring 1998, **enables the ISI to strike in India while denying any involvement**, says Yossef. The book also makes a stunning allegation: **The ISI, in cahoots with the so-called Mujaheddin, sponsors, supports and trains terrorists throughout the world from centers in Afghanistan and Pakistan for operations in the Middle East, India (not just Kashmir), and increasingly, western Europe** (Bodansky, 2001).

**Title:** *The New Face Of Terrorism: Threats From Weapons Of Mass Destruction* (Non-Fiction)

**Date:** June 1, 2002

**Publisher:** I. B. Tauris

**Author:** Nadine Gurr, Benjamin Cole

**Abstract:** This revised edition is a comprehensive account of **the technological and political possibilities and dangers presented by weapons of mass destruction** in the wake of September 11th, 2001. The technical and organizational sophistication of the attacks on September 11th heralds a new era in the age-old war against terrorism. After these attacks, attention became focused on the activities and capacities of Islamic extremist groups, such as Osama bin Laden's al-Qaeda organization, but the reality is that terrorist threats could come from almost any quarter (Gurr & Cole, 2002).

**Title:** *American Jihad: The Terrorists Living Among* (Non-Fiction)

**Date:** January 29, 2002

**Publisher:** Free Press

**Author:** Steven Emerson

**Abstract:** Emerson shows how the Palestinian terrorist group Hamas has grown an extensive network in the United States, how the group Islamic Jihad set up shop at the University of South Florida, and how an Islamic center in Tucson helped recruit two of Osama bin Laden's top deputies. He also provides circumstantial evidence that bin Laden himself once applied for an American visa--"even the possibility is tantalizing, and chilling," he concludes. He urges Americans to fight back, but worries that time is short. **The United States government is actively monitoring terrorist cells affiliated with Osama bin Laden's al Qaeda network in eleven cities, from Florida to Boston to Denver to Houston.** But al Qaeda is hardly our only threat. Hamas, formed in 1987, was run by top Palestinian officials in America from its earliest days, and has tentacles in Texas, California, New Jersey, Virginia, and Illinois (Emerson, 2002).

**Title:** *Islam: America's Trojan Horse* (Non-Fiction)

**Date:** February, 2003

**Publisher:** Freedom Publications

**Author:** Don Boys

**Abstract:** Dr. Don Boys tells the hard truth about Islaam and how America has been blind sighted by it in many ways. He explains how political correctness in dealing with this Islamic terror issue may very well be America's downfall as they plot their attack from within! Not for the squeamish in heart or closed minded reader (Boys, 2003).

**Title:** *Osama's Revenge: The Next 9/11* (Non-Fiction)

**Date:** June 1, 2004

**Publisher:** Prometheus Books

**Author:** Paul L. Williams

**Abstract:** The plot outlined in this lurid exposé is a frightening one: **Osama bin Laden has nuclear weapons—lots of them—and is preparing to use them to create "an American Hiroshima."** Williams, a journalist, former FBI consultant and author of *The Vatican Exposed: Money, Murder and the Mafia*, contends that **bin Laden has purchased of dozens low-yield Russian "suitcase" atomic bombs and gotten his hands on enough weapons-grade uranium to build Hiroshima-sized 10-kiloton devices, and that one nuclear device may already have been smuggled into America.** Contrary to the subtitle, Williams relies heavily on media reports to flesh out the arch-terrorist's nuclear intrigues, **detailing bin Laden's lucrative heroin trafficking operations, his ties to the Chechen mafia and to Pakistani nuclear scientists, and his network of thousands of sleeper agents in the United States.** He criticizes the Clinton and Bush administrations for inept attempts to apprehend bin Laden, but offers little advice on what to do. As if to heighten readers' anxiety, Clark reprints several **al-Qaeda manifestoes calling down destruction on America and includes a lengthy treatise on the devastation an atom bomb would wreak on lower Manhattan.** He doesn't tie up all the loose ends in this hasty treatment; on the question of why, if it has nukes, **al-Qaeda hasn't yet used them, he can only assume that bin Laden is patiently awaiting the perfect moment for a multiple-target strike.** But after 9/11, alarmist scenarios have to be taken seriously, and the disquieting evidence Clark has amassed provides a useful reminder of the gravest threat in the war on terror (Williams, 2004).

**Title:** *Nuclear Terror: The Ultimate Preventable Catastrophe* (Non-Fiction)

**Date:** August 9, 2004

**Publisher:** Times Books

**Author:** Graham Allison

**Abstract:** A founding dean of Harvard's John F. Kennedy School of Government, Allison applies a long, distinguished career in government and academia to this sobering—indeed frightening—presentation of U.S. vulnerability to a terrorist nuclear attack. While he begins by asserting such an attack is preventable, the balance of his text is anything but reassuring. **Allison begins by describing the broad spectrum of groups who could intend a nuclear strike against the U.S. They range from an al-Qaeda with its own Manhattan Project to small and determined doomsday cults.** Their tools can include a broad spectrum of weapons, either stolen or homemade from raw materials increasingly available worldwide. Once terrorists acquire a nuclear bomb, Allison argues, its delivery to an American target may be almost impossible to stop under current security measures. The Bush administration, correct in waging war against nuclear terrorism, has not, he says, yet developed a comprehensive counter strategy. **Arguing that the only way to eliminate nuclear terrorism's threat is to lock down the weapons at the source, Allison recommends nothing less than a new international order based on no insecure nuclear material, no new facilities for processing uranium or enriching plutonium and no new nuclear states.** Chemical weapons can kill in the thousands. **Over the same area, a football-sized nuclear packet could kill half a million. With Iran and North Korea joining the fray, Russia's massive supplies, and Pakistan's black market, we're in Big Trouble** (Allison, 2004).

**Title:** *Terror Tracker: An Odyssey Into Pure Fear* (Non-Fiction)

**Date:** September 8, 2004

**Publisher:** Mainstream Publishing

**Author:** Neil Doyle

**Abstract:** *Terror Tracker* chronicles the extraordinary experiences of an investigative journalist who set out to penetrate the internal workings of **al-Qaeda and illuminate the murky world of international terrorism.** Neil Doyle's journey began in 1993, with an assignment to report on the first bombing of the World Trade Center in New York. That experience led him to resolve to abandon his job as a news editor in favor of investigating terrorism full-time. Doyle twice managed to locate the exact whereabouts of Osama bin Laden, and despite opposition from figures in the world of espionage, he went on to uncover **al-Qaeda's plans to use chemical, biological, and nuclear weapons against Western targets.** *Terror Tracker* lifts the lid on the unseen battles being waged between al-Qaeda computer hackers and their Western counterparts (Doyle, 2004).

**Title:** *The Four Faces Of Nuclear Terrorism* (Non-Fiction)

**Date:** June 14, 2005

**Publisher:** Routledge

**Author:** Charles D. Ferguson, William C. Potter

**Abstract:** Assesses the motivations and capabilities of **terrorist organizations to acquire and use nuclear weapons**, to fabricate and detonate crude nuclear explosives, to strike nuclear power plants and other nuclear facilities, and to build and employ radiological weapons or "dirty bombs" (Ferguson & Potter, 2005).

**Title:** *King Of The Bombs* (Fiction)

**Date:** July 16, 2005

**Publisher:** Author House

**Author:** Sheldon Filger

**Abstract:** *King Of The Bombs* is a chilling novel about nuclear terrorism plotted by Al-Qaeda. **Nuclear terrorism is the greatest threat to the United States since Al-Qaeda launched attacks on September 11, 2001.** Nuclear terrorism poses the greatest threat to human civilization. Surprisingly, the U.S. government does not focus on the threat of nuclear terrorism to the same degree of other national security issues. *King Of The Bombs* is not only a terrifying novel about Al-Qaeda; Osama bin Laden and nuclear terrorism; it presents a chilling warning about the realistic danger of nuclear terrorism in an age of global nuclear proliferation. *King Of The Bombs* reads from today's headlines, with a plot involving Iran's nuclear program. **North Korea and the international nuclear weapons black market converging with Al-Qaeda and its plan to detonate a massive nuclear warhead in a major American city.** What are the odds that nuclear terrorism will occur in our lifetime? A leading expert on the threat of nuclear terrorism has stated that the odds that Al-Qaeda will initiate nuclear terrorism in the United States within the next five years are higher than fifty percent. *King Of The Bombs* is not only a novel about nuclear terrorism; it is also a thriller with a warning about a nightmare that can actually happen, unless public opinion demands from political leadership that **the horror of nuclear terrorism launched by Al-Qaeda with other followers of Osama bin Laden be recognized as the nation's greatest national security threat** (Filger, 2005).

**Title:** *Countdown To Terror: The Top Secret Information That Could Prevent The Next Terrorist Attack On America...And How The CIA Has Ignored It* (Non-Fiction)

**Date:** July 25, 2005

**Publisher:** Regnery Publishing, Inc

**Author:** Curt Weldon

**Abstract:** **If someone knew when and where the next major terrorist attack was to be to take place against America, wouldn't the US intelligence community want to know about it?** In *Countdown to Terror*, US Congressman Curt Weldon, proves that "Ali," an informant with access to the minutes of the most secret Iranian councils does have details about many plots against the US. In fact, he has outright predicted - days, weeks, or months in advance - numerous terrorist plots that were actually carried out or thwarted at the last minute. Still, the CIA, the DIA, the NSA, and the FBI in the US have all repeatedly refused to listen to him, even going as far as to threaten him for his communications with Congressman Weldon. **"Ali" now warns of an even greater threat than the 11th of September 2001 - a plot called "The 12th Imam" - which the US intelligence community must act upon, or face catastrophic consequences.**

**From The Inside Flap:** **Could the next September 11 be nuclear?** This is no theory, says Congressman Curt Weldon, in his shocking new book *Countdown to Terror*. **It is a fact as real as the arrest of Muslim terrorists who planned to crash a plane into the Seabrook nuclear power plant in New Hampshire in 2004.** What's even more stunning, Congressman Weldon tried to warn American intelligence about the attack—but no one in America's intelligence community would listen. How did Congressman Weldon know about it? Because of a secret source, an intelligence contact code-named Ali who has been a treasure trove of reliable intelligence—intelligence that, despite Congressman Weldon's strenuous efforts, has been routinely ignored by the CIA and the rest of America's intelligence services. But in *Countdown to Terror*, Congressman Weldon lets you know what the CIA doesn't want to know. You'll learn, straight from Ali's actual reports: · Why Iran will decide the next terror strike on America · How a major planned terror strike was called off because the terrorists thought it would help President Bush politically · Why Iran, not al Qaeda, is the command post of radical Islamic terror · Who is undercutting American efforts to create a peaceful, stable Iraq · Why Iran is like the Soviet Union in the 1980s: extremely dangerous, the iron glove behind all our enemies—yet on the verge of internal collapse · The Iranian nuclear program: red-hot and more advanced than you think Congressman Weldon's sharing of vital intelligence with you, the reading public, is unprecedented. But it is necessary so that the American people can be informed and pressure our government to do what needs to be done to **protect our country, fix our still broken intelligence services, and win the war on terrorism.** *Countdown to Terror* is a frightening book—but it is all true. And if we act now, we can avoid its grimmest scenarios (Weldon, 2005).

**Title:** *The Al Qaeda Connection: International Terrorism, Organized Crime and the Coming Apocalypse* (Non-Fiction)

**Date:** September 6, 2005

**Publisher:** Prometheus Books

**Author:** Paul L. Williams

**Abstract:** **Williams explores the shocking dimensions of the international terrorist threat to Americans.** Williams reveals persuasive evidence that al Qaeda has now established connections with the Sicilian Mafia, which is helping to finance terrorism through the sale of Number Four heroin, the present drug of choice in Europe and the United States. In addition, through its ties to the Chechen Mafia, the group responsible for the heinous attack on a Russian school, **al Qaeda has managed to obtain nuclear weapons from poorly secured**

and carelessly guarded storehouses in Russia. Perhaps the most disturbing evidence uncovered by Williams is the relation of al Qaeda to an obscure Salvadoran street gang, which calls itself Mara Salvatrucha and has expanded exponentially. In exchange for big money, this violent group of anarchic thugs has **smuggled weapons of mass destruction and sleeper agents across the Mexican border onto American soil, or what they refer to as the land of the "Great Satan."** No other book deals with the connection between international, extremist Islamic terrorism and organized crime—a connection that has made possible the establishment of a well-financed branch of al Qaeda in Latin America and the creation of terrorist cells in major metropolitan areas throughout the United States. **Williams convincingly demonstrates that by means of this network Bin Laden is now in a position to execute his dream of an American Hiroshima, an apocalyptic act of mass murder within the borders of the United States.** Though vigorously working to prevent such an attack, many military experts and security officials concede the probability of nuclear terrorism in America, perhaps in the immediate future. But the most disturbing news is that high level U.S. officials now believe at least some of those weapons have been smuggled into the U.S. for use in the near future in major cities as part of this "American Hiroshima" plan, according to an upcoming book. According to Williams, former CIA Director **George Tenet informed President Bush one month after the Sept. 11, 2001, attacks that at least two suitcase nukes had reached al-Qaida operatives in the U.S.** "Each suitcase weighed between 50 and 80 kilograms (approximately 110 to 176 pounds) and contained enough fissionable plutonium and uranium to produce an explosive yield in excess of two kilotons," wrote Williams. "One suitcase bore the serial number 9999 and the Russian manufacturing date of 1988. The design of the weapons, Tenet told the president, is simple. The plutonium and uranium are kept in separate compartments that are linked to a triggering mechanism that can be activated by a clock or a call from the cell phone." According to the author, **the news sent Bush "through the roof," prompting him to order his national security team to give nuclear terrorism priority over every other threat to America.** However, it is worth noting that Bush failed to translate this policy into securing the **U.S.-Mexico border through which the nuclear weapons and al-Qaida operatives are believed to have passed** with the help of the MS-13 smugglers. He did, however, order the building of underground bunkers away from major metropolitan areas for use by federal government managers following an attack. **Bin Laden, according to Williams, has nearly unlimited funds to spend on his nuclear terrorism plan** because he has remained in control of the Afghanistan-produced heroin industry. Poppy production has greatly increased even while U.S. troops are occupying the country, he writes. Al-Qaida has developed close relations with the Albanian Mafia, which assists in the smuggling and sale of heroin throughout Europe and the U.S. Some of that money is used to pay off the notorious MS-13 street gang between \$30,000 and \$50,000 for each sleeper agent smuggled into the U.S. from Mexico. The sleepers are also provided with phony identification, most often bogus matricula consular ID cards indistinguishable from Mexico's official ID, now accepted in the U.S. to open bank accounts and obtain driver's licenses. According to Williams' sources, **thousands of al-Qaida sleeper agents have now been forward deployed into the U.S. to carry out their individual roles in the coming "American Hiroshima" plan.** Bin Laden's goal, according to the book, is to kill at least **4 million Americans, 2 million of whom must be children.** Only then, bin Laden has said, would the crimes committed by America on the Arab and Muslim world be avenged. **There is virtually no doubt among intelligence analysts al-Qaida has obtained fully assembled nuclear weapons, according to Williams.** The only question is how many. Estimates range between a dozen and 70. **The breathtaking news is that an undetermined number of these weapons, including suitcase bombs, mines and crude tactical nuclear weapons, have already been smuggled into the U.S. – at least some across the U.S.-Mexico border.** The future plan, according to captured al-Qaida agents and documents, suggests the attacks will take place simultaneously in major cities throughout the country – including New York, Boston, Washington, Las Vegas, Miami, Chicago and Los Angeles. "Terrorists have carte blanche to carry practically anything they want across our national line at this time," he said. **"As ordinary citizens have warned this government for years, the only surprising part about the new information reported here is that nothing apocalyptic from Mexican-border weapons trafficking has yet happened. Terrorism has reared its ugly head in London again these past few days, and as we know all too well we are not immune in this country.** At this point, the next attempt to attack America at home is just a matter of 'when,' not 'if.' **And our unsecured borders have surely contributed to this threat – yet our government officials continue to fiddle while our nation's margin of security and safety burns away.** The president and Congress had better wake up before they have to answer for another devastating terrorist incursion on our own soil" (Williams, 2005).

**Date:** September 3, 2005

**Source:** World Net Daily, Ryan Mauro

**Title/Headline:** *Paul Williams Details 'American Hiroshima'*

**Abstract:** Paul L. Williams is a former consultant to the FBI on organized crime and terrorism. Since then, he has become an award-winning investigative journalist and written several books. In his new book, **"The Al Qaeda Connection," he claims Osama bin Laden has obtained nuclear weapons and smuggled them into the U.S. through Mexico for use in a plot known as "American Hiroshima."**

**Ryan Mauro:** Much has been written about the "American Hiroshima" report. How did you first learn about the plot?

**Paul Williams:** I have a unique background. I hold a Ph.D. in philosophy from Drew University and I am a seasoned and award-winning journalist. **I came upon the story of bin Laden's acquisition of tactical nuclear weapons while working as the editor/publisher of The Metro and a consultant on organized crime for the FBI.** Several members of the Chechen Mafia, who had emigrated to Little Odessa, muscled into the operations of the Bufalino Crime Family in

Northeast Pennsylvania by selling choice No. Four heroin, guns of every description, and stolen high-end cars from New York and New Jersey . **I learned that they came to the U.S. after Makhmud and his associates sold tactical nukes and nuclear materials to Osama bin Laden and Ayman al-Zawahiri.** I began to search for evidence of this sale and came upon stories in The Jerusalem Report and The London Times and Arab stories in Muslim magazines, Al-Watan al-Arabi and al-Majallah **This led me to other sources and reports of further sales of nukes from the former Soviet Union to al-Qaida** not only by the Chechens but also the Russian Mafia and black-marker arms-dealers, including Semion Mogilevic from the Ukraine . Such information can be obtained by any journalist with a telephone, a computer, and a library card. I further learned that the sales to al-Qaida have been verified by a host of intelligence officials and weapons inspectors, including Hans Blix, former director general of the UN's International Atomic Energy Agency. **The sales were even verified by bin Laden and al-Zawahiri in their pronouncements that they have obtained a small arsenal of nuclear weapons from black-market sources.** My research took me farther into dealings between **bin Laden and Dr. A. Q. Khan** and the fact that over 20 nuclear scientists and technicians from Khan's research laboratories in Pakistan worked with al-Qaida on a regular basis to maintain and modify the weapons that had been purchased and to develop other weapons from the highly enriched uranium and plutonium that bin Laden had purchased from Uzbekistan and other countries. **Dr. Mahmood and Dr. Majeed, two of the leading officials at the Khan facility, confessed to CIA and ISI interrogators that they participated in al-Qaida's nuclear projects.** The fact that the Chechens possessed the nukes should be no surprise to any reporter or investigator. In 1995, the Chechens under Com. Shamil Basayev planted a radiological bomb in Izmailovsky Park near Moscow . The bomb was made of cesium-137, and, if detonated, would have killed thousands of Russians. **This incident represented the first case of a nuke to be deployed as a weapon of terror.** Later that same year, Dzhokhar Dudayev, the leader of the Chechen Mafia, offered to sell his collection of nuclear weapons to the United States in exchange for U. S. recognition of Chechnya 's independence. The Clinton Administration declined and so the weapons were sold to al-Qaida. **More importantly, there is empirical proof that al-Qaida possesses nukes.** In 2000, British agents posed as recruits from a London mosque to infiltrate al-Qaeda training camps in Afghanistan . In Herat , they saw nuclear weapons being manufactured. Similarly, **an al-Qaeda operative was arrested at the checkpoint at Ramallah with a weapon strapped to his back. At first, Israeli intelligence thought that the weapon was a radiological bomb but later confirmed, as reported by Richard Sales of UPI and other reputable journalists, that it was a tactical nuke.** There are more examples, including the canister of uranium 238 that U.S. military officials discovered in a lead canister in Kandahar at the outset of Operation Enduring Freedom.

**Ryan Mauro:** How come other terrorism experts, Steven Emerson for example, haven't warned us about the plot? In other words, why does it seem so out of the mainstream?

**Paul Williams:** Few military and intelligence officials question bin Laden's ability to launch his plan for the American Hiroshima. **Gen. Eugene Habiger, former Executive Chief of Strategic Weapons at the Pentagon, said that an event of nuclear mega-terrorism on U. S. soil is "not a matter of if, but when."** During the 2004 presidential debates, President Bush and Sen. Kerry said that nuclear weapons in the hands of terrorists represent the greatest danger facing the American people, while **Vice President Cheney, on the campaign trail, warned that a nuclear attack by al-Qaida appears imminent.** Before leaving office, Attorney General John Ashcroft and Homeland Security Director Tom Ridge both voiced that belief that al-Qaida's plan to nuke cities throughout the country soon might come to fruition. From the private sector, Warren Buffet, who establishes odds against cataclysmic events for major insurance companies, concluded that an imminent nuclear nightmare within the United States is **"virtually a certainty."** From the academic community, Dr. Graham Allison, director of Harvard University's Belfer Center for Science and International Affairs, said: **"Is nuclear mega-terrorism inevitable? Harvard professors are known for being subtle or ambiguous, but I'll try to be clear. 'Is the worst yet to come?' My answer: Bet on it. Yes."** Finally, from the mainstream media, Bill Keller, editor of The New York Times, concluded that the only reason for thinking a nuclear attack won't happen is because "it hasn't happened yet," adding that such reasoning represents "terrible logic." And so, Ryan, the message has been delivered but few are listening. Emerson's importance as an analyst pales in comparison to that of Michael Scheuer, of the CIA and author of "Imperial Hubris," who was in charge on "the Alec file," the CIA's file on bin Laden. On Nov. 14, 2004 , Scheuer appeared on "60 Minutes" to alert the American people £ that a nuclear attack by al-Qaida "is pretty close to being inevitable."

**Ryan Mauro:** In your upcoming book, "The Al-Qaeda Connection," you write that former Russian KGB and Spetsnaz operatives maintain bin Laden's nuclear arsenal. When were they hired and how do we know they are capable of such a monumental task?

**Paul Williams:** Bin Laden and al-Zawahiri began recruiting former Spetsnaz technicians circa 1997. By 1999, a host of such technicians (along with nuclear scientists from China ) were working at al-Qaida laboratories in Afghanistan and Pakistan. **By 2000, al-Qaida also secured the help of scientists and technicians from the A. Q. Khan Research Facility in Pakistan , including the assistance of Khan himself. On Sept. 11, 2001, when the attack was taking place in America , bin Laden and company were meeting with Dr. Sultan Bashiruddin Mahmood, former Chairman of Pakistan's Atomic Energy Commission, and Dr. Chaudry Abdul Majid, chief technician for the A. Q. Khan Facility, to discuss the maintenance and deployment of al-Qaida's nuclear arsenal.** When the CIA confiscated records from Ummah Tameer E-Nau ("Islamic Reconstruction"), Dr. Mahmood's bogus charity in Kabul , they **discovered evidence from Mahmood's computer that at least one al-Qaida nuke had been forward deployed to the U.S. from Karachi in a cargo container.** After interrogating Mahmood and Majid, CIA officials discovered that more than a score of scientists and technicians from the A. Q. Khan Facility worked on a daily basis to develop, upgrade, and maintain the al-Qaida nuclear arsenal. **Almost all of these scientists have escaped from Pakistan to avoid arrest.** U.S. officials have been denied permission to interrogate Dr. Khan, even though we know that he provided nuclear technology and designs for atomic bombs not only to Libya , Iran and North Korea, but also Saudi Arabia, Kuwait, Sudan, Nigeria, Brazil, Egypt, Malaysia, Indonesia, Algeria, Abu Dhabi and Myanmar. In Myanmar , for example, Dr. Sulieman Asad and Dr. Mohammad Ali Mukhtar are building a 10-megawatt nuclear reactor while still providing help and expertise to the al-Qaida network. It's a hellava situation and the press is not reporting it.

**Ryan Mauro:** Do you have any information on what the U.S. and its friends are doing to try to stop the plot?

**Paul Williams:** **On Oct. 11, 2001 , George Tenet, former CIA director, met with President Bush to inform him that at least two tactical nukes have reached al-Qaida operatives in the U.S. This news was substantiated by Pakistan 's ISI, the CIA and the FBI.** In accordance with this discovery, the Bush administration deployed hundreds of new and sophisticated Gamma Ray Neutron Flux Detector sensors to U.S. borders, overseas facilities and "choke points" around Washington, D.C. The administration further assigned Delta Force, the elite special operations detachment unit of the U.S. Army, the task of killing or disabling any or all suspects. Such measures have proved to be ineffective. Richard L. Wagner, senior staff member at the Los Alamos National Laboratory, testified before the House Homeland Security Subcommittee on the Prevention of Nuclear and Biological Attack that the currently installed radiation detection systems are highly limited in their capabilities and, in general, insufficient to the task. To add to the problem of insecurity, the borders remain almost completely porous and less than 10 percent of the freight that arrives at major ports (including New York/New Jersey) is inspected.

**Ryan Mauro:** Where is the WMD arsenal now that Afghanistan is occupied?

**Paul Williams:** **The nuclear weapons were not contained solely in Afghanistan. Al-Qaida laboratories were established in the Balkans, Sudan, Pakistan, Egypt, Saudi Arabia and even places like Myanmar.** A number of these weapons have been forward deployed to Mexico and the U.S. My educated guess would be that arsenals have been established in several of the following countries: Pakistan, Sudan, Saudi Arabia, Myanmar, Algeria, Indonesia, Malaysia, Abu Dubai, Iran, Syria and Lebanon . The last three in light of the al-Qaida truce and bonding with Hezbollah. Myanmar looms large since very sinister events are taking place there. These events, including the construction of large reactors, have been made possible by fugitive scientists and technicians from the Khan Research Facility. **But don't lose sight of the fact that nukes have been forward deployed to al-Qaida cells in Canada, Mexico and the U.S.**

**Ryan Mauro:** Why haven't the weapons been used already? One can't help but think that the best time to use the weapons would have been during the invasions of Afghanistan or Iraq .

**Paul Williams:** The worst time for al-Qaida to use its nuclear weapons would have been during the invasions of Afghanistan and Iraq when the U.S. remained on high alert. A defining characteristic of bin Laden is patience. His favorite Islamic verse is as follows: "I will be patient until Patience is outworn by patience." He started plotting the 1998 bombings of the U.S. embassies in Kenya and Tanzania when he was in the Sudan in 1993; the attack of the USS Cole was more than two years in the making and eight years passed between the first attack on the World Trade Center and the second. **The planned American Hiroshima is enormous in scope. It requires not only development and (in some cases) rebuilding of the weapons along with codification for detonation but also forward deployment, site preparation and precise strategic coordination with scattered cells.** Bin Laden will not allow the attack to take place unless there is certainty of success. His entire resources (including the gains from the poppy fields) have been spent on this operation. After scrutinizing the situation and analyzing the data, Bill Keller, editor of The New York Times, said that the "best reason" for thinking that the nuclear attack by al-Qaida will NOT happen is because "it hasn't happened yet," adding this conclusion represents "terrible logic." I agree with him.

**Ryan Mauro:** Is there any indication of when Bin Laden intends to use the arsenal?

**Paul Williams:** Bin Laden can't sit on these weapons for years. They require constant maintenance. At any given time, a tactical nuke exudes a temperature in excess of 100 degrees Fahrenheit. This means that they are prone to oxidation and rust. Moreover, the triggers that emit large quantities of neutrons at high speeds decay rapidly and have short half-lives – most would become useless without maintenance in less than four months. The nuclear cores also are subject to decay and over the course of several years would fall below the critical mass threshold. Though the shells that encase the cores are the most durable parts of the weapons, they, too, are subject to contamination. The tritium used to compensate for the required amount of conventional explosives to compress the fissile core within the compact devices is less of an issue since it has a half-life of 12.3 years. **Taking all things into consideration, the attack should occur within the very near future. The bombs which bin Laden began building in 1992 are for the American Hiroshima.**

**Ryan Mauro:** Given the heat and radiation given off by the nuke, couldn't it be detected?

**Paul Williams:** Richard L. Wagner, senior staff member at the Los Alamos National Laboratory and one of the founders of the Department of Energy's Nuclear Emergency Search Team, recently told Congress that major breakthroughs in the ability of the U.S. government to locate rogue nukes may be *five* years away. Wagner, a Ph.D. whose specialty is radiation detection, testified that better technology and more radiation detection devices are needed to stop the nuclear terrorist threat. **"Currently installed radiation detection systems, or systems which could be procured in quantity in the next year or two, are quite limited in their capabilities and, in general, are insufficient for the task,"** he testified. "Substantial research and development is needed to improve detection capabilities." **A nuclear gun bomb that could be fired from a 155 millimeter recoilless rifle could be packed in the small container, stuffed into the truck of a car or van and transported into any major metropolitan city within the U.S. without detection.** That's the fact of the matter. Other weapons could be transported by private plane to any major airport. Less than 25 percent of the freight on private planes is inspected let alone subjected to radiation detection. To complicate matters, the ports of entry (such as the airports) are now controlled by the Albanian Mafia. The Albanians have taken over the operations of the Italian-American crime families and have become, according to the FBI, the leading criminal organization in the U.S. The Albanians, as you know, are Muslims with ties to radical Islam and, through the KLO, al-Qaida.

**Ryan Mauro:** I have trouble believing that teams required to maintain a nuclear weapon wouldn't be detected here in the U.S.

**Paul Williams:** There isn't just one team but, at least, seven. They are working within mosques and Islamic centers. In the U.S., a federal judge will not provide any FBI or law enforcement agent with a warrant to search a mosque of an Islam center for *any* reason since such places are listed as "houses of worship."

**Ryan Mauro:** Seven teams?

**Paul Williams:** At least seven teams, according to information obtained from Khalid Sheikh Mohammed and other al-Qaida operatives, in at least seven metropolitan areas. **These areas have been identified as New York, Miami, Houston, Las Vegas, Los Angeles, Chicago and Washington, D.C. The attack will occur simultaneously at the seven sites.**

**Ryan Mauro:** How do you know you can trust what Khalid Sheikh Mohammad said? In the past, he's given us bogus information, some of which led to orange alerts. Some say he and other al-Qaida operatives are waging a disinformation campaign meant to dull our senses.

**Paul Williams:** No, you can't trust Khalid Sheikh Mohammad, but you can trust the information that was obtained from his laptop when he was arrested on March 1, 2003.

**Ryan Mauro:** Will Bin Laden use them on the American homeland or also forces overseas and countries that have joined the war on terrorism?

**Paul Williams:** They are not for use in the United Kingdom, Spain, Italy, Iraq or Afghanistan . **The declaration of war was issued against the United States and al-Qaida insists that over 4 million Americans must die for the sake of parity.** They are intent upon realizing this objective and the doomsday clock by all reckoning is very near midnight (Mauro, 2005).

**Title:** *Nuclear Terrorism After 9/11(Adelphi Series)* (Non-Fiction)

**Date:** March 16, 2006

**Publisher:** Routledge

**Author:** Robin M. Frost

**Abstract:** The very mention of nuclear terrorism is enough to rouse strong reactions, and understandably so, because it combines the most terrifying weapons and the most threatening of people in a single phrase. The possibility that terrorists could obtain and use nuclear weapons deserves careful analysis, but discussion has all too often been contaminated with exaggeration, even hysteria. For example, it has been claimed that nuclear terrorism poses an "existential threat" to the United States. This *Adelphi Paper* develops a more measured analysis of the risk of terrorists detonating a true fission device. The problem is attacked from two perspectives: the considerable, possibly

insurmountable, technical challenges involved in obtaining a functional nuclear weapon, whether 'home-made' or begged, borrowed or stolen from a state arsenal; and the question of the strategic, political and psychological motivations to 'go nuclear'. **The conclusions are that nuclear terrorism is a less significant threat than is commonly believed, and that, among terrorists, Muslim extremists are not the most likely to use nuclear weapons** (Frost, 2006).

**Title:** *Dunces of Doomsday* (Non-Fiction)

**Date:** April 6, 2006

**Publisher:** WND Books

**Author:** Paul L. Williams

**Abstract:** Williams identifies the enemy as Islam, a religion boasting 1.4 billion adherents, with an army of "untold millions" that has "threatened Western civilization for fourteen hundred years." **Islam has "amassed nuclear weapons" and seeks parity with the death of four million Americans — "two million of whom must be children."** Islam, Williams notes, has defeated the Soviet Union in Afghanistan and the United States in Somalia and Lebanon (Williams, 2006).

**Title:** *Countering Terrorism And WMD: Creating A Global Counter-Terrorism Network* (Non-Fiction)

**Date:** October 30, 2006

**Publisher:** Routledge

**Author:** Peter Katona, John P. Sullivan, Michael D. Intriligator

**Abstract:** This volume shows us that in order to deal with today's **Fourth Generation asymmetric warfare by terrorist groups using conventional arms and weapons of mass destruction, we need a new 'global networked' approach.** The contributors examine the various attempts that have been made to counter the latest wave of terrorism, including the US strikes against Afghanistan and Iraq, President George W. Bush's declaration of a 'war against terrorism', the creation of the US Department of Homeland Security, and the 9/11 Commission. Drawing from our experience with 'Terrorism Early Warning' and the co-production of counter-terrorism intelligence, this book explains the need for such a network and shows how it could be formed. It compiles the opinions of experts from clinical medicine, public policy, law enforcement and the military. These expert contributors identify the nature of a global counter-terrorism network, show how it could be created, and provide clear guidelines for gauging its future effectiveness (Katona, Sullivan, & Intriligator, 2006)

**Title:** *The Day Of Islam: The Annihilation Of America And The Western World* (Non-Fiction)

**Date:** May 22, 2007

**Publisher:** Prometheus Books

**Author:** Paul L. Williams

**Abstract:** Williams reveals the underlying narrative of news updates on terrorist activity, tying isolated acts to bin Laden's overall strategy to carry out an "American Hiroshima." Among profiles of purported Al Qaeda supporters (including Venezuela's Hugo Chavez and Brazil's Lula de Silva), Williams examines interesting items like bin Laden's alleged location (a small village in Pakistan's Northwest Frontier); Al Qaeda's purchase of a nuclear "suitcase bomb," a Soviet leftover; and the role of Pakistan's Interservice Intelligence in the beheading of Wall Street Journal reporter Daniel Pearl (allegedly investigating nuclear trafficking between Al Qaeda and a Pakistani scientist). Though absorbing, Williams' approach reduces the proponents of Islamic jihad to violent, irrational stereotypes rather than exploring their worldview. A noteworthy guide to the workings of Islamic terrorism, this volume's colorful style obscures its serious intent (Williams, 2007).

**Title:** *Deception: Pakistan, The United States And The Global Nuclear Weapons Conspiracy* (Non-Fiction)

**Date:** September 1, 2007

**Publisher:** Atlantic Books

**Author:** Adrian Levy & Catherine Scott-Clark

**Abstract:** "Deception" exposes the terrifying truth about the proliferation of nuclear weapons amongst the rogue states and terrorist organizations which now threaten to destabilize the entire world. This book is essential reading for fans of Seymour Hersh, Richard Preston, Mark Bowden, and Jason Burke. On 15 December 1975, A. Q. Khan - a young Pakistani nuclear scientist working in Holland - stole top secret blueprints for a revolutionary new process to arm a nuclear bomb. **His original intention was to provide for Pakistan a counter to India's ongoing pursuit of an atomic bomb. But over time that ambition mushroomed into a vast nuclear black market sanctioned by Pakistan's military elite - financed by aid money from the United States, Saudi Arabia and Libya, as well as boundless assistance from China.** They secretly sold weapons to Iran, North Korea, and many others - with the clear knowledge of the American government, for whom Pakistan was a crucial buffer against the Soviets and now an ally in the 'war on terror'. **Successful US Administrations conducted a deliberate cover-up: destroying intelligence, lying to Congress and the West about Pakistan's capability, and facilitating the spread of the very weapons we vilify the 'axis of evil' powers for coveting and dread Islamic terrorists obtaining** (Levy & Scott-Clark, 2010).

**Title:** *The Nuclear Jihadist* (Non-Fiction)  
**Date:** December 3, 2007  
**Publisher:** Twelve  
**Author:** Douglas Frantz, Catherine Collins

**Abstract:** In tackling the story of Pakistani nuclear scientist A.Q. Khan, Frantz and Collins are entering a crowded field. As Adrian Levy and Catherine Scott-Clark did in *Deception*, this husband-and-wife team divides attention between Khan's influence over **Pakistan's nuclear program and how the American government ignored evidence of his progress because Pakistan served as a convenient ally**. While much of this story is familiar, Frantz and Collins do provide more detail on Khan's background and draw on several different U.S. sources. (They reveal, for example, that the State Department discussed assassinating Khan as far back as 1978.) They also give the Pakistani government more benefit of the doubt than most other commentators: an internal corruption investigation ordered by Pervez Musharraf shortly after he became Pakistan's president is interpreted as suggesting that Khan's dealing with nations like Libya and Iran might not have been sanctioned by his government (Frantz & Collins, 2007).

**Title:** *Will The Terrorists Go Nuclear?* (Non-Fiction)  
**Date:** September 23, 2008  
**Publisher:** Prometheus Books  
**Author:** Brian Michael Jenkins

**Abstract:** A leading expert on terrorism and a senior adviser at the RAND Corporation, Jenkins addresses the contentious issue of nuclear terror in this exhaustive study that seeks to separate what we fear from what we might reasonably expect. The author traces the debate over nuclear terror from the Cold War to its contemporary nexus with al-Qaeda, noting that 9/11 renewed all the old debates and significantly altered our perceptions of what was plausible. Furthermore, the Bush administration's saber-rattling and the relentless media coverage exaggerated the threat and left the nation intentionally terrified. **While acknowledging al-Qaeda's efforts to obtain nuclear weapons, Jenkins points out that the evidence confirms... ambition, not capability or the knowledge to fabricate a nuclear device.** Finally, the author invites the reader to assume the role of president in a frightening scenario that begins with a nuclear blast in Manhattan. Jenkins's ambitious goal seems to be not to downplay the nuclear threat posed by terrorists but to get Americans to address it logically and dispassionately; his thoroughly documented and carefully reasoned study is an important step in that direction (Jenkins, 2008).

**Title:** *The Challenge Of Nuclear Terror* (Non-Fiction)  
**Date:** September 30, 2008  
**Publisher:** Knowledge World International  
**Author:** Sitakanta Mishra

**Abstract:** Explores the nuances of the global discourse in the light of the emergence of non state actors with an expressed interest in WMD terrorism. This book looks into the details of the phenomenon of nuclear terrorism (Mishra, 2008).

**Title:** *One Second After* (Fiction)  
**Date:** March 17, 2009  
**Publisher:** Forge Books  
**Author:** William R. Forstchen

**Abstract:** In this entertaining apocalyptic thriller from Forstchen, **a high-altitude nuclear bomb of uncertain origin explodes, unleashing a deadly electromagnetic pulse that instantly disables almost every electrical device in the U.S. and elsewhere in the world.** Airplanes, most cars, cellphones, refrigerators—all are fried as the country plunges into literal and metaphoric darkness. History professor John Matherson, who lives with his two daughters in a small North Carolina town, soon figures out what has happened. Aided by local officials, Matherson begins to deal with such long-term effects of the disaster as starvation, disease and roving gangs of barbarians. While the material sometimes threatens to veer into jingoism, and heartstrings are tugged a little too vigorously, fans of such classics as *Alas, Babylon* and *On the Beach* will have a good time as Forstchen tackles the obvious and some not-so-obvious questions the apocalypse tends to raises (Forstchen, 2009).

**Title:** *Atomic Obsession: Nuclear Alarmism From Hiroshima To Al Qaeda* (Non-Fiction)

**Date:** November 5, 2009

**Publisher:** Oxford University Press

**Author:** John E. Mueller

**Abstract:** The explosion of a single atomic bomb capable of destroying a few city blocks is taken to portend the demise of the entire city, the economy of the country, the country itself, the modern state system, civilization, the planet. Armageddon and apocalypse have continuously been found to be looming just over the horizon. Disaster has also been envisioned as the inexorable result if more countries obtain nuclear weapons. Before China obtained its bomb, the director of the Central Intelligence Agency prophesied that, with that event, **nuclear war would become "almost inevitable."** Moreover, the rate at which new countries would obtain the weapons has almost always been wildly off the mark. It was in 1960, for example, that a presidential candidate insisted that there might be "ten, fifteen, twenty" countries with a nuclear capacity by 1964. In 1964 itself a high level committee asserted that the world was fast approaching a point of no return on this. And for decades, prominent analysts have prophesied that Germany and Japan would necessarily soon get nuclear weapons. Declamations like that very much continue to this day. If Iran or North Korea gets a nuclear weapon, we are repeatedly told, the result will be a proliferation cascade (or epidemic or wave or avalanche), and the result of that would be a nuclear war or, in the words of the esteemed, and imaginative, head of the International Atomic Energy Agency, "the beginning of the end of our civilization." There is, a recent think tank report suggests, "something approaching a consensus" among "both in and out of government," that **we are "on the verge of a new nuclear age" where there will be more nuclear weapons states and a much greater chance the weapons will be used.** In result, the continuously discredited "nightmare vision" of the 1960s, in the words of another alarmed analyst, "still holds." Following on this grand legacy of impending doom, there has been a particular fixation since the terrorist attacks of September 11, 2001, on the potential **for a terrorist atomic bomb, and politicians of all stripes preach to an anxious and very numerous choir when they proclaim this to be the single most serious threat to the security of the United States or, for that matter, of the world.** Among those deeply concerned about that possibility is Governor Thomas Kean, chair of the 9/11 Commission, who has confessed that what keeps him up at night is **"the worry of a terrorist with a nuclear device in one of our major cities."** Bill Keller of the *New York Times* has complained about a similar disorder: after finishing a long article about nuclear terrorism for that newspaper's magazine entitled "Nuclear Nightmares," he remained boldly determined not to evacuate Manhattan but, he admitted, "neither am I sleeping quite as soundly." **Like Kean and Keller, FBI Director Robert Mueller reportedly wakes up in the middle of the night worrying about an al-Qaeda nuclear strike.** Indeed the affliction seems general. Defense Secretary Robert Gates maintains that, when asked what keeps them awake at night, *every* senior leader declares it to be **"the thought of a terrorist ending up with a weapon of mass destruction, especially nuclear."** In the case of the FBI Director, there are other worrying symptoms as well: it is carefully reported that there are "dark circles under his eyes" from thinking about the prospect, and when he utters the words, "nuclear device," he "knits his brow and clenches his teeth" even as his left eyebrow lifts "like an arrow poised in midflight." Similarly, **Rolf Mowatt-Larssen, formerly a top investigator at the CIA, ranks himself among the many who consider the atomic terrorist to be an "existential" threat, and he, too, reportedly can't sleep because he is convinced al-Qaeda is "looking for uranium," that it "could build a Hiroshima-size bomb," and that "we'd never see it coming."** The third part of the book examines the atomic terrorist nightmare that has become so pervasive since 9/11, an expression of the atomic obsession that has not only caused widespread sleep disorders, but has inspired protective and policing expenditures that are likely to prove substantially excessive. **Actually, it is not all that clear that any terrorist groups actually really want the weapons or are remotely capable of obtaining them should the desire to do so take hold of them.** The evidence of a desire on al-Qaeda's part to go atomic and of any progress in accomplishing this exceedingly difficult task is remarkably skimpy, if not completely negligible, **while the scariest stuff--a decade's worth of loose-nuke rumor and chatter and hype--seems to have no substance whatever.** Because of a vast array of organizational and technical hurdles, **the likelihood that terrorists will be able to build or acquire an atomic bomb is vanishingly small.** Despite the substantial array of threats regularly issued by al-Qaeda (the only terrorist group that may envision attacks on the United States to be desirable), and despite the even more substantial anguish these threats have inspired in their enemies, the terrorist group's capacity seems to be quite limited. One reason for al-Qaeda's remarkably low activity in the last years is that 9/11 proved to be substantially counterproductive from al-Qaeda's standpoint; indeed, with 9/11 and subsequent terrorist acts, the group seems mainly to have succeeded in uniting the world, including its huge Muslim portion, against its violent global jihad. **Any threat presented by al-Qaeda is likely to fade away in time, unless, of course, the United States overreacts and does something to enhance its numbers, prestige, and determination--something that is, needless to say, entirely possible.** The existential bombast suggesting that the United States will destroy itself in response to an atomic explosion encourages the most diabolical and murderous terrorists to investigate the possibility of accomplishing the task. **In the end, then, it appears that, whatever their impact on activist rhetoric, strategic theorizing, defense budgets, and political posturing, nuclear weapons have had at best a quite limited effect on history,** have been a substantial waste of money and effort, do not seem to have been terribly appealing to most states that do not have them, are out of reach for terrorists, and are unlikely materially to shape much of our future (Mueller, 2010).

**Title:** *The American Hiroshima: Osama's Plan For A Nuclear Attack, And One Man's Attempt To Warn America* (Non-Fiction)

**Date:** November 24, 2009

**Publisher:** iUniverse

**Author:** Dr. Hugh Court

**Abstract:** Do you really think Osama bin Laden is done with America? Are you ready for the next 9/11? Help stop Osama bin Laden's plan for a devastating nuclear attack on multiple American cities in the very near future. **Two thirds of Americans believe Osama bin Laden will strike America again, and this time it will be nuclear. Guess what? They are right!** Find out how Iran is aiding and abetting Osama's nuclear plan. Learn how you can help stop Osama's horrible attack, or, if we can't stop it, at least learn how to prevent deadly radiation sickness. **The American Hiroshima: Osama bin Laden's Plan for a Nuclear Attack, and One Man's Attempt to Warn America is the most important book on the imminent terrorist threat facing America.** To save your nation, and protect your family, you must read this book today! (Court, 2009).

**Title:** *The Overton Window* (Faction)

**Date:** June 15, 2010

**Publisher:** Threshold Editions

**Author:** Glenn Beck

**Abstract:** A plan to destroy America, a hundred years in the making, is about to be unleashed . . . can it be stopped? There is a powerful technique called the Overton Window that can shape our lives, our laws, and our future. **It works by manipulating public perception so that ideas previously thought of as radical begin to seem acceptable over time.** Move the Window and you change the debate. Change the debate and you change the country. For Noah Gardner, a twentysomething public relations executive, it's safe to say that political theory is the furthest thing from his mind. Smart, single, handsome, and insulated from the world's problems by the wealth and power of his father, Noah is far more concerned about the future of his social life than the future of his country. But all of that changes when Noah meets Molly Ross, a woman who is consumed by the knowledge that the America we know is about to be lost forever. **She and her group of patriots have vowed to remember the past and fight for the future--but Noah, convinced they're just misguided conspiracy-theorists, isn't interested in lending his considerable skills to their cause.** And then the world changes. **An unprecedented [Nuclear] attack on U.S. soil shakes the country to the core and puts into motion a frightening plan, decades in the making, to transform America and demonize all those who stand in the way. Amidst the chaos, many don't know the difference between conspiracy theory and conspiracy fact--or, more important, which side to fight for. But for Noah, the choice is clear: Exposing the plan, and revealing the conspirators behind it, is the only way to save both the woman he loves and the individual freedoms he once took for granted.** After five back-to-back #1 New York Times bestsellers, national radio and Fox News television host Glenn Beck has delivered **a ripped-from-the-headlines thriller that seamlessly weaves together American history, frightening facts about our present condition, and a heart-stopping plot.** The Overton Window will educate, enlighten, and, most important, entertain--with twists and revelations no one will see coming (Beck, 2010).

**Conclusion:** Unless these authors have direct contact with Al Qaeda, it is fascinating how much inside information they have regarding an impending nuclear attack. The "terrorists" are 10,000 miles away, speak an entirely different language, but apparently that does not matter! A more likely scenario is that these authors are being fed inside information from FBI and CIA officials who are privy to the nuclear terror plan.

## The Nuclear Bible: Nuclear Terror Dates, Targets & Scenarios

**Intro:** Once a nuclear detonation occurs, it is highly likely that the U.S. government along with the governments of the World will hype the real or imagined threat of a 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, or even a 6<sup>th</sup> nuclear attack for political gain. That being said, the 1<sup>st</sup> one will be on “LIVE TV”, due to the 30 to 60 second visual life of the blast. As with Hiroshima and Nagasaki, there will likely be a nuclear detonation on the 6<sup>th</sup> (Super Bowl XLV, February 6, 2011) of the month, with another following on 9<sup>th</sup> of February, 2011, or on March 9, 2011 (Ash Wednesday), or the 9<sup>th</sup> of a month yet to be determined in the capitol of the United States, Washington D.C. This secondary target will enable the formation of the North America Union whose new capitol is Denver, Colorado.

**In order to be considered a major nuclear terror target, a target must contain these 3 main criteria in order to terrorize the intended victims and bring about the desired result for the suspected terrorists.**

- 1) Drastic War-Like Casualties
- 2) A Live Global TV Audience
- 3) A Strategic Location

**A Live Global TV Audience:** In order to terrorize victims most effectively, the actual nuclear detonation must be seen globally by a LIVE TV audience, due to the 30-60 second life-span of the mushroom cloud. The Super Bowl, The Olympics, The World Cup, and the New Year's party in Times Square fit this bill. Please see Chapter 31: *TV & LIVE Terror* for more information.

**Drastic War-Like Casualties:** There must be a high number of civilian and eventual first responder casualties, and must outdo 9/11 in every shape and form. It must be “shock and awe”, and the event must mobilize the American people to anger, rage, hate, and eventually war. It is likely that within 24 hours, the talking heads on TV and radio will blame Al Qaeda and Pakistan, for if there ever was a real investigation, it is highly likely that the atomic signature would indicate that the nuclear material was from one of the hijacked nuclear weapons from Minot Air Force Base. Please read Chapter 25: *Nuclear Hijack: Top Secret*, for more information,

**A Strategic Location:** The event must be in a location that is strategically beneficial to the Globalists such as Texas, Brazil, & London. Ironically, there just happens to be three major sporting events planned for these three locations in the next four years.

**The Republic of Texas:** The State of Texas currently stands in the way of the NAFTA (North American Free Trade Agreement) Superhighway, due to the high number of private land owners unwilling to surrender their land to the treasonous U.S. Federal Government. Should an attack in Texas occur, Mexico and potentially Canada could be involved in some way, thus giving reason to set up North American Union by securing the border of Mexico, Canada, and the United States (See Chapter 21: “Blackjack” for more info). Texas has opposed the NAFTA Super Highway and the North American Union probably more than any other State in the Union and is dead-set on allowing the Globalists to carve up their state. A nuclear terror attack would decimate Texas for hundreds of years and would ultimately pave a way for the North American Union based on the logic of securing Canada, United States and Mexico with an airtight nuclear security perimeter. As noted in the chapters *Terrorism & Texas* and *Terrorism & Mexico*, the ground work to eventually blame the Mexican border is well in political play.

**London, England:** The 2012 Olympics is already receiving much hype about a potential nuclear terrorist attack. London was one of 7 cities nuked in the *Telegraph's* infamous “Blackjack, a simultaneous global nuclear terror. With all Nations of the World present, a live attack during the Opening Ceremonies would make for a terrorists wet dream. (See Chapter 21: “Blackjack” for more information.

**Brazil:** Being the largest Nation in South America and a rising star who will host the World Cup (2014) and the Summer Olympics (2016) during the next four years. A nuclear detonation would be the end of Brazil’s dominance in South America, and would potentially destroy the entire South American economy for decades. Brazil, who recently signed a nuclear agreement with Iran and Turkey, is the largest and most powerful economic force in South America. It is possible that the Globalists see Brazil as a threat and may try to invade South America to “hunt down Al Qaeda”, should a nuclear terror event occur in 2014 and/or 2016.

## **The Nuclear Bible: Top 4 “Live” Nuclear Terror Targets**

**# 1 Super Bowl   # 2 The Olympics   # 3 The World Cup   # 4 Times Square, New York**

**Intro:** Base on ALL the quantitative and qualitative research conducted, a nuclear terror attack is most likely going to happen in the United States during the Super Bowl. While there are many factors to consider when making this hypothesis, but none greater than the 2 following points. The Super Bowl is the most watched live TV event in the United States. The Super Bowl is probably the biggest party day in America. It is likely that potentially half of all Americans adult males will be severely intoxicated by the end of the game. Should a nuclear terror attack transpire, martial law would surely follow and many American People would be helpless against it.

## **The Nuclear Bible: Nuclear Terror Target # 1: The NFL Super Bowl**

**NFL (National Football League) Super Bowl Championship**

<b><u>Super Bowl:</u></b>	<b><u>City:</u></b>	<b><u>Stadium:</u></b>	<b><u>Date:</u></b>
<b>Super Bowl XLV</b>	<b>Arlington, TX</b>	<b>Cowboys Stadium</b>	<b>February 6<sup>th</sup>, 2011</b>
Super Bowl XLVI	Indianapolis, IN	Lucas Oil Stadium	February 5 <sup>th</sup> , 2012
Super Bowl XLVII	New Orleans, LA	Louisiana Superdome	February, 2013?
Super Bowl XLVIII	East Rutherford, NJ	Meadowlands Stadium	February, 2014?

## **The Nuclear Bible: Super Bowl 6/11 & 26/11 Scenarios**

**Date:** February 6, 2011

**Scenario:** 6/11

**Location:** Arlington (Dallas), Texas, USA

- As with the September 11, 2001 attacks (9/11), should a nuclear attack transpire on February 6, 2011, the establishment and media will most likely name the event 6/11: an upside down 9/11
- This particular date is exactly 786 months ( $7+8+6=21$ ) to the day since Hiroshima, Japan, was nuked at 8:15 (Japanese time) on August 6, 1945, by the United States in WWII. The #21 is often referred to “Blackjack” and is the name of Chapter 21: Blackjack.

**Title:** *The Simpsons: To Surveil With Love*

**Date:** May 2, 2010

**Writer(s):** Michael Nobori

**Distributor(s):** 20<sup>th</sup> Century Fox Television

As with 9/11, there was a Simpsons episode with a chilling message that aired prior to the actual event taking place.

**Scenario:** 26/11

**Date:** February 6, 2011

**Location:** Arlington (Dallas), Texas, USA

Pakistani terrorists/militants attack America this day, the same day numerically (2/6/2011) in retaliation for the Obama administrations favoritism towards India and the call for India to join the UN Security Council.

## **The Nuclear Bible: February 6<sup>th</sup> in History**

**February 6, 1900:** The international arbitration court at The Hague was created when the Netherlands' Senate ratifies an 1899 peace conference decree. **Should an international nuclear terror attack occur, it is highly likely that the International Criminal Court or some International Court will be the venue where alleged perpetrators will be tried, thus ushering in a global justice system.**

**February 6, 1933:** The 20th Amendment to the United States Constitution, establishing the beginning and ending of the terms of the elected federal offices, went into effect. Should a nuclear terror attack occur, it is highly likely that the U.S. Constitution will become null and void and some sort of a fascist dictatorship will emerge in America.

**February 6, 1958:** The Munich air disaster took place on 6 February 1958, when British European Airways Flight 609 crashed on its third attempt to take off from a slush-covered runway at Munich-Riem Airport in Munich, West Germany. On board the plane was the Manchester United football team, nicknamed the "Busby Babes", along with a number of supporters and journalists. 20 of the 44 people on board the aircraft died in the crash. The injured, some of whom had been knocked unconscious, were taken to the Rechts der Isar Hospital in Munich where 3 more died, resulting in a total of 23 fatalities with 21 survivors.

**February 6, 1959:** **1<sup>st</sup> Titan ICBM Missile Fired** At Cape Canaveral, Florida. Should a nuclear terror attack occur it is highly likely that the Obama Administration will launch multiple nuclear ICBM's at Pakistan and potentially other nations that are unwilling to submit to the Globalist's New World Order Agenda.

## The Nuclear Bible: February 7<sup>th</sup> (7/11), “The Day After”

**Scenario:** 7/11

**Date:** February 7, 2011, “The Day After”

**Location:** Arlington (Dallas), Texas, USA

Should an attack transpire at the Super Bowl in Texas, the European time of nuclear detonation would be February 7, 2011, which would read as “7/11”. What date the world accepts as the general date would not be determined for years. However, in the United States, 7/11 would be “The Day After”. This is also the name of a nuclear disaster film. There are over 39,000 7 Eleven stores in America, and ironically, the store was founded on July **11**, 1927.

**February 7, 1778:** After the American Revolutionary War, the Treaty of Alliance and the Treaty of Amity and Commerce are signed by the United States and France in Paris, signaling official recognition of the new republic. Interestingly, the day that America is officially born could be the same day that it dies, just 267 years later.

**February 7, 1795:** The 11th Amendment to the United States Constitution is ratified and deals with each state's sovereign immunity from being sued in federal court by someone of another state or country.

**February 7, 1862:** American Civil War: Ulysses S. Grant gives the United States its first victory of the war, by capturing Fort Henry, Tennessee, known as the Battle of Fort Henry.

**February 7, 1899:** Spanish-American War: The Treaty of Paris, a peace treaty between the United States and Spain, is ratified by the United States Senate.

**February 7, 1900:** The international arbitration court at The Hague is created when the Netherlands' Senate ratifies an 1899 peace conference decree. Will a UN type World Court be resurrected 111 years later to try the terrorists who will certainly come from multiple nations?

**February 7, 1904:** A fire in Baltimore, Maryland destroys over 1,500 buildings in 30 hours.

**February 7, 1922:** The Washington Naval Treaty is signed in Washington, D.C., limiting the naval armaments of United States, Britain, Japan, France, and Italy.

**February 7, 1933:** The 20th Amendment to the United States Constitution, establishing the beginning and ending of the terms of the elected federal offices, goes into effect. This amendment will likely be suspended in favor of martial law.

**February 7, 1935:** The classic board game Monopoly is invented.

**February 7, 1951:** *The Broker*, a Pennsylvania Railroad passenger train derailed near Woodbridge Township, New Jersey. The accident kills 85 people and injures over 500 more. **The wreck is one of the worst rail disasters in American history.**

**February 7, 1952:** Elizabeth II becomes Queen upon the death of her father George VI. At the exact moment of succession, she was in a tree house at the Treetops Hotel in Kenya. **If a nuclear attack occurred, the public date of the emergence of the North American Union would take place, thus making the Queen of England the de facto ruler of the United States of America exactly 59 years later.**

**February 7, 1990:** Collapse of the Soviet Union: The Central Committee of the Soviet Communist Party agrees to give up its monopoly on power. Given a nuclear attack in the United States, nothing would satisfy the Globalists more than to see America fall into the hands of the North American Union.

**February 7, 1992:** The Maastricht Treaty is signed, leading to the creation of the European Union. A nuclear terror attack in America would surely usher in the North American Union (The merger of the United States, Mexico, and Canada), and would be used as a hammer to force the rest of the world into the New World Order system of World Government. Those who stand up for State sovereignty would be labeled “terrorist sympathizers” and would be dealt with accordingly.

**February 7, 1995:** Ramzi Yousef, the mastermind of the 1993 World Trade Center bombing, is arrested in Islamabad, Pakistan.

## **The Nuclear Bible: Arlington (Dallas), Texas**

**Date:** November 5, 2010

**Source:** Wikipedia

**Title/Headline:** *Arlington National Cemetery*

**Abstract:** The Arlington National Cemetery is located in Arlington County, Virginia, a military cemetery in the United States of America, established during the American Civil War on the grounds of Arlington House, formerly the estate of the family of Confederate general Robert E. Lee's wife Mary Anna (Custis) Lee, a great grand-daughter of Martha Washington. The cemetery is situated directly across the Potomac River from the Lincoln Memorial in Washington, D.C., and near The Pentagon. It is served by the Arlington Cemetery station on the Blue Line of the Washington Metro system. In an area of 624 acres (2.53 km<sup>2</sup>), veterans and military casualties from each of the nation's wars are interred in the cemetery, ranging from the American Civil War through to the military actions in Afghanistan and Iraq. Pre-Civil War dead were reinterred after 1900. Arlington National Cemetery and United States Soldiers' and Airmen's Home National Cemetery are administered by the Department of the Army. The other national cemeteries are administered by the Department of Veterans Affairs or by the National Park Service (Wikipedia, 2010).

**Should a nuclear attack occur in Arlington, Texas, one could say it would be the new national cemetery of the United States, for it will fail to exist as a sovereign nation or as a political entity from that day forward. The new North American Union will take its place, and the United States of America will be no more.**

**Trinity River:** The beautiful "Trinity" River just happens to flow through the heart of Dallas and Arlington, Texas. "Trinity" also happens to be the code name of the first nuclear weapons test of an atomic bomb (Wikipedia, 2010).

**Date:** July 16, 1945

**Source:** Wikipedia

**Title/Headline:** *Trinity-Test*

**Abstract:** Trinity Test was conducted by the United States Army on July 16, 1945, at a location about 35 miles (56 km) southeast of Socorro, New Mexico, at the White Sands Proving Ground, now the White Sands Missile Range. Trinity was a test of an implosion design plutonium device. The weapon's informal nickname was "The Gadget". Using the same conceptual design, **the Fat Man device was detonated over Nagasaki, Japan, on August 9, 1945** The Trinity detonation produced an explosive power equivalent to the explosion of about 20 kilotons of TNT. **This date is usually considered to be the beginning of the Atomic Age** (Wikipedia, 2010).

**The Nuclear Regulatory Commission (NRC):** A United States government agency that was established by the Energy Reorganization Act in 1974 from the Atomic Energy Commission, and was first opened January 19, 1975. The NRC oversees reactor safety and security, reactor licensing and renewal, radioactive material safety, security and licensing, and spent fuel management (storage, security, recycling, and disposal). **Region IV, located in Arlington, Texas, oversees the southern midwestern and the western United States** (Wikipedia, 2010). **If a nuclear attack occurs in Arlington, Texas, ALL nuclear records for the western half of the United States will be destroyed. This is key, because any illegal activity regarding nuclear sites in New Mexico and Alaska would be destroyed.**

## The Nuclear Bible: Nuclear Terror Target # 2: The Olympics

### The Summer Olympics:

**Event:**

XXX Summer Olympics  
XXXI Summer Olympics

**Country:**

London, England (UK)  
Rio de Janeiro, Brazil

## The Nuclear Bible: Nuclear Terror Target # 3: The World Cup

**Nuclear** Target # 3: The World Cup

**Agency:** FIFA (Fédération Internationale de Football Association)

**World Cup Dates:** 2014, 2018, 2022

**Intro:** The 2010 FIFA World Cup was played in South Africa on July 11, 2010 (7/11). Aside from the U.S., most other countries put the day first rather than the month, thus resulting in the numerical switch to 11/7. Should a massive terror event occur at the World Cup on the same date, the 7/11 convenience store with 38,000 locations globally would serve as a constant reminder of Nuclear Terror, similarly like 9/11 was to all Americans who dialed 911 (Emergency Phone Number for Police, Fire, & Medical).

**Tragically, on the day of the 2010 World Cup Final, twin suicide bombs were detonated in Uganda during the game.**

**Event:**

2014 World Cup  
2018 World Cup  
2022 World Cup

**Country:**

Brazil  
Russia  
Qatar

**Date:**

June 11 – July 11, 2014?  
June-July 2018?  
June-July 2022?

## The Nuclear Bible: Other Nuclear Terror Dates, Targets & Scenarios

**New Year's Eve in Time Square, New York, New York:** Time Square in New York City was attacked in 2010 by an American Pakistani with a WMD, and it is highly likely that it will suffer the same fate as the World Trade Center Towers in New York which were attacked in 1993 and again on 9/11 in 2001. Whether it's a Dirty Bomb or Bio Attack the LIVE nature of the event and being the biggest city in the World makes it a Prime Target for the Globalist terrorists.

<u>Event:</u>	<u>City:</u>	<u>Location:</u>	<u>Date:</u>
New Year's Eve	New York City	Time Square	January 1 <sup>st</sup> , 2011
New Year's Eve	New York City	Time Square	January 1 <sup>st</sup> , 2012
New Year's Eve	New York City	Time Square	January 1 <sup>st</sup> , 2013
New Year's Eve	New York City	Time Square	January 1 <sup>st</sup> , 2014
New Year's Eve	New York City	Time Square	January 1 <sup>st</sup> , 2015

## The Nuclear Bible: Other Cities Mentioned As Nuclear Terror Targets in both Fiction & Non Fiction Accounts

### **Arlington, Texas**

Baltimore, Maryland

Boston, Massachusetts

Charleston, South Carolina

Chicago, Illinois

**Dallas, Texas** (Super Bowl XLV on February 6, 2011)

Hartford, Connecticut

### **Houston, Texas**

Las Vegas, Nevada

Los Angeles, California

Miami, Florida

New York, New York

Norfolk, Virginia

Portland, Oregon

Philadelphia, Pennsylvania

Rappahannock County, Va. (White House Underground Command Center)

Richmond, Virginia

San Francisco, California

Seattle, Washington

### **Texas City, Texas**

Washington D.C.

## International Cities

Beijing, China

London, England (2012 Summer Olympics)

Moscow, Russia (2018 World Cup)

Mexico City, Mexico

Paris, France

Toronto, Canada

## The Nuclear Bible: Other Potential Target Dates & Events

### Other Dates:

- 1) December 21, 2012 (Supposed "End" of the Mayan Calendar)
- 2) December 25<sup>th</sup> (Christmas Day "Bomber" Could Strike Again)
- 3) July 4<sup>th</sup> (America's Birthday)
- 4) November 5<sup>th</sup> (Guy Fawkes Day)
- 5) April 15<sup>th</sup> (Tax Day in America)

- 6) April 19<sup>th</sup> (Paul Revere Ride, Waco Attack, Oklahoma City Bombing)
- 7) Muslim Holy Days or Holidays

**Political Events:** 2012/2016/2020 U.S. Presidential Nomination Ceremony, Republic Convention, Democratic Convention, 3<sup>rd</sup> Party Nomination or Victory Party

**Sporting Events:** The Goodwill Games, The World Series, The NBA Finals, Wimbledon, Ryder Cup, Australian Open, Tour de France, U.S. Open, The Masters, NBA, NFL, MLB, NHL, and MLS games and any other high-profile sporting event.

**Entertainment Events:** Oscars, Emmy's, Grammys, Golden Globes, Tonys, U.S./European MTV Music/Movie Awards, and any other high-profile entertainment event.

**Please see Chapters 31, 32, and 33 for more information on the top 3 nuclear terror targets**

**Conclusion:** Please do your part to stop this nuclear holocaust, and forward this information to the four corners of the Earth ASAP.

## The Nuclear Bible: Nuclear Terror Drills

**Intro:** Countless Federal Agencies along with the American Red Cross have been very busy in the last couple of years training local, county, and state police, military, and emergency response workers for an upcoming mass casualty terror attack. While the drills have varied in their location and mission, all of the drills have been training these agencies to work together in harmony should an emergency occur.

**There are so many terror, mass casualty and emergency drills occurring simultaneously throughout America, Britain and Canada, a few pertinent questions remain:**

- When will the drills go live?
- How can will the police, military and the American people tell the difference between “real world” and “exercise” drills?
- Will video footage of the mock drills be used for military/media propaganda purposes at a later date? Will drill footage be passed off as “real” world events?

### Resounding Themes:

- It is not a matter of “if”, but “when” regarding an impending mass casualty terror attack
- Synchronicity and coordination of all local, county, state and federal government emergency agencies is being repeatedly drilled by DHS and FEMA in congruence with COG (Continuity of Government) plans. See Chapter 39: *Nuclear Aftermath of America* for more info...

**Date:** August 21, 2005

**Location:** South Carolina, USA

**Source:** World Net Daily

**Title/Headline:** *Pentagon Drills For Nuke Terror*

**Abstract:** When authorities tried to arrest a terrorist discovered unloading an improvised nuclear weapon in the port of Charleston, S.C., the bomb was detonated, killing 10,000, injuring 30,000 and exposing as many as 100,000 to high levels of radiation. That was the scenario at the center of a nuclear terrorism drill, completed this week, one involving thousands of civilians, military personnel and local and federal officials told Inside Defense. **"Sudden Respond 05" was led by Virginia's Fort Monroe-based Joint Task Force-Civil Support and was designed to simulate a nuclear terrorist attack that the highest U.S. officials, including President Bush, have said is the No. 1 threat facing the nation. The drill, one of many like it scheduled around the country, was not designed to stop a nuclear terrorist attack but to deal with its devastating aftermath.** The exercises took place from Aug. 15 through Aug. 19. Drills in other parts of the country will focus on 15 other scenarios involving the detonation of terrorist weapons of mass destruction. In this case, the device was a 10-kiloton bomb, said Tom Sobieski, deputy for training and exercises at Joint Task Force-Civil Support, in an interview with InsideDefense. For two weeks prior to the drill, the task force, which spearheads the Defense Department's support for civil authorities leading the response, conducted **"in-depth computer modeling" analysis to predict the damage to the southern port, including its infrastructure, facilities, communications as well as how the radioactive plume might move through the atmosphere.** Organizers say the nuclear drills should not frighten civilians but instead encourage them to learn how to protect themselves if such an attack – which some officials have referred to as inevitable – should occur. **"What we're doing is validating what we call our 'nuclear playbook' – our operating procedures for how we would respond to a nuclear scenario,"** Sobieski told Inside Defense. **The task force, part of the U.S. Northern Command, which oversees the Defense Department's domestic military activity, is composed of active, reserve and Guard members from the Army, Navy, Air Force, Marines and Coast Guard, as well as civilian personnel. It is commanded by a federalized National Guard general.** Army National Guard Maj. Gen. Bruce Davis, the task force commander, directed the Charleston drill, which included 164 members of his operation, dozens of role players who will represent other organizations the joint task force would work with, as well as representatives from South Carolina's state government and officials from the Federal Emergency Management Agency. While Charleston was selected as the target for the exercise, most of the activity took place at the task force's Virginia headquarters. Assistant Secretary of Defense for Homeland Defense Paul McHale in an interview last month said **the Pentagon, in partnership with other federal departments, is contemplating "truly catastrophic" scenarios that go well beyond recent exercises designed to test the reaction of civilian and military forces to biological and chemical weapons attacks. "With an**

**unflinching eye, we are taking a realistic look at worse-case scenarios,"** he told Inside Defense. "We have begun to consider in a very focused way not only mid-range consequence management requirements of the type that could be met by a combination of existing and military and civilian capabilities, but also truly catastrophic events that would go beyond the normal range of challenges reflected in our more recent exercises." Each member of the task force has a bag with contamination gear and another with 30 days of clothing and personal needs. They are never far from a telephone. **Neither are about 3,450 military people around the country on 24-hour call for just this sort of disaster. "We are specifically designed as a part of U.S. Northern Command to come in after an incident like this and assist local responders with saving lives, preventing further injuries and restoring critical life support,"** said Maj. Gen. Bruce Davis. "There are those out there that have stated their intent to hurt us anyway they possibly can and to not take that serious and not be prepared would be folly," Gen. Davis added (World Net Daily, 2005).

**Date:** May 17, 2009

**Location:** New York, USA

**Source:** CBC News

**Title/Headline:** *Ground Zero Emergency Drill Staged In NYC*

**Abstract:** Hundreds of emergency employees took part in a disaster drill Sunday morning at the site in lower Manhattan where the two World Trade Center towers were struck by passenger jets and destroyed nearly eight years ago. Officials simulated a mock explosion in a commuter train tunnel linking New York City to New Jersey. Police and fire truck sirens sounded above ground, while emergency workers kept streets in the city's financial district closed to vehicle traffic and pedestrians. Officials also suspended PATH rail service during the drill. **About 150 volunteers pretended to be victims of the explosion. The mock emergency involved over 800 police officers, firefighters and Port Authority of New York and New Jersey officials. It was the largest disaster drill since the Sept. 11, 2001, attack on the twin towers, which killed more than 2,700 people** (CBC News, 2009).

**Date:** June 8, 2009

**Location:** United States of America

**Source:** North American Aerospace Defense Command And United States Northern Command

**Title/Headline:** *NORAD And USNORTHCOM Exercise Planned For Mid-June*

**Abstract:** North American Aerospace Defense Command and U.S. Northern Command are planning to conduct a combined exercise June 18 - 24 that will incorporate several military exercises with a National Guard exercise. These linked exercises are referred to as **ARDENT SENTRY 09**. Events will take place in multiple venues across the country including Iowa, Kansas, Oregon, Wyoming, and off the East and West Coasts. The exercise will allow several Department of Defense organizations and some federal and state partners to implement plans and respond to a variety of notional events. Historically, exercises like these have helped both DoD and other agencies review their processes and procedures and focus their future training efforts on closing gaps and identifying areas that need additional attention.

#### **Major AS 09 Venues Include:**

- NORAD's AMALGAM DART exercise involving air defense activities at Camp Rilea, Oregon;
- The National Guard's VIGILANT GUARD exercise focused on civil support with major activities in Des Moines, Iowa and Topeka, Kansas; and,
- **A Nuclear Weapons Incident exercise (NUWAIX) with a U.S. Air Force response near Cheyenne, Wyoming;**

The activities in the vicinity of Camp Rilea will involve the deployment of an Army National Guard ground-based air defense system that will be integrated with Air Force airborne systems (AWACS and fighters) and a Navy Aegis Destroyer. *(Media interested in covering this event should contact Mr. Al Eakle at 1-850-283-8080)* Iowa, Kansas, Missouri, and Nebraska National Guard units will respond to multiple events in Iowa and Kansas including simulated train derailments and foreign animal disease. *(Media interested in covering events in Iowa should contact LTC Greg Hapgood at 515-971-6385; for events in Kansas, contact Sharon Watson at 785-274-1192)* **In Wyoming, Air Force Space Command will respond to an incident involving a simulated nuclear weapon.** *(Media interested in covering this should contact Capt. Sharbe Clark at 719-554-3815).* NORAD is a bi-national United States and Canada organization charged with the missions of aerospace warning and aerospace control for North America. **USNORTHCOM provides command and control of DoD homeland defense efforts and, when directed, provides timely and effective defense support of civil authorities** (NORAD & USNORTHCOM, 2009).

**Date:** June 13, 2009

**Location:** New York, USA

**Source:** Press TV, Associated Press

**Title/Headline:** *New York Drill For Possible Nuke War*

**Abstract:** US security authorities have conducted a semi-clandestine nuclear fallout drill in the City of New York in order to be prepared "for the worst." The NYC Police Department (NYPD) in unison with the Federal Bureau of Investigation (FBI) carried out a massive almost-covert anti-nuclear exercise codenamed 'New York, you have a problem' in order to gauge the metropolitan promptness in responding to such attacks. According to an AP report on Friday, hundreds of NYPD officers and FBI agents participated in the drill that involved the detection of a gamma-ray emitting device concealed in the heart of the urban area. **The group was also accompanied by an elite corps of federal weapons specialists who, under a US attorney general mandate, found a simulated "nuclear device" and diffused it.** Commenting on the nature of new threats on the City area including 'dirty bombs' and other unconventional explosive devices, head of FBI's New York office, Joseph Demarest, said, **"It's something we're very concerned about."** Reflecting Demarest's comments, **FBI's counterterrorism supervisor, Don Always, told reporters, "Hopefully, we'll never have to do this for real." "But if we do, we have to do it right the first time," he went on to say.** New York City authorities have frequently expressed concerns over a sudden occurrence of such attacks capable to claim numerous lives. A dirty bomb is an explosive device equipped with nuclear, chemical or biological containers, which could be blown up without having to use sophisticated nuclear detonators. The news of the NYC nuclear fallout drill comes in the wake of an assessment last week in which the **Missouri Congressman Todd Akin warned of a looming nuclear threat on the US's West coast cities** as adversarial regimes such as North Korea expand their nuclear and rocket launching capabilities. **The 62-year-old Republican Congressman advised the US administration to seriously consider current nuclear issues threatening US security, which demanded a fortified scheme to tackle the potential issues** (Press TV, 2009).

**Date:** July 27, 2009

**Location:** United States of America

**Source:** FEMA (Federal Emergency Management Agency)

**Title/Headline:** *National Level Exercise 2009 (NLE 09)*

**Abstract:** National Level Exercise 2009 (NLE 09) is scheduled for July 27 through July 31, 2009. NLE 09 will be **the first major exercise conducted by the United States government that will focus exclusively on terrorism prevention and protection, as opposed to incident response and recovery.** NLE 09 is designated as a Tier I National Level Exercise. Tier I exercises (formerly known as the Top Officials exercise series or TOPOFF) are conducted annually in accordance with the National Exercise Program (NEP), which serves as the nation's overarching exercise program for planning, organizing, conducting and evaluating national level exercises. **The NEP was established to provide the U.S. government, at all levels, exercise opportunities to prepare for catastrophic crises ranging from terrorism to natural disasters.** NLE 09 is a White House directed, Congressionally- mandated exercise that includes the participation of **all appropriate federal department and agency senior officials, their deputies, staff and key operational elements.** In addition, broad regional participation of state, tribal, local, and private sector is anticipated. This year the United States welcomes the participation of Australia, Canada, Mexico and the United Kingdom in NLE 09.

**EXERCISE FOCUS:** NLE 09 will focus on intelligence and information sharing among intelligence and law enforcement communities, and between international, federal, regional, state, tribal, local and private sector participants. **The NLE 09 scenario will begin in the aftermath of a national terrorist event outside of the United States, and exercise play will center on preventing subsequent efforts by the terrorists to enter the United States and carry out additional attacks.** This scenario enables participating senior officials to focus on issues related to preventing terrorist events domestically and protecting U.S. critical infrastructure. NLE 09 will allow terrorism prevention efforts to proceed to a logical end (successful or not), with no requirement for response or recovery activities. NLE 09 will be an operations-based exercise to include: activities taking place at command posts, emergency operation centers, intelligence centers and potential field locations to include federal headquarters facilities in the **Washington D.C. area, and in federal, regional, state, tribal, local and private sector facilities in FEMA Region VI, which includes the states of Arkansas, Louisiana, New Mexico, Oklahoma and Texas. Additionally, California, in FEMA Region IX, is also participating.**

**EXERCISE OBJECTIVES:** Through a comprehensive evaluation process, the exercise will assess prevention and protection capabilities both nationally and regionally. Although NLE 09 is still in the planning stages, the exercise is currently designed to validate the following capabilities:

- Intelligence/Information Sharing and Dissemination
- Counter-Terrorism Investigation and Law Enforcement
- Air, Border and Maritime Security
- Critical Infrastructure Protection
- Public and Private Sector Alert/Notification and Security Advisories
- International Coordination

**VALIDATING THE HOMELAND SECURITY SYSTEM:** Exercises such as NLE 09 are an important component of national preparedness, helping to build an integrated federal, state, tribal, local and private sector capability to prevent terrorist attacks, and rapidly and effectively respond to, and recover from, any terrorist attack or major disaster that occurs. The full-scale exercise offers agencies and jurisdictions a way to test their plans and skills in a real-time, realistic environment and to gain the in-depth knowledge that only experience can provide. Participants will exercise prevention and information sharing functions that are critical to preventing terrorist attacks. **Lessons learned from the exercise will provide valuable insights to guide future planning for securing the nation against terrorist attacks, disasters, and other emergencies.** FEMA's mission is to support our citizens and first responders to ensure that as a nation we work together to build, sustain, and improve our capability to prepare for, protect against, respond to, recover from, and mitigate all hazards (FEMA, 2009).

**Date:** September 11, 2009

**Location:** Ohio, USA

**Source:** The Review, Laurie Huffman

**Title/Headline:** *Hazmat Drill Preps Area Firefighters For Chemical Spill*

**Abstract:** Every year, some type of hazardous materials incident has been documented in the county during the past four years that Don McDonald has headed the Stark County Local Emergency Planning Committee. This is why hazmat drills are so important, McDonald told firefighters and various agency officials after a drill was executed at the Alliance Water Treatment Plant on Thursday. During the exercise, the simulated chemical spill was contained and five people were located who were in supposed peril at the plant due to the deadly vapors that were expelled. McDonald has been program director of the county's LEPC for four years, and is retired from the Jackson Township Fire Department, where he was a captain and a firefighter for 25 years. **LEPC is the county agency responsible for coordination of resources and handling of hazardous material spills, and it was the agency that was being evaluated after the drill by three fire chiefs -- Scott Cochran of the Alliance Fire Department, John Bacon of North Canton and John Fetty of Louisville. Vicki Bunting of Ohio Emergency Management Agency was the facilitator. The drill lasted about two-and-a-half hours and an evaluation, or "hot wash," was held directly afterward at Lexington Fire Station. The drills are mandated by the state and 13 objectives must be met through the exercises in each four-year period. Four objectives were being evaluated during this drill: Incident Command System Evaluation (Fetty); Initial Notification and Incident Assessment (Bacon); and Communication (Cochran).** During his evaluation, Cochran said the only area he thought that could be improved upon was there was no one on site taking notes and the incident would have to be reported in full detail later on. **Also, he said the county should have been notified that the 800 megahertz radios were being utilized so the frequency would be cleared. Lexington Fire Chief Ed Johnson said the exercise was a large drill for them, and he said they learned a lot about working with departments they aren't used to working with.** Others present during the drill included Stark County Health Commissioner Bill Franks, Alliance Safety Service Director John Blaser, Stark County EMA Director Tim Warstler, Stark County EMA Deputy Director Rich Weber, Stark County Hazmat Control Officer Fred Klingamon, Denny Tan of Canton Health Department, Alliance-Minerva American Red Cross Chapter Manager John Essick. Food was supplied at the evaluation session by the local Red Cross chapter and by the Lexington Township Fire Auxiliary (Huffman, 2010).

**Date:** October 15, 2009

**Location:** California, USA

**Source:** MSNBC, Associated Press

**Title/Headline:** *Calif. Practices 'Drop, Cover And Hold': State's Earthquake Preparedness Drill Billed As Largest In U.S. History*

**Abstract:** Dozens of schoolchildren took shelter Thursday under work tables along with scientists and government officials as California practiced how to survive a major earthquake. **The scene at the California Science Center was to be repeated throughout the state, with millions of participants in offices, schools and emergency agencies. The fourth-graders who participated in the drill in Los Angeles had been chanting "drop, cover and hold," moments before the simulated earthquake was announced. Some 6.7 million Californians signed up to take part in the earthquake disaster drill, billed as the largest such exercise in U.S. history.** Many schools and businesses were to practice "drop, cover and hold on" — the minimum requirement for participation. Some hospitals and fire departments planned more elaborate simulations complete with search-and-rescue missions and people posing as faux quake victims. **Last year, the state held its first large-scale quake preparedness drill, focusing on Southern California. Some 5.5 million around the region participated, from school children ducking under their desks to firefighters doing medical triage. After last year's drill, organized decided to hold one every year. This year's exercise occurs during the same week as the 20th anniversary of the Loma Prieta earthquake that killed 63 people, collapsed a major freeway, and caused nearly \$6 billion in damage around San Francisco Bay. The magnitude-6.9 temblor struck before the start of the third game of the 1989 World Series. Ready to rumble?** California,

one of the most seismically active states in the United States, faces a 46 percent chance of being hit by a 7.5 or larger earthquake in the next 30 years, according to the U.S. Geological Survey. The last temblor to cause significant damage in California was the 1994 Northridge disaster. The drill is sponsored by the Earthquake Country Alliance, made of up USGS, state Emergency Management Agency, American Red Cross and others (MSNBC, 2010).

**Title/Headline:** *Metro Transit Police Stage Large Anti-Terrorism Drill*

**Abstract:** Metro Transit Police staged their largest anti-terrorism sweep ever during Tuesday morning's rush hour, as about 50 officers -- some toting M-4 rifles and others guiding bomb-sniffing dogs -- took up position in Union Station in a new initiative aimed at discouraging attacks. In coming months, they plan to hold similar drills for the effort, dubbed Blue TIDE (Terrorism Identification and Deterrence Effort). Robert Rotz, 50, did a double take when he ran into two officers wearing body armor and shouldering rifles. "This will make people think twice if they are trying to do something," said Rotz, a computer specialist who commutes from Shady Grove. A delegation of senior Indian police officers observed Tuesday's drill. "They are very interested in the technology used in the United States to help prevent attacks," said Deputy Chief Erhart M. Olson of the Metro Transit Police. Metro is planning exercises this month modeled after terrorist attacks in Madrid, London and Mumbai. About 200 to 300 police officers and other emergency responders from across the region will take part in tactical exercises Feb. 12, 13 and 24 that will include simulations of the bombing of a Metrobus, an explosion in the tunnel between the Rosslyn and Foggy Bottom-GWU Metro stations, and shooters at the Friendship Heights Metro station (Tyson, 2010).

**Title/Headline:** *NORAD Trains For Terrorist Attack Over Northwest Ohio*

**Abstract:** Express Airport trained for a terrorist attack during part of a NORAD exercise where two armed F-16's took flight to intercept a passenger jet possibly hijacked by terrorists. Michael Cornell, Director of Owens Community College's Center for Preparedness, says "It's just another example of how well the country is working to prepare for what many feel is an inevitable attack." Cornell believes a terrorist attack is imminent, citing the failed Christmas Day bomber in Detroit. However, Cornell believes the U.S. has come a long way, but says there's always room for growth and preparedness training. "I don't think we're where we need to be, but (we're) a lot better off than we were five to ten years ago." Fire Chief Mike Wolever oversees homeland security for Toledo and says there have been threats to Toledo, but he can't talk about them. "One of the things that the state and local people are getting better at doing is sharing classified information and that's huge," said Wolever. However, Ohio authorities are now worried about a cyber-terrorism, which could crush the banking industry and Wall Street. Local officials believe the U.S. remains vulnerable to attack (WTOL, 2010).

**Title/Headline:** *Statewide Tornado Drill Postponed*

**Abstract:** Due to the threat of inclement weather, the annual tornado drill has been postponed until Thursday, March 4, at 9:00 a.m. The drill was originally scheduled for Tuesday morning. The South Carolina Emergency Management Division (SCEMD) jointly sponsors the drill with the National Weather Service as part of South Carolina Severe Weather Awareness Week. Public schools, state and local Emergency Management, the South Carolina Broadcaster's Association, and others will participate in this annual event. The purpose of the drill is to test communication systems, safety procedures, mitigation processes, etc. South Carolina has received a waiver from the Federal Communications Commission to use the Tornado Warning product on NOAA tone-alert weather radio when the drill is conducted. During the drill, the National Weather Service will use a real-event code, TOR. The "TOR" code will activate tone-alert weather radios that are set to receive tornado warnings, and those radios will broadcast the exercise message. In the past, the Weather Service has used a code specifically designed for tests, but the test code does not activate the audio alarms on all radios (Carolina Live, 2010).

**Title/Headline:** *Portland Harbor Hosts Major Coast Guard Drill*

**Abstract:** The Coast Guard started conducting a major two-day drill Wednesday in Portland Harbor. The drill -- called the Spill of National Significance -- involves more than a dozen ships testing their abilities to respond to a massive oil spill at sea. It's so big that many refer to it as the Super Bowl of emergency drills. Officials from several agencies spent a year and a half choreographing the simulated disaster. Wednesday started off stormy for most of the day, providing tough weather conditions that Coast Guard officials deemed good because crews respond regardless of the weather conditions. This nightmare scenario involves a simulation of millions of gallons of crude oil spilling into Casco Bay. "It would be that thick black oil. It would be very sticky," Coast Guard Cmdr. Eric Doucette said. "Even with the storm conditions, you would have globs of what would become tar balls." The drill simulated two massive

barges colliding, spilling more than 3 million gallons of crude oil in the harbor. The Coast Guard holds the training session in different parts of the country each year. This year, the command center in South Portland was chosen to serve as host. The drill's purpose is to test not only Maine's preparedness, but the nation's. **"Industry, state partners and the federal government are working as one team to address the public's concern of an oil spill that has the magnitude of impacting three New England states,"** Doucette said. "Industry, state partners and the federal government are working as one team to address the public's concern of an oil spill that has the magnitude of impacting three New England states." There are 55 agencies and about 400 people working together, from operations to logistics. **"It's always people that make things happen. So, to have an exercise like this, we're all getting to know each other better,"** Parker said. "We've been working together, planning this for over a year. So, if an incident occurred, we'd know who we were working with, what people's strengths and weaknesses are so we can help each other out" (WMTV News, 2010).

**Title/Headline:** *Terrorism Training In New York*

**Abstract:** The New York City Fire Department and the Marines' Chemical Biological Incident Response Force responded to a simulated exploded bus, a subway chemical attack, a building collapse and two IED attacks. The all-day exercise was the culmination of a weeklong training evolution at FDNY Fire Academy on Randall's Island pairing Marines and firefighters. The Chemical Biological Incident Response Force, based in Indian Head, Md., has a history with the FDNY going back to the unit's founding in 1996. CBIRF is never in command of an incident, instead they respond and augment at the request of local, state or federal agencies, said Col. John Pollock, CBIRF commanding officer. The Marines go to large-scale events, such as presidential visits and sporting events, so they can respond quickly in case of emergency. The Marines can assist local emergency services when they may get overwhelmed in a large-scale disaster. "These guys are cut from the same cloth that we are. We are both men and women of action. **When most people see explosions, fire, or hear the sound of guns they head the other way, these are ones heading into the danger to make a difference and save lives,**" said Major Michael S. Johnson, CBIRF operations officer. **"When you call the Marines, they're going to get the job done,"** said Fire Commissioner Salvatore J. Cassano standing in front of the Marines scrubbing and spraying victims as they came out of the smokey subway, and then passing them to fire department medical personnel. **"This is a true joint operation and the picture of interoperability,"** said Fire Commissioner Salvatore J. Cassano. "The city fire department is better trained to respond after today" (Clinton, 2010).

**Location:** Nevada, USA

**Source:** The Washington Times, Rowan Scarborough

**Title/Headline:** *Military Cancels Nuclear Attack Test*

**Abstract:** The U.S. military has canceled a major field exercise that tests its response to a nuclear attack, angering some officials who say that what is now planned for this month will be a waste of time. U.S. Northern Command in Colorado withdrew from major participation in this month's National Level Exercise (NLE), a large-scale drill that tests whether the military and the Department of Homeland Security can work with local governments to respond to an attack or natural disaster. **The exercise was canceled recently after the planned site for a post-nuclear-attack response — Las Vegas — pulled out in November, fearing a negative impact on its struggling business environment.** A government official involved in NLE planning said a new site could not be found. The official also said the Northern Command's exercise plans for "cooping" — continuity of operations, during which commanders go to off-site locations — also had been scratched. "All I know is it's been turned into garbage," said the official, who asked not to be identified because of the sensitivity of the information. "It's a nonevent." **The NLE, which is supposed to be a series of hands-on exercises to test the system in the event terrorists use a nuclear device, has become instead a "tabletop exercise at best,"** the official said. Maj. Michael Humphreys, a Northern Command spokesman, said the military officials decided to delink the Ardent Sentry exercise from the National Level Exercise, but he stressed that the command conducts other exercises and "cooping" at other times. "This exercise enabled both the [Defense Department] and other agencies to review their processes and procedures, and focus future training efforts on closing gaps and additional areas identified during the exercise," Maj. Humphreys said. "This year, Ardent Sentry will not be linked with the NLE." **He said NorthCom will work with the Pentagon in its role in the NLE.** In a statement to The Washington Times, the Pentagon said: "It was necessary to cancel the field exercise portion of the NLE due to the inability to get another state/local community to engage on short notice after the original venue was changed. NorthCom still has a requirement to exercise its core requirements. It is just doing this at another location." **Created after the Sept. 11 attacks, the NLE is the country's largest exercise of its kind — combining activities among the military, Department of Homeland Security and local governments to test their joint, emergency response capabilities.** Homeland Security spokesman Clark Stevens said his department still plans major field work. **"NLE 2010 provides an important opportunity to exercise and assess emergency response and recovery capabilities in the face of a major disaster or a terrorist attack against the United States,"** Mr. Stevens said. "Working with local partners in a number of states, the scenario will allow emergency response officials at all levels of government to test response plans, communication capabilities, and interagency coordination — **tools that are vital to the effective response in a real-world event.**" **The field exercise in Las Vegas was to simulate terrorists detonating an improvised nuclear device assembled with smuggled weapons-grade uranium** (Scarborough, 2010).

**Title/Headline:** *2 Day Drill Will Simulate WMD Attack On Sioux Falls*

**Abstract:** The National Guard, Sioux Falls Fire and other first responders will be taking part, simulating a response to an attack involving weapons of mass destruction. Sirens, soldiers and people in moon suits helping the sick and the dying. For the next two days, this is the grim scenario that will play out in Sioux Falls. The Times Square car bomb case seems a million miles away from here. But like most crimes, terror attacks are random meaning they could happen anywhere, even here. This terror drill will simulate how Sioux Falls first responders would react to an attack involving multiple threats. Sergeant Rick Larson is with the South Dakota Air National Guard.

"Mainly focusing on weapons of mass destruction in the chem-bio arena and perhaps a little in the radioactive arena." The concerns go beyond a direct, physical attack. In February, South Dakota U-S Attorney Brendan Johnson warned of the risk of terrorists poisoning the food supply by attacking the nation's cattle herds. Pat DeVaney lives in Sioux Falls and tells us, he is worried. "I think the American people aren't going to realize just the danger we're in until something happens in the heartland and that does include cities like Sioux Falls." And exercise organizers are saying tonight, don't be surprised or alarmed if you see a lot of military vehicles driving on Sioux Falls streets over the next two days. They're part of this big exercise (Allen, 2010).

**Title/Headline:** *WMD Training Set For Saturday*

**Abstract:** About 150 firefighting personnel will be participating in several undisclosed locations throughout the county, including a school, a warehouse and a wildland environment. The exercise will include a search and rescue, a WMD and hazardous materials incident, a building fire and a wildfire. The exercise also will cover required annual training for firefighters to maintain certification to respond to statewide emergencies. "With Stanislaus County located only a few hours away from many large metropolitan areas, it's not a question of if we are going to respond to a major incident, but when," said Modesto Fire Division Chief Mike Kraus. "The purpose of this training exercise is to enhance our firefighters' knowledge so they can do their job safely, not only in a wildland fire environment but an all-risk environment." The exercise is funded by a federal Department of Homeland Security grant" (The Modesto Bee, 2010).

**Title/Headline:** *Appalachian To Conduct Emergency Exercise May 19*

**Abstract:** A full-scale emergency exercise will be conducted May 19 at Appalachian State University. The exercise will run from approximately 7:30 a.m. until 2 p.m. on the west side of campus in and around the stadium parking lot. One or more buildings on the main campus also might be included in the exercise. Traffic along Stadium Drive may be limited at times during the exercise. **More than 100 participants, including local and state law enforcement personnel from six agencies, will participate. Other participants will include Watauga Emergency Medical Services and Boone Fire Department. The drill is designed to test emergency response and communication capabilities during an emergency.** Officials with EnviroSafe are directing the drill in consultation with officials from Appalachian and the University of North Carolina General Administration. Area residents and motorists should not be alarmed by increased traffic from law enforcement and emergency response vehicles along Rivers Street and Stadium Drive during the day of the drill. **Law enforcement officers participating in the drill will not carry armed weapons. Participants and observers will be identified by specially colored vests and identification badges. Simulated explosions might be heard during the exercise. This is the second full-scale emergency exercise conducted at Appalachian. The first, in 2009, simulated an active shooter/hostage situation. The May 19 drill follows a directive from UNC system President Erskine Bowles that all UNC institutions conduct an emergency exercise this school year.** (Appalachian State University News, 2010).

**Title/Headline:** *Terror Attack Response Exercises At Calif Ports*

**Abstract:** Federal and state authorities are conducting a series of anti-terrorism training exercises this week at ports throughout California. **The two days of simulations include an attack on a container ship at the Port of Oakland and a bomb to be located in San Francisco Bay** by sea mammals trained by the Navy. Gov. Arnold Schwarzenegger started the annual training event in 2004 to improve homeland security and disaster preparedness. **This year, more than 3,000 federal, state and local responders are focusing on counterterrorism response at California ports.** Officials say there will be simulated attacks at the ports of Oakland, San Diego, Los Angeles, Long Beach, Redwood City and Sacramento, as well as California State University, San Marcos (Sign On San Diego, 2010).

**Date:** May 18, 2010

**Location:** North Carolina, USA

**Source:** East Carolina University

**Title/Headline:** *ECU Conducts Emergency Drill*

**Abstract:** East Carolina University tested its emergency response abilities May 18 with a full-scale planning drill. **The drill, required for all UNC system institutions, was designed to prepare staff members and law enforcement officers to respond to a crisis.** Chancellor Steve Ballard praised the drill as a success. "There was excellent communication between groups," Ballard said. "This is part of an ongoing effort to make ECU as safe as we possibly can" ECU's drill centered on an active shooter who took hostages. **The exercise, which involved more than 100 people, played out between 7:30 a.m. and 2:30 p.m. in and around White Residence Hall on the west end area of the main campus.** "This was an exercise and learning opportunity for all of us," ECU Police Chief Scott Shelton said. **"But I was very impressed with the collaborative work between the agencies — EMS, police departments, sheriff's office, and the ECU infrastructure. Everyone came together, shared and contributed."** Emergency response began after 9:16 a.m., when simulated shots were heard fired at the residence hall. From there, the campus community was notified through multiple measures that the drill had begun. **Announcements were made over an outdoor speaker system and electronic alerts via e-mail, phone, computer and campus televisions. As part of the practice scenario, officers quickly learned that a shooter had holed up on the 10th floor with hostages.** Casualty reports, mirroring a real-life situation, were unclear. In the hours that followed, negotiators worked with the shooter to secure release of the hostages. **Once they were deemed safe, police entered the building and "neutralized" the suspect. In all, eight victims were wounded and three were killed — two victims died in the initial shooting while another died later.** The practice scenario was meant to be as realistic as possible. The shooter and his victims were played by volunteers. Law enforcement used simunitions, which are special cartridges often used in police training. **The drill involved many agencies including ECU and Greenville police, the Pitt County Sheriff's Department, the N.C. Highway Patrol, Greenville Fire and Rescue, Pitt County Emergency Services and Pitt Emergency Management. EnviroSafe Consulting and Investigations Inc., a Graham-based firm that the UNC General Administration contracted with to study and analyze university response, oversaw the drill.** The company will issue a full report later, but Kevin Dull, president and chief executive officer, praised the university's overall execution. "You really paid attention to a lot of the details in a way we have not seen before," Dull said at a debriefing after the exercise. Bill Koch, associate vice chancellor for environmental health and campus safety, also praised the emergency response: **"We hope never to go to this level, but it's great to be ready"** (East Carolina University, 2010).

**Date:** May 19, 2010

**Location:** Washington, USA

**Source:** The Daily of UW, Nick Visser

**Title/Headline:** *Emergency Drill*

**Abstract:** Officials put the UW Medical Center's emergency-response system to the test yesterday with a drill that evacuated the hospital. **The mock evacuation involved more than five other King County hospitals and dozens of emergency personnel.** The drill took place during normal operating hours with a group of 35 volunteers strategically placed throughout the hospital to mimic everyday occurrences seen in the building. UW Emergency Management Coordinator Tamlyn Thomas said the exercise drew information from real

patient needs, and that the placement of the volunteers matched hospital bed-count information to create a situation as close to reality as possible. **She said the drill was not planned in preparation for a natural disaster, but more of a “What if” situation.** “This response would only happen in situations in which we’ve done everything we could to refrain from closing down the medical center,” Thomas said. **“It’s not just about the evacuation, it’s asking how do we send patients, and how do other hospitals receive them.”** The system was run through Harborview Medical Center, the triage facility of King County and the UW’s sister hospital. Evacuators were given instructions about bed availability and had to place patients based on their information. “Each patient in a real situation has very specific needs, and we try and match the patients to the hospital that can best suit them,” Thomas said. Patients were then evacuated by ambulance. In addition to the live volunteers, there was a virtual aspect to judge how efficiently medical records and information could be sent and sorted. Hospital emergency-preparedness coordinator Cynthia Dold said that **a new patient-hospital mutual aid-tracking program was being placed into effect as well, to help ensure important medical information is sent with every patient evacuated.** **“We had to agree as a region what kind of information an evacuating facility needs to send, like critical medical issues, family history and medicine,”** Dold said. “Ideally, every patient would be matched with this form, and we want to see if that was a feasible option.” Dold said that, **assuming there were a disaster situation, the forms might be all that medical staff would have about a patient, and that any information is better than no information.** Johnese Spisso, chair of the King County Healthcare Coalition, said she wanted the collaboration between public-health organizations and King County to take disaster response to the next level. **“We collect all of the information about what went right and what went wrong, and we modify our plan so that next time, we are better equipped and more prepared,”** Spisso said. She hopes the collaboration helps improve preparedness not only in hospitals, but also in businesses and schools around Seattle. **The exercise was organized over the past two months as part of the SoundShake 2010 program in emergency preparedness, a series of exercises simulating how a major medical center would respond 24 hours after an earthquake.** “This is one piece of a series focused on collaboration between hospitals,” said Dave Tait, assistant director of SoundShake. “It’s not just about recovery, it’s about stabilization.” Tait said **SoundShake is funded through federal grants from the Department of Homeland Security and hopes to see King County perform a drill focusing on the week after an earthquake in the future, testing different pieces of the response.** SoundShake will practice more scenarios over the next few months to prepare evacuations from homeless shelters and animal shelters, culminating in a two-day drill testing regional response to a hypothetical massive earthquake in October (Visser, 2010).

**Title/Headline:** *Nuclear Terror Drill Staged In Los Angeles*

**Abstract:** The FBI and other U.S. local, state and federal agencies this week are dealing with a simulated nuclear terror attack in Los Angeles, United Press International reported. **“Threats involving weapons of mass destruction are complex, and confronting them must be practiced constantly,”** said FBI Assistant Director Steve Martinez, who heads the bureau’s Los Angeles field office. Participants in the three-day exercise worked to track down, deactivate and remove a crude nuclear device at the Los Angeles Coliseum, according to an FBI statement. **In addition, authorities intended to seek out other devices dispersed throughout the city. The scenario was also set to involve a mock explosion elsewhere in the country. “Every day we are taking steps to continue to strengthen our nation’s emergency response team, from the local level up to the federal government,”** Craig Fugate, head of the U.S. Federal Emergency Management Agency, said in a statement. “[National Level Exercise] 2010 provides an important opportunity to exercise these response and recovery capabilities across all levels of government.” The drill -- a yearly effort conducted under the FEMA National Exercise Program and scheduled to end today -- sought to showcase the ability of U.S. agencies and officials to respond to an emergency situation in accordance with established procedures. The exercise would be carried out and assessed in line with the Homeland Security Exercise and Evaluation Program, according to a FEMA press release. **Federal participants in the drill included the National Nuclear Security Administration, Customs and Border Protection and the Federal Air Marshal Service, the FBI said in a statement. Other agencies involved in the exercise included the California Emergency Management Agency, the Los Angeles mayor’s office and city police, the Los Angeles World Airports Police Department, and the Los Angeles County Public Health and Sheriff’s departments (NTI, 2010).**

**Date:** May 19, 2010

**Title/Headline:** *Emergency Drill At OVU Tests Local Agencies’ Response*

**Abstract:** Emergency crews from Wood County gathered Tuesday at Ohio Valley University to participate in a full-scale emergency exercise designed to critique and improve how agencies respond to emergencies. Sponsored by the Wood County Local Emergency Planning Commission, the exercise involved agencies using normal radio channels to communicate and react to emergency scenarios acted out by volunteers at OVU’s main campus. Police and fire crews gathered at the south campus, which was designated as the staging area, until they were dispatched to the scene. **“This is an exciting undertaking,”** Hess said. **“Tonight, our law enforcement and fire agencies will handle a variety of situations. There might be a chemical leak, a fire or an explosion. They could be dealing with a hostage situation or a bomb.** For the most part, what happens tonight will be somewhat of a surprise to emergency crews,” he said. **During the first emergency drill involving a possible explosive, an actor made an emergency call to the 911 center, prefacing the call with the phrase, “This is a drill,” to inform dispatchers that there was not an actual emergency.** Agencies experienced glitches in communications, resulting in delays. Real emergency situations resulting from heavy rains in Wood County resulted in many of the ambulances participating in the drill to be dispatched to other areas. It’s an interesting scenario,” said Hess. **“All of these agencies should react as if this was a real-life emergency.”** The American Red Cross, hospitals, the Mid-Ohio Valley Health Department, The ARC,

**Volunteer Action Center and Wood County Schools participated in the drill and provided volunteers. The SWAT team, sheriff's office, police and volunteer fire departments participated in the training exercise. A second emergency exercise will take place from 5-9 p.m. Thursday at Vienna Elementary School (Seely, 2010).**

**Date:** May 19, 2010

**Source:** The Daily Journey, Michelle Durand

**Title/Headline:** *Terror In Redwood City: Emergency Drill Prepares For Terrorist Attack*

**Abstract:** The explosion that broke yesterday morning's quiet at the Port of Redwood City was little more than a quick bright flash and billowing plume of black smoke rising up beyond a row of trees. What did not dissipate quickly, though, was the unexplained blow-up's fallout — **first responders staging areas to assess the injured, hundreds of military and public safety members trying to contain a fire and chemical release and bloodied and battered people strewn in the mud around the Cemex facility. Those on the ground didn't know yet what had happened** — the 10 a.m. explosion was actually the second terrorist attack which, coupled together, blew up a ship and collapsed a building — but they knew they needed help. **Kyle double-checked her story card on a lanyard around her neck. Yep, in yesterday's mock terrorism drill, the three women survived, albeit in need of serious help. But in helping victims like the trio, emergency personnel from local, state and federal were the ones being aided.** The simulated response exercise known as Golden Guardian was one of several statewide testing local reaction to terrorist attacks at various ports, including Redwood City. **Past drills have included disease and natural disasters. California Emergency Management Agency Secretary Matthew Bettenhausen said the drills are also reminders to the greater public to be prepared for 72 hours, including an escape route from the home and knowing where to find gas and water meters. The annual event started in 2004 under Gov. Arnold Schwarzenegger who was invited to the Redwood City exercise but could not attend. The governor's absence was barely noticeable in the sea of roughly 400 participants, including members of the National Guard, Air Force, CalEMA and public safety organizations throughout the Peninsula. Camouflage-clad soldiers and military vehicles rumbled down Seaport Boulevard just outside the Pacific Shores Center. Elsewhere in the state, a terrorist attack on a container ship at the Port of Oakland caused a hazardous plus that resulted in an evacuation. At Pier 48 in San Francisco, divers used the Navy Marine Mammal Program which uses dolphins to recover an explosive device. A dirty bomb and shooters rocked the campus of California State University San Marcos and hostages were taken after a terrorist group took over a Catalina Express ferry boat moored at Long Beach Ferry Terminal. Back in Redwood City, though, some of the affected had concerns other than their immediate safety — primping. Although Tuesday's drill was simulated, officials said the scenarios and the actors help emergency personnel know how to react if a real situation comes to pass. "It's so easy to forget ... how important this is. The events in New York City a few weeks ago remind us of how important this is," said Redwood City Mayor Jeff Ira (Durand, 2010).**

**Title/Headline:** *UW Madison, Several Agencies Hold Emergency Response Drill*

**Abstract:** UW Madison, along with several law enforcement, medical and other area agencies held a full scale emergency drill today. **The exercise, named "Operation Badger One", simulated an incident on campus that required a response from several emergency agencies.** The scenario involved a man with bombs and a gun. It included actors who posed as hostages and victims who were injured or killed. The exercise was designed to improve the University's response to real emergency situations. UW officials say one of the goals was to test procedures that are in place and to do so in a realistic environment. "I think just for any agency its good practice. **The more you do things the better you get at it and you can find where there's deficiencies and make improvement in those things so not only for the university, but for any agency to do those type of things,**" says Sergeant Kerri Miller with UW Police. The victims were transported to local hospitals, which also participated in the exercise. **Organizers say the exercise was designed to test preparedness, teamwork and communication between the agencies. The exercise was a year in the making--with the UW Madison Police Department Emergency Management Unit heading up the planning (NBC News, 2010).**

**Title/Headline:** *Brown Printing Holds Emergency Drill*

**Abstract:** Although there was smoke, there was no fire at Brown Printing Wednesday evening as the company and local first responders took part in a large scale emergency drill. The exercise had emergency crews responding to a mock printing press explosion and coordinating the rescue of six “injured” employees. **Brown Printing Safety & Environmental Compliance Manager Craig Mast said the company has been working with the Waseca Fire Department for the past five years to refine their internal command structure.** Brown has held smaller scale drills to help their internal first response teams and also practice evacuations for the staff, but this was the largest drill by far. Makeup for the victims — including fake blood and injuries — began shortly after 5 p.m. and the actors were in their positions at 6:25 when the drill started. The drill lasted roughly an hour and gave some of the new firefighters a chance to get some hands-on training in an industrial setting. A pile of debris with a dummy at the bottom was set up ahead of time. This allowed firefighters a chance to get experience using the Jaws of Life to make a space to get the victim out. **All the victims were then transported to the Waseca Medical Center, where staff used the opportunity to test their own trauma response program.** “For us it was a great drill,” Mast said, adding that they have around 20 points that could be improved. “That’s why we do these things.” **The outside departments and organizations that took part in the drill included: members of the Waseca, New Richland and Janesville Fire Departments, North Ambulance, New Richland Ambulance, the Waseca County Sheriff’s Office, Waseca Police Department and the Waseca Medical Center.** Mast, who is also a Waseca firefighter, said the Owatonna Fire Department also provided coverage support to Waseca just in case there was a real incident elsewhere in the city or surrounding area. “All the people I’ve talked to that were involved were all very supportive of the event,” **Mast said, adding that the departments will be meeting on Tuesday to review the drill and talk about the possibility of making this a yearly event** (Amo, 2010).

**Title/Headline:** *Anderson-Area Agencies Prepare For Emergency Drill*

**Abstract:** There will be explosions and military trucks on the streets of Anderson County, but it won’t be real. In the weeks of June 8 through June 20, Anderson County emergency response teams — from law enforcement units and fire departments to emergency management workers and the coroner’s office — will participate in a mock terrorist attack in the Anderson area. Called Palmetto Shield and Operation Red Dragon, organizations from Anderson, Abbeville, Greenville, Greenwood, Oconee and Pickens counties will work with the U.S. Army, the South Carolina Department of Health and Environmental Control, the South Carolina Law Enforcement Division, the Federal Emergency Management Agency and the American Red Cross, among other agencies, to simulate the coordination of efforts in the face of a real emergency. The scenario will play out like this: On June 8, intelligence agencies will start to hear chatter that a terrorist group is planning an attack somewhere between Atlanta and Charlotte. Throughout the week, intelligence will continue to point to some sort of pending attack. On June 12, a domestic violence call in Honea Path will result in officers finding bomb-making equipment. From there, a series of events will happen, including the explosion of an improvised explosive device at a Greenwood train facility, the discovery of more bomb-making equipment at an Abbeville home and a call to assist with the aftermath of a hurricane on the coast. The training exercises will culminate on June 19 when two trucks head down Interstate 85 toward Anderson and get off at exit 19. One truck will drive up Clemson Boulevard toward Pendleton and stop at the Michelin plant in Sandy Springs. **An IED dirty bomb will explode there, injuring eight and killing two. But that truck will be a diversion to the “real” event, another IED dirty bomb at a mock car and bike show at the Anderson University Athletic Campus, the former Anderson County Fair and Expo Center on Williamston Road.** “This will be the real target, something with a lot of people,” Jones said. “This IED will take out 150 people with 25 dead.” Local agencies will have a chance to work with national organizations as well as with specialized equipment available in the state, he said. For instance, when the city of Anderson Police Department is faced with the attack, it will call in the U.S. Army Reserves to assist with decontamination, reconnaissance and air sampling. “**This is part of their Operation Red Dragon,**” Jones said. “**It gives the Army a chance to work with civilians and learn how to get out of the military mind-set and work more effectively with local units.**” Simulating mass fatalities will be a “major test of our resources,” said Greg Shore, Anderson County Coroner and MedShore Ambulance Service chief executive officer. “This is probably the largest simulated exercise involving real-time events we’ve been involved with,” Shore said. “**It will give us an opportunity to test our mass fatality plan of action.**” “We’ve been training with local agencies but this drill will test our ability to work with state-level and federal emergency response agencies,” Shore said. “We’re excited to see how we respond.” “**We’ll be activating our (billboard emergency alert system), to let people know that it’s just a drill,**” said Anita Donley, public information officer for the Anderson County emergency services division. “We’ll also be doing updates on our Web site, sending out emergency texts and updating people through our Facebook and Twitter accounts. **For the people within a 1-mile radius of the actual event site, we will be activating our reverse 911, to call residents and let them know this is a drill. We really want to be able to test all of our procedures.**” Honea Path Police Chief David King said the event will be a learning experience for all the parties involved. “**It’s going to be a very beneficial training opportunity for our department to work and learn together with Anderson County Sheriffs Office,**” King said. “**Anderson sheriffs SWAT team, emergency preparedness officials and state and federal agencies as well. It will also test our communications between our dispatch center, law enforcement agencies and all our emergency services. Everything will be handled just as a real emergency exist. A lot of hard work is going into this training by all agencies involved. ... Our goal is to make sure we are prepared to protect our community and county.**” Jones said the event will be paid for with grants and federal money. “This is as much a boost to our own pockets as our own sense of security,” said interim Anderson County administrator Rusty Burns. “On May 21, the Department of Homeland Security issued a report that said, ‘The number and pace of attempted attacks against the United States over the past nine months have surpassed the number of

attempts during any other previous one-year period.' Just like with home fire drills, none of us can ignore the need to be prepared for the worst. And while many of us will sleep better knowing our agencies are prepared to deal with this, ultimately many others will sleep better because of the food on their table and the money in their pockets that resulted from these organizations spending their training dollars in Anderson" (Carey, 2010).

**Title/Headline:** *Mock Crash, Real Test*

**Abstract:** Shortly before 10 a.m. Saturday, a gravelly transmission emanates from emergency radios describing a reported plane crash south of the Veterans Memorial Bridge. **There is no sign of a fire, but there are "74 souls on board," says the dispassionate voice.** With that initial report, city, state and federal agencies launched into action, attempting to go through the motions that they would if a plane had really crashed. **"We don't deal with situations of this size every day so it's good to train,"** said police Lt. Gary Rogers, who took on the role of public information officer during the drill. **The Federal Aviation Administration requires the Portland International Jetport to hold a full-scale emergency drill once every three years. The drill is designed to test emergency response and identify weaknesses in the plan before a real disaster hits. This drill was designed by city, state and jetport officials attempting to recreate some of the challenges faced in January 2009 when a US Airways pilot made an emergency landing on the Hudson River.** The participants in Saturday's drill took their training exercise seriously. Monitoring the response were representatives of the National Transportation Safety Board and the Federal Aviation Administration. All aspects of the emergency response are critiqued, but Saturday's drill included a special emphasis on disseminating information to the public. Getting accurate information to the public -- and responding quickly to inaccurate rumors -- is important. **"We've never tested this function before and it's very important,"** said Nicole Clegg, spokeswoman for the city of Portland. **At 11:30 a.m., Fire Department Deputy Chief Michael Shutts, incident commander, held a news conference with Coast Guard Commander Phil Thorne and jetport manager Paul Bradbury at the South Portland police station, which was serving as the Joint Information Center** (Hensch, 2010).

**Title/Headline:** *Fermi Emergency Canceled*

**Abstract:** DTE Energy early today canceled its declaration of an emergency at its Fermi 2 nuclear plant after electrical power was restored to the complex, but it's not known when the plant might be restarted due to tornado damage to its buildings and cooling towers. The utility declared an "unusual event," or low-level emergency at the plant at 2:38 a.m. Sunday when storms cut power to the plant, automatically shutting down the reactor. **It declared an "alert," the second-lowest emergency level, at 4:17 a.m. when it discovered tornadic winds had ripped away siding from the auxiliary building and damaged the turbine building roof, leaving a hole in it. Both buildings sit near the building housing the reactor.** The winds also damage some of the cooling fins that ring the base of the plant's twin, landmark cooling towers. The emergency was lifted at 2:20 this morning after power was restored and field inspections of the damage was complete, said Guy Cerullo, a DTE spokesman. A full damage assessment is now under way, he added. **"Several areas on the site will need to undergo structural repairs, including a portion of the turbine building roof, part of the auxiliary building from which siding is missing, and cooling fins on the bottom of the cooling towers,"** he said. None of the damage affects the safety of the reactor and it remains in a safe stable condition, he said. "We will restart the plant when we're satisfied that all necessary work is complete," he continued. **The emergency and damage the tornado caused means the utility will play a scaled-back role in a planned annual federal-state-local emergency drill for the nuclear plant.** "We will support the counties' and state to help them meet their exercise objectives but we're limiting our participation in the exercise due to the shutdown and the work being performed here," Mr. Cerullo said. The plant was operating at full power when the storm cut the electricity. The reactor shut down automatically and emergency diesel backup generators came on to power essential systems. **In the aftermath of the storm, federal Nuclear Regulatory Commission officials said the plant was in a "safe and stable condition."** Nuclear plant reactor buildings generally are designed to withstand a tornado. The National Weather Service confirmed late Sunday that a tornado packing 90 mph winds touched down at 2:33 a.m. in the southwest portion of Detroit Beach and cut a 500-yard-wide path northeast five miles to Estral Beach before moving into Lake Erie. The NWS said that storm impacted the Fermi plant. When the utility discovered the damage to its buildings at the nuclear complex, it raised the emergency levels one notch to an "alert" at 4:17 a.m. as a conservative measure, Mr. Cerullo said. **"Once they discovered there was physical damage to the auxiliary building, that put us into the alert,"** he said. The auxiliary building, next to the reactor building, houses auxiliary and safety-related systems, such as radioactive waste systems, chemical control systems, and emergency cooling water systems. The turbine buildings house steam-powered turbines that spin a generator to create electricity. **Federal officials said no potential exists for the release of radioactivity to the environment and an assessment indicates no conditions exist that would cause the plant to re-enter emergency status.** It was not known when the plant might be restarted, though it appears it might be at least weeks due to the structural damage that will need to be repairs. The turbine building roof will have to be repaired before restart, "We'll do a thorough evaluation before making a restart decision," Mr. Cerullo said. DTE confirmed that a worker for International Transmission Co. was injured while working to restore power to the plant Sunday and was taken to the hospital for treatment, but ITC could not furnish details of the incident this morning (Slat, 2010).

**Title/Headline:** *Massive Emergency Drills Planned In Chicago, Oak Lawn, Bridgeview, Elk Grove Village And Bensenville*

**Abstract:** Imagine a bomb blast, a plane crash, a hazardous materials spill and a CTA derailment, all in the same week. That's the set-up for a massive joint training exercise that's set to start Sunday. The drill is designed to stretch first responders to the breaking point. **Dozens of local, state and federal agencies will respond, and seven hospitals will be ready for casualties.** Anyone who sees the drill might think it's the real thing; Oak Lawn Police Lt. Arthur Clark says it will be very realistic. **"People who live in buildings across the street when they look out their window will see over 300 first responders and over 50 pieces of fire and emergency equipment,"** he said. "They're going to see people who will be simulated injured." And that's just for starters. At least seven different scenarios will play through Thursday in Oak Lawn, Bridgeview, Elk Grove Village, Bensenville and in Chicago. One event will be at Soldier Field, another

will take place on a stretch of CTA track at 15th Street. There are bound to be traffic tie-ups, and frightening scenes of survivors and victims. **So if you see one, remember this story before you call 911. About 15-hundred people will be part of this. The folks putting this together say it's one of the biggest exercises ever coordinated in our area.** Volunteers from Great Lakes Naval base will play the injured. **Mannequins will play the fatalities, and they're being dressed for the occasion by the Salvation Army stores** (Chacon, 2010).

**Title/Headline:** *County Disaster Drill Tests Emergency Workers*

**Abstract:** A Saguache County disaster drill Saturday tested the skills of emergency workers and law enforcement officials preparing them to deal with the unexpected when it does arrive. The drill was held at the Leech Airport off CR 53 and CR C outside Center. The call for the mock disaster went out at about 9:15 a.m. to all fire department volunteers countywide as well as law enforcement and emergency personnel. **Local hospitals were notified and placed on "standby." Rio Grande Hospital's Flight for Life was invited to make an appearance but could not respond that day. The scenario for the drill was a windstorm causing adverse road conditions resulting in a bus/RV rollover and multiple car pile-ups.** According to the drill scenario, emergency personnel and law enforcement had to be treated for eye and respiratory irritation on scene. **Accidents from the pile-up included a bus rollover with injured children and adults, a rollover in a ditch involving a pregnant woman, another rollover injuring an elderly individual with a heart condition and a jackknifed semi-trailer truck with one car under the semi, several piled up behind it and several cars between the bus rollover and semi-trailer accident.** Variable situations covered in the drill included disoriented individuals needing restraint, a cardiac arrest, an epileptic seizure, unresponsive pediatric patients, two individuals needing to be extracted from their vehicles with the jaws of life, and an individual trying to take charge of the scene without proper credentials. **Evaluation criteria discussed following the drill included marking the (open) area off with yellow tape; define routes and movements for emergency vehicles; creating designated exits and entrances, also parking, for vehicles; assigning a rehabilitation area for hydration and supplies; designating and assigning communication channels; creating a landing zone for Flight for Life and creating a triage transport flow record.** Officials also decided to require labeled vests for those in command (Bennis, 2010).

**Title/Headline:** *Emergency Drill 'Patients' Taken To Vancouver Hospital*

**Abstract:** Volunteer "patients" portraying gunshot victims tested Southwest Washington Medical Center's ability to respond to a regional mass-casualty incident. And their "families" added to the stress, as well. **The Vancouver hospital was part of the "Big MAC" — Multi-Agency Coordination — emergency exercise drill staged in Wahkiakum and Cowlitz counties.** The drill's scenario started with a domestic violence incident in Cathlamet. **It escalated into a series of shooting incidents that culminated in a Longview-Kelso industrial area,** said Vancouver Fire Captain Kevin Murray, a spokesman for the regional exercise. A Coast Guard helicopter was included in the exercise, but didn't actually drop off a "victim" at Southwest Washington Medical Center. It briefly touched down at the hospital's helicopter landing pad, then took off. **The exercise gave agencies an opportunity to test their emergency plans and see how their communications systems meshed in a coordinated response to a mass-casualty incident. In addition to law enforcement agencies and other emergency services, the exercise brought in mental-health counselors to work with victims, family members, witnesses and responders.** The Civil Air Patrol provided aerial views of the incident sites and highway routes. After an evaluation of the exercise, recommendations will be incorporated into regional emergency response plans. **The exercise was sponsored by Southwest Washington's regional Homeland Security Coordinating Council** (Vogt, 2010).

**Title/Headline:** *Medford Airport Drill Gives Team Practice*

**Abstract:** Emergency crews from across Jackson County rushed to the Medford airport Thursday morning to practice what they would do if a commercial plane skidded off a runway and hit a hangar. **The emergency drill — with an old bus standing in for a Dash-400 passenger plane and Civil Air Patrol and Medical Reserve Corps volunteers posing as passengers and crew, in this case — is required by the Federal Aviation Administration. As part of the airport's federal certification to serve commercial passenger planes, it must put its emergency plans to the test in a live drill every three years,** said Kim Stearns, the airport's public information officer. The training tests response times and communication while helping officials plan access and staging areas, she said. **"It's valuable training," Stearns said. "We've never had an incident like this, but we've had some close calls." Hospitals in the Rogue Valley and the Oregon Burn Center at Legacy Emanuel Hospital in Portland also participated in the drill, moving files representing patients through treatment steps.** Stearns said the agencies that participated in the drill will re-evaluate their work in the coming weeks, looking for ways to improve preparedness (Burke, 2010).

**Title/Headline:** *East Host's Red Cross Emergency Drill: High School Serves As Ground Zero For Town Of Brookhaven*

**Abstract:** In preparation for the upcoming hurricane season, the Suffolk County chapter of the Red Cross hosted emergency drills open to the public on Saturday throughout the Greater New York area, including one at Sachem High School East. **East, said to have one of the largest capacities in the county, according to Red Cross acting shelter manager Jeff O'Neill, could accommodate 1,000 people during an evacuation and a maximum of 1,500 people on shorter terms during an emergency.** An overflow of evacuees would be taken in by surrounding shelters, including Seneca Middle School. "This is ground zero for the Brookhaven area," said Craig Cooper, public affairs lead for the Red Cross's Suffolk County chapter, adding that all coordination with the school is done well in advance to ease any potential transition to use for shelter. **Both the Nassau and Suffolk chapters of the Red Cross plan to open as many as 50 shelters in the event of an emergency, each equipped with a conex box for storage of cots and other supplies. One such box, emblazoned with the Red Cross logo, sits behind the school.** The emergency setup at the school would register evacuees in the lobby adjacent to the auditorium and provide health and mental health services, and food would be served to them using the school's cafeteria. A communications department would coordinate with the Suffolk County Office of Emergency Management and also relay information to and from outside the school, and a media room near the auditorium to issue alerts and updates for local residents. To maintain order, a police unit would also be dispatched to the school by the OEM. During a hurricane or other weather-related circumstance, evacuees would be instructed to stay in the hall between the gymnasium and the cafeteria, away from windows to protect their safety. **No major hurricanes have endangered Long Island recently - 1985's Hurricane Gloria was a Category 1 upon landfall here, downgraded from a Category 3 when it struck Cape Hatteras in North Carolina - but the preparation serves as a sobering reminder of how susceptible the Island remains to natural disasters. According to the International Hurricane Research Center, the East End of the Island ranks eighth on the top-10 list of the most vulnerable mainland areas of the U.S. to hurricanes** (Haag, 2010).

**Title/Headline:** *Huge Number of Disaster Drills Held Throughout America: Extraordinary Number Of Drills Cause For Concern?*

**Abstract:** From terrorist attacks and hurricane evacuations to submarine base and nuclear power plant mishaps; bomb blasts, plane crashes, dirty bombs, hazmat spills, earthquakes, medical disasters and train derailments, America is on high alert. Over the past several weeks to the present, more than 35 major disaster drills are taking place throughout America. It makes one wonder what's prompting all of these emergency exercises and planning venues. Not among the major disaster drills, conspicuously absent, were ones dedicated to the Gulf oil spill disaster. Maybe government will wing that too, if it comes down to evacuations. **After six national TOPOFF (Top Officials National Exercise Series) drills that have escalated in cost from \$16 to \$25 million a pop** – plus many real natural and man-made disasters – you'd think America would have emergency preparedness together by now. Yet tests and drills reveal numerous problems. Some drills, whose assessments have already been released, reveal serious communication foul-ups, gaps in plans, and shortages in water, food, fuel and other supplies. Few thought we'd ever experience such a debacle as the rescue efforts of Hurricanes Rita and Katrina, but the Gulf oil spill may rival them at the end of the day. **States are waking up to the fact that we can't and shouldn't depend on government. If you're smart, you'll realize this too, and make your own preparations for whatever events might challenge your area.** Clearly government is more concerned with appearances and buck passing than it is in getting job 1 done – preparing and protecting America (Deyo, 2010).

**Title/Headline:** *Anti-terrorism Drills Staged At Metro Stations*

**Abstract:** About 150 officers from local, state and federal law enforcement agencies took part in the drill, part of the Blue TIDE (Terrorism Identification and Deterrence Effort) initiative launched in February to demonstrate Metro's vigilance against terrorism. In December, Metro created a 20-member anti-terrorism unit funded by a \$9.6 million grant from the Department of Homeland Security. **Metro Transit Police had about 60 officers involved, including members of the anti-terrorism, special response and K-9 explosives detection teams. Other East Coast cities, including New York, carried out similar anti-terrorism exercises Tuesday, part of a coordinated, regional effort along the Northeast Corridor called Rail Safe,** Metro spokeswoman Cathy Asato said. Terrorist groups have targeted large urban subway systems in London, Moscow and Mumbai in recent years. About 100 officers from the New York Police Department were at Penn Station, Grand Central Terminal and Herald Square beginning at 7 a.m., performing additional bag screenings and inspections of trains and subways. "A lot of people are coming up and saying 'thank you,'" said Metro Transit Police Sgt. Sean Flinn. **Other groups participating in Blue TIDE included the Montgomery County and Rockville police, Maryland Transit Administration Police, Maryland Transportation Authority Police, the Federal Protective Service and the Transportation Security Administration (TSA).** At Forest Glen, about a dozen law enforcement officers patrolled the station, including members of the TSA's Visible Intermodal Prevention and Response (VIPR) team. **"We are looking for people who want to harm mass transit,"** said David Johnson, special agent in charge at TSA and VIPR program manager. "Most people appreciate it." **Several teams of federal air marshals took part in the Metro anti-terrorism drill, as well as some "behavioral detection officers who look for people exhibiting suspicious behaviors,"** Johnson said. At Greenbelt Station, the heavy police presence attracted the attention of commuter Kerry Hotopp, who e-mailed The Washington Post that he saw a Prince George's County SWAT vehicle parked at the station entrance about 9:30 a.m.

"No fewer than a dozen police officers with assault rifles were present throughout the station, along with a few people in TSA uniforms," he wrote. This is the latest in a series of anti-terrorism activities and drills for Metro. In February, Metro Transit Police staged an anti-terrorism sweep in Union Station during the morning rush hour. In March, transit police simulated explosions on a train and a bus to test their coordination with other regional agencies (Tyson, 2010).

**Title/Headline:** *Beaver Valley Nuclear Drill Shows Cracks In Emergency Preparedness*

**Abstract:** FirstEnergy's Beaver Valley nuclear power station found communication and operational problems in responding emergency agencies in to Ohio and West Virginia during an emergency preparedness exercise on April 19-20. **The federal Nuclear Regulatory Commission said a malfunctioning button on a hand-held two-way radio prevented the Ohio Emergency Management Agency's field coordinator from telling two field teams about a mock release of radiation.** A deficiency letter was sent to the West Virginia Division of Homeland Security and Emergency Management that said emergency responders with the Weirton Fire Department did not show they were able to monitor and decontaminate evacuees and their vehicles in the case of a disaster. **Hancock County Emergency Management Agency Director John Paul Jones said the findings "caught us off guard." "It was a surprise. ... Through the years, the Weirton Fire Department has been flawless," he said. Jones believes the issues were with "planning, training, and procedure," but says they are "correctable issues."** **Emergency workers in a 10-mile radius of the plant should have been notified to take potassium iodine tablets during the drill.** While Weirton does not fall in that radius, evacuees likely would be taken there if such a disaster occurred. Chief of the technological hazards branch for the Federal Emergency Management Agency's Region Five office, Bill King, said **"Two of the three emergency teams from Ohio did not receive the information about the radiation release or the potassium iodine and were in the simulated plume, causing unnecessary exposure and a health and safety issue."** Every two years FEMA conducts mock emergency preparedness exercises and every six years, full-scale exercises to assess preparedness of local and state emergency response agencies. Paul Howard, director of operations for West Virginia's emergency management agency, said the Weirton Fire Department is working with FEMA and FirstEnergy to correct monitoring and decontamination procedures. **He also said they will be conducting a redemonstration exercise. Weirton Fire Chief Dave Lashhorn said the department will do a "dry run" of the exercise before the end of June.** The deficiencies noted for Ohio and West Virginia are the most serious of three FEMA assessment classifications since they involve risks to the health and safety of either the general public or, as in this case, emergency responders. Regardless, King said he considered the Ohio program "sound" despite the deficiencies. "In this instance, what happened was not serious to the general public, but we also need to consider the emergency workers' health and safety," he said. Tamara McBride, spokeswoman for the Ohio Emergency Management Agency, said the deficiency is the state's first in 20 years. **She said the agency is revising its emergency communications policy and procedures to require confirmation of electronic field team transmissions, and a FEMA-required "redemonstration" of the new procedures is set for July 22.** "It's really important we exercise and test our plan," McBride said (GSN News, 2010).

**Location:** Yorkshire, England

**Source:** Yorkshire Post

**Title/Headline:** *Dry Run For Nuclear Terror Medics*

**Abstract:** Fire crews and hospital staff carried out an exercise in Barnsley to test the emergency response to a terrorist attack in South Yorkshire. The scenario was that a chemical, biological, radiological or nuclear (CBRN) device had exploded in the Meadowhall shopping centre and crowds of people with radiation burns needed to be treated. Volunteers were showered in "decontamination" tents at Barnsley Hospital before being allowed in the hospital's emergency department. Mike Lees, head of emergency planning at Barnsley Hospital, said: "Exercises like this are all about gaining experience for the future, for the time when we have to deal with real, large-scale emergencies" (Yorkshire Post, 2010)

**Date:** July 28, 2010

**Location:** California, USA

**Source:** Contra Costa Times

**Title/Headline:** *Agencies Drill For Nuclear Terrorist Attack*

**Abstract:** Firefighters, police, sheriff's deputies, paramedics, the county coroner and other emergency services personnel will participate in a **TRAINING exercise that simulates a response to the detonation of 10-kiloton improvised nuclear device. The drill is "not based on any actual intelligence information or threat to Los Angeles or the United States,"** said Ken Kondo, a spokesman for the county's Office of Emergency Management. It is geared toward advance planning for such an event and to share information and technology between first responders and public safety personnel at local, state and federal levels. **"The greatest threat to U.S. and global security is no longer a nuclear exchange between nations, but nuclear terrorism by violent extremists and nuclear proliferation to an increasing number of states,"** said Obama in announcing a shift in the country's nuclear policy. Such an improvised nuclear device could be small enough to be carried in a briefcase, but would wreak "indescribable" devastation, Kondo said. **After detonation, depending on wind patterns, a plume cloud could cover much of the Southern California area.** "The most critical point to be made is that **the majority of the population will survive this kind of an incident** and participating agencies must be prepared to manage the consequences in a deliberate and focused manner, in order to protect lives and preserve property," Kondo said. Any nuclear blast would leave damaged buildings, broken windows and potential nuclear fallout in its wake, so residents would be urged to shelter in place. "It's better to be safe inside" in such a scenario, said Kondo. Just as in the event of an earthquake or other potential natural disasters, residents should be prepared with plenty of supplies, including food, water and a battery-operated radio to listen to emergency communications. **Personnel from 88 cities, 137 unincorporated areas and more than 200 special districts will participate in the exercise, dubbed "Operation Golden Phoenix 2010."** Emergency operations centers throughout the Southland will be activated as part of the drill and communicate with the Los Angeles County Emergency Operations Center, said Kondo. **In Burbank, public safety personnel will host a live demonstration of the U.S. Department of Homeland Security's Integrated Chemical, Biological, Radiological, Nuclear and Explosive (ICBRNE) real-time sensor technology system.** The sensors monitor conditions and alert officials about the detection of radiation in the area. The planning team for today's events includes the Los Angeles County Chief Executive Office, Office of Emergency Management; the City of Los Angeles Emergency Management Department; and the county's Department of Public Health. Ventura County officials will also participate, as part of the exercise will anticipate the possibility of evacuating residents to other counties. The training is sponsored by the U.S. Department of Homeland Security, Science and Technology Directorate and facilitated by the Naval Postgraduate School Center for Asymmetric Warfare. **The county Office of Emergency Management has developed two programs to prepare citizens and the media for all hazards and catastrophic events.** The county spokesman urged residents to use the online materials to develop a family emergency plan and to stock necessary supplies. **"If it does happen, it will happen quickly," Kondo said. "If you have a plan, you will be able to survive"** (Contra Costa Times, 2010).

**Exactly 6 months prior to Superbowl XLV in Arlington, Texas on February 6, 2011, the following exercise "Operation Lone Star" took place in Texas. Due to the similarity of the flags of Czechoslovakia, Chile, and Texas, it highly likely that these foreign troops will likely be deployed in Texas should a nuclear attack transpire. While the aforementioned flags are indeed different, the stupidity of the American people along with the fear of the day will likely produce an environment where the details of the flags on the uniforms will not even matter.**

**Date:** August 6, 2010

**Location:** Texas, USA

**Source:** National Guard, Staff Sgt. Daniel Griego

**Title/Headline:** *Texas Guard, Czech Army Trains For Disaster In Operation Lonestar*

**Abstract:** For the joint members of the Texas Military Forces, the Department of State Health Services and local civil agencies, preparedness means more than a ready standing force. With the persistent threat of hurricanes, flooding and seasonal pandemics, preparedness requires a fully trained, joint force capable of engaging a large-scale incident anywhere in the state. **"What we do and what we're training for is a mass casualty,"** said Texas State Guard Capt. James R. Owens, a registered nurse with the DFW Medical Group. **"It's about taking care of the population." This year, these state assets used the annual humanitarian event Operation Lone Star to conduct a complete exercise simulating a mass casualty incident.** Providing the Rio Grande Valley with immunizations, physicals and various other medical services, the mission sought to stress and challenge the capabilities of state military and civilian departments, as well as reinforce their cooperation and inter-agency communication. **"At one level, we provide free care,"** said Dr. Brian R. Smith, lead for the public health agency sponsoring OLS and the regional medical director for Health Service Region 11. **"At the same time, it provides a preparedness exercise for those of us in public health and the Texas Military forces to work together and to practice together in a major event."** Among the state agencies supporting the operation is the Texas Medical Assistance Team (TexMAT-1), populated by paramedics and medical practitioners from through the state.

"It's an opportunity under a training scenario to see a lot of people at one time," said Charles A. Neely, an EMT paramedic with TexMAT-1. "It just improves our capabilities in the long run." The two-week operation, running from July 26 through August 6, featured sites in Brownsville, Palmview, Raymondville and San Juan during the first week and will include Laredo, Rio Grande City and Zapata during the second week. **Many OLS locations rotate from year to year, but tend to stay centralized in local high schools or elementary schools.**

Flag of Czechoslovakia

Flag of Chile

Flag of Texas

Further bridging the spirit of cooperation, even **service members from the Czech Republic and Chilean armies supported OLS this year.** "We need to practice for any kind of mass casualty occasion, too," said Capt. Petra Matulkova, an epidemiologist with the Czech Army, which is part of the State Partnership Program with Texas. "We need to know these things, being military doctors." With so many organizations working together, key leaders placed a premium on clear and effective communication throughout the operation. "A lot of the training that we're doing is being able to communicate," said Owens. "At any level, at any issue, we will have to be able to communicate." **This finely tuned coordination allowed OLS to process 12,645 area residents in 2009, a number that event organizers expect will only grow in 2010 and future years.** Spanning six counties in Texas, Operation Lone Star functions as an ideal execution of a real-time public health crisis, uniting disparate agencies for a common and worthy goal. "We set it up just as if we may have a thousand people or one person that needs the services," said Owens. "It may be small at one area or larger at another, but in the grand scheme of things, it provides a very good and very applicable training exercise for our units" (Griego, 2010).

**Title/Headline:** *Idaho Airport Conducts Emergency Response Drill*

**Abstract:** Idaho's Magic Valley Regional Airport conducted a full-scale federally mandated emergency response drill this week. **The county's police department, sheriff's department, medical center and a variety of emergency medical technician companies participated in the drill, which simulated a crash involving a small commercial plane with 40 passengers.** Officials said the Federal Aviation Administration requires the drill every three years (Silo Breaker, 2010).

**Date:** October 22, 2010  
**Location:** California, USA  
**Source:** The Age  
**Title/Headline:** *Big Drill As California Braces For The Big One*

**Abstract:** With choppers clattering in the sky above, bloodstained students watch in shock as blaring ambulances screech into the schoolyard, disgorging paramedics with medicine packs and gurneys. At least that's what it looked like, as one California school put on a graphic display on Thursday of what will happen when - not if - the Big One hits this earthquake-prone western US state. **Nearly eight million Californians were signed up for Thursday's drill, the most ever, after 6.9 million took part last year. Thousands of schools, businesses and other organisations took part. The show was given added drama as a real 6.9 temblor struck a few hundred miles to the south, in Mexico's Baja California peninsula, although nothing was felt over the border in the US. "At some point our luck is going to run out,"** said leading seismologist Lucy Jones of the US Geological Survey, after the fake quake put on by Providence High School in the film-making town of Burbank just north of Los Angeles. The display - co-organised with a neighbouring medical centre - was put on **as millions took part in the annual "Great California ShakeOut" to help people prepare for what experts say is the inevitable.** At exactly 10.21 am alarms sounded across the state and the Providence School schoolchildren dived under their desks, following the so-called "Drop, Cover, Hold On" quake response mantra. Under the procedure, everyone has to get down on the ground, crawl under the nearest table or other cover, and hold on tight until the earth stops moving -- which can take anything up to a couple of minutes. "I didn't get down quick enough, and got hurt," explained 15-year-old Genna Amado, displaying a scarred cheek and bloodied arm, the product of gory make-up which would make Burbank's nearby Universal Film Studios proud. **"I think this kind of drill is very important, because it helps you realise how serious the danger is,"** added her schoolfriend Bryan Hofilena, also 15, with a huge blue bruise across half of his face. **A 20-strong delegation from Chile - which was struck by a massive 8.8 magnitude earthquake that killed over 500 people in February - also helped organise the drill.** "Education is the most important thing in saving lives," said Jesus Lopez Argentieri of Chile's army, noting that buildings in his country were designed to withstand quakes because they were a regular occurrence over the centuries. **"People know what an earthquake is, we have a whole history of it ... We know how to cope with the situation, we do it quite naturally,"** he told AFP as blue-clad nurses helped ferry "injured" students out of the school building. Earthquakes are also regular events in California, mostly triggered by activity along the San Andreas fault which runs through much of the western state, the most populous in the United States. Geologists say an earthquake capable of causing widespread destruction is 99 per cent certain of hitting California within the next 30 years. **Studies have said that a 7.8 magnitude quake could kill 1800 people, injure 50,000 more and damage 300,000 buildings.** A 6.7 earthquake in Los Angeles in 1994 left at least 60 people dead and an estimated 10 billion dollars damage, while a 6.9 quake in San Francisco in 1989 claimed the lives of 67 people. A moderate 5.4 earthquake shook southern California in July, swaying high-rise buildings in Los Angeles and San Diego and rattling nerves, but causing only minimal damage (The Age, 2010).

**Date:** November 5, 2010  
**Location:** Georgia, USA  
**Source:** The Florida Times-Union, Gordon Jackson  
**Title/Headline:** *Nuclear Drill Puts National Focus On Kings Bay*

**Abstract:** As many as 1,800 military and civilian personnel from across the nation will participate in a simulated nuclear weapon incident at Kings Bay Naval Submarine Base beginning today. While the majority of activity will be on base, residents living near Kings Bay will be affected by the drill. **They can expect to see emergency vehicles, especially today, driving to a local hospital.** Residents may also see smoke and hear loud noises coming from the base. Capt. John O'Neill, commanding officer at Kings Bay, described the drill as a national-level exercise involving all branches of the military, the FBI, local public safety officials and medical personnel. **"We'll look at the initial response and coordination of all the agencies,"** O'Neill said. The Defense Threat Reduction Agency is sponsoring the multi-agency response exercise, Navy officials said. O'Neill said he cannot reveal specifics of the drill, other than to say there will be some mock injuries that will test local emergency officials. "For security reasons, we can't give details," he said. "Specifics, we don't discuss." Brian Lamkin, special agent in charge of the FBI office in Atlanta, said the exercise gives his agency a way to prepare for different national security scenarios. **"We have national assets we want to exercise in this process,"** he said. While many base personnel are participating in the drill, those who are late to their jobs on base because of traffic backups at security check points will not be penalized, O'Neill said.

"We anticipate there will be some impact to traffic," he said. The Stimson, Franklin and St. Marys gates will be closed today and 100 percent vehicle inspection will follow when gates reopen. The last day of the drill is Wednesday. Those trying to conduct business on base may also be affected. The Navy Exchange, commissary and base gym are closed today. Housing residents, school buses, Navy Lodge guests and employees, Child Development patrons and people with medical or other appointments will enter and exit through the Jackson Gate, on Georgia Spur 40 near Crooked River Elementary School. **Navy officials said the exercise does not involve nuclear weapons or radioactive materials, nor does it reflect an increased likelihood that a real accident might occur** (Jackson, 2010).

**Conclusion:** As with 9/11, drilling the local, state and federal agencies' response to an upcoming terror threat is key in conducting a successful false-flag terror attack. Particularly disturbing are the drills in Texas (exactly 6 months before Super Bowl XLV) using foreign troops with roughly the same flag as Texas, and the bio-terror drill in Chicago which consisted of a plane crash and a bio attack. As Sarah Palin would say, "Drill Baby Drill!"

## The Nuclear Bible: Nuclear Terror Foreshadowing

**Intro:** The following titles, events, movies, and books indicate that something like a nuclear detonation is right around the corner.

**Super Bowl XLV Halftime Show Sponsor: Bridgestone** (A bridge from the USA to the North American Union?)

**Half-Time Performer:** Black Eyed Peas (nuclear terror; a black eye for America?)

**Super Bowl XLV Slogan:** “Tonight’s gonna be a good night!” (sure it is)

**GMC Commercial:** “Never Say Never”

**Bud Light:** Here we go!

**Verizon:** It Begins. “To our millions of customers, who never stopped believing this day would come...Thank you.”

**AT&T Commercial:** “Don’t be left behind”

**Visa:** Viewers of Super Bowl XLV will remember the nuclear terror for life.

**Nike Commercial:** “Boom”

**Nike Commercial:** “Strike Fear”

**Budweiser Super Bowl XLV Commercials:** One features a gunman walking into an Old West saloon, while the other a scorpion waiting on the road for the Clydesdales. Commercials will conclude at Super Bowl XLV.

## **The Nuclear Bible: Nuclear Terror Foreshadowing at the Movies**

**The Mechanic:** The “terrorists” will need a mechanic for the nuke, likely a German one.

**Unknown:** Enough said.

## **The Nuclear Bible: Popular Post-Apocalyptic Releases**

**Date:** September 26, 2006  
**Source:** Wikipedia  
**Author:** Cormac McCarthy  
**Book Title:** *The Road*

**Abstract:** *The Road* is a 2006 novel by American writer Cormac McCarthy. **It is a post-apocalyptic tale of a journey taken by a father and his young son over a period of several months, across a landscape blasted by an unnamed cataclysm that destroyed all civilization and, apparently, almost all life on earth.** The novel was awarded the 2007 Pulitzer Prize for Fiction and the James Tait Black Memorial Prize for Fiction in 2006 (Wikipedia, 2010).

**Date:** January 15, 2010  
**Source:** Wikipedia  
**Film Title:** *The Book Of Eli*

**Abstract:** *The Book of Eli* is a 2010 **American post-apocalyptic action film** directed by the Hughes brothers, written by Gary Whitta, and starring Denzel Washington, Gary Oldman, Mila Kunis, Ray Stevenson and Jennifer Beals. **The story revolves around Eli, a nomad in a post-apocalyptic world, who is charged with delivering his copy of a book, the last remaining Bible, to a safe location on the West**

**Coast of the United States.** The history of the post-war world is explained along the way as is the importance of Eli's task. Filming began in February 2009 and took place in New Mexico. The film was released for theaters in January 2010. Alcon Entertainment financed and co-produced the film with Silver Pictures, while it was distributed by Warner Bros. in the US, and international sales handled by Summit Entertainment (Wikipedia, 2010)

**Date:** November 25, 2010

**Source:** Wikipedia

**Film Title:** *The Road*

**Abstract:** *The Road* is a 2009 post-apocalyptic drama film directed by John Hillcoat and written by Joe Penhall. Based on the Pulitzer Prize-winning 2006 novel of the same name by American author Cormac McCarthy, the film stars Viggo Mortensen and Kodi Smit-McPhee as a father and his son in a post-apocalyptic wasteland. Filming took place in Pennsylvania, Louisiana, and Oregon. The film received a limited release in North American cinemas from November 25, 2009 and was released in UK cinemas on January 4, 2010 (Wikipedia, 2010).

**Conclusion:** As with 9/11, there appears to be a lot of predictive programming via TV, movies and commercials. Hopefully it's all pure speculation and coincidence, but probably not.

## The Nuclear Bible: Anti-Nuclear Legislation & Summits

**Intro:** The preparation of World leaders and politicians for nuclear terror started in the early 1990's, but has increased rapidly in the last couple of years.

**Date:** 1992

**Source:** Nuclear Threat Initiative (NTI)

**Agency:** U.S. Congress

**Commission:** *International Commission on Nuclear Non-Proliferation and Disarmament (ICCNRD)*

**Abstract:** U.S. Congress endorsed in 1992 the imaginative and forward-looking cooperative threat reduction programs sponsored by Senators Sam Nunn and Richard Lugar, designed to lock down dangerous weapons and materials – and in particular **to reduce the chance of their falling into the hands of terrorist groups, or nations that sanction terrorism** – in the former Soviet Union (and subsequently expanded to a number of countries since, notably **Pakistan**). Add to all that now **the risk of terrorist actors getting their hands on the makings of a nuclear weapon**. We can no longer be under any illusions about the intent of certain messianic groups to cause destruction on a massive scale. And – although the probability is small, and probably lower than some alarmist accounts have suggested – their capacity should not be underestimated to put together and detonate a Hiroshima-sized nuclear device. Using manageable technology long in the public domain and back-channel sourcing of the kind the **A.Q. Khan network taught us to be alarmed about, such a device exploded from the inside of a large delivery truck in Trafalgar Square or Times Square, or in the centre of any other major city**, would cause in each case hundreds of thousands of deaths and injuries. A much easier option for terrorist groups would be to make a “dirty bomb”, combining conventional explosives with radioactive materials like medical isotopes, **which would generate nothing like the casualties of a fission or fusion bomb but have a psychological impact at least equal to 9/11** (NTI, 2010).

**Date:** 2000

**Source:** *NSSA*

**Agency:** *National Nuclear Security Administration*

**Abstract:** The *NSSA* was established by Congress in 2000, *NSSA* is a semi-autonomous agency within the U.S. Department of Energy responsible for enhancing national security through the military application of nuclear science in the nation's national security enterprise. *NSSA* maintains and enhances the safety, security, reliability, and performance of the U.S. nuclear weapons stockpile without nuclear testing; **reduces the global danger from weapons of mass destruction**; provides the U.S. Navy with safe and effective nuclear propulsion; and responds to nuclear and radiological emergencies in the U.S. and abroad. (NSSA, 2010).

**Date:** April, 2004

**Source:** U.S. Department Of State

**Agency:** United Nations

**Law:** *UNSC Resolution 1540*

**Abstract:** In April 2004, the UN Security Council adopted UN Security Council Resolution 1540, establishing for the first time binding obligations on all UN member states under Chapter VII of the UN Charter to take and enforce effective measures against the proliferation of WMD, their means of delivery and related materials. UNSCR 1540, if fully implemented, can help ensure that no State or non-State actor is a source or beneficiary of WMD proliferation. All states have three primary obligations under UNSCR 1540 relating to such items: to prohibit support to non-State actors seeking such items; to adopt and enforce effective laws prohibiting the proliferation of such items to non-State actors, and prohibiting assisting or financing such proliferation; and to take and enforce effective measures to control these items, in order to prevent their proliferation, as well as to control the provision of funds and services that contribute to proliferation. **If implemented successfully, each state's actions will significantly strengthen the international standards relating to the export of sensitive items and support for proliferators (including financing) and ensure that non-state actors, including terrorist and black-market networks, do not gain access to chemical, nuclear or biological weapons, their means of delivery or related materials** (U.S. Department of State, 2004).

**Agency:** U.S. Department of State

**Summit:** *Global Initiative To Combat Nuclear Terrorism*

**Abstract:** On July 16, 2006, Presidents George W. Bush and Vladimir Putin jointly announced the organization of the Global Initiative to Combat Nuclear Terrorism. The GICNT is a voluntary initiative aimed at fostering international cooperation in order to prevent terrorists from acquiring, transporting, or using nuclear materials or radioactive substances, to deter hostile actions against nuclear facilities, and to respond to incidents involving the use of radiological or nuclear materials. GICNT participants work to unite experience and expertise from the nonproliferation, counter-proliferation, and counter-terrorism fields; strengthen global activities and institutions through integration of collective capabilities and resources; and maintain a network for partners to share information and expertise in a legally non-binding capacity. **The Global Initiative to Combat Nuclear Terrorism (GICNT) is an international partnership of 82 nations and 4 official observers working to improve capacity on a national and international level for prevention, detection, and response to a nuclear terrorist event.** Partners join the GICNT by endorsing the Statement of Principles, a set of broad nuclear security objectives. GICNT partner nations organize and host workshops, conferences, and exercises to share best practices for implementing the Statement of Principles. The GICNT also holds Planetary meetings to discuss improvements and changes to the partnership (Wikipedia, 2010).

**Date:** June 8, 2008

**Source:** Wikipedia

**Summit:** *International Commission on Nuclear Non-proliferation and Disarmament*

**Abstract:** The International Commission on Nuclear Non-proliferation and Disarmament is a joint initiative of the Australian and Japanese governments. It was proposed by Australian Prime Minister Kevin Rudd on 9 June 2008, and on 9 July 2008 Rudd and Japanese Prime Minister Yasuo Fukuda agreed to establish it. The Commission is co-chaired by former Australian foreign minister Gareth Evans and former Japanese foreign minister Yoriko Kawaguchi. Key goals for the Commission include undertaking preparatory work for the Nuclear Non-Proliferation Treaty Review Conference in 2010, including shaping a global consensus in the lead-up to the Review Conference. The Commission presented its report on 15 December 2009 (Wikipedia, 2010).

**Date:** 2009

**Source:** NSSA

**Agency:** United Nations

**Law:** *UNSC Resolution 1887*

**Abstract:** The United Nations Security Council Summit on Nuclear Nonproliferation and Nuclear Disarmament, UNSC Resolution 1887, expresses **the Council's grave concern about the threat of nuclear proliferation and the need for international action to prevent it.** It reaffirms that the proliferation of weapons of mass destruction and their means of delivery are threats to international peace and security and shows agreement on a broad range of actions **to address nuclear proliferation and disarmament and the threat of nuclear terrorism.** Broadly, the resolution supports: Better security for nuclear weapons materials **to prevent terrorists from acquiring materials essential to make a bomb, including through the convening of a Nuclear Security Summit in 2010,** locking down vulnerable nuclear weapons materials in four years, a goal originally proposed by President Obama, minimizing the civil use of highly enriched uranium to the extent feasible, and encouraging the sharing of best practices as a practical way to **strengthen nuclear security and the Global Initiative to Combat Nuclear Terrorism and the G-8 Global Partnership.** The Security Council's authority and vital role in addressing the threat to international peace and security posed by the spread of nuclear weapons and underscoring **the Council's intent to take action if nuclear weapons or related material are provided to terrorists** (NSSA, 2010).

**Date:** August 5, 2009

**Source:** NTI (Nuclear Threat Initiative)

**Title/Headline:** *The Global Initiative To Combat Nuclear Terrorism*

**Abstract:** A joint statement issued after a July 6, 2009 summit meeting between U.S. President Barack Obama and Russian President Dmitry Medvedev called for advancing the Global Initiative to Combat Nuclear Terrorism (GICNT), an effort the two governments had launched at a similar summit meeting three years earlier. In a speech in Prague on April 5, 2009, Obama called for institutionalizing this Bush-era initiative, which is currently an informal grouping rather than a formal institution.

**Background:** The GICNT was launched by U.S. President George W. Bush and Russian President Vladimir Putin on July 15, 2006. It is aimed at fostering international cooperation in order to prevent terrorists from acquiring, transporting, or using nuclear materials and radioactive substances, or carrying out hostile actions against nuclear facilities. GICNT's participants are "seeking to bring together experience and expertise from the nonproliferation, counter proliferation, and counterterrorism disciplines; integrate collective capabilities and resources to strengthen the overall global architecture to combat nuclear terrorism; and provide the opportunity for nations to share information and expertise in a legally non-binding environment." The 13 founding Global Initiative partners first met in Rabat, Morocco, on October 30-31, 2006, and agreed on a statement of principles to combat nuclear terrorism and a methodology for assessing progress in this area. These principles indicated how the members aimed to build up the capacity of state parties "to combat nuclear terrorism on a determined and systematic basis, consistent with national legal authorities and obligations they have under relevant international legal frameworks", notably the Convention for the Suppression of Acts of Nuclear Terrorism, the Convention on the Physical Protection of nuclear Material and its 2005 Amendment, and United Nations Security Council Resolution 1540. According to the State Department, by endorsing the Global Initiative to Combat Nuclear Terrorism, "partners are providing their political support and commitment to strengthening and implementing the Statement of Principles."

#### **These Principles Include:**

- Developing and improving physical protection systems safeguarding nuclear and radioactive materials;
- Strengthening security of civilian nuclear facilities;
- Enhancing the capability to detect nuclear and radioactive materials to stop illicit trafficking of these materials;
- Preventing the establishment of terrorist safe havens and financial or economic resources to terrorists seeking to acquire or use nuclear or radioactive materials;
- Leverage response, mitigation, and investigation tools for terrorist attacks;
- Encouraging information sharing between and among partner countries pertaining to acts of nuclear terrorism;

The GICNT seeks to involve partner-nations in "conducting various multilateral activities, workshops, and table-top and field exercises." These exercises are similar in concept to the exercises that are held from time to time in the United States to simulate homeland security or emergency response events. Many exercises held to date have trained responders for activities after a nuclear detonation, the so-called "post-event" response. However, Global Initiative partner nations also engage in "pre-event" activities, such as detecting illegally obtained nuclear materials that could potentially prevent execution of an attack. For example, in 2008, the partners held a field exercise in Spain, in which they sought to detect the presence of illicit nuclear materials. That same year, Kazakhstan's Special Forces conducted a training exercise "Atom-Antiterror-2008" at the Institute of Nuclear Physics in Ala-Tau. The scenario centered on intrusion of 12 individuals upon the Institute's territory. The individuals encountered resistance from the security forces while making their way to the Institute's reactor and took some of the Institute's staff hostage. The Special Forces stormed the building, arresting the intruders, rescuing the hostages, and alleviating danger to the reactor. GICNT partner-nations have also sought to develop a Global Nuclear Detection Architecture and a Model Guidelines Document to help states determine what is needed to carry out effective nuclear detection on their own territory. The emerging Global Nuclear Detection architecture is intended to be a multilayered, international system with associated resources and infrastructure that could provide a capability to detect radiological and nuclear threats. This system involves securing and accounting for nuclear and radiological materials, screening shipping from ports, border protection, coast guard/maritime inspection, and at-sea interdiction. The Model Guidelines lay out the structural and technical elements needed at a national level for nuclear detection as well as related information architectures and a framework for implementing such a system. A first draft of the guidelines was circulated in November 2008, and a revised draft was prepared after a meeting in Germany in April 2009. According to U.S. officials, the proposals continue to be refined.

#### **Meetings of the Global Initiative since the founding meeting in Rabat:**

- A meeting in Ankara, Turkey in February, 2007 focused on deepening the cooperation between partner countries & encouraging more countries to join;
- A meeting in Astana, Kazakhstan on June 11-12, 2007 discussed strategies and exercises useful to the defense of nuclear facilities;
- A meeting in Madrid, Spain on June 17, 2008 discussed the importance of cooperation between nations' private sectors, their respective federal governments, and international organizations such as the International Atomic Energy Agency;

The latest GICNT meeting took place in The Hague on June 18, 2009 and focused on nuclear forensics and development of a "new framework to enhance operational cooperation between partners investigating illicit uses of nuclear material." Global Initiative partners also agreed to continue outreach efforts to further expand participation in key regions around the world. U.S. officials have pointed

especially to the need for greater participation from countries in Southeast Asia, Africa, and Latin America. As of July 7, 2009, 76 countries had signed on to the GICNT. The International Atomic Energy Agency (IAEA), the European Union, and the International Criminal Police Organization (INTERPOL) also serve as official observers.

**Institutionalizing The Global Initiative:** In his April 5, 2009 Prague speech, in which he set a goal of ridding the world of nuclear weapons, Obama called nuclear terrorism "the most immediate and extreme threat to global security." He said that "because this threat will be lasting, we should come together to turn efforts such as the Proliferation Security Initiative and the Global Initiative to Combat Nuclear Terrorism into durable international institutions." He also pledged to secure all vulnerable nuclear material worldwide before the end of his first term in January 2013 and called for a global summit on nuclear security in 2010. At the latest Global Initiative to Combat Nuclear Terrorism meeting at The Hague on June 16, 2009, Assistant Secretary of State C.S Eliot Kang indicated that the United States would like the GICNT members to be significantly involved in carrying out Obama's Prague pledges, including the global nuclear security summit, now scheduled for March 2010 and the commitment to secure nuclear materials within four years. According to Kang, Moscow and Washington have discussed "ways to make a more effective and enduring international institution" out of the Global Initiative. He also noted that "some ideas under consideration include clearly identifying a policy making body, having a decision making mechanism that is open to all partners, better coordinating exercise planning... facilitating capacity building, which is central to this initiative." Russian president Medvedev has recently stated that "Moscow and Washington have a special responsibility to counter WMD proliferation and terrorism." At their meetings in April and July 2009, Medvedev and Obama have pointed to GICNT's importance. At a summit in London on April 1, 2009 the two leaders issued a joint statement in which they pledged to further promote the Global Initiative to new countries. Further, at the July summit in Moscow they promised to "jointly initiate practical steps, to include conducting world-wide regional nuclear security best-practices workshops, to facilitate greater international cooperation in implementing this initiative." Thus, three years after its inception, the GICNT—now a 76 partner-nation tool for countering nuclear terrorism—continues its emergence as an important venue for coordinating and sharing security, response, and law enforcement best practices (NTI, 2010).

**Law:** *H.R. 730: Nuclear Forensics and Attribution Act*

**Abstract:** According to the White House, H.R. 730, the "Nuclear Forensics and Attribution Act," establishes in statute the National Technical Nuclear Forensics Center in the Department of Homeland Security (DHS); and requires DHS to establish a National Nuclear Forensics Expertise Development Program to provide scholarships and fellowships to undergraduate and graduate students for studies in specialties relevant to nuclear forensics (White House, 2010).

**Date:** February 16, 2010

**Source:** House Committee On Homeland Security, Bennie G. Thompson

**Title/Headline:** *Nuclear Forensics And Attribution Act Signed*

**Abstract:** Bennie G. Thompson, Chairman of the House Committee on Homeland Security, released the following statement in reaction to President Obama signing H.R. 730: "In the case of an attempted or, in the worst case, a successful nuclear or radiological attack, rapid attribution is critical. Our government must have the capacity to quickly determine the source of the nuclear material so that the key decision-makers have the information needed to respond." Thompson went on to state that, "We know that our enemies, both terrorists and rogue nations, are interested in developing and using nuclear or radiological weapons. By signing this bill into law, the President has taken a major step forward in developing the expertise we need in nuclear forensics-related sciences" (DHS, 2010).

**Title/Headline:** *The Dangers Of Nuclear War: U.S.-Russian Nuke Deal No Cure For Real Threat*

**Abstract:** After nearly a year's negotiations, the U.S. and Russian governments finally reached an agree-ment on further reduction and limitation of nuclear weapon arms. The agreement will be signed on April 8, limiting the total number of warheads to less than 1,550. Overall, it is good for world peace and stability as well as the prevention of nuclear proliferation, but we shouldn't be over-optimistic about the treaty. The motivations behind the treaty are clear. Russia is opposed to the U.S. missile defense system and its deployment in Eastern Europe. The U.S. continues to expand the scope of the missile defense system, which constitutes a real threat to Russia in Eastern Europe. With 95 percent of the world's total nuclear warheads, the U.S. and Russia are the world's two largest nuclear powers. Russia has more than 14,000 missiles and the U.S. has more than 9,000. This remains one of the few areas where the former U.S.'s national strength is as great as ever, so the U.S. is active in working toward compromise in this field. Yet the treaty has its problems. In the existing agreements, the number of nuclear warheads was limited to between 1,500 and 2,200. This new agreement itself has no new breakthroughs and has not met the expectations of the international community. Half a year ago, the limit of 1,500 was proposed, but in the

end, it became 1,550, no big breakthrough at all. The most fundamental problem is that the provisions do not eliminate nuclear weapons but instead change their level of readiness. **Nuclear weapons have three states of readiness: fully equipped and ready to be fired, readied but with the head and body separated, and finally, in storage conditions with the warhead removed.** This treaty reduces the number of fully equipped nuclear weapons to less than 1,550, but the excess missiles will not be destroyed, only moved to a different state of readiness. **They could be activated and re-weaponized in only a short span of time. Despite the agreement, the U.S. also continues to work on developing new nuclear weapons itself. While some are being moved from the frontlines, lighter, more accurate weapons are being developed, as well as so-called bunker-busters designed to penetrate deeply into the Earth.** The U.S.-Russian agreement only limits bilateral development, but the real concern is the spread of nuclear weapons worldwide. The U.S. is planning to hold a nuclear safety summit on April 13 where the core issue is the nuclear non-proliferation. **Once nuclear technology spreads, and especially if terrorist organizations get their hands on nuclear materials, the consequences are unpredictable, and it is in every country's interests to prevent this. U.S. standards on nuclear proliferation are also inconsistent.** It gives tacit approval to Israel's nuclear weapons program, and makes no effort to discourage Japan from stockpiling raw materials that could, in theory, produce thousands of nuclear weapons. In contrast, the U.S. has been particularly sensitive to Iran and North Korea. Iran has not tested nuclear weapons, but claims to developing civilian nuclear facilities. However, the U.S. has been strongly working for sanctions against it as a consequence and even considering military actions. **Out of political considerations, the U.S. has adopted two completely different standards on the use of nuclear technology by various nations. To make a convincing case for non-proliferation, the U.S. should apply the same standards to every country** (Guoan, 2010).

**Title/Headline:** *IAEA to Focus on Israeli Nukes in June*

**Abstract:** The International Atomic Energy Agency (IAEA) will discuss Israel - the owner of Middle East's sole atomic arsenal -- and its nuclear activities. The IAEA is allowed to refer nuclear proliferation concerns to the UN Security Council. The issue, which has always eluded IAEA's agenda with the help of the United States, has been included in the list of items to be brought up at the agency's gathering on June 7, the Associated Press reported Saturday. The matter is to be discussed under the subject of Israel's "nuclear capabilities" at the request of the body's 18 Arab members. The organization has avoided the issue since its inception and for more than half a century amid Israel's insistence on maintaining a policy of nuclear "ambiguity," under which the regime neither confirms nor denies having nuclear weapons. Tel Aviv has repeatedly brushed aside international calls for joining the Nuclear Non-Proliferation Treaty (NPT). Since 1958, when Israel began building the Dimona plutonium and uranium processing facility, it has allegedly manufactured scores of nuclear warheads, earning reputation as the sole owner of such weapons in the Middle East. Former US President Jimmy Carter has attested to the existence of the arsenal, which he said includes between 200 to 300 warheads. According to AP, the June meeting's agenda could change, should Washington and other Israeli allies raise strong objections to the measure" (Press TV, 2010).

**Title/Headline:** *EU, U.S. Adopt Counterterrorism Declaration*

**Abstract:** The European Union and the United States have adopted a new counterterrorism declaration that calls for strengthened activities aimed at preventing terrorists from acquiring weapons of mass destruction, officials said last week. The document states that the European Union, its member nations and the United States would take a number of measures to reduce the threat of terrorism, including enhancing "efforts to counter the risks of chemical, biological, radiological and nuclear (CBRN) material being obtained or used by terrorists, including by building a stronger global nonproliferation regime, securing all nuclear material". Washington and Brussels also pledged to "seek to build a more permanent joint mechanism for EU-U.S. cooperation on explosives and critical infrastructure protection" and to "encourage the global ratification and effective implementation of all relevant international conventions and protocols on counterterrorism". U.S. Attorney General Eric Holder welcomed last week's adoption by an EU body of the declaration, which also asserts the importance of cooperation between the EU, the United States and the United Nations on counterterrorism preparations. **"This declaration demonstrates our joint commitment to protect our citizens from terrorism consistent with our laws, our values and our commitment to individual privacy,"** Holder said in a statement. **"Our work with our EU partners to protect the security of our citizens – including through programs such as the Terrorist Finance Tracking Program and the Passenger Name Record Agreement – is critical to the success of our counterterrorism efforts"** (NTI, 2010).

**Title/Headline:** *Key Congressional Committees Boost Funds to Prevent Nuclear Terrorism*

**Abstract:** Two key Congressional committees this week gave a big boost to the administration's efforts to prevent nuclear materials from falling into the hands of violent extremist groups. Both committees fully funded the administration's request for a 27 percent increase for two Energy Department programs to secure vulnerable nuclear materials in other countries. **"The nuclear nonproliferation initiatives of the Obama administration have enjoyed strong bipartisan support,"** explains David Culp, a lobbyist for the Friends

Committee on National Legislation (Quakers). **"These significant budget increases reflect the concern of many members of Congress in securing bomb-grade nuclear material internationally.** They also are a result of a concerted lobbying effort by the Energy Department, Vice President Biden, and Undersecretary of State Ellen Tauscher." The House Energy and Water Appropriations Subcommittee voted July 15 to fully fund the administration's request for these funds. Its Senate counterpart subcommittee followed suit on July 20, with the full Senate Appropriations Committee adopting the increase on July 22. The Bush 43 administration began the Global Threat Reduction Initiative program in 2004 and they expanded the International Nuclear Material Protection and Cooperation program. The two Bush programs enjoyed strong support from Sen. Dick Lugar (IN), one of Obama's foreign policy mentors. **Obama developed the idea of accelerating the "loose nukes" programs on the campaign trail and included the funding increases in his budget this year. President Obama had pledged during his campaign to secure all vulnerable nuclear materials worldwide within four years.** The administration persuaded 46 other countries to ratify that goal at an international Nuclear Security Summit in Washington in April. The acting chairman of the House Energy and Water Appropriations Subcommittee, Rep. Ed Pastor (AZ), said at its bill-drafting session, **"The Global Threat Reduction Initiative, along with the International Nuclear Material Protection and Cooperation, will lead the efforts to secure fissile material in four years; the bill provides \$1.1 billion, the same as the request and \$243 million above 2010, for this important effort."** Pastor said at the June 15 markup that he was regularly getting phone calls from Vice President Joe Biden asking about the funding. The ranking member of the House subcommittee, Rodney Frelinghuysen (NJ), also voiced his support for the nonproliferation increases in the subcommittee markup. Senate subcommittee chairman Byron Dorgan (ND) stated in his report on the bill, **"The Committee supports NNSA's goal of securing all vulnerable nuclear material within 4 years. Securing nuclear materials at the sites and facilities where they are located is the best defense against nuclear terrorism."** NNSA is the National Nuclear Security Agency. The full House Appropriations Committee has not yet scheduled the bill for final approval, but may take it up the week of July 26. A House-Senate conference committee will hammer out the differences in the two bills, probably as part of a larger, year-end "omnibus" appropriations bill in a lame-duck session of Congress in November and December. **The Friends Committee on National Legislation, the oldest registered religious lobby in Washington, is a non-partisan Quaker lobby in the public interest. FCNL works with a nationwide network of tens of thousands of people from every state in the U.S. to advocate for social and economic justice, peace, and good government.** For more information: [www.fcnl.org](http://www.fcnl.org) (PR Newswire, 2010).

**Title/Headline:** *Lawmakers Tackle Gaping Flaws In WMD Attack Preparedness*

**Abstract:** A Senate Judiciary subcommittee will assess government preparedness for a terrorist attack with weapons of mass destruction in the wake of a report calling Justice Department planning inadequate. The Subcommittee on Terrorism and Homeland Security will hear testimony from senior Justice Department and Homeland Security officials concerning the ability of the United States to prevent as well as respond to an attack using a WMD. The hearing comes after several damning reports about the country's ability to prevent such an attack, including a report card this year from a blue-ribbon commission that gave the White House three failing grades on WMD preparedness. **On top of this, the intelligence and security lapses that preceded a string of recent domestic attacks — the deadly shooting at Fort Hood and failed bombing attempts on Northwest Flight 253 over Detroit on Christmas Day and on Times Square — have done little to inspire confidence from homeland security hawks in Congress.** The subcommittee will address specifically a May 2010 report by Glenn Fine, the inspector general of the Justice Department, that raised serious questions about the department's ability to respond to a potential WMD attack. **"The Department of Justice as a whole ... has not implemented adequate WMD response plans. As a result, the Department is not fully prepared to provide a coordinated response to a WMD incident,"** the report said. Fine is scheduled to testify at the hearing. **The report is one of several this year finding flaws in the country's preparedness for a catastrophic terrorist attack.** In January 2010, the Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism issued a "report card" assessing the government's progress in implementing preventive measures recommended by the commission in a December 2008 report. **The Obama administration received mixed grades in the January report, including three Fs, for failure to prepare effectively for a biological attack, failure to recruit and train a new generation of national security experts and failure to reform congressional oversight on intelligence and national security.** Retired Col. Randall Larsen, USAF, the executive director of the commission, will also testify before the subcommittee. **"We gave America, as a whole, an 'F,'"** Larsen said. The blue-ribbon commission, chaired by former Sens. Bob Graham (D-Fla.) and Jim Talent (R-Mo.), was created by Congress following a recommendation from the 9/11 Commission. Graham and Talent's initial report in 2008 **warned that a terrorist attack using WMDs was "likely" to occur somewhere in the world by 2013, with the United States being a prime target.** The commission officially concluded its work in February, but Graham, Talent and Larsen have sought to continue their efforts by forming the Bipartisan WMD Terrorism Research Center. Larsen said his primary mission is to educate lawmakers about the seriousness of the threat posed by WMDs and that this will be the focus of his testimony next week. **"Congress has got a lot on its minds, but this should be one of its highest priorities,"** Larsen said. **"All these little battles we have to fight, I don't think we'd have to be doing that if members of Congress really understood the threat,"** he added. The commission's latest report slammed Congress for failing to consolidate nearly 100 committees and subcommittees that oversee some aspect of the Department of Homeland Security. **"Virtually no progress has been made since consolidation was first recommended by the 9/11 Commission in 2004,"** the report stated. The Obama administration disputed the commission's findings, arguing that the president had accomplished a "great deal" since taking office. **The commission's report laid out a range of measures the federal government should pursue to reduce the United States' vulnerability to such an attack, including increased security and awareness at biological research labs and strengthening international treaties against the spread of biological and nuclear weapons.** Lawmakers have been making progress to address the commission's concerns through legislative action. At a press conference last month, **Graham and Talent joined members of the House Homeland Security Committee to announce the introduction of the Weapons of Mass Destruction Prevention and Preparedness Act of 2010,** a bipartisan bill that aims to enact the commission's recommendations. Committee Chairman Bennie Thompson (D-Miss.) described it as "a major step forward on the threat from WMD." The bill is the House companion to legislation introduced by Sens. Joe Lieberman (I-Conn.) and Susan Collins (R-Maine) in 2009. Both bills have cleared committee but have yet to be brought to the floor for a vote. Lieberman and

Collins, respectively chairman and ranking member of the Senate Homeland Security Committee, presided at a June 30 hearing on nuclear terrorism where they heard alarming testimony from government officials concerning the United State's ability to prevent a nuclear attack. **Lieberman said the officials' testimony was "a real alarm bell going off" in terms of the country's preparedness. "The threat of nuclear terrorism is growing faster than our ability to prevent an attack on our homeland," he said at the hearing (Stiles, 2010).**

**Title/Headline:** *IAEA Adopts Atomic Weapons In The Middle East*

**Abstract:** The International Atomic Energy Agency (IAEA's) 54th General Conference of Member States concluded yesterday, Friday September 24 2010, in Vienna. **The member states of the (IAEA) voted on a draft resolution introduced by the Arab States calling for Israel to join the Non-Proliferation Treaty (NPT). The United States and its major allies, the European States and some *small western countries*, who called for a Middle East free from "weapons of mass destruction", allied themselves over the past three days by holding continuous meetings and gatherings outside the hall where the 54 IAEA General Conference was held at the UN headquarters in Vienna, in order to thwart the resolution introduced by the Arab States. Forty-six delegations voted in favor of the resolution, 51 against it and 23 others abstained from voting in the 151-member General Assembly of the IAEA. The Arab representatives and ambassadors all said that Israel's presumed nuclear arsenal threatens regional peace and stability. The Jewish state is the region's only country outside the nuclear Non-Proliferation Treaty.** The scene of the political gatherings held by the Europeans and their allies outside of the main conference in order to support Israel and thwart the Arab draft resolution confirms that there is a deep chasm between the West and the Middle East and it also showed the double standards implicit in the decisions of the block of Western countries when dealing with the issue of nuclear weapons in Israel, North Korea and Iran. Israel, which possesses a nuclear arsenal, pursues a policy of "nuclear ambiguity" and refuses to sign the Non-Proliferation Treaty which could force them to renounce nuclear weapons. The United States urged other states members of the IAEA to vote down the Arab-sponsored draft resolution. "Symbolically it is important to vote down this non-binding resolution" said the US representative to the IAEA, claiming that the vote in favor of the resolution "could disrupt a broader effort to ban such weapons in the Middle East" and sends a negative message to the Israeli-Palestinian peace process, which recently resumed. **This "peace process" is merely one more show in the theater which legitimizes the Israeli genocide and war crimes in Palestine and lengthens the occupation under sham "peace negotiations". The more serious question which arises after the vote on this resolution is if Israel will at some time in the future use its nuclear weapons to attack the same European states which rejected the Arab-sponsored draft resolution calling on Israel to join the NPT. Asking this question, even thinking about it, is taboo for the regimes of the European Union and the western world, which are all led by pro-Zionist politicians who often have double nationality and who obviously always adopt decisions of foreign policy concerning Israel which are favorable to Israel but are gravely detrimental to the obvious interests of the countries which these politicians represent. Israel, which in public speaks sweet and honey words to its European "allies", at the same time teaches Israeli children in kindergarten, primaries and later to hate and seek revenge from Europe, where the "descendants of the Nazis" live, according to the language used school texts in Israel. Children are taught in one way or another to seek revenge from the European countries, and revenge this is only matter of time for Israel. Anybody who denies this should spend some days at the Israeli schools and watch the movies which the kids see in their childhood, which teach them that the whole world should "kneel before the feet of the Jews", and generally speak with the people on the streets, letting them speak freely about their views about Europe (Kawther Salam, 2010).**

**Date:** 2012

**Source:** Wikipedia

**Title/Headline:** *2012 Nuclear Security Summit*

**Abstract:** At the 2010 Nuclear Security Summit, American president Barack Obama announced that the next Nuclear Security Summit would be held in South Korea in 2012. The importance of planning for the conference was clarified when the American president explained his view that "we have the opportunity, as partners, to ensure that our progress is not a fleeting moment, but part of a serious and sustained effort (Wikipedia, 2010).

**Conclusion:** It appears that humanity is about to enter the Nuclear Terror Age and the so called leaders of the world appear just fine with that scenario. As though they are oblivious to the consequences of such an attack, they appear to be falling in line behind Obama as the world plunges into its darkest time yet.

## The Nuclear Bible: Nuclear Terror Movies

**Intro:** The following mainstream movies and documentaries dealing specifically with nuclear terror have been sporadic over the last 33 years but have intensified in the 5 years.

**1977:** *Black Sunday*

**1983:** *Special Bulletin*

**2002:** *The Sum Of All Fears*

**2005:** *Last Best Chance*

**2007:** *Next*

**2010:** *Unthinkable*

**2010:** *Countdown To Zero*

**2010:** *Nuclear Tipping Point*

**Date:** March 11, 1977

**Title:** *Black Sunday*

**Director(s):** John Frankenheimer

**Writer(s):** Ernest Lehman, Kenneth Ross, Ivan Moffat

**Producer(s):** Robert Evans, Alan Levine, Robert L. Rosen

**Distributor(s):** Paramount Pictures

**Nuclear Target(s):** Miami, Florida

**Abstract:** An American thriller film based on the novel by Thomas Harris. Michael Lander (Bruce Dern) is an American blimp pilot deranged by years of torture as a prisoner of war in Vietnam, a failed marriage, and a bitter court martial. He longs to commit suicide and take as many people as possible with him, so he conspires with Dahlia Iyad (Marthe Keller), an operative from a **Palestinian terrorist group known as Black September, to launch a massive suicide bombing over the Miami Orange Bowl during the Super Bowl X between Pittsburgh and Dallas.** American and Israeli intelligence agencies, led by Mossad agent David Kabakov (Robert Shaw) and FBI agent Sam Corley (Fritz Weaver), race to prevent the catastrophe (Wikipedia, 2010)

**Date:** 1983

**Title:** *Special Bulletin*

**Director(s):** Edward Zwick

**Writer(s):** Marshall Herskovitz (teleplay), Edward Zwick, Marshall Herskovitz (story)

**Producer(s):** Marshall Herskovitz, Edward Zwick

**Distributor(s):** NBC (National Broadcasting Company)

**Abstract:** A terrorist group brings a homemade atomic bomb aboard a tugboat in the harbor of Charleston, South Carolina in order to blackmail the U.S. Government into disabling its nuclear weapons, and the incident is caught live on television. The movie simulates a series of live news broadcasts on the fictional RBS Network (Wikipedia, 2010).

**Date:** Filmed 1999; Released: 2002  
**Title:** *The Sum Of All Fears*  
**Director(s):** Phil Alden Robinson  
**Writer(s):** Tom Clancy (novel), Paul Attanasio, Daniel Pyne (screenplay)  
**Producer(s):** Mace Neufeld  
**Distributor(s):** Paramount Pictures  
**Nuclear Target(s):** Baltimore, Maryland

**Abstract:** The *Sum of All Fears* is an American action film directed by Phil Alden Robinson and based on a book of the same name by Tom Clancy. Starring Ben Affleck and Morgan Freeman it **was filmed in 1999, but not released by Paramount Pictures in the United States until May 31, 2002** The film begins with a sequence inspired by the novel's prologue set during the 1973 Yom Kippur War, in which a single Israeli A-4 jet carrying a nuclear weapon is shot down over the Syrian desert. **The bomb, over time, is consumed by the sand and disappears. Eventually, after an ensuing geopolitical drama, the nuclear bomb arrives in a crate in Baltimore, Maryland, and is placed in an American football stadium** disguised as a cigarette vending machine. After the detonation, it is eventually concluded that that the plutonium for the Baltimore bomb was manufactured in Savannah River nuclear plant in South Carolina in 1968, thus indicating that **the original nuclear fissile material was of American origin** (Wikipedia, 2010).

**Date:** April 27, 2007  
**Title:** *Last Best Chance*  
**Director(s):** Sam Nunn's Nuclear Threat Initiative, Carnegie Corporation of New York, MacArthur Foundation.  
**Writer(s):** Sam Nunn's Nuclear Threat Initiative, Carnegie Corporation of New York, MacArthur Foundation.  
**Producer(s):** Sam Nunn's Nuclear Threat Initiative, Carnegie Corporation of New York, MacArthur Foundation  
**Distributor(s):** Sam Nunn's Nuclear Threat Initiative, the Carnegie Corporation of New York, MacArthur Foundation

**Abstract:** *Last Best Chance* is an educational DVD that reveals the modern nuclear threat of international terrorist organizations, produced by the Nuclear Threat Initiative. The DVD is freely available through the NTI-supported website. The film stars Fred Thompson as President Charles Ross. The name of the film is a reference to a quote by Abraham Lincoln. **Running at forty-five minutes (Super Bowl 45 is February 6, 2011)** in length, *Last Best Chance* premiered in the fall of 2005 at the lavish East Side mansion that is home to the Council on Foreign Relations in New York City. Among the attendees were diplomats, military personnel, international bankers, and lawyers.

**Speakers at the event following the film included:**

**Pete Peterson:** Chairman of the Council on Foreign Relations  
**Ted Turner:** Founder of CNN  
**Warren Buffett:** Investor and philanthropist  
**Sen. Richard Lugar:** Chairman of the United States Senate Foreign Relations Committee  
**Sam Nunn:** Founder of the Nuclear Threat Initiative (Wikipedia, 2010).

**Date:** October 3, 2005

**Source:** The New Yorker, Hendrik Herzberg

**Title/Headline:** *Rain And Fire*

**Abstract:** Early autumn is a big season for new releases, and last week, what with the opening of the New York Film Festival and all, there were lots of such screenings around town. One of them was different. Its setting was a modest auditorium in the immodest East Side mansion that houses the Council on Foreign Relations. **The audience consisted of diplomats, military officers, international bankers and lawyers, and think-tankers. The speakers after the lights went up were white-haired gentlemen in business suits: Pete Peterson, the council's chairman; Ted Turner, the billionaire philanthropist and founder of CNN; Warren Buffett, the folk philosopher and fabulously rich investor; Richard Lugar, Republican, the current chairman of the Senate Foreign Relations Committee; and Sam Nunn, Democrat, the retired chairman of the Senate Armed Services Committee, and now head of a nongovernmental organization called the Nuclear Threat Initiative.** The film, "Last Best Chance," was a bit unusual, too. **You might even say it isn't really a movie at all—it just plays one on TV.** Set in the near future, it takes the form of a slick international suspense thriller, the kind that cuts from a rainswept warehouse in a bleak corner of the former Soviet empire to a dimly lit White House Situation Room. It has no sex scenes, no car chases, and no wisecracking sidekicks, and **it is only forty-five minutes long, but it lays out a frighteningly plausible narrative of how terrorists might buy or steal the makings of a nuclear bomb, assemble one, smuggle it halfway around the world, and send it on its way to an American city in an S.U.V.** The closest thing to a star in the cast is Fred Thompson, the lawyer turned actor turned Republican senator from Tennessee turned actor again. Thompson plays the President of the United States, and his character is mature, wise, and serious—the one jarringly unrealistic note in the picture. **"Last Best Chance" was made not by a movie studio but by a singularly unraffish indie producer: Nunn's Nuclear Threat Initiative, with support from the Carnegie Corporation of New York and the MacArthur Foundation.** The blurb on its poster comes not from Ebert & Roeper but from Kean & Hamilton—Thomas Kean and Lee Hamilton, the chairman and vice-chairman of the 9/11 Commission. Its grosses are zero. For the past five months, it has been distributed free on DVD. Now it has been taken up by HBO, which plans to show it repeatedly, beginning on October 17th. **"Last Best Chance" is entertaining, in a grim sort of way, but entertainment is not its raison d'être.** Its purpose is to stimulate public support and political pressure on the Bush Administration and Congress to do something serious about the terrifying danger of nuclear terrorism. And this is a scandal. It is scandalous that at this late date, four years after the attacks on New York and Washington, people like Nunn, Lugar, and Buffett feel it necessary to go to such unorthodox lengths to get the attention of Washington's responsables. "Last Best Chance" is a symptom of an immense failure of national, and especially Presidential, leadership. "As short a time ago as nine years or eight years," Turner said in his remarks after the screening, **"I still thought that nuclear weapons, biological and chemical weapons, was an area that the government took care of"** (Herzberg, 2005).

**Distributor(s):** Senator U.S.

**Targets Mentioned:** New York, New York, Los Angeles, California, Dallas, Texas

**Abstract:** An American Muslim man named Yusuf (Sheen), formerly named Younger, who claims to have nuclear bombs planted in three U.S. cities that will go off if his (at first, unstated) demands are not met. Using extreme torture as a method of interrogation [Torture], "H" (Jackson) attempts to force Yusuf to reveal the locations of the nuclear bombs. Also involved is Special Agent Helen Brody of the FBI who, at the same time, is leading a team trying to locate the bombs using other information. Once H is authorized to interrogate Yusuf, he quickly shows his capability and cruelty by chopping off one of Yusuf's fingers with a small hatchet. Horrified, Special Agent Brody attempts to put a stop to the measures. Her superiors make it clear that the potentially disastrous consequences necessitate these extreme measures. As the plot unfolds, H escalates his methods (with Brody as the "good cop") and Yusuf, trained in resisting torture, maintains his silence. When Brody accuses Yusuf of faking the bomb threat in order to make a point about the moral character of the United States government, he breaks down and agrees that it was all a ruse. He gives her an address to prove it, but visiting the address triggers a C-4 explosion at a nearby shopping mall, killing 53 people. Angry at the senseless deaths, Brody takes a scalpel and begins cutting Yusuf's chest. It is clear, though, that Yusuf is not afraid. He justifies the deaths by comparing them to the greater number of Muslim deaths by American hands. Yusuf then makes his demands: he would like the President of the United States to announce a cessation of support for puppet governments and dictatorships in Middle Eastern countries and a withdrawal of American troops from the Middle East. The group quickly blows off the possibility of his demands being met. H falters in his belief that the bombs' location will be revealed until Yusuf's wife is found and detained. He brings her in front of her husband and threatens to mutilate her in front of him, Brody and the others begin to take her away from the torture room in disgust. Out of desperation, H slashes her throat and she bleeds to death in front of Yusuf. Still without cooperation, H tells the soldiers to bring in Yusuf's two children, a young boy and a girl. Outside of Yusuf's hearing, he assures everyone that he will not harm the children. Yusuf's children are brought in and H makes it clear that he will torture them if the bombs' locations are not given. Yusuf breaks and gives three addresses, but H does not stop, forcing the others to intervene. Citing the amount of missing nuclear material Yusuf potentially had at his disposal, H insists that Yusuf has not admitted anything about a hence-unreferenced 4<sup>th</sup> bomb. When Brody refuses to retrieve the children for H, he unstraps Yusuf, who then manages to get ahold of a pistol and commit suicide. Brody walks out of the building with Yusuf's children. A FBI bomb disposal team arrives at one of the disclosed locations and resets the timer to prevent the bomb from going off. As the FBI are celebrating however, behind a nearby crate, the originally unconfirmed 4th bomb's timer counts down to zero. The screen immediately cuts to black and the credits roll (Wikipedia, 2010).

**Date:** January 25, 2010 (Sundance), July 23, 2010 (United States)

**Title:** *Countdown To Zero*

**Director(s):** Lucy Walker

**Writer(s):** N/A

**Producer(s):** Lawrence Bender

**Distributor(s):** Magnolia Pictures

**Nuclear Target(s):** N/A

**Abstract:** *Countdown to Zero* is a documentary film released in 2010 which argues that the likelihood of the use of nuclear weapons has increased since the end of the Cold War due to terrorism, nuclear proliferation, theft of nuclear materials and weapons, and other factors. The documentary film was set for a July 9, 2010 theatrical release in the United States but was pushed back to July 23. The film features interviews with leading statesmen and experts, including Tony Blair, Jimmy Carter, Mikhail Gorbachev, Robert McNamara, Pervez Musharraf, and Valerie Plame Wilson. The film was narrated by Gary Oldman. The musical score was composed by Peter Golub, and the rock band Pearl Jam contributed the song "The Fixer." It was developed, financed and executive produced by Participant Media. The idea for the film first occurred to the producers when the Nobel Peace Prize was awarded to Al Gore after the success of his documentary about global warming, *An Inconvenient Truth*. Diane Weyermann of Participant Media

asked Walker if she was interested in directing a film about nuclear weapons, and Walker said yes. More than 84 people were interviewed for the film. Global Zero, an international organization promoting the elimination of nuclear weapons, provided production assistance for the film (Wikipedia, 2010).

**Date:** 2010

**Title:** *Nuclear Tipping Point*

**Director(s):** NTI (Nuclear Threat Initiative)

**Writer(s):** NTI (Nuclear Threat Initiative)

**Producer(s):** NTI (Nuclear Threat Initiative)

**Distributor(s):** NTI (Nuclear Threat Initiative)

**Nuclear Target(s):** America

**Abstract:** *Nuclear Tipping Point* is a 2010 documentary film produced by the Nuclear Threat Initiative. It features interviews with four American government officials who were in office during the Cold War period, but are now advocating for the elimination of nuclear weapons. They are: Henry Kissinger, George Shultz, Sam Nunn, and William Perry. **The film was screened at the White House on April 6, 2010** (Wikipedia, 2010). According to the official website: *Nuclear Tipping Point* is a conversation with four men intimately involved in American diplomacy and national security over the last four decades. **Former Secretary of State George Shultz, former Secretary of State Henry Kissinger, former Secretary of Defense Bill Perry and former Senator Sam Nunn share the personal experiences that led them to write two *Wall Street Journal* op-eds, in support of a world free of nuclear weapons and the steps needed to get there.** Their efforts have reframed the global debate on nuclear issues and, according to the *New York Times*, "sent waves through the global policy establishment." **"Nuclear weapons today present tremendous dangers, but also an historic opportunity. U.S. leadership will be required to take the world to the next stage — to a solid consensus for reversing reliance on nuclear weapons globally as a vital contribution to preventing their proliferation into potentially dangerous hands, and ultimately ending them as a threat to the world."** From *The Wall Street Journal Op-ed* by George Shultz, William Perry, Henry Kissinger and Sam Nunn, January, 2007. The film is introduced by General Colin Powell, narrated by Michael Douglas and includes interviews with California Governor Arnold Schwarzenegger and former Soviet President Mikhail Gorbachev. ***Nuclear Tipping Point* was written and directed by Ben Goddard and produced by the Nuclear Security Project in an effort to raise awareness about nuclear threats and to help build support for the urgent actions needed to reduce nuclear dangers.** It was produced with support from NTI's Nuclear Security Project in cooperation with Stanford University's Hoover Institution, with funding from the Carnegie Corporation of New York, the John D. and Catherine T. MacArthur Foundation, Mr. and Mrs. Richard P. Anderson, Phineas Anderson and Stephen Stranahan (*Nuclear Tipping Point*, 2010).

**Conclusion:** Everything starts in the movies, and nuclear terror is no different. Interestingly, the entire idea of nuking the Super Bowl originated from Tom Clancy's *The Sum of All Fears*. A best-selling book and a major motion picture later, fiction will likely turn into reality on February 6, 2011.

## The Nuclear Bible: Nuclear Terror Music

**Intro:** The following songs and albums regarding nuclear terror and war would not be so disturbing except for the fact that they have all come since 2009. Is the government run media programming the youth of the World for an upcoming nuclear detonation? Based on the words in the songs, album titles and track titles, one may just think so.

**Title:** *Nuclear Blast: Music Assault 2009*

**Date:** 2009

**Source:** Metal India Magazine

**Artist(s):** Various

**Abstract:** This CD has a balanced mix of styles. There weren't any bad songs here, and they all fit together to express the overarching theme of the compilation. Overall it's a good collection of songs by Nuclear Blast.

**Suffocation – “Blood Oath”:** Along with a very select few others, Suffocation are card-carrying members of the exclusive Death metal club, yet whose own output continues to be as menacing, acerbic and relevant as it was a decade ago. “Blood Oath” is off their sixth full length offering which bombards you with a slow and heavy attack of triplets which is reminiscent of Morbid Angel's Gateways to Annihilation.

**Ex Deo – “Legio XII”:** Ex Deo is a side project of Kataklysm's frontman Maurizio Iacono. It is a Roman-themed death metal band which sings of its homeland's glorious past. “Legio XII” is one of those songs which have a warlike ambience, giving an impression of armies gathering. Combination of death and black vocals give nice touch to the epic sound of the song.

**Vader – “Rise Of The Undead”:** Necropolis is the title given to the latest gathering of recordings sent our way from Poland. Vader in “Rise of the undead” does its usual chugging fast pace evil war machine engine like attack. Great riffs and amazing solos will not fail to blow you away.

**Darkane – “Execution 44”:** This melodic thrash metal outfit from Sweden is quite different from the kind of stuff that usually comes out of Sweden. A hint of modern sound in good old thrash is their take. “Execution 44” starts off with a somber lead and transforms into ferocious paced groove. Although too mainstream sounding but nonetheless good metal.

**Amorphis – “Silver Bride”:** This is your average progressive metal song. It has fairly catchy and compelling vocals with good melodic passages. Opeth fans might dig this.

**S.W.W.A.T.S – “The Tamagotchi Gesture”:** An Interesting name which actually spells out as “Success Will Write Apocalypse Across the Sky”. I actually checked twice before writing down the abbreviation... (Pun intended). I fail to understand what's with long band name and Deathcore music. “The tamagotchi gesture” is pretty forgettable song except that it does not have annoying breakdowns like other deathcore music. Feel free to press the “next” button on that remote right away.

**Threat Signal – “The Beginning Of The End”:** Threat signal's brand of industrial/metalcore is pretty fresh. Decent riffs and drum work. Raspy vocals and thrashy edge will surely make you want to headbang to it. Often compared to Fear Factory and Strapping Young Lad, they are worth checking out.

**Swashbuckle – “Cruise Ship Terror”:** Many metal bands attempt to have a comical or radical image while maintaining their metalness. Swashbuckle is one of those bands that do it with excellence. Pirates in metal isn't an unheard of concept but these guys will surely convince you that they truly are pirates from the 1700's that traveled forward in time to play some kick ass thrash metal.

**Mantic Ritual – “One By One”:** In case you're not keeping score, tried and true thrash metal is back and firmly in the hands of the youth of today. Add Mantic Ritual to the new-gen thrash pack. “One by one” will make you wish the old days of thrash were still around.

**Augury – “Aetheral”:** One of Canada’s finest death metal exports with a progressive leaning, Augury’s music is varied and engaging. Super smooth bass playing and aggressive riffing will leave you scratching your head.

**Korpiklaani – “Vodka”:** Korpiklaani’s sound has always combined happy drinking songs with folk infused metal. These Finns joyfully manifest their upbeat attitude they derive from their music. “Vodka” is a nice breather after all the mayhem of this c.d.

**Sylosis – “Teras”:** This quintet from the UK plays progressive thrashcore. Although the musicianship is excellent but they are just another modern band, only a bit of more technical and progressive than most of their peers and nothing new.

**Candlemass – “If I Ever Die”:** These are the leaders, the pioneers, the ones who are still keeping the flag of the doom brilliance high. “If I ever die” has that unmistakable groove but it’s not a very memorable song.

**Echoes Of Eternity – “Twilight Fires”:** “Twilight fires” seems more black metal than goth but they call themselves progressive so I guess it fits the bill. Nothing unusual here, it’s a very average attempt. Drum work is pretty annoying. Long monotonous programmed beats are a bit too high in the mix.

**Samael – “Under One Flag”:** Black metal fused with industrial music. Samael is strictly for Darkwave/Industrial fans. “Under one flag” has some mammoth riffs and some excellent electric drums to drive the beats. Keyboards provide some beautiful melodic passages which set Samael apart from other industrial metal bands.

**Hammerfall – “Any Means Necessary”:** These guys continue to make some decent power metal which although is shamelessly watered down but remains entertaining. “Any means necessary” has the right hooks but at some point’s way too simple a song. And if you happen to check the video of this song, you’re in for some good laughs.

**Sirenia – “Lost In Lite”:** It seems that the sea of female-fronted metal bands keeps rising higher every year, particularly in the gothic realm. “Lost in lite” is full of catchy melodies and carries some heaviness with it. There is nothing special about the bass or drum. The keyboards mingle with the music but don’t do anything spectacular or particularly noteworthy. In my opinion it’s too pop to be on this compilation (Metal India Magazine, 2010).

**In December of 2009, Illuminati artist Jay Z released a song with Mr. Hudson entitled *Young Forever* (a remake of the Alphaville's 1984 hit *Forever Young*), which was produced by fellow Illuminati artist Kanye West. The song makes a direct reference to “the bomb”, thus ushering in the idea of nuclear war into the current generation’s collective consciousness, just as *Forever Young* did in 1984.**

**Title:** *Young Forever*

**Date:** December 2, 2009

**Source:** YouTube

**Artist:** Jay Z, Mr. Hudson

**Album:** *The Blueprint 3*

**Label:** Rockefeller Records

**Producer:** Kanye West

**Abstract:** “Heaven can wait we’re only watching the skies...**Hoping for the best but expecting the worst, Are you gonna drop the bomb or not? Let us die young or let us live forever**, We don’t have the power but we never say never, Sitting in a sandpit, Life is a short trip, The music’s for the sad man” (Youtube, 2010).

**Title:** *Children Of The Bomb 2010: KIF Anti Nuclear Music Compilation*

**Date:** January 13, 2010

**Source:** Discogs

**Artist(s):** Various

**Label:** Kifrecording (Poland)

<u>Band Name</u>	<u>Track Title</u>
1) Abraxas Apparatus -	It's Funny They Call It _arsch Noise_ In France
2) GrA (4) -	Track 3_002
3) ValeNoise -	Toxic Residues
4) Teknocannibaal -	MINI KRP1 Demonstration_2009
5) Azbezt -	Cannon Fodder
6) Maaaa -	I Have Got My Satan Rocket Edge
7) Nihilistic Front	Air Attack
8) Ataraxy	Missile Terror
9) Capitalism	Piiiiiiiiimiel
10) Clemens Hausch	Persuasive Dreams (A Sudden Awakening)
11) Origami Hairry	Kasztany
12) Rovar17 -	With Wearied Smile
13) Shock Technician, The -	Emetic Neurosis
14) Animal Machine (2)	Roasted Cockroaches
15) Paddo One	5 Terrible Trampoline Technicians
16) Audiocum / Bassfucker -	Silver Tip (Discogs, 2010).

**In September of 2010, Linkin Park, who has collaborated intimately with Jay Z in the past, released their latest album entitled *A Thousand Suns*. This was their second album with a nuclear title since *Minutes To Midnight* (2007), another direct reference to nuclear war.**

**Title:** *A Thousand Suns*

**Date:** September 10, 2010

**Source:** Wikipedia

**Artist:** Linkin Park

**Label:** Warner Bros.

**Abstract:** The album's title comes from the Hindu Sanskrit scripture, the *Bhagavad Gita*: "If the radiance of a thousand suns were to burst at once into the sky, that would be like the splendor of the mighty one," a quote made famous by J. Robert Oppenheimer (Father of the Atomic Bomb) in reference to the atomic bomb. *A Thousand Suns* is a concept album dealing with nuclear warfare and themes of war in general. "On this record, the concepts blend human ideas with technology [...] Human fears, **your fear of what's going to happen in the world**, the music kind of references that", said Mike Shinoda on an interview with MTV (Wikipedia, 2010).

- 1) **The Requiem**
- 2) **The Radiance**
- 3) **Burning in the Skies**
- 4) Empty Spaces
- 5) When They Come for Me
- 6) Robot Boy

- 7) Jornada del Muerto" (Journey of a Deadman)
- 8) Waiting for the End
- 9) Blackout
- 10) Wretches and Kings
- 11) Wisdom, Justice, and Love
- 12) **Iridescent**
- 13) **Fallout**
- 14) **The Catalyst**
- 15) The Messenger

**Conclusion:** It appears that nuclear related music is just another attempt to make the idea and concept of nuclear war appear normal in the minds of young people world-wide. The fact that artists like Jay Z and Linkin Park are featured in the nuclear music genera shows that there is a very serious attempt to get the message of nuclear terror into the minds of the masses.

## The Nuclear Bible: Nuclear Terror News

**Intro:** The following warnings regarding an impending nuclear terror attack, whether false-flag or real, are quite substantial. Whether these are legitimate warnings, government propaganda, and/or outright fear mongering is secondary. The fact that they exist in excess shows that a potential nuclear attack is in the cards and may be played in a last ditch effort to regain total political and military control of society. These warnings are in chronological order and consist of various news articles, opinion papers, and press releases. For brevities sake, only relevant material has been included. For access to the complete article, please Google the “Title/Headline” or see Chapter

### Resounding Themes:

- A nuclear bomb is easy to make and anybody, so long as they are dedicated, can make or acquire one
- A nuclear terror attack is not a matter of “if”, but “when”.
- Pakistan is the real threat to America because it has terrorist extremists threatening to overthrow the Pakistani government and seize its nuclear arsenal
- Martial law and/or a Military Dictatorship will replace the Republic form of U.S. Government, post nuclear attack
- Nuclear Proliferation is a “Global Problem” that requires a “Global Solution” and should a devastating nuclear terror attack occur, ALL nations would have to cede sovereignty to an international organization and open their particular country to nuclear inspection and regulation.

**Title/Headline:** *Bin Laden Has Several Nuclear Suitcases*

**Abstract:** Master terrorist Ossame Bin Laden has acquired portable nuclear devices, a U.S.-based expert on non-conventional terror believes. **The only real question now is whether BinLaden has "a few," as Russian intelligence seems to think, or "over 20,"** a figure cited by intelligence services of moderate Arab regimes. **"There is no longer much doubt that Bin Laden has finally succeeded in his quest for nuclear 'suitcase bombs,'** says Yossef Bodansky, head of the Congressional Task Force on Non-Conventional Terrorism in Washington D.C. Bodansky reported that **Bin Laden's associates acquired the devices through Chechnya, paying the Chechens \$30 million in cash and two tons of Afghan heroin,** worth about \$70 million in Afghanistan and about 10 times that on the street in Western cities. Bodansky's statements corroborate a 1998 testimony by former Russian security chief Alexander Lebed to the U.S. House of Representatives in which he stated that **43 nuclear suitcases from the former Soviet arsenal have vanished.** Lebed stated that one person could detonate such a bomb by himself, and kill 100,000 people. Among the others who recognize the threat is Ben Venzke, director of Tempest Publishing, who stated that **"The danger is quite real and is not confined to stolen Russian weapons"** and that **"It is really quite simple to acquire radioactive material and combine it with an explosive or so-called dirty device"** (Jerusalem Report, 1999).

**Title/Headline:** *Anti-Terrorism Meet In Abu Dhabi*

**Abstract:** More than 200 people from various strategic organisations are taking part in an eight-day anti-terrorist workshop in the capital. The workshop, which got underway yesterday, is designed to train people in how to recognise and deal with a terrorist attack using nuclear, chemical or biological weapons. It is the first time training of this kind has been provided in the UAE. The workshop has been organised by the General Directorate of Abu Dhabi Police in co-operation with the United States Department of State, Anti-terrorism Assistance Programme. It will provide concentrated training to 220 employees from the Ministry of Health, petroleum companies, the Red Crescent Society, the Armed Forces, the Ministry of Interior, the Civil Aviation Department and the General Directorate of the Abu Dhabi Police. The training programme has been carried out successfully in over 60 cities. Now it has been extended to US allies around the world. (The Gulf News) (UAE Interact, 2001).

No more than 10 days before 9/11, the United States Department of State's Anti-terrorism Assistance Programme is providing "concentrated training" for 220 employees from the Ministry of Health, petroleum companies, the Red Crescent Society, the Armed Forces, the Ministry of Interior, the Civil Aviation Department and the General Directorate of the Abu Dhabi Police? What exactly were they doing and who exactly attended? **This may have been a meeting to go over the final preparations for the 9/11 attacks.**

**Source:** Wikipedia

**Title/Headline:** WTC # 7

**Abstract:** 7 World Trade Center is a building in New York City located across from the World Trade Center site in Lower Manhattan. The name "7 World Trade Center" has referred to two buildings: the original structure, completed in 1987, and the current structure. The original building was destroyed on September 11, 2001, and replaced with the new 7 World Trade Center, which opened in 2006. Both buildings were developed by Larry Silverstein, who holds a ground lease for the site from the Port Authority of New York and New Jersey. The original 7 World Trade Center was 47 stories tall, clad in red exterior masonry, and occupied a trapezoidal footprint. On September 11, 2001, 7 WTC was damaged by debris when the nearby North Tower of the WTC collapsed. [7 World Trade Center] collapsed completely at 5:21:10 p.m. (Wikipedia, 2010).

**Date:** September 28, 2001

**Source:** Wired Magazine, Declan McCullagh

**Title/Headline:** *Does Osama Have A Nuclear Bomb?*

**Abstract:** Government reports and intelligence experts have been warning that bin Laden has been trying to build the bomb. "It's difficult to know if he has (nuclear weapons)," said Kimberly McCloud, a researcher at the Monterey Institute of International Studies

who tracks weapons of mass destruction. **"We know he's been interested in it, and that's reason for concern. At the same time, we don't know if (he) has weaponized it." One shortcut to membership in the nuclear club is a portable tactical device, often called a "suitcase nuke."** "You're talking about a bomb, a device with a capability of 1 kiloton of destruction, which is a massive capability that would cause severe destruction of a major inner city area, perhaps causing a multitude of buildings to collapse with the people inside of them," Rep. Curt Weldon (R-Pennsylvania) said in 1999. Alexie Yablokov, Boris Yeltsin's former science advisor, **told a U.S. House committee in 1997 that he believed dozens of the "suitcase-size nuclear munitions" were missing.** At the time, the U.S. State Department said it was satisfied with Russia's assurances. **"We have no evidence at all that bin Laden has access to nuclear weapons,"** said Anthony Cordesman, a senior fellow at the Center for Strategic and International Studies who specializes in the Middle East and Southeast Asia, but stated that **"He now has shown an interest,"** Cordesman said. "George Tenet has made public remarks on this. No one has seen that there is a clean chain of evidence that he has the capability. But no one can account for the Russian nuclear weapons." Cordesman referred to speeches by CIA Director George Tenet, including a briefing that he gave in February. At the time, Tenet said: **"The missile and WMD proliferation problem continues to change in ways that make it harder to monitor and control, increasing the risk of substantial surprise."** About the only thing that's certain is that **if al Qaeda and bin Laden have the materials, making a nuclear weapon may not be that difficult.** A report by Carey Sublette, distributed by the Federation of American Scientists, recalls a 1960s experiment conducted by the U.S. government. In it, **three newly graduated physics students were asked to develop a nuclear weapon** using only publicly available information. The result: **"They did develop a viable design** after expending only three man-years of effort over two and a half calendar years. In the years since, much more information has entered the public domain so that the level of effort required has obviously dropped further" (McCullagh, 2001).

TIME

**Source:** TIME, Hannah Bloc, Joshua Kucera, Violeta Simeonova, Tim McGirk, Andrew Purvis, Douglas Waller, Yuri Zarakhovich

**Title/Headline:** *Osama's Nuclear Quest*

**Abstract:** The so-far offstage effort to battle the most dreadful of the terror weapons Osama bin Laden would like to have in his arsenal: nuclear arms. Airborne anthrax and hijacked planes are little more than a murderous tease compared with the prospect of rogue nukes. Just what bin Laden has in his stockpiles, what he plans to do with it and what can be done to stop him are rapidly becoming the most pressing questions in the anti-terror wars. "The goal of terrorism is to spread panic," says Dr. Jerrold Post, a physician and professor at George Washington University's Elliott School of International Affairs, who **believes that al-Qaeda would try a nuclear or radiological attack if it had the capacity.** "Psychologically, there are no constraints." **It's been an open secret in the intelligence community that bin Laden and his al-Qaeda organization have long lusted after nukes.** The consensus in Washington is that the group does not have a true nuclear-fission device, though it may well have what is known as a radiological weapon or "dirty bomb"--a conventional explosive packed with radioactive debris. Whatever bin Laden's got, he has made any number of attempts to get more. As early as the mid-1990s, **intelligence sources tell TIME, bin Laden's agents began cruising the black markets of Europe and Asia looking for pirated Russian warheads.** Al-Qaeda also made it known that loose components such as enriched uranium would do too. Relatively new to the free-for-all thieving of the post-Soviet republics, **bin Laden was fleeced at least twice, getting fooled by black marketeers who tried to sell him low-grade, radioactive rubbish--**in one instance claiming it was "red mercury," a fictional Russian weapon. **But bin Laden has been a patient shopper, and if he hasn't made a good buy yet, he has come awfully close.** At the trial of the four men now convicted of planning the U.S. embassy bombings, **al-Qaeda turncoat Jamal Ahmed al-Fadl described his role in helping to broker a 1993 deal in which bin Laden attempted to pay \$1.5 million for a cylinder of South African uranium.** Al-Fadl saw the cylinder, but he wasn't present to see when--or if--money and material changed hands. Last April a Bulgarian working as a middleman in a Dubai company providing Asian laborers to Middle East construction firms was briefly introduced to bin Laden in a safe house at an unknown location during a trip to Pakistan. The next day he was approached by a scientist who seemed to be part of bin Laden's organization, offering him a different kind of business proposition: a scheme to bring nuclear waste from Bulgaria through Moldova and Ukraine. The names al-Qaeda and bin Laden never came up during that meeting, but the wary Bulgarian backed out of the deal. **"They pressured me,"** he told TIME. "They said, 'We're ready to give you this business.'" Simpler still is the so-called dirty bomb. Detonated in a crowded city, a dirty bomb would pack an explosive punch no greater than ordinary ordnance, but the radioactive debris it would scatter could sicken and kill unknown numbers of people and contaminate an unknown stretch of real estate. **Because the bomb would require no special skill to build, it's perhaps the most feared of the terrorists' nuclear choices.** "They don't kill as many people," says Morton Bremer Maerli, a nuclear-terror expert at the Norwegian Institute of International Affairs, "but as a weapon of terror, they may be just as effective." **If there's reason for anxious Americans to feel hopeful, it's that pulling off a nuclear attack, even a low-grade one, is an enormously complicated business,** and anything at all--from technical problems to supply problems to the simple dangers of fooling with radioactive material--could trip it up. **For bin Laden, everything would have to go exactly right, or a nuclear strike wouldn't work.** For the American military and the global law-enforcement forces arrayed against him, the job is to see to it that at least one of those things goes wrong (Bloch, Kucera, Simeonova, McGirk, Purvis, Waller, & Zarakhovich, 2001).

**Title/Headline:** *Al Qaeda's Nuclear Agenda Verified*

**Abstract:** Pakistani intelligence officers were assisting Osama bin Laden's al Qaeda organization to develop the ability to build a "dirty" nuclear device, U.S. and Pakistani intelligence agencies have concluded. Intelligence officers in Washington and Islamabad, speaking on the condition of anonymity, said they are now convinced that al Qaeda was attempting to put together a "nuclear device in the dirty bomb category." Documents uncovered in Kabul and the interrogation of nuclear scientists who were frequent visitors to Taliban-ruled Afghanistan - ostensibly to perform humanitarian work - have produced conclusive evidence of the fact, the officers said. **One Pakistani general who has seen the evidence described the device as a "dirty nuclear weapon," meaning one in which radioactive materials are wrapped around conventional explosives. Such a device can contaminate an area of several square blocks with radiation. The general said he also believes bin Laden obtained such materials on Russia's nuclear black market.** The International Atomic Energy Agency in Vienna is aware of 175 cases of trafficking in nuclear materials since 1993, including 18 that involved highly enriched uranium and plutonium pellets the size of a silver dollar. **There are 18 million potential delivery vehicles that could be used to smuggle a nuclear device into the United States. That is the number of cargo containers that arrive in the country annually. Of them, only 3 percent are inspected, and bills of lading do not have to be produced until the containers reach their destination, according to current regulations. An unidentified former chief of Pakistan's Inter-Services Intelligence (ISI) agency is believed to be the man who coordinated bin Laden's nuclear ambitions. One local intelligence source speculated that before September 11, a dirty bomb could have been smuggled out of Afghanistan in a truck all the way to Karachi and then shipped out in a cargo container.** That could be the weapon Taliban chief Mullah Mohammed Omar was referring to when he said, after the U.S. bombing started Oct. 7, that America would soon have to face extinction. Allowing for hyperbole, he may have known what bin Laden was planning next. Another ex-ISI chief, retired Gen. Hameed Gul, predicted after September 11 that one day there would be a single Islamic state that would stretch from Saudi Arabia to Pakistan and Afghanistan and that would have nuclear weapons, as well as control of the Gulf's oil resources. The general is an ISI legend, and still popular among the agency's present crop of leaders who were his junior officers in the late 1980s. Gen. Gul, a Muslim fundamentalist, is vehemently anti-American. He acts as "strategic adviser" to Pakistan's extremist religious parties, and spent two weeks in Afghanistan just prior to September 11. Gen. Gul is slowly emerging as the spokesman for the combined opposition of Islamic fundamentalists. In Urdu-language newspapers on Friday, he was quoted as saying: **"No one can tell us how to run our nuclear facilities and nuclear programs. This is being done in the interest of Pakistan, not the United States. Taliban will always remain in Afghanistan, and Pakistan will always support them.** He was presumably referring to the Taliban in its guerrilla mode, following the fall of Kandahar. Gen. Gul's only daughter runs VARAN, the public transportation bus company that enjoys a monopoly in Islamabad and its twin military garrison city of Rawalpindi. Gen. Gul himself lives in "Pindi" in an army compound housing development earmarked for retired generals. **Officially, the Pakistani government has accepted the explanation of three nuclear scientists about their "innocuous" relationship to the Taliban. Privately, however, some Pakistani officials, working closely with U.S. colleagues, said their activities "cannot be described as innocuous by any stretch of the imagination."** On a brief visit to Islamabad early this month, George Tenet, director of CIA, conferred with President Pervez Musharraf on what was described as the need for "more and better intelligence" from ISI. **The CIA has reportedly submitted a list of six more nuclear scientists whom it wants to probe for suspected links to al Qaeda. Two of them, Dr. Suleiman Asad and Dr. Muhammad Ali Muktar, are now in Burma doing undisclosed research with local scientists.** Apparently anxious to avoid further U.S. probes into Pakistan's ultrasecret nuclear weapons program, these two scientists have been advised by the government to remain in Burma until further notice. Dr. Sultan Bashiruddin Mahmud, former director of the Pakistan Atomic Energy Commission (PAEC), and Chief Engineer Dr. Chaudry Abdul Majeed have been questioned by a joint FBI-ISI team. According to PAEC sources, the CIA wishes to conduct a separate interrogation based on documents seized in Kabul. Dr. Mahmud is a close associate of Gen. Gul. **They were colleagues when Gen. Gul ran ISI. Dr. Mahmud is one of three scientists who befriended Taliban leaders. He is an expert in enriched uranium and plutonium, having lectured all over Pakistan with odes to the Taliban as "the wave of the future for Pakistan."** Dr. Mahmud and two of his colleagues were detained in late October as a result of U.S. questions about Pakistani "relief" organizations active in Taliban-run Afghanistan, including an agricultural project near Kandahar. **They admitted to meeting with al Qaeda associates of bin Laden and were officially cleared of passing on nuclear secrets. Dr. Mahmud says publicly that plutonium production is not a state secret, and advocates increasing plutonium output to help other Islamic nations build nuclear weapons.** After the start of the U.S. bombing campaign, Gen. Musharraf ordered an immediate redeployment of Pakistan's nuclear arsenal to six new secret locations, including separate storage facilities for uranium and plutonium cores and their detonation mechanisms. **Army colleagues now say privately that Gen. Musharraf was fearful of assassination by extremists who were already accusing him of betraying Islam and selling out to the United States. There were also rumors of a coup by hard-liners in the military. The officer corps is 20 percent fundamentalist, according to a post-September 11 confidential survey by military intelligence separate from ISI. Pakistan's community of nuclear scientists is held to be "profoundly fundamentalist" and anti-American. They are particularly resentful of U.S. economic and military sanctions against Pakistan as punishment for their country's nuclear weapons program.** The community's guru is Abdul Qadir Khan, the scientist who devised Pakistan's first nuclear weapon. Pakistan now has an estimated 20 such weapons in its arsenal. ISI is still widely distrusted by Western intelligence agencies and by all levels of Pakistani society, from people in the street to top political leaders. **An ISI general who is regional director in one of the tribal areas told an important tribal leader known to this reporter that "after Afghanistan, Pakistan is next on America's list of countries to be conquered, and after Pakistan, Iran will be next. All that war talk about Iraq being next is just a smokescreen."** Gen. Gul has been touring FATA (Federally-Administered Tribal Areas) along the border of Afghanistan with much the same message about Washington's plans for conquest in the region. ISI is undergoing a traumatic shock in the wake of the Taliban's defeat, according to knowledgeable secular political party leaders. "They have lost thousands of operatives in Afghanistan," said one key politician who asked not to be named. ISI also facilitated the transfer to Afghanistan in the past two months of thousands of young religious school students who had been proselytized by their clerical teachers to volunteer to fight with the Taliban. **Gen. Musharraf had a dangerous precedent in mind: Six years ago, a group of Pakistani army officers was arrested for plotting to kill Army Chief of Staff Gen. Abdul Waheed.** He had fired the ISI chief for secretly assisting Muslim rebels in several countries (De Borchgrave, 2001).

**Title/Headline:** *Report: Bin Laden Already Dead*

**Abstract:** Usama bin Laden has died a peaceful death due to an untreated lung complication, the *Pakistan Observer* reported, citing a Taliban leader who allegedly attended the funeral of the Al Qaeda leader. "The Coalition troops are engaged in a mad search operation but they would never be able to fulfill their cherished goal of getting Usama alive or dead," the source said. **Bin Laden, according to the source, was suffering from a serious lung complication and succumbed to the disease in mid-December, in the vicinity of the Tora Bora mountains.** The source claimed that bin Laden was laid to rest honorably in his last abode and his grave was made as per his Wahabi belief. **About 30 close associates of bin Laden in Al Qaeda, including his most trusted and personal bodyguards, his family members and some "Taliban friends," attended the funeral rites. A volley of bullets was also fired to pay final tribute to the "great leader."** The Taliban source who claims to have seen bin Laden's face before burial said "he looked pale ... but calm, relaxed and confident." Asked whether bin Laden had any feelings of remorse before death, the source vehemently said "no." Instead, he said, **bin Laden was proud that he succeeded in his mission of igniting awareness amongst Muslims about hegemonistic designs and conspiracies of "pagans" against Islam.** Bin Laden, he said, held the view that the sacrifice of a few hundred people in Afghanistan was nothing, as those who laid their lives in creating an atmosphere of resistance will be adequately rewarded by Almighty Allah. When asked where bin Laden was buried, the source said, **"I am sure that like other places in Tora Bora, that particular place too must have vanished"** (Fox News, 2001).

**Title/Headline:** *Bush: Don't Wait For Mushroom Cloud*

**Abstract:** Former U.S. President George W. Bush, while outlining his case for the invasion of Iraq, stated that, "There is a reason. We have experienced the horror of September 11. We have seen that those who hate America are willing to crash airplanes into buildings full of innocent people. **Our enemies would be no less willing -- in fact they would be eager -- to use a biological, or chemical, or a nuclear weapon.** Knowing these realities, America must not ignore the threat gathering against us. **Facing clear evidence of peril, we cannot wait for the final proof -- the smoking gun -- that could come in the form of a mushroom cloud"** (CNN, 2002).  
**FBI Wanted Poster: Khalid Shaikh Mohammed**

**Date:** May 12, 2003

**Source:** TIME, Tim Burger, Tim McGirk

**Title/Headline:** *Al-Qaeda's Nuclear Contact?*

**Abstract:** Khalid Shaikh Mohammed, the No. 3 leader of al-Qaeda, who was captured in Pakistan on March 1, has been questioned extensively about his relationship with Osama bin Laden and the 9/11 hijackers. But his U.S. interrogators have also grilled him about another figure of much concern to Washington: **Abdul Qadeer Khan, the maverick Pakistani scientist who has been called the father of the Islamic Bomb. U.S. intelligence, according to one official, has information that the al-Qaeda man and the nuclear scientist had connections with the same safe-house operator and may have crossed paths. They were "reported to be at the same place at approximately the same time,"** the official said. Under questioning, according to the source, Mohammed denied seeing Khan and downplayed any usefulness Khan may have had to al-Qaeda. Khan declined repeated requests from TIME to comment on the accusations. The CIA believes that Khan had a key role in helping North Korea develop at least one or two nuclear devices, a senior official tells TIME. Under pressure from the U.S., the Pakistani government two years ago stripped Khan of his position in the nuclear and military establishment and barred him from traveling abroad without official permission. Within Pakistan, Khan is always accompanied by two military officers, Pakistani officials say. **But Washington fears that he may still have enough freedom to be able to shop Pakistan's nuclear secrets to other clients. Says a Washington official: "He moves around very freely and has everything he needs inside his head, if not his briefcase"** (Burger & McGirk, 2003).

**Title/Headline:** *Is A Nuclear 9/11 In Our Future?*

**Abstract:** **Sooner or later there will be a nuclear 9/11 in an American city** or that of a US ally unless serious program is undertaken to prevent such an occurrence. **A terrorist nuclear attack against an American city could take many forms.** A worst case scenario would be the detonation of a nuclear device within a city. Depending upon the size and sophistication of the weapon, it could kill hundreds of thousands or even millions of people. Terrorists could obtain a nuclear device by stealing or purchasing an already created nuclear weapon or by stealing or purchasing weapons-grade nuclear materials and fashioning a crude bomb. **While neither of these options would be easy, they cannot be dismissed as beyond the capabilities of a determined terrorist organization.** If terrorists succeeded in obtaining a

nuclear weapon, they would also have to bring it into the US, assuming they did not already obtain or create the weapon in this country. **While this would not necessarily be easy, many analysts have suggested that it would be within the realm of possibility.** Another form of terrorist nuclear attack requiring far less sophistication would be the detonation of a radiation weapon or “dirty bomb.” This type of device would not be capable of a nuclear explosion but would use conventional explosives to disperse radioactive materials within a populated area. **The detonation of such a device could cause massive panic due to the public’s appropriate fears of radiation sickness and of developing cancers and leukemias in the future.** A bi-partisan task force of the Secretary of Energy’s Advisory Board, headed by former Senate Majority Leader Howard Baker and former White House Counsel Lloyd Cutler, called upon the US in 2001 to **spend \$30 billion over an eight to ten year period to prevent nuclear weapons and materials in the former Soviet Union from getting into the hands of terrorists or so called “rogue” states.** The task force called the nuclear dangers in the former USSR “**the most urgent unmet national security threat facing the United States today.**” **The great difficulty in preventing a nuclear 9/11 is that it will require ending the well-entrenched nuclear double standards that the US and other nuclear weapons states have lived by throughout the Nuclear Age. Preventing nuclear terrorism in the end will not be possible without a serious global program to eliminate nuclear weapons and control nuclear materials that could be converted to weapons.**

**Such a program would require universal agreement in the form of an enforceable treaty providing for the following:**

- Full accounting and international safeguarding of all nuclear weapons, weapons-grade nuclear materials and nuclear reactors in all countries, including the nuclear weapons states;
- International tracking and control of the movement of all nuclear weapons and weapons-grade materials;
- Dismantling and prohibiting all uranium enrichment facilities and all plutonium separation facilities, and the implementation of a plan to expedite the phasing out all nuclear power plants;
- Full recognition and endorsement by the nuclear weapons states of their existing obligation pursuant to the Nuclear Non-Proliferation Treaty for an “unequivocal undertaking” to eliminate their nuclear arsenals;
- Rapidly dismantling existing nuclear weapons in an orderly and transparent manner and the transfer of nuclear materials to international control sites;
- And criminalizing the possession, threat or use of nuclear weapons.

**While these steps may appear extreme, they are in actuality the minimum necessary to prevent a nuclear 9/11. If that is among our top priorities as a country, as surely it should be, the US government should begin immediately to lead the world in this direction. Now is the time to act, before one or more US cities are devastated by nuclear terrorism (Krieger, 2003).**

**Source:** Sky News

**Title/Headline:** *Al Qaeda 'Planning Nuke Attack'*

**Abstract:** Al Qaeda is preparing to use nuclear, chemical and biological weapons, according reports in America. An internal CIA report which says the terror network and allied groups are aiming to cause "mass casualties". That would be brought about through a series of simultaneous, small-scale attacks. The unclassified, four-page report was produced by the CIA's intelligence directorate. It comes as the agency is facing heavy criticism over the failure to uncover any weapons of mass destruction in Iraq. The report says the terrorists could easily obtain the materials needed and have the know-how to make the weapons. **It claims al Qaeda is developing bombs with radioactive material from industrial facilities. A document found in Afghanistan contained a sketch of a crude device capable of causing a nuclear blast.** Another document indicated "the group has crude procedures for making mustard agent, sarin and VX". Mustard is a blistering agent and sarin and VX are deadly nerve agents. **The CIA report says al Qaeda is more likely to produce a so-called "dirty" nuclear bomb than a conventional one. A dirty bomb would be easier to make but the effect would be just as devastating (Sky News, 2003).**

**The  
New York  
Times**

**Date:** March 10, 2004

**Source:** New York Times

**Title/Headline:** *A Nuclear 9/11*

**Abstract:** A 10-kiloton nuclear bomb (a pipsqueak in weapons terms) is smuggled into Manhattan and explodes at Grand Central. **Some 500,000 people are killed,** and the U.S. suffers \$1 trillion in direct economic damage. That scenario, cited in a report last year from the John F. Kennedy School of Government at Harvard, could be a glimpse of our future. We urgently need to control nuclear materials to forestall that threat, but in this war on proliferation, we're now slipping backward. **"We're losing the war on proliferation,"** Andrew F. Krepinevich Jr., a military expert and executive director of the Center for Strategic and Budgetary Assessments, says bluntly. **But all in all, the risks of a nuclear 9/11 are growing. "I wouldn't be at all surprised if nuclear weapons are used over the next 15 or 20 years,"** said Bruce Blair, president of the Center for Defense Information, **"first and foremost by a terrorist group that gets its hands on a Russian nuclear weapon or a Pakistani nuclear weapon." Finally, there's the real rogue nation of proliferation, Pakistan.** We know that Abdul Qadeer Khan, the Islamist father of Pakistan's bomb, peddled materials to Libya and North Korea, and we don't know who else.

"It may be that A. Q. Khan & Associates already have passed bomb-grade nuclear fuel to the Qaeda, and we are in for the worst," warns Paul Leventhal, founding president of the Nuclear Control Institute. It's mystifying that the administration hasn't leaned on Pakistan to make Dr. Khan available for interrogation to ensure that his network is entirely closed. **But unless we act more aggressively, we will get a wake-up call from a nuclear explosion** or, more likely, a "dirty bomb" that uses radioactive materials routinely lying around hospitals and factories (Kristof, 2004).

**Title/Headline:** *Al Qaeda Bluffing About Having Suitcase Nukes, Experts Say: Russians Claim Terrorists Couldn't Have Bought Them*

**Abstract:** Ayman al-Zawahri, al Qaeda's No. 2 man, has bragged that the terrorist group bought suitcase nuclear bombs from former Soviet nuclear scientists in Moscow and Central Asia, but experts on Russia's nuclear program dismiss the statements, saying Osama bin Laden's deputy is bluffing. Al-Zawahri, the Egyptian doctor believed to be a mastermind of the Sept. 11, attacks, laughed and said: **"If you have \$30 million, go to the black market in central Asia, contact any disgruntled Soviet scientist and a lot of dozens of smart briefcase bombs are available,"** Mir reported. **"They have contacted us, we sent our people to Moscow, to Tashkent (the capital of Uzbekistan), to other Central Asian states, and they negotiated, and we purchased some suitcase bombs."** **The idea of al Qaeda's acquiring suitcase nuclear bombs -- compact, easily portable bombs shaped like briefcases or backpacks that can be detonated by timers -- is the sum of all fears for Washington.** A suitcase nuclear bomb detonated in the center of a metropolitan area can instantly kill tens of thousands of people and expose hundreds of thousands more to levels of radiation that would kill them within **24 months; millions of others would suffer from radiation poisoning.** But Russian nuclear officials and experts on the Russian and post-Soviet nuclear programs adamantly deny that al Qaeda or any other terrorist group could have bought Soviet-made suitcase nukes, which were built in the 1960s for use against NATO and U.S. targets by special Soviet military intelligence agents. **"(Al-Zawahri) is bluffing,"** an unnamed official at the Russian Federal Nuclear Energy Agency told the official Ria-Novosti news agency Monday. **"It is practically impossible not only to buy nuclear weapons but even their components in Russia."** **U.S. security experts have also said it is unlikely that bin Laden is close to acquiring nuclear weapons technology, although he clearly wants it.** A U.S. federal indictment handed down in 1998 charges that beginning in 1993 al Qaeda members **"made efforts to procure enriched uranium for the purpose of developing nuclear weapons"** (Badkhen, 2004).

**Date:** July 14, 2004

**Source:** Newsmax, Paul L. Williams

**Title/Headline:** *Al-Qaida Has Nuclear Weapons Inside U.S.*

**Abstract:** Williams claims that al-Qaida has been planning a spectacular nuclear attack using six or seven suitcase nuclear bombs that would be detonated simultaneously in U.S. cities. Williams' contention is not far from what U.S. intelligence believes, a source close to Homeland Security Secretary Tom Ridge has told NewsMax. **The source said Ridge claimed that U.S. intelligence believes terrorists already have smuggled into the U.S. actual atomic devices, as opposed to so-called "dirty nukes" that simply are conventional bombs that help spread radiation.** Shortly after the Indian nuclear tests, Pakistan made an all-out effort to join the nuclear club, the author says. Islamabad received help from sympathetic nations, namely China and North Korea. Williams traces the rampant spread of nuclear bomb development to a leading Pakistani scientist, Dr. Abdul Qadeer Khan. **Khan, described as an "Islamic extremist," also has been depicted by former CIA chief George Tenet as "the father of Pakistan's nuclear program."** It is believed the Pakistani gained his expertise while working in the Netherlands, where he allegedly stole technology used in uranium reprocessing, a key procedure for building an atomic bomb. Pakistan successfully detonated two nuclear weapons inside a northern mountain range in the late 1990s. Khan, arrested by Pakistani police in February under White House pressure, admitted selling nuclear technology to numerous foreign countries, including North Korea and Libya. **According to Williams, another beneficiary of Khan's "contacts" was al-Qaida.** **The author reports that the U.S. got its first "hard" evidence of a connection when it invaded the Afghan capital of Kabul in 2001.**

A former al-Qaida safe house was found to be loaded with documents detailing dealings with the Pakistani scientist. The finding was so serious, says Williams, that Tenet traveled to Afghanistan and Pakistan to follow up on the discovery. Tenet: **'They Are Coming'** Perhaps it was such intelligence that led Tenet to say in October 2002: **"The threat environment we face is as bad as it was before September 11. It is serious. They have reconstituted. They are coming after us."** Almost from the moment 9/11 happened, the U.S. has been on a heightened state of alert and worry over the possible use of nuclear weapons. On the day of the attack, **President Bush left Florida and began criss-crossing the country in Air Force One in maneuvers consistent with a president preparing for a nuclear attack.** Shortly after Sept. 11, Taliban leader Mullah Omar claimed to the BBC that the main intent of al-Qaida was the **"bigger cause," which he described as the "destruction of America."** Asked pointedly if this meant the use of nuclear weapons against the U.S., he responded: **"This is not a matter of weapons. We are hopeful for God's help. The real matter is the extinction of America. And, God willing, it will fall to the ground."** Omar cryptically suggested that a nuclear plan was already under way at the time of Sept. 11. **And how could al-Qaida manage to transport such weapons into the U.S.?** Williams points out that the **borders with Mexico and Canada are still dangerously porous and not equipped to detect the smuggling of nuclear materials.** U.S. seaports are even more vulnerable, he argues. **Though New York City would seem to be the No. 1 target of another attack by al-Qaida,** Williams points out other U.S. cities have been mentioned in intercepted intelligence chatter. **Among those discussed: Boston, Los Angeles, Chicago, Dallas, Philadelphia, Miami, Washington and Rappahannock County, Va.** Why a small rural county in Virginia? Williams says it houses the underground command center the White House would use in time of war. He hastens to add that time "may not be on our side." **"It was eight years between the World Trade Center attacks. Islam preaches patience. They will attack when they want,"** Williams concluded. More chilling was the response from the International Atomic Energy Agency, the U.N.'s nuclear watchdog. One official, speaking on background, told NewsMax: **"We have no comment. It is not within our responsibility to track atomic bombs"** (Stogel, 2004).

**Date:** July 22, 2004

**Source:** Military.com, H. Thomas Hayden

**Title/Headline:** *Suitcase Nukes*

**Abstract:** Since the Associated Press reported back in March 2004 quoting an Australian television station interview with Pakistani journalist Hamid Mir, I have been looking for more reports on "suitcase nukes." Suitcase nukes, or atomic demolition devices (ADMs), are actually small nuclear bombs. Both the Soviets and the US had such devices during the "Cold War." They were to be carried by Special Operations Forces who would be parachuted ahead/behind main force units using the ADMs to destroy large bridges, collapse mountain passes, or destroy entire major headquarters. These ADMs can be no larger than a king size suitcase. Some were designed for a large backpack. They were considered tactical nukes, and authority for usage could have been released to the Soviet "Front" commander or the US Theater Commander-in-Chief. **The US has claimed to have long dismantled their ADMs but the Soviets and now the Russian government have not provided complete information their ADMs.** Former Soviet General Ledbed, once a candidate for the Russian presidency and an opponent of Boris Yeltsin, reported just before his untimely death that **over 50 ADMs were missing from the Soviet arsenal.** Ledbed died of mysterious circumstances while he was running for the Russian presidency. No one ever proved or disproved the Ledbed allegations. **In an interview broadcast on Australian Broadcasting Corporation television, Hamid Amir, a Pakistani journalist, said he had met with Dr. Ayman al-Zawahri, the Number Two Al Qaeda leader behind Osama bin Laden. Dr. Ayman al-Zawahri claimed that "smart briefcase bombs" were available on the "black market."** There was no mention of when or where the interview was conducted. When asked how difficult it was to buy and operate ADMs, Dr. Al-Zawahri is reported to have laughed and said: **"Mr. Mir, if you have \$30 million, go to the black market in central Asia, contact any disgruntled Soviet scientists, and a lot of smart briefcase bombs are available."** Al-Zawahri added, **"They have contacted us, we sent our people to Moscow, to Tashkent, to other central Asian states, and they negotiated, and we purchased some suitcase bombs."** It has been well known that Al Qaeda has sought to acquire nuclear weapons. Osama bin Laden, in November 2001, according to the AP report, in an interview with another Pakistani journalist, boasted about his acquiring "components." Russian and Pakistani top nuclear scientists have been investigated for selling sensitive equipment and nuclear technology to Iran, Libya, and North Korea. **Why would there be any doubt that if Al Qaeda had the money, someone had the materials for nuclear weapons.** Whether Saddam Hussein actually had a nuclear bomb program in existence when the Coalition invaded Iraq seems to be open to question. However, no one doubts that Saddam had an on going "research" program for nuclear bombs. Additionally, it should be clear to all that Saddam had a close working relationship with many Soviet general officers and could have easily bought a suitcase nuke for a price. In his new book, **Osama's Revenge: The Next 9/11, Paul L. Williams, who claims to be a consultant to the FBI, says that Al Qaeda has been planning a spectacular nuclear attack using six or seven suitcase bombs that would be detonated simultaneously against US cities.** **In discussing Dr. al-Zawahri, Mir described him as the "real brains behind Osama Bin Laden."** According to Mir, Dr. Al-Zawahri is the real strategist and Osama bin Laden is the front man because of his money. Mir added that he thinks Al-Zawahri is more dangerous than Bin Laden because Al-Zawahri planned the 9/11 attacks on the US while Bin Laden funded the operations. Before going into deep cover, both **Osama bin Laden and Dr. al-Zawahri, threaten after the loss of the Taliban in Afghanistan and the expulsion of Al Qaeda from Afghanistan, that the next attack on the US would be more spectacular than the 9/11 attack.** Dr. Al-Zawahri is an Egyptian born surgeon. He was thought to be hiding with Osama bin Laden in the rugged mountain area along the Pakistan-Afghanistan border. Other reports put bin Laden and Al Zawahri in Iran. My bet is that both are living with their families where no one would expect to find them. **Osama bin Laden is in Saudi Arabia and Al-Zawahri must be with him. Bin Laden's mother and some of his brothers have long been known to provide support to bin Laden. Osama bin Laden comes from one of the wealthiest families in the world. It would not be too difficult to live behind the many 10-foot high walled villas in Saudi Arabia. No one outside immediate family would ever see the most wanted men on earth, if they chose to temporarily halt all contact with the outside world except through their most trusted family members.** While much has been in the news about a "dirty bomb" - radiological materials wrapped in large amounts of TNT or C-4 like materials - the facts are that a dirty bomb would do more psychological harm than any kind of physical damage. Small dirty bombs can be made by anyone with access to radiological materials, like spent nuclear fuel rods, hospital radiological materials, research isotopes, etc. However, a dirty bomb would be a little difficult to build without contamination to the amateur that might be so foolish to do so. A suitcase bomb would be shielded and more easily transportable (Hayden, 2004). \$

**Title/Headline:** *Preventing A Nuclear 9/11*

**Abstract:** This month's hostage tragedy in Russia is a stark reminder of the potent terrorist threat that country still faces -- **a threat that could result in a nuclear Sept. 11 if terrorists manage to gain access to Russia's nuclear stockpiles.** Unfortunately, the recent claim by Russian Defense Minister Sergei Ivanov that inadequately secured nuclear stockpiles in Russia are only a "myth" is far from the truth. There has been a decade of improvements in Russia, but the work remains dangerously incomplete and the threat to nuclear facilities is terrifyingly high. While many of the best-known thefts of nuclear material occurred a decade ago, it was only last year that the chief of Russia's nuclear agency testified that nuclear security was underfunded by hundreds of millions of dollars. At nearly every site U.S. experts visit, they reach quick agreement with Russian experts on the need for substantial security upgrades. Russia's decision to send additional troops to guard nuclear facilities in the wake of the most recent terrorist attacks belies the notion that these facilities were adequately secured before. Moreover, that heightened troop presence is not likely to last and will do little to reduce the danger of theft by insiders. **Meanwhile, terrorists are zeroing in on these nuclear stockpiles. Top Russian officials have confirmed at least two cases in 2001 of terrorists carrying out reconnaissance at Russian nuclear warhead storage sites. The 41 heavily armed, suicidal terrorists who seized hundreds of hostages at a Moscow theater in 2002 reportedly considered seizing the Kurchatov Institute instead -- a site with enough highly enriched uranium (HEU) for dozens of nuclear weapons.** In 2003 proceedings in a Russian criminal case revealed that a Russian businessman had been offering \$750,000 for stolen weapon-grade plutonium for sale to a foreign client. **Al Qaeda has been actively seeking nuclear material for a bomb and has strong connections to Chechen terrorist groups.** Comprehensive U.S.-funded security upgrades have been completed for only 22 percent of Russia's potential nuclear bomb material; upgrades for tens of thousands of bombs' worth of material are still incomplete. Disputes over access to sensitive sites, liability, and other bureaucratic and political obstacles have been allowed to stymie progress for years. This is a global problem. More than 130 research reactors in dozens of countries still operate with HEU fuel, and many have no more security than a night watchman and a chain-link fence. **Pakistan's heavily guarded nuclear stockpiles face huge threats, from both insiders and outsiders, including large remnants of al Qaeda and the Taliban in the country. The good news is that this is a solvable problem. Plutonium and HEU -- the essential ingredients of nuclear weapons -- are too difficult for terrorists to make. If the world's stockpiles can be locked down and kept out of terrorist hands, nuclear terrorism can be prevented.** Many of the needed programs are in place. In addition to continuing efforts to secure Russia's stockpiles, the administration has been exploring similar cooperation with Pakistan and others -- and Energy Secretary Spencer Abraham has just launched a Global Threat Reduction Initiative (GTRI) designed to remove potential bomb material entirely from the world's most vulnerable sites rapidly. Three steps are urgently needed if the world is to win the race to lock down these stockpiles before the terrorists get to them. **First, it will be crucial to implement GTRI as quickly, flexibly and comprehensively as possible -- with a target of removing potential bomb material from the world's highest-risk facilities within four years.** Congress should give Abraham both the explicit and flexible authority and the additional funds he needs. Second, the United States and Russia must drastically accelerate their efforts to secure Russia's stockpiles. The next U.S.-Russian summit should focus on agreements to sweep aside bureaucratic and political obstacles and set an agreed deadline for getting the job done. President Bush needs to make clear to Russian President Vladimir Putin that locking down these stockpiles quickly and permanently is central to U.S.-Russian relations and to Russia's own security. **Third, the United States must expand the security upgrade effort to the rest of the world, forming a fast-paced global partnership to quickly lock down all the vulnerable nuclear caches that cannot simply be removed or eliminated.** Making all this happen will require a sea change in the level of sustained White House leadership, no matter who is president. **A full-time senior official is needed -- one who has the president's ear -- to lead the myriad efforts in many agencies meant to block the terrorist pathway to the bomb. This official must also keep the issue on the front burner at the White House day in and day out. Only then will we have done all we should to reduce the risk of a nuclear Sept. 11** (Bunn & Wier, 2004).

**Title/Headline:** *Preventable Nightmare: Al Qaeda Wants To Nuke A U.S. City. There Are Simple Ways To Stop It*

**Abstract:** In October 2001, a top-secret team was dispatched to New York City to search for a nuclear bomb. According to a CIA agent code-named Dragonfire, **Al Qaeda had gotten hold of a nuclear weapon produced by the former Soviet Union and had successfully smuggled it into the city.** Under a cloak of secrecy that excluded even Mayor Rudolph Giuliani, the Nuclear Emergency Search Team, or NEST, began a hunt for the 10-kiloton bomb whose Hiroshima-sized blast could have obliterated a significant portion of Manhattan. NEST is a SWAT team of "nuclear ninjas." When mobilized, members drop their day jobs as physicists, engineers and explosives experts to search for and dismantle weapons before they explode into mushroom clouds. **Often undercover, a "sports fan" may hide his sophisticated radiation-detection equipment in a golf bag, a "businesswoman" in her attache case.** If a nuclear device is found, teams compare it with NEST's catalog of existing designs and possible home-made bombs for clues about how to disarm it. But, as one member of the teams has conceded, even **locating a nuclear device amid background radiation is like "looking for a needle in a haystack of needles."** As NEST teams scoured New York City, Vice President Dick Cheney left Washington for a secret underground site, later disclosed to be on the Maryland-Pennsylvania border. **President Bush was concerned that Al Qaeda might have smuggled a nuclear weapon into the capital as well.** Several hundred federal employees joined the vice president in his bunker for many weeks, preparing an alternative government should a nuclear explosion wipe out Washington. The suspected nuclear device in New York City was never found. But the threat was credible for good reasons. Did former Soviet stockpiles include a large number of 10-kiloton weapons? Yes. Could the Russian government account for all its nuclear bombs? No. **Could Al Qaeda have acquired one? Yes.** Could it have smuggled a nuclear weapon through border controls and into a U.S. city? Yes. In a moment of gallows humor, one official quipped that terrorists could have wrapped a bomb in one of the bales of marijuana routinely smuggled into cities like New York and Los Angeles. In the weeks and months following Sept. 11, the U.S. national security community was waiting for the second shoe to drop. In the 1990s,

when I served as an assistant secretary of Defense, I prepared a highly classified memorandum on possible terrorist attacks, ranked in terms of potential damage to the United States, titled "A Hundred Horribles." An attack by a hijacked aircraft on trophy buildings fell in the lower half of the list. **First place on everyone's list was the detonation of a nuclear bomb in a U.S. city. Only a nuclear explosion can kill hundreds of thousands of people instantly.** The factors that made Dragonfire's report plausible in October 2001 are even more acute today. **Osama bin Laden has declared the production of nuclear weapons "a religious duty."** Though New York City is regarded as the most likely target, it is clear that Al Qaeda is not only capable but also interested in mounting attacks on other U.S. cities, where residents may be less prepared. Imagine the consequences of a 10-kiloton weapon exploding in Los Angeles. From the epicenter of the blast to a distance of approximately one-third mile, every structure and individual would vanish instantaneously. A bomb exploded at the intersection of Hollywood Boulevard and Highland Avenue would vaporize the historic Mann's Chinese Theatre and the Hollywood Walk of Fame. Buildings three-quarters of a mile from ground zero, like the Pantages Theater (the former home of the Academy Awards show), would look like the Murrah Federal Office Building in Oklahoma City after it was destroyed in 1995 by a massive bomb hidden inside a rental truck. The fires and radiation of the blast's outer circle would erase the sign in the Hollywood Hills. Soil incorporated into the fireball would be made radioactive and would return to Earth as radioactive fallout. This fallout would emit gamma, alpha and beta radiation, but the effect on nearby cities would be determined by environmental conditions, weather patterns, rain, wind, terrain, etc. **Where could Al Qaeda obtain a nuclear bomb? Russia is the most likely source in Bin Laden's quest for nuclear weapons. Russia's 12-time-zone expanse contains more nuclear weapons and materials than any country in the world, including 8,600 assembled warheads and enough weapons-usable material for 80,000 more, much of it vulnerable to theft. Pakistan ranks a close second as a potential source.** When I interviewed Gen. Pervez Musharraf, Pakistan's president, earlier this year, he claimed that within his army "even one bolt of a rifle cannot be lost." But as we now know, the father of Pakistan's atomic program, Abdul Qadeer Khan, was the kingpin of a black market in nuclear technology, fissile material and technical assistance stretching back more than a decade. The head of the International Atomic Energy Agency has called Khan's network a "Wal-Mart of private-sector proliferation." And further potential suppliers, especially North Korea, cannot be ignored. **The largely unrecognized good news about nuclear terrorism is that it is preventable. Unlike bioterrorism, nuclear terrorism is a finite challenge manageable with a finite response.** The strategic narrows of the challenge is preventing terrorists from acquiring nuclear weapons or the materials from which a bomb could be made. It's a fact of physics: no highly enriched uranium or plutonium, no nuclear explosion, no nuclear terrorism. A serious campaign to prevent nuclear terrorism can be organized under a new doctrine of "three no's." The first strand of the strategy -- "no loose nukes" -- requires securing all nuclear weapons and weapons-usable material, on the fastest possible timetable, to a new gold standard. Equally the security of gold at Ft. Knox. "No new nascent nukes" means no new national capabilities to enrich uranium or reprocess plutonium. The third no -- "no new nuclear weapons states" -- draws a bright line under the current recognized nuclear powers and says unambiguously, "no more." **Al Qaeda spokesman Suleiman Abu Gheith has stated Al Qaeda's objective: "to kill 4 million Americans -- 2 million of them children -- and to exile twice as many and wound and cripple hundreds of thousands."** Nearly 3,000 died in the Sept. 11 attacks. It would take about 1,334 similar assaults to reach 4 million. Or it could take one nuclear weapon. **Al Qaeda has made its intentions clear. America's challenge is to prevent the terrorists from succeeding** (Allison, 2004).

**Title/Headline:** *A Nuclear 9/11 Could Shut Us Down*

**Abstract:** In our war on terror, the enemy is now positioning to strike America from yet another direction and with a potentially fatal blow, with many thanks to France. The 9/11 Commission pointed out that our biggest failure was "a failure of imagination." France has developed an advanced diesel powered submarine. **It was designed to run super quiet and escape detection by the current sensors placed by the U.S. along the bottoms of the oceans.** It carries 16 cruise missiles that can deliver nuclear warheads. It can travel about 12,000 miles from home and remain submerged, and undetected, for up to 60 days. **France sold the first submarine to Pakistan in roughly 2000.** But Pakistan does not require this weapon system for an adequate defense against India, its main rival. **This stealth submarine is capable of striking coastal cities almost anywhere in the world.** Pakistan also induced France to show the Pakistanis how to build a shipyard where they have already built their second submarine. In 18 months Pakistan will have its third stealth submarine. **Professor Bloom reminds us that the Moslems in Pakistan are highly radicalized--not all Moslems, but a very significant percentage. He also reminds us that historically a small number of radicals can seize control of a government away from the majority.** It has happened before, in the 1930's with both Germany and Japan, for example. We recently learned that even under the "moderate" Musharef, Pakistan was proliferating nuclear weapons technology to other Moslem regimes. **Bloom argues that bin Laden might wait until submarine number three is ready to then topple Musharef, seize power, and acquire Pakistan's 40+ nuclear warheads for mounting on the submarine's cruise missiles.** At this point we will have "intent plus capability." **Osama bin Laden could then direct these submarines to incinerate some of our coastal cities such as Boston, New York, Washington, San Francisco, Los Angeles, etc.** And in case we had any ideas about retaliation we could be advised that they have a lot more nukes ready to launch in case we do not immediately surrender. Prof. Bloom has discussed all this with our intelligence people. Some take it seriously, some are highly skeptical and others say not to worry because our government is monitoring the situation. **As Prof. Bloom says on his web site: "9/11 woke us up, a nuclear 9/11 could shut us down."** Americans need to be asking tough questions of our government right now and demanding straight answers. **What in the world is France doing selling these stealth submarines to Pakistan? Why does Pakistan need such a dangerous weapons system when it makes no sense regarding any threat from India? Why is the U.S. government allowing this potential threat to develop?** The stakes keep getting higher and higher. **We cannot afford a nuclear 9/11 but realistically what are the chances that America will act in time?** History is not encouraging. We failed to stop Pakistan from going nuclear and now we learn that Pakistan was also proliferating nuclear technology to other Arab states and to Iran. If the picture looks ominous it is not because all the good news is being withheld. Some will complain and attack the messenger. **But are we better off pretending that this massive danger does not exist? This story is not a secret. There are a lot of people among our leadership who purport to be wise and courageous. Now is their time to come forward and lead this nation** (Neuwirth, 2004).

**Title/Headline:** *Al-Qaida Nukes Already In U.S.*

**Abstract:** According to captured al-Qaida leaders and documents, the plan is called the "**American Hiroshima**" and involves the **multiple detonation of nuclear weapons already smuggled into the U.S. over the Mexican border** with the help of the MS-13 street gang and other organized crime groups. **Al-Qaida has obtained at least 40 nuclear weapons from the former Soviet Union** – including suitcase nukes, nuclear mines, artillery shells and even some missile warheads. In addition, documents captured in Afghanistan show al-Qaida had plans to assemble its own nuclear weapons with fissile material it purchased on the black market. In addition to detonating its own nuclear weapons already planted in the U.S., military sources also say there is evidence to suggest al-Qaida is paying former Russian special forces Spetznaz to assist the terrorist group in locating nuclear weapons formerly concealed inside the U.S. by the Soviet Union during the Cold War. **Osama bin Laden's group is also paying nuclear scientists from Russia and Pakistan to maintain its existing nuclear arsenal and assemble additional weapons** with the materials it has invested hundreds of millions in procuring over a period of 10 years. **The plans for the devastating nuclear attack on the U.S. have been under development for more than a decade.** It is designed as a final deadly blow of defeat to the U.S., which is seen by al-Qaida and its allies as "the Great Satan." At least half the nuclear weapons in the al-Qaida arsenal were obtained for cash from the Chechen terrorist allies (WorldNetDaily, 2005).

**Title/Headline:** *Tancredo To Request Al-Qaida Nuke Briefing*

**Abstract:** Rep. Tom Tancredo, R-Colo., a staunch critic of the federal government's lax immigration and border enforcement policies, said yesterday he would request a **briefing from the Justice Department on information it has on plans revealed by WND this week for a nuclear attack on the U.S. by al-Qaida terrorists.** Tancredo said he was greatly alarmed by the report and would seek whatever information he could get from the nation's law enforcement authorities – either in classified or unclassified reports. Tancredo also plans to meet with the author of a book that provides **new evidence al-Qaida has used the insecure Mexican border to bring nuclear devices into the country along with thousands of sleeper agents.** **Al-Qaida's plans, known as "America's Hiroshima"** according to captured terrorists and terrorist documents, calls for the multiple detonation of nuclear weapons, already in the possession of Osama bin Laden's operatives currently inside the U.S. The agents and arms having been smuggled across the U.S.-Mexico border with the help of the MS-13 street gang and other organized crime groups, according to the report originating in Joseph Farah's G2 Bulletin, a premium, online intelligence newsletter published by the founder of WND. **The attack is designed to kill at least 4 million Americans. Al-Qaida has obtained at least 40 nuclear weapons from the former Soviet Union** – including suitcase nukes, nuclear mines, artillery shells and even some missile warheads, according to the report. In addition, documents captured in Afghanistan show al-Qaida had plans to assemble its own nuclear weapons with fissile material it purchased on the black market. **In addition to detonating its own nuclear weapons already planted in the U.S.,** military sources also say there is evidence to suggest al-Qaida is paying former Russian Spetznaz, or special forces operatives, to assist the terrorist group in locating nuclear weapons formerly concealed inside the U.S. by the Soviet Union during the Cold War. **Bin Laden's group is also paying nuclear scientists from Russia and Pakistan to maintain its existing nuclear arsenal and assemble additional weapons with the materials it has invested hundreds of millions in procuring over a period of 10 years.** In response to the G2 Bulletin revelations, Chris Simcox, founder of the Minuteman Civil Defense Corps, a citizen action group demanding the U.S. government take control of its borders, said an immediate military presence on the borders is now imperative "to stop the overwhelming influx of unidentified, potentially hostile and seditious persons coming across at an alarming rate." **"Terrorists have carte blanche to carry practically anything they want across our national line at this time,"** he said. "As ordinary citizens have warned this government for years, the only surprising part about the new information reported here is that nothing apocalyptic from Mexican-border weapons trafficking has yet happened. **"At this point, the next attempt to attack America at home is just a matter of 'when,' not 'if.'** And our unsecured borders have surely contributed to this threat – yet our government officials continue to fiddle while our nation's margin of security and safety burns away. **The president and Congress had better wake up before they have to answer for another devastating terrorist incursion on our own soil"** (WorldNetDaily, 2005).

**Date:** July 18, 2005

**Source:** World Net Daily

**Title/Headline:** *Al-Qaida's U.S. Nuclear Targets*

**Abstract:** Al-Qaida's prime targets for launching nuclear terrorist attacks are the nine U.S. cities with the highest Jewish populations, according to captured leaders and documents. **At least two fully assembled and operational nuclear weapons are believed to be hidden in the United States already,** according to G2 Bulletin intelligence sources and an upcoming book, "The al-Qaida Connection: International Terrorism, Organized Crime and the Coming Apocalypse," by former FBI consultant Paul L. Williams. The cities chosen as optimal targets are **New York, Miami, Los Angeles, Philadelphia, Chicago, San Francisco, Las Vegas, Boston and Washington, D.C.** **New York and Washington top the preferred target list for al-Qaida leadership.** **Bin Laden's goal, according to G2 Bulletin sources, is to launch one initial attack, followed by a second on another city to simulate the U.S. bombing of Hiroshima and Nagasaki.** The optimal dates for the attacks are Aug. 6, the anniversary of the Hiroshima bombing, Sept. 11 and May 14, the anniversary of the re-creation of the state of Israel in 1948. No specific year has been suggested, however, this Aug. 6 represents the 60th anniversary of the Hiroshima attack. **The captured terrorists and documents also suggest smaller attacks may take place on American soil before the nuclear incidents. They may include some involving automatic weapons at schools and shopping malls,** but will not include any airplane hijackings. Why? Because bin Laden does not want any failed efforts to overshadow "the success of Sept. 11." There will also not be any attacks on U.S. nuclear power plants. The rationale? The nuclear power plants can act as force multipliers when the

weapons of mass destruction are detonated. **Another requirement dictated from the top at al-Qaida is that the attacks take place in daylight, so that the whole world will be able to see the images of a mushroom cloud over an American city.** One of the sources for the information is Khalid Sheikh Mohammed, the chief planner of the Sept. 11 attacks, who is now in U.S. custody. According to Williams' sources, **thousands of al-Qaida sleeper agents have now been forward deployed into the U.S. to carry out their individual roles in the coming "American Hiroshima" plan** (WorldNetDaily, 2005).

**Date:** August 1, 2005

**Source:** World Net Daily

**Title/Headline:** *Chertoff Warns Of Nuclear Terror*

**Abstract:** Issuing yet the latest warning of the threat of nuclear terrorism in the U.S., Homeland Security Secretary Michael Chertoff said there are far worse security problems facing the country than bombings of mass-transit systems. In comments during a visit to Lawrence Livermore Laboratory in California this week, **Chertoff said the foremost concern for the nation's security now is the threat of a larger chemical, biological or nuclear attack.** Chertoff joins the growing list of public officials – including President Bush, Vice President Dick Cheney and Chertoff's predecessor at Homeland Security, Tom Ridge – who have strongly hinted that **nuclear terrorism has moved center stage as the No. 1 security threat facing the U.S.** Referring to the London bombings, Chertoff said: "We can't let what happened two or three weeks ago beguile our concerns about what could happen in the future" (WorldNetDaily, 2005).

**Date:** August 2, 2005

**Source:** World Net Daily

**Title/Headline:** *Nuke Terror To Strike U.S. By This Weekend*

**Abstract:** Intelligence gathered from captured al-Qaida documents and interrogations of captured operatives has provided the U.S. with some specific information about Osama bin Laden's favored dates for his decade-long plan for an "American Hiroshima" nuclear terrorist attack – **One of the most frequently cited dates is Aug. 6, the anniversary of the U.S. nuclear bombing of Hiroshima.** The Aug. 6 date and its association with Hiroshima was actually cited by captured al-Qaida operatives, according to U.S. military sources. "In addition to mentioning this date as a preferred target, **Al-Qaida operatives have made it clear they also prefer an attack during the daylight during the week to wreak maximum havoc and to be sure the entire world views the images of burning U.S. cities,**" said one knowledgeable military intelligence source. Other dates mentioned by other bin Laden watchers include Sept. 11 and May 14, the anniversary of the re-creation of the state of Israel in 1948. **But bin Laden also craves the element of surprise. Bin Laden has spent billions of dollars on the successful purchase and development of nuclear weapons** – money his al-Qaida terrorist network earned by directing poppy cultivation in the fields of Afghanistan, right under the noses of U.S. occupation forces. **The vast drug fortune has also aided al-Qaida in smuggling some of those nuclear weapons – along with thousands of sleeper agents – over the Mexican border with the help of the MS-13 criminal street gang, say the sources** (WorldNetDaily, 2005).

**Source:** World Net Daily

**Title/Headline:** *Author Says Prepare For Nuclear Terror*

**Abstract:** U.S. officials should get serious about nuclear terrorism by urging Americans to prepare for disaster by stockpiling food, water, building shelters and planning evacuation routes, says an author and former member of the Indiana House of Representatives. In response to reports al-Qaida is planning an "American Hiroshima" nuclear attack on the U.S. using weapons and operative already smuggled into the country, Don Boys, author of "Islam: America's Trojan Horse," says he is not trying to panic the public. **"In a few days or weeks, everyone who has not prepared for disaster will panic,"** he says. "I would like for you to realize that you may have already waited too long to properly prepare, and if you wait much longer, it will be too late to buy gold, guns, and groceries. ... **The name of the game will be survival, only survival.** Forget the job since it will be gone. Your Social Security or pension check? Don't count on it. Protection from local authorities? Probably not. You will be on your own." **Boys bases his advice on the words of U.S. officials – from President Bush to Vice President Dick Cheney to the directors of the FBI and Homeland Security – who have said nuclear terrorism is the greatest threat facing the nation and a virtual inevitability at some point.** "If U.S. officials are wrong and there is no danger from terrorists ... then breathe a sigh of relief, thank God for His mercy and continue with your life," he says. "However, if you are wrong (and U.S. officials are right), you and your family will be cold, hungry, and dependent on others to provide for your basic needs. Is it wise to take such an unnecessary risk?" Boys suggests Americans purchase non-electric tools, guns, ammunition, food and toilet paper. He says it would be wise to set aside small bills as well as quarters. **"A few boxes of No-Rad (potassium iodide anti-radiation tablets) will be more valuable than gold if you are in a contaminated area,"** he says. **"Get a supply today"** (WorldNetDaily, 2005).

**Date:** August 10, 2005

**Source:** World Net Daily

**Title/Headline:** *Nunn Sees Nuke Terror Threat*

**Abstract:** Sam Nunn, former Democratic senator and chairman of the Senate Armed Service Committee, says the threat of nuclear terrorism is real and must be addressed. Nunn is on a personal mission to point out how easy it would be for organized criminals to bribe or shoot their way into storerooms containing nuclear weapons in the former Soviet Union. **He points out how simple it would be for those organized crime elements to sell the weapons to terrorists who could smuggle them into the U.S. – a possibility more intelligence sources say has already happened. Now Nunn's nightmare is being shared nationwide through a new documentary produced by the Nuclear Threat Initiative. Called "Last Best Chance," the docudrama is free to anyone who requests one at the film's website. "The threat of nuclear terrorism is real,"** Nunn said in a phone call played on speakerphone to about 300 people gathered for a screening of the film at the Unitarian Universalist Congregation of Atlanta on a recent rainy weeknight. **"We really want to raise public awareness."** The executive director of the Nuclear Threat Initiative, Nunn noted that about 40 nations have enough material to make a nuclear weapon. Since the end of the Cold War, he said, the United States has helped secure about half the available weapons grade nuclear material, mostly in the former Soviet Union. **That leaves a lot of potentially loose warheads, he said, pointing out that the 9/11 Commission concluded that al-Qaida has been trying to obtain a nuclear weapon for 10 years. "We're in a race around the world between cooperation and catastrophe,"** he said. The docudrama's producers have offered a free DVD version of the film to anyone who asks in hopes that people will educate themselves and take action. Nunn and his colleagues are talking with television networks about the possibility of them airing "Last Best Chance," which features Fred Thompson, the former U.S. senator and actor known to viewers of "Law & Order" as the Manhattan district attorney. **Both presidential candidates said during the recent election that the threat of nuclear terrorism constituted the most significant threat the United States faces** (World Net Daily, 2005).

**Title/Headline:** *Al-Qaida's Nuclear Efforts: 'Sophisticated, Professional'*

**Abstract:** The man who headed the Central Intelligence Agency's Osama bin Laden desk said he recognized al-Qaida's single-minded efforts to secure nuclear weapons for use against the U.S. nearly a decade ago, but multiple efforts to have the terror leader captured before Sept. 11, 2001, went unheeded. **"We had found that he and al-Qaida were involved in an extraordinarily sophisticated and professional effort to acquire weapons of mass destruction,"** Michael Scheuer told CBS News. "In this case, nuclear material, so by the end of 1996, it was clear that this was an organization unlike any other one we had ever seen." Scheuer was one of the CIA's foremost authorities on bin Laden. He was the senior intelligence analyst who created and then advised a secret CIA unit for tracking and eliminating bin Laden beginning in 1996. Scheuer said his bosses at the CIA were skeptical of the information about bin Laden's nuclear ambitions and ability. In a letter to the House and Senate Intelligence Committees earlier this year, **Scheuer says his agents provided U.S. government officials with about 10 opportunities to capture bin Laden. All of them were rejected. By 1999, Scheuer was in trouble at the CIA because of his persistence about getting bin Laden. "I think I became too insistent that we were not pursuing this target with enough vigor and with enough risk-taking – an unwillingness to take risks,"** said Scheuer. "I got relieved of the position I was in. I had a lovely sojourn in the library and then had other sojourns since." His exile ended shortly after the attacks of Sept. 11, when he was brought back to the bin Laden unit as a special adviser. Now, he says, the problems are greatly complicated. **He also says he fully anticipates bigger attacks on the U.S. – including the probability of a nuclear terrorist attack.** "One of the great intellectual failures of the American intelligence community, and especially the counterterrorism community, is to assume if someone hasn't attacked us, it's because he can't or because we've defeated him," said Scheuer. **"Bin Laden has consistently shown himself to be immune to outside pressure. When he wants to do something, he does it on his own schedule."** About the prospects of a nuclear terrorist strike on the U.S. by al-Qaida, he says: **"I don't believe in inevitability. But I think it's pretty close to being inevitable. ... Yes, I think it's probably a near thing."** Scheuer points out that bin Laden has announced his intentions. **"He secured from a Saudi sheik named Hamid bin Fahd a rather long treatise on the possibility of using nuclear weapons against the Americans,"** he said. **"Specifically, nuclear weapons.** Scheuer says the fatwa was issued in May 2003, "and that's another thing that doesn't come to the attention of the American people." He blames Sept. 11 on poor leadership from people like former CIA Director George Tenet, his chief deputy, Jim Pavitt, and former White House counterterrorism czar Richard Clarke. Scheuer also says the U.S. makes a mistake in not respecting the capabilities of bin Laden. **"I think our leaders over the last decade have done the American people a disservice in continuing to characterize Osama bin Laden as a thug, as a gangster, as a degenerate personality, as some kind of abhorrent individual,"** said Scheuer. "He surely does reprehensible activities, and we should surely take care of that by killing him as soon as we can. **But he's not an irrational man. He's a very worthy enemy. He's an enemy to worry about"** (WorldNetDaily, 2005).

**Title/Headline:** *Does Al Qaeda Have Nuclear Weapons: Part One*

**Abstract:** Paul Williams is a journalist who has written two books on the nuclear terror threat. In 2004 he came out with *Osama's Revenge* in which he claimed that **al Qaeda was preparing a nuclear attack against America that would take place simultaneously at various locations throughout the country.** In 2005, Williams offered us *The Al Qaeda Connection*, in which he describes the relationship between **al Qaeda nuclear weapons and narcotics smuggling. Williams points to testimony from captured terrorists and borderland criminals who say that a mass nuclear attack on the U.S. is imminent.** Like many observers I'm not sure how to analyze the testimony of political fanatics who are told lies by their superiors as a matter of course. And I don't know much weight to give the testimony of narcotics traffickers. Piecing together testimony is tricky business. Furthermore, I am skeptical when it comes to the idea that a non-state actor (i.e., al Qaeda) possesses dozens of nuclear weapons and a counterintelligence capacity sophisticated enough to maintain and hide these weapons in various countries and, even more astounding, move them undetected from place to place in preparation for a mass assault on the United States. Opinions on the likelihood of this scenario differ, and the complex technical issues are many. I had the opportunity to interview Mr. Williams during the past week and found him to be passionate, persuasive and highly informed.

**Does Al Qaeda Have Nuclear Weapons?:** For a small group of fanatics to accomplish what many nations have been unable to accomplish (including Iraq under Saddam Hussein), one has to establish an economy of scale and a richness of talent equal to the task. To build dozens of nuclear weapons, with sufficient miniaturization, requires tools and brainpower that only nations can muster. What Williams therefore suggests is that Islam according to the Prophet Mohammed is a nation in its own right; and Osama bin Laden has won the hearts and minds of a majority within this nation. **The United States is not simply fighting a war against al Qaeda, Williams told me, but a host of Muslim organizations. The Declaration of War against the United States of February 23, 1998** was signed not only by Osama bin Laden but also Ayman al-Zawahiri, leader of the Jihad Group of Egypt; Abu Yasir Rifai Ahmad Taha, leader of the Armed Islamic Group (Algeria); Sheikh Mir Hamzah, secretary of the Jamiat-ul-Ulema-e-Pakistan; and Fazlul Rahman, leader of the Jihad Movement in Bangladesh. The fatwah received support from Asbat al Ansar (Lebanon), Harakat ul-Ansar (Pakistan), al-Badar (Pakistan), the Saafi Group for Proselytism and Combat (Algeria), Talaa al Fath (Vanguards of Conquest), the Groupe Roubaix (Canada/France), Harakat ul Jihad (Pakistan), Jaish Mohammed (Pakistan), Hezbollah (Iran/Lebanon/Syria), Hamas (Israel/Palestinian Authority), al Gama'a al-Islamiyya (Egypt), al-Hadith (Pakistan), Bayt al-Imam (Jordan), Islamic Jihad (Palestinian Authority), Islamic Movement of Uzbekistan, al-Jihad (Bangladesh), al-Jihad Group (Yemen), Laskar e-Toiba (Pakistan), Lebanese Partisans Group, Libyan Islamic Group, Moro Islamic Liberation Front (Philippines), Partisans Movement (Kashmir), Abu Sayff (Philippines), Al-Ittihad (Somalia), Ulema Union of Afghanistan, *et alia*. This goes to show that the jihad has widespread support among Muslims throughout the world. Nor is the war a war against terror. Terror is a tactic not a nation or militant body." **Williams seems to be saying that America hasn't properly identified its enemy.** Instead, we have evaded the task by declaring war on the enemy's tactics. According to Williams, the enemy of America is a specific militant religious group. The clash of faiths in the present conflict is therefore fundamental. Saudi Arabia, in short, is not much different than Afghanistan under the Taliban, Williams explained. This brings us to the crux of the problem. In 2001, the CIA conducted a poll which showed that over 90 percent of the Saudis between the ages of 25 and 45 support bin Laden and the jihad. Regarding the destructive power of al Qaeda, replied Williams, **bin Laden has been in search of nuclear weapons and materials since 1992 when he was in the Sudan.** At that time, he made several purchases from Pretoria. This was verified by testimony in federal court in New York, viz., *U.S. vs. Osama bin Laden* (1999). **Regarding the destructive capability of radical Islam, consider the fact that Pakistan is a member of the nuclear club and that eight assassination attempts already have been undertaken against President Musharref.** When Musharref goes he is, by all accounts, a dead man walking he will be replaced by the mullahs who are intent upon our destruction. Also, consider the situation in Iran, which is about to enter the nuclear club. Iran, of course, represents the opposite side of Islam the Shia. Then take into account that nuclear laboratories, thanks to Dr. A.Q. Khan, have been established in Egypt, Malaysia, Indonesia, Algeria, Kuwait, Myanmar and Abu Dhabi. We have never faced a threat of this magnitude. Put in these terms, of course, a catastrophic future is indicated. The danger is inarguable and, to make matters worse, the United States seems unable to admit what has occurred and formulate a new national security policy. Even after 9/11 the country is clearly unprepared. As a military expert told me two years ago, **America is wide open to a massive terrorist assault.** Like the majority of Americans today, President Bush will not accept the darker truths that underlie the situation. I asked Williams if he could prove that al Qaeda has nuclear weapons. **Yes, he said, there is undeniable proof that al Qaeda has nuclear weapons. In December 2001, as U.S. troops combed the tunnels near an al Qaeda base in Kandahar, they discovered uranium-238 in a lead-lined canister.** This was reported in every major U.S. newspaper, including *The New York Times*. In October 2001, an al Qaeda operative was arrested as he attempted to enter Israel through the checkpoint at Ramallah. **The operative had a bomb strapped to his back that Mossad first believed was a radiological devise but later discovered, as verified by UPI, that it was a tactical nuke.** Early in 2001, two British agents, as reported by BBC on Nov. 26, 2001, managed to infiltrate an al Qaeda training camp in Afghanistan by posing as recruits from a London mosque. The agents eventually were sent to Herat where they saw nuclear weapons being manufactured. **Finally, Dr. Mahmood and Dr. Majid of the A.Q. Khan Research Facility in Pakistan admitted upon interrogation that they provided assistance to al Qaeda in developing nuclear weapons and that at least one weapon was forward deployed from Karachi to the United States.** You can check out this story by turning to A. Borchgrave, *Al Qaeda Nuclear Agenda Verified*, *Washington Times*, Dec. 10, 2001. There are numerous other instances in which proof has been provided but the above accounts should suffice to dispel all doubt (Nyquist, 2005).

**Source:** Financial Sense Online, J. R. Nyquist

**Title/Headline:** *Does Al Qaeda Have Nuclear Weapons: Part Two*

**Abstract:** I interviewed Paul Williams about his claim that al Qaeda has nuclear weapons. Williams offers many facts in support of his

case, but facts are slippery. As reported last week, Williams recited how uranium-238 was discovered near an al Qaeda base in December 2001. But uranium-238 is better known as depleted uranium. It cannot be used to make a fission reaction. I asked Williams about the uranium-238 found in Afghanistan and he agreed that uranium-238 cannot be used for a tactical nuclear device but is a key ingredient for a dirty nuke. According to Williams, if a dirty nuke made from uranium-238 were detonated in New York City, thousands would die from the conventional explosion and thousands more would die from radioactive contamination, which is the worst kind of death imaginable. **The fact that al Qaeda would leave such material worth millions behind shows that the groups interest is in the serious bombs [i.e., tactical nukes].** Bin Laden has confirmed this himself as has al-Zawahiri, Mullah Omar, Abu Ghaith, Khalid Sheikh Mohammed, etc. Any doubts about al Qaeda's possession of the real McCoy's tactical nukes should have been put to rest by Michael Scheuer, author of *Imperial Hubris*. Michael was the CIA operative in charge of the Alec file on bin Laden. On Nov. 14, 2004, he appeared on 60 Minutes to confirm that al Qaeda possesses an arsenal of tactical nukes and that a nuclear attack by al Qaeda is pretty close to being inevitable. Credible testimony about al Qaeda nukes is out there. Consider the Oct. 14, 2001 UPI report that Israeli officials had detained a Palestinian with a radiological backpack bomb attempting to enter Jerusalem from Ramallah. This journalistic tidbit comes from UPI intelligence reporter Richard Sale. On Dec. 20, 2001, Sale wrote an even more astonishing UPI story in which he noted: **Initially, there were conflicting reports as to whether the pack contained a radiological weapon [i.e., dirty bomb] or a nuclear system [i.e., fission bomb]. UPI re-interviewed the sources who saw the [CIA] Daily Report item, and they insisted that the weapon was nuclear, not radiological.** American officials make various and conflicting statements to reporters. Some say the al Qaeda nuclear attack story is bunk. Others say it is probably true. If Israeli security officials caught a Palestinian with a Soviet backpack, no official acknowledgment would be expected because governments are responsible entities and no democratic government could successfully govern a nation that *seriously* expects a large-scale nuclear attack in the near term. Imagine the investment climate under such a government. Imagine what would happen to employment, opportunity, currency and consumer goods. People would begin hoarding food and other necessities. They would dump paper money for gold and silver. Economic collapse would surely follow. **I asked Williams if an al Qaeda nuclear attack on America might trigger a reciprocal war of annihilation between Christian and Muslim nations?** Yes, he said. I then asked if the Muslim world is being successfully radicalized by bin Laden. Williams replied: Radical Islam is mainstream Islam. Wahhabism, the most radical manifestation of the teachings of the Prophet, became the official religion of Arabia when the Saud family established its dynasty in 1932. Life in Saudi Arabia is little different from life in Afghanistan under the Taliban. Women must wear long, black abaya gowns with their heads covered; witchcraft, apostasy and blasphemy remain capital crimes; and crucifixion remains a common form of punishment. The practices of religions other than Islam are not tolerated; virtual servitude exists for Hindu workers; and non-Muslims cannot be buried within the country. And yes, according to a Gallup poll, the majority of the Islamic world expresses admiration for bin Laden and support for the Jihad. According to Williams, **a war of mass destruction between Christian and Muslim is already on its way. The sides have been drawn.** Furthermore, the United States cannot be defended at the outset of this war because its social system is incompatible with the requirements of defense. This is the implication of Williams's work. A consumer-oriented, multicultural society, sensitive to Muslim rights, cannot effectively oppose a Muslim nuclear insurgency. The apparent inaction of the U.S. government and the complacency of the public is easily explained. (1) Serious protective measures, in themselves, would cause a severe recession with predictable social and political consequences. The "negative" attitudes attending the proposed maximum security state are economically depressive, not only in terms of closing the borders, restricting trade and the free movement of people between countries, but also in terms of investment and public spending. (2) **Citizens are not going to accept facts, logic or testimony that effectively forces them to relinquish their life style or limit their choices.** Surrendering the consumer economy and the shopping mall regime is not an option. (3) One of the issues that the president and many other U.S. leaders have emphasized is that they are not simply defending the country. They are also defending a "life style." **In other words, the United States government is not properly oriented to defend the United States of America. It is oriented to defend a particular life-style.** (4) A close analysis of political criminality (in the nuclear context) suggests that liberal free market institutions with minimal internal security are unworkable and destined for collapse. (This is the main argument of my book, *Origins of the Fourth World War*.) The slowness, ineptness, sloth, corruption, narcissism and radical individualism of the shopping mall regime precludes and disdains strict and serious security measures needed to defend the country against nuclear threats whether from terrorists hiding in caves or communists sitting in Beijing. This is the situation America finds itself in today. **It would be preferable if the United States government, with wisdom and foresight, amended the laws and structure of American society in advance of a nuclear attack on the cities.** But the U.S. government is not free to halve the standard of living, curtail liberties and expel millions of resident aliens. **As elastic as America's system is, in economic terms, American society cannot be adapted to today's nuclear threat environment short of a political revolution (initiated by the president and/or Congress). Such a revolution cannot occur before a mass nuclear attack because the public will not be persuaded of the danger and the politicians dare not say that a retreat from consumerism is necessary** (Nyquist, 2005).

**Title/Headline:** *Al-Qaida Nuke Reactor Threat*

**Abstract:** An Internet posting at an Islamic forum relayed what purports to be a command to the al-Qaida organization in America to strike nuclear power plants inside the country. U.S. Central Command, which translated the original message, says it is skeptical of the authenticity of the message, calling it a "fantasy threat" that would "go unfulfilled." Aug. 8, 2005, al-Zawahiri said: "What you have seen, O Americans, in New York and Washington and the losses you are having in Afghanistan and Iraq, in spite of the blackouts by your media, are only the losses of the initial clashes. You will soon experience horrors that will make you forget the horrors you have encountered in Vietnam. **The fate of the world for the next Islamic year, if bin Laden has his way, will include the nuclear destruction of the United States**" (WorldNetDaily, 2005).

**Source:** Mirror World, Greg Szymanski

**Title/Headline:** *Nuclear Attack In America*

**Abstract:** The January air is again filled with rumblings about an imminent nuclear attack on American soil, as ominous signs are popping up all over the place indicating the "dropping of the real potato" is right around the corner. Sources inside the military and close to the action this week warned areas of "nuclear concern" within the next 10 to 90 days include Texas City, Tex., the Houston metro area, Charleston, S.C., Los Angeles, Ca., and Kansas City, Ka. "I am worried," said Jon Watkins of Texas City. "My family is right in the middle of it. I have asked two police officers to keep an eye out for any suspicious activity during the next 10 days. I also am sending a copy to the FBI of the interview I heard today on Greg Szymanski's, Investigative Journal, where his guest, **Army Capt. Eric May, presented compelling evidence that a nuclear attack, created by the Bush Cabal, could very well take place on or near Jan. 31, 2006, right here in Texas City.**" And From east coast to west, people like Watkins from all walks of life, including **military and civilian, are coming forward with stories about "an impending disaster," most of them linking the insidious Bush Cabal pushing the "nuke buttons," not the fictitious and Illuminati-created Al Qaeda terrorists. Cheney's direct orders to Strategic Command (STRATCOM), had specific plans to nuke Iran "if a nuclear blast occurred on American soil."** At that time, sources in the military stationed at Ft. Monroe, VA, warned how **a planned nuclear test exercise scheduled for the waters around Charleston, S.C., "may go live,"** the leak in the military saying this probably led to the strange firing of Gen. Kevin P. Byrnes, who may have gotten wind of the backdoor military nuclear plan. Other sources since have come forward, saying **Gen. Byrnes, head of the United States Army Training and Doctrine Command (TRADOC), was actually fired for not keeping "a better lid" on the nuclear plans, since the leaked information circulated heavily on the internet and other places drew too much attention for the Bush administration plans to go ahead with scheduled plans to "nuke its own country. Gen. Byrnes, one of the few military four star generals ever to be fired, was replaced Oct. 13, 2005, with Gen. William S. Wallace, now heading TRADOC and any future nuclear exercises at FT. Monroe.** "Remember how the Bush Cabal works," added Capt. May. **"Every attack has to be greater than first like sequels in a horror movie. Also remember the way they use names. First Oklahoma City, Okla., next New York City, N.Y. and what's next Texas City, Texas?"** (Szymanski, 2006).

**Source:** Global Research, Michel Chossudovsky

**Title/Headline:** *Is The Bush Administration Planning A Nuclear Holocaust?*

**Abstract:** While the 2001 Nuclear Posture Review sets the stage for the preemptive use of nuclear weapons in the Middle East, specifically against Iran, **the Doctrine for Joint Nuclear Operations goes one step further in blurring the distinction between "defensive" and "offensive" military actions: "The new triad offers a mix of strategic offensive and defensive capabilities that includes nuclear and non-nuclear strike capabilities,** active and passive defenses, and a robust research, development, and industrial infrastructure to develop, build, and maintain offensive forces and defensive systems ..." (Ibid) (key concepts indicated in added italics) **The new nuclear doctrine, however, goes beyond preemptive acts of "self-defense", it calls for "anticipatory action" using nuclear weapons against a "rogue enemy" which allegedly plans to develop WMD at some undefined future date: Responsible security planning requires preparation for threats that are possible, though perhaps unlikely today.** The lessons of military history remain clear: unpredictable, irrational conflicts occur. Military forces must prepare to counter weapons and capabilities that exist or will exist in the near term even if no immediate likely scenarios for war are at hand. **To maximize deterrence of WMD use, it is essential US forces prepare to use nuclear weapons effectively and that US forces are determined to employ nuclear weapons if necessary to prevent or retaliate against WMD use.** Nukes would serve to prevent a non-existent WMD program (e.g. Iran) prior to its development. **This twisted formulation goes far beyond the premises of the 2001 Nuclear Posture Review and NPSD 17. which state that the US can retaliate with nuclear weapons if attacked with WMD: "The United States will make clear that it reserves the right to respond with overwhelming force – including potentially nuclear weapons – to the use of [weapons of mass destruction] against the United States, our forces abroad, and friends and allies" (NSPD 17).**

**"Integration" Of Nuclear & Conventional Weapons Plans:** The Doctrine for Joint Nuclear Operations outlines the procedures governing the use of nuclear weapons and the nature of the relationship between nuclear and conventional war operations. The DJNO states that the: **"Use of nuclear weapons within a [war] theater requires that nuclear and conventional plans be integrated to the greatest extent possible".** The implications of this "integration" are far-reaching because once the decision is taken by the Commander in Chief, namely the President of the United States, to launch a joint conventional-nuclear military operation, **there is a risk that tactical nuclear weapons could be used without requesting subsequent presidential approval.** In this regard, execution procedures under the jurisdiction of the theater commanders pertaining to nuclear weapons are described as "flexible and allow for changes in the situation": "Geographic combatant commanders are responsible for defining theater objectives and developing nuclear plans required to support those objectives, including selecting targets. When tasked, CDRUSSTRATCOM, as a supporting combatant commander, provides detailed planning support to meet theater planning requirements. All theater nuclear option planning follows prescribed Joint Operation Planning and Execution System procedures to formulate and implement an effective response within the timeframe permitted by the crisis. **Since options do not exist for every scenario, combatant commanders must have a capability to perform crisis action planning and execute those plans.** Crisis action planning provides the capability to develop new options, or modify existing options, when current limited or major response options are inappropriate. Command, control, and coordination must be flexible enough to allow the geographic combatant commander to strike time-sensitive targets such as mobile missile launch platforms."

**Nuclear Weapons Deployment Authorization:** The planning of the aerial bombings of Iran started in mid-2004, pursuant to the formulation of CONPLAN 8022 in early 2004. In May 2004, National Security Presidential Directive NSPD 35 entitled Nuclear Weapons Deployment Authorization was issued. **The contents of this highly sensitive document remains a carefully guarded State secret.** There has been no mention of NSPD 35 by the media nor even in Congressional debates. **While its contents remains classified, the presumption is that NSPD 35 pertains to the deployment of tactical nuclear weapons in the Middle East war theater in compliance with CONPLAN 8022.** In this regard, a recent press report published in Yeni Safak (Turkey) suggests that the United States is currently: **"deploying B61-type tactical nuclear weapons in southern Iraq as part of a plan to hit Iran from this area if and when Iran responds to an Israeli attack on its nuclear facilities"**. (Ibrahim Karagul, "The US is Deploying Nuclear Weapons in Iraq Against Iran". **What the Yenbi Safak report suggests is that conventional weapons would be used in the first instance, and if Iran were to retaliate in response to US-Israeli aerial attacks, tactical thermonuclear B61 weapons could then be launched.** This retaliation using tactical nuclear weapons would be consistent with the guidelines contained in the 2001 Nuclear Posture Review and NSPD 17.

**Israel's Stockpiling Of Conventional & Nuclear Weapons:** Israel is part of the military alliance and is slated to play a major role in the planned attacks on Iran. Confirmed by several press reports, **Israel has taken delivery, starting in September 2004 of some 500 US produced BLU 109 bunker buster bombs.** The first procurement order for BLU 109 [Bomb Live Unit] dates to September 2004. In April 2005, **Washington confirmed that Israel was to take delivery of 100 of the more sophisticated bunker buster bomb GBU-28 produced by Lockheed Martin ( Reuters, April 26, 2005).** The GBU-28 is described as **"a 5,000-pound laser-guided conventional munitions that uses a 4,400-pound penetrating warhead."** It was used in the Iraqi war theater: The Pentagon [stated] that ... the sale to Israel of 500 BLU-109 warheads, [was] meant to "contribute significantly to U.S. strategic and tactical objectives." Mounted on satellite-guided bombs, BLU-109s can be fired from F-15 or F-16 jets, U.S.-made aircraft in Israel's arsenal. This year Israel received the first of a fleet of 102 long-range F-16Is from Washington, its main ally. "Israel very likely manufactures its own bunker busters, but they are not as robust as the 2,000-pound (910 kg) BLUs," Robert Hewson, editor of Jane's Air-Launched Weapons, told Reuters. (Reuters, 21 September 2004) **The report does not confirm whether Israel has stockpiled and deployed the thermonuclear version of the bunker buster bomb. Nor does it indicate whether the Israeli made bunker buster bombs are equipped with nuclear warheads.** It is worth noting that this stock piling of bunker buster bombs occurred within a few months after the Release of the NSPD 35, Nuclear Weapons Deployment Authorization (May 2004). **Israel possesses 100-200 strategic nuclear warheads.** In 2003, Washington and Tel Aviv confirmed that they were collaborating in "the deployment of US-supplied Harpoon cruise missiles armed with nuclear warheads in Israel's fleet of Dolphin-class submarines." (The Observer, 12 October 2003) . **In more recent developments, which coincide with the preparations of strikes against Iran, Israel has taken delivery of two new German produced submarines "that could launch nuclear-armed cruise missiles for a "second-strike" deterrent"** (Newsweek, 13 February 2006). Israel's tactical nuclear weapons capabilities are not known. Israel's participation in the aerial attacks will also act as a political bombshell throughout the Middle East. It would contribute to escalation, with a war zone which could extend initially into Lebanon and Syria. The entire region from the Eastern Mediterranean to Central Asia and Afghanistan's Western frontier would be affected..

**Building a Pretext For A Preemptive Nuclear Attack:** The pretext for waging war on Iran essentially rests on two fundamental premises, which are part of the Bush administration's National Security doctrine.

- 1) Iran's alleged possession of "Weapons of Mass Destruction" (WMD), more specifically its nuclear enrichment program
- Iran's alleged support to "Islamic terrorists"

**These are two interrelated statements which are an integral part of the propaganda and media disinformation campaign.** The "Weapons of Mass Destruction (WMD)" statement is used to justify the "pre-emptive war" against the "State sponsors of terror", --i.e. countries such as Iran and North Korea which allegedly possess WMD. Iran is identified as a State sponsor of so-called "non-State terrorist organizations". The latter also possess WMDs and potentially constitute a nuclear threat. Terrorist non-state organizations are presented as a "nuclear power". **"The enemies in this [long] war are not traditional conventional military forces but rather dispersed, global terrorist networks that exploit Islam to advance radical political aims. These enemies have the avowed aim of acquiring and using nuclear and biological weapons to murder hundreds of thousands of Americans and others around the world."** (2006 Quadrennial Defense Review ), In contrast, Germany and Israel which produce and possess nuclear warheads are not considered "nuclear powers". In recent months, the pretext for war, building on this WMD-Islamic terrorist nexus, has been highlighted ad nauseam, on a daily basis by the Western media. In a testimony to the US Senate Budget Committee, Secretary of State Condoleezza Rice accused Iran and Syria of destabilizing the Middle East and providing support to militant Islamic groups. **She described Iran as the "a central banker for terrorism", not withstanding the fact amply documented that Al Qaeda has been supported and financed from its inception in the early 1980s by none other than the CIA.** "It's not just Iran's nuclear program but also their support for terrorism around the world. They are, in effect, the central banker for terrorism" (Statement to the Senate Budget Committee, 16 February 2006).

**"Second 9/11": Cheney's "Contingency Plan":** While the "threat" of Iran's alleged WMD is slated for debate at the UN Security Council, Vice President Dick Cheney is reported to have instructed USSTRATCOM to draw up a contingency plan **"to be employed in response to another 9/11-type terrorist attack on the United States"**. This "contingency plan" to attack Iran uses the pretext of a **"Second 9/11" which has not yet happened, to prepare for a major military operation against Iran.** The contingency plan, which is characterized by a military build up in anticipation of possible aerial strikes against Iran, is in a "state of readiness". **What is diabolical is that the justification to wage war on Iran rests on Iran's involvement in a terrorist attack on America, which has not yet occurred:** The plan includes a large-scale air assault on Iran employing both conventional and tactical nuclear weapons. Within Iran there are more than 450 major strategic targets, including numerous suspected nuclear-weapons-program development sites. Many of the targets are hardened or are deep underground and could not be taken out by conventional weapons, hence the nuclear option. As in the case of Iraq,

the response is not conditional on Iran actually being involved in the act of terrorism directed against the United States. Several senior **Air Force officers involved in the planning are reportedly appalled at the implications of what they are doing—that Iran is being set up for an unprovoked nuclear attack—but no one is prepared to damage his career by posing any objections.** (Philip Giraldi, Attack on Iran: Pre-emptive Nuclear War, The American Conservative, 2 August 2005) Are we to understand that US military planners are waiting in limbo for a Second 9/11, to launch a military operation directed against Iran, which is currently in a "state of readiness"? Cheney's proposed "contingency plan" does not focus on preventing a Second 9/11. **The Cheney plan is predicated on the presumption that Iran would be behind a Second 9/11 and that punitive bombings would immediately be activated, prior to the conduct of an investigation, much in the same way as the attacks on Afghanistan in October 2001, allegedly in retribution for the role of the Taliban government in support of the 9/11 terrorists.** It is worth noting that the bombing and invasion of Afghanistan had been planned well in advance of 9/11. As Michael Keefer points out in an incisive review article: **"At a deeper level, it implies that "9/11-type terrorist attacks" are recognized in Cheney's office and the Pentagon as appropriate means of legitimizing wars of aggression against any country selected for that treatment by the regime and its corporate propaganda-amplification system** (Keefer, 2006). Keefer concludes that "an attack on Iran, which would presumably involve the use of significant numbers of extremely 'dirty' earth-penetrating nuclear bombs, might well be made to follow **a dirty-bomb attack on the United States, which would be represented in the media as having been carried out by Iranian agents**" (Keefer, February 2006 )

#### **Five Basic Types Of U.S. Military Plans:**

- **Campaign Plan (CAMPLAN):** A plan for a series of related military operations aimed at accomplishing a strategic or operational objective within a given time and space (e.g., campaign plan for Iraq incorporating a number of subordinate specific plans).
- **Operations Plan (OPLAN):** A completed plan required when there is compelling national interest, when a specific threat exists, and/or when the nature of the contingency requires detailed planning (e.g., North Korea). OPLANs contains all formatted annexes (see below), and Time Phased Force and Deployment Data (TPFDD), a database containing units to be deployed, routing of deploying units, movement data of forces, personnel, logistics and transportation requirements. An OPLAN can be used as a basis for development of an Operations Order (OPORD).
- **Operations Plan in Concept Form Only (CONPLAN):** An operations plan in an abbreviated format prepared for less compelling national interest contingencies than for OPLANs and for unspecific threats. A CONPLAN requires expansion or alteration to convert into an OPLAN or OPORD. It normally includes a statement of Strategic Concept and annexes A-D and K (see below). CONPLANs that do have TPFDDs are usually developed because of international agreement or treaties.
- **Functional Plans (FUNCPLAN):** An operations plan involving the conduct of military operations in a peacetime or non-hostile environment (e.g., disaster relief, humanitarian assistance, counter-drug, or peacekeeping operations).
- **Theater Security Cooperation and Theater Engagement Plans (TSCPs and TEPs):** Day-to-day plans to set the initial conditions for future military action in terms of multinational capabilities, U.S. military access, coalition interoperability, and intelligence (Chossudovsky, 2006).

**Title/Headline:** *Chairman Of 9/11 Whitewash Commission Sets Stage For Al Qaeda Nuke Attack*

**Abstract:** Thomas Kean, the chairman of the 9/11 Commission, gave a lecture at Southwestern University in Georgetown, Texas. In his speech to the throngs of students, **Mr. Kean kept stressing his biggest fear...that the terrorists would smuggle a nuke into this country and set it off.** He recommended biometric ID cards for everyone! **Keane did make a few very telling remarks though, repeating over and over again that the biggest threat right now is small nuclear devices being smuggled in across our completely unsecured borders and setting off the next escalation of the so-called war on terror.** The source of the material to make these fearsome nuclear devices would be none other than the former Soviet Union. **The plans for horrible terrorists to make these bombs would be easy to come by on the internet** or so says the honorable Keane. **By repeating over and over again that terrorists can get the plans to make nukes on the internet, he is encouraging people to fear the internet and bring along the even more corporate, sanitized and controlled internet2** (Dacy, 2006).

**WIRED**

**Date:** June 15, 2006

**Source:** Wired Magazine, Bruce Schneier

**Title/Headline:** *The Scariest Terror Threat of All*

**Abstract:** For a while now, I have been writing about our penchant for "movie-plot threats" -- terrorist fears based on very specific attack scenarios. Terrorists with crop-dusters, terrorists exploding baby carriages in subways, terrorists filling school buses with explosives -- these are all movie-plot threats. They're good for scaring people, but it's just silly to build national security policy around them. But if we're going to worry about unlikely attacks, why can't they be exciting and innovative ones? **If Americans are going to be scared, shouldn't they be scared of things that are really scary? "Blowing up the Super Bowl" is a movie plot, to be sure, but it's not a very good movie.** I decided to raise the stakes. So I announced a Movie-Plot Threat Contest on my blog: Entrants are invited to

submit the most unlikely, yet still plausible, terrorist attack scenarios they can come up with. **Your goal: Cause terror. Make the American people notice. Inflict lasting damage on the U.S. economy. Change the political landscape, or the culture.** The more grandiose the goal, the better. Assume an attacker profile on the order of 9/11: 20 to 30 unskilled people, and about \$500,000 with which to buy skills, equipment, etc. The contest spread across the internet. Even *The New York Times* wrote about it. By the end of the month, the blog post had 782 comments. I printed them all out and spiral-bound them so I could read them more easily. **The cover read: "The Big Book of Terrorist Plots."** I tried not to wave it around too much in airports. The submissions fell into several broad categories. **The first was attacks against our infrastructure: the food supply, the water supply, the power infrastructure, the telephone system.** The idea is to cripple the country by targeting one of the basic systems that make it work. The second category was of big-ticket plots. **Either they have very public targets -- blowing up the Super Bowl, the Oscars -- or they have high-tech components: nuclear waste, anthrax, chlorine gas, a full oil tanker.** And they are often complex and hard to pull off. This is the 9/11 idea -- a single huge event that affects the entire nation. The third category was low-tech attacks that go on and on. Several people imagined a version of the D.C.-sniper scenario, but with multiple teams. **The teams would slowly move around the country, perhaps each team starting up after the previous one was captured or killed. Other people suggested a variant of this with small bombs in random public locations around the country.** A fourth category had actual movie plots, often comical or unrealistic, some with science-fiction premises. That wasn't what I was looking for, so I mostly ignored them.

**The best ideas tap directly into public fears. In my book, *Beyond Fear*, I discuss five different tendencies people have with evaluating risks:**

- People exaggerate spectacular but rare risks and downplay common risks
- People have trouble estimating risks for anything not exactly like their normal situation
- Personified risks are perceived to be greater than anonymous risks
- People underestimate risks they willingly take and overestimate risks in situations they can't control
- People overestimate risks that are being talked about and remain an object of public scrutiny

**The best plots leverage one or more of those tendencies. Big-ticket attacks leverage the first.** Infrastructure and low-tech attacks leverage the fourth. And every attack tries to leverage the fifth, especially those attacks that go on and on. I almost don't want to pick a winner, because the real point is the enormous list of them all. And because it's hard to choose. But after careful deliberation, I chose the winning entry by Tom Grant. [Read it](#); it's chilling. **Although planes filled with explosives is already a cliché, destroying the Grand Coulee Dam is inspired. The chain reaction destroys most of the other dams on the Columbia River, taking out the West Coast power grid for months.** Congratulations, Tom. If you think Tom's entry is scary, consider that I received a bunch of e-mails from people with ideas they thought too terrifying to post publicly. Some of them wouldn't even tell them to me. **I also received e-mails from people accusing me of helping the terrorists by giving them ideas.** Both of these reactions make the same erroneous assumption: that terrorist attacks are easy, and all terrorists need are a few good ideas. **But if there's one thing this contest demonstrates, it's that good terrorist ideas are a dime a dozen. Anyone can figure out how to cause terror.** The hard part is execution. Some of the submitted plots require minimal skill and equipment. "Twenty guys with cars and guns" -- that sort of thing. Reading through them, you have to wonder why there have been no terrorist attacks in the United States since 9/11. I don't buy the "[flypaper theory](#)" that the terrorists are all in Iraq instead of in the United States; it just doesn't make any sense. And I don't buy that our post-9/11 security programs have made it impossible for terrorists to operate within the United States -- although I do believe that our successes in intelligence and investigation have made it harder. But mostly, **I think terrorist attacks are much harder than most of us think. It's harder to find willing recruits than we think. It's harder to coordinate plans. It's harder to execute those plans. It's easy to make mistakes. Terrorism has always been rare, and for all we've heard about 9/11 changing the world, it's still rare** (Schneier, 2006)

**Title/Headline:** *Al-Qaeda's Nuke Plot: Facts And Failures*

**Abstract: Time magazine has caused a spike in US and Western worries over al-Qaeda's intentions and ability to use weapons of mass destruction (WMD) against the United States.** Prompting the concern is Time's excerpt of journalist Ron Suskind's new book, *The One Percent Doctrine*, which describes al-Qaeda's apparently successful development of a portable device that can be used to disperse cyanide gas. **The gas kills upon inhalation, and Suskind claims that a cyanide-gas attack on New York City's subway system was within 45 days of occurring when al-Qaeda's deputy commander, Ayman al-Zawahiri, called off the attack.** Media coverage of the book excerpt so far has focused on how many casualties such an attack might have caused - first estimates are in the September 11, 2001, range of 3,000 dead - and whether or not the dispersal device would have actually worked. **Al-Qaeda, he says, will incrementally increase the pain that its attacks cause the United States until it forces Washington to change its policies toward Israel and the Muslim world.** While the graphing of al-Qaeda attacks since 1996 would not display a straight ascending line, the clear trend of the line would be upward; each attack has indeed been more destructive to US citizens and material interests than the last. If 3,000 Americans killed by chemical weapons in the New York subway system were not enough for al-Qaeda, what sort of attack did Zawahiri - and, implicitly, Osama bin Laden and his *shura* council - decide to wait for patiently? **The answer, unfortunately for Americans, may well be the detonation of a nuclear weapon of some sort.** While there is no definitive evidence that al-Qaeda has such a device, the group has had a specialized unit - staffed by scientists and engineers - that has sought one since at least 1992, and events over the past year suggest that such a possibility remains current. In the mid-1970s, the US Congress's Office of Technology Assessment found that **"a small group of people, none of whom have ever had access to nuclear material, could possibly design and build a crude nuclear device."** Media reporting and scholarly writings since the 1970s have reinforced this finding, and just in the past year the full-range of proliferation

activities of Pakistani nuclear scientist Abdul Qadeer Khan has come to light. **Some reports suggest that Khan and/or some of his senior engineers have met with senior al-Qaeda leaders.** In addition, the availability of unemployed nuclear-weapons-related scientists and engineers has increased exponentially since the 1991 fall of the Soviet Union and the destruction of the Iraqi state in 2003. Indeed, some Iraqi WMD scientists were released from custody by US authorities last year when no charges could be brought against them. Al-Qaeda's supporters, too, have played a hand in the proliferation of nuclear knowledge by mounting a website **on the Al-Firdaws Forum dedicated to providing detailed instructions on how to make nuclear "dirty and biological bombs"**. First appearing on the Internet last October, the site had 57,000 views just one month later, and a physics professor at the Imperial College in London said after studying the site that it was "more like a proper instruction manual" than the other more generic sites he had reviewed. When asked by Congress in February 2005 whether he could assure Americans that no nuclear weapons were available to terrorists, then-director of central intelligence Porter Goss replied, **"No, I can't make that assurance. I can't account for some of the [Former Soviet Union's (FSU) nuclear] materials, so I can't make the assurance about its whereabouts."** The US National Intelligence Council also categorically assessed that **"undetected smuggling [of nuclear materials] has occurred, and we are concerned about the total amount of material that could have been diverted or stolen [from the FSU] in the last 13 years"**. A former Soviet military officer said that "small tactical nuclear loads" had been found missing from the Soviet army's inventory in the 1990s. **Bin Laden himself has made clear that al-Qaeda has been shopping in the FSU's nuclear arms bazaar. "It is a fact," bin Laden wrote to Mullah Omar on June 5, 2002, "that the [FSU's] Islamic Republics region is rich with significant scientific experiences in conventional and non-conventional military industries, which have a great role in the future jihad against the enemies of Islam."** Since May 2003, al-Qaeda's intention to use nuclear weapons against the United States has had religious sanction. In that month, a respected Salafi Saudi cleric named Sheikh Nasir Bin Hamd al-Fahd **concluded that the use of nuclear weapons in the United States was theologically justified on the basis of reciprocity.** "Anyone who considers American aggression against Muslims and their lands during the last decades," Fahd wrote, **"will conclude that striking her [with nuclear weapons] is permissible merely on the rule of treating as one has been treated.** Some brothers have totaled the number of Muslims killed directly or indirectly and come up with a figure of nearly 10 million." More recently, the respected cleric and spiritual leader of Indonesia's Jemaah Islamiya, Sheikh Abu Bakar Ba'asyir - who was freed from prison recently - said **Muslims must embrace nuclear weapons "if necessary" because "in places like London and New York there must be other calculations [than conventional attacks]. In battle it is best to cause as many casualties as possible."** With the necessary nuclear knowledge and materials available, and with religious approval in hand, Suskind's book also suggests **that al-Qaeda still possesses the discipline and command-and-control capabilities that would be required to stage a sophisticated, September 11-type attack that included the use of WMD.** The New York subway operation was scheduled for spring 2003, at a time when many Western authorities were asserting that bin Laden and Zawahiri were completely isolated and cut off from their fighters stationed outside South Asia. Suskind, however, describes how on January 2003 the operation's commander - Yusef al-Ayeri, then head of al-Qaeda on the Arabian Peninsula - easily traveled from Saudi Arabia to Zawahiri's location, where Zawahiri listened to the description of the proposed attack and decided that it should be canceled. Ayeri then returned to Saudi Arabia and ordered the operation terminated. Suskind's book also shows that the al-Qaeda fighters tasked with executing the subway operation beat US immigration and border controls and easily entered New York City from North Africa in the autumn of 2002, more than a year after the September 11 attacks. All told, Suskind's book appears to present a gripping account of a viable WMD attack that was canceled by Zawahiri. More important, however, the book suggests that several judgments about al-Qaeda that are now accepted in the United States and the West as common wisdom - **such as al-Qaeda's inability to stage large, complicated attacks in the United States;** that bin Laden and Zawahiri are isolated and cannot exercise command and control over al-Qaeda; and that US border security is greatly improved since September 11 - need to be re-examined and debated (Scheuer, 2006).

**The following is a conversation that took place on July 27, 2006, between Fox Television anchors Allan Colmes and Sean Hannity with Cham Dallas, the Director for the Center for Mass Destruction Defense at the University of Georgia.**

**Date:** July 27, 2006

**Source:** Fox News, Cham Dallas

**Title/Headline:** *Hannity & Colmes: The Nuclear Threat*

#### **Abstract:**

**Cham Dallas:** Sometime in the future there's going to be a nuclear weapon used in the United States - certainly a radiological device is going to be used and a lot of radioactivity is going to fall on American citizens.

**Alan Colmes:** You say that like it's a certainty, like there's no question it's going to happen.

**Cham Dallas:** There's no doubt in my mind that at some point in the future we will have a radiological device probably soon and a nuclear device at some point five or ten years after.

[Dallas fingered Pakistan and North Korea as the likely suppliers of nuclear weapons without informing the viewers that the receipts for this technology are in the hands of the US government - Rumsfeld fast-tracking nuclear capability to North Korea and the Bush family protecting A.Q. Khan's network.]

**Sean Hannity: (referring to Hezbollah and Al-Qaeda):** Do you doubt that these terror groups could get a weapon - if they did there's no doubt they would use it against Israel is there?

**Cham Dallas:** There's no doubt in mind that if I should say when one of these terror groups gets a weapon like Hezbollah - within the next decade - they will use it within a time of their choosing,

**Sean Hannity:** So the likelihood is that within ten years it would not be shocking to you in any way for people to turn on this news channel and find out that a nuclear device has gone off in a major city around the world?

**Cham Dallas:** **I'm certain of it.**

**Sean Hannity:** You're certain of it - you have no doubt?

**Cham Dallas:** **There's no doubt in my mind about it** (Fox News, 2006).

**The following is a conversation that took place July 27, 2006, on Fox Television's Big Story between anchor John Gibson and "Terror Analyst" Robert Strang, CEO of Investigative Management Group.**

**Date:** July 27, 2006

**Source:** Fox News, Robert Strang

**Title/Headline:** *Hezbollah And Al Queda Are Here In The USA And Ready To Spring At Any Moment*

**Abstract:** Gibson led the segment by asking if Osama bin Laden and al-Zawahiri were jealous of Hezbollah, or were they cheering on their brethren? Strang says they are brothers, going back more than ten years, and have fund-raised and trained together in the past. Hezbollah is out in front militarily now, but coupled with Al Queda they are a very powerful organization. **Right now both have cells in the US, and security people are worried about not just the active cells, but the "followers."** Ratcheting up the personal fear, he said it's a huge, growing problem, especially right now. Strang says Hezbollah does have a large presence in the US, and they've been here since before Al Queda was here. Even if we defeat them here, (although so far we've been fighting them over there so we can ignore them over here) the worry behind the scenes is that Hezbollah will they reach out to Al Queda. Strang says that **"when we're watching what's happening in Israel and Lebanon, what we're really worried about is the potential for another terrorist attack on our own soil or a US interest overseas."** (Fox News, 2006)

**Title/Headline:** *Study: Nuke Attack On California Port Could Kill 60,000 Instantly, Irradiate 150,000 More*

**Abstract:** A nuclear explosion at the Port of Long Beach could kill 60,000 people immediately, expose 150,000 more to hazardous radiation and cause 10 times the economic loss of the Sept. 11, 2001 terrorist attacks, according to a new Rand Corp. study. The study released by the Santa Monica-based think tank was the latest to address concerns about the possible vulnerability of the nation's ports. It analyzed the possible effects of terrorists detonating a 10-kiloton nuclear bomb in a shipping container unloaded onto a Long Beach pier. In addition to the human casualties, **such a blast might destroy the infrastructure and every ship at the ports of Long Beach and Los Angeles, which together handle about one-third of the nation's imports, the study said.** Damage at port-area refineries could create critical shortages. The two ports have taken steps to tighten security. In 2005, the ports of Long Beach and Los Angeles received the second- and third-largest security grants from the U.S. Department of Homeland Security, \$12.7 million and \$11.4 million, respectively. The money is to go for protecting ports from small craft and underwater attacks and enhance explosive detection capabilities. Efforts are also under way to design a facility within the Port of Los Angeles where agents could thoroughly inspect suspicious cargo. Currently, customs officials screen cargo with radiation monitors and X-ray machines at the docks then truck suspicious containers to a warehouse six miles away for closer inspections (Fox News, 2006).

**Title/Headline:** *Islam, Terror and the Second Nuclear Age*

**Abstract:** As nuclear technology spreads, terrorists will enjoy increasing odds of getting their hands on nuclear weapons. If an Islamic state or Islamic terrorists used nuclear weapons against Israel, the United States or other Western targets, like London or Madrid,

the guaranteed retaliation would cost the lives of thousands and maybe millions of Muslims. But after 9/11, we can no longer treat the possibility as fanciful. **The Islamic discussion of nuclear weapons is profoundly intertwined with a parallel discussion of suicide bombing that is also taking place in the Muslim world.** When it came to the killing of civilians, bin Laden's thought developed more gradually. In early pronouncements, before 9/11, he spoke as if the killing of women and children was inherently an atrocity. "Nor should one forget," he admonished an interviewer in 1996, "the deliberate, premeditated dropping of the H bombs [sic] on cities with their entire populations of children, elderly and women, as was the case with Hiroshima and Nagasaki." After 9/11, however, the argument changed. Now **bin Laden began to suggest that American civilians were fair game.** In a document titled "A Treatise on the Law of the Use of Weapons of Mass Destruction Against the Unbelievers," written in 2003 by a brilliant Saudi dissident named Sheik Nasir bin Hamad al-Fahd, he states that **"If the unbelievers can be repelled . . . only by using" weapons of mass destruction, then "their use is permissible, even if you kill them without exception.** Some Brothers have added up the number of Muslims killed directly or indirectly by [American] weapons and come up with a figure of nearly ten million," the treatise states. This total, Fahd concludes, would authorize the use of weapons of mass destruction to kill 10 million Americans: indeed, "it would be permissible with no need for further [legal] argument." The report went on to state that **Bin Laden has called for Muslims to acquire nuclear weapons, and in the 1990's reportedly tried to acquire them himself** (Feldman, 2006).

**Title/Headline:** *New Tools For A New World Order: Nuclear Forensics Touted As Method To Trace Bomb Materials, Deterrent For Rogue Nations*

**Abstract:** Amid all the frightening uncertainties of the decades-long Cold War, one thing was reassuringly clear: **If a nuclear bomb ever fell on America, everybody would know where it originated, and retribution would be swift and sure.** That guarantee was called "mutually assured destruction." The promise that a nuclear attack, however devastating, would trigger an equally devastating response was a critical component of Cold War deterrence. And it worked. "Deterrence ... as a matter of practice, was successful," said Allen Weiner, a professor at Stanford's Institute for International Studies and a State Department attorney from 1990 to 2001. "It was even successful more ambitiously -- not only was the development of nuclear arsenals on both sides sufficient to deter a nuclear attack by the adversary, but (it) was essentially successful in deterring conventional attacks." At a time when nuclear devices are increasingly the weapons of choice for weaker nations rather than superpowers, can deterrence still work? **Can it restrain emerging nuclear powers such as North Korea and Iran, or even smugglers and thieves and rogue scientists who sell plutonium to the highest bidder?** A growing number of respected nuclear scientists want more attention focused on the esoteric field of nuclear forensics as a means of keeping track of fissionable material and -- they hope -- enhance deterrence in an era of international terrorism and defiant nationalism. "We need our government to develop an effective policy around that ... technical tool," said Charles Ferguson, a science and technology fellow at the Council on Foreign Relations. **"I think people maybe could sleep more rested at night knowing we have a better capability to deal with this extreme act of terrorism."** The science of nuclear forensics is capable of revealing a great deal about the fissile material at the heart of a nuclear device, even if scientists arrive only after the explosion, said Michael May, the former director of the Lawrence Livermore National Laboratory, which was a pioneer in the science in the 1980s. **"The atoms all survive. They get transmuted, but they don't suddenly disappear," May said. "You only need micrograms, milligrams. You need very small amounts, and there's going to be kilograms of it spread around."** From those tiny samples, May said, nuclear detectives can extract a wealth of data in a few days or weeks. Ratios of certain isotopes of plutonium can show how long the material was in a reactor, and how long since it was removed. Ratios of isotopes in uranium can suggest where the element was mined. **Other clues, such as the presence of impurities like gadolinium, a rare-earth metal used in some reactors, can tell what kind of reactor was used to produce the fissile material or give hints of how the bomb was constructed.** The science has already had successes. Early nuclear forensic analysis of airborne debris collected near China in 1949 confirmed the Soviet Union's first nuclear test, just as air samples taken over North Korea this month confirmed its entry into the nuclear club. In 1999, Bulgarian customs officials detained a man in possession of a lead container and documents suggesting the container was filled with uranium-235. Livermore scientists were able to identify the material -- sealed inside a glass tube and cushioned with wax -- as highly enriched uranium oxide originating in Eastern Europe. But even modern forensics only takes you so far, May said. "If you want to identify (material) uniquely, then you need some samples to compare it with," he said. "Otherwise, you're like someone with a DNA sample and no DNA bank." **That limitation has led scientists to call for an international database of nuclear material from around the world, a resource that could help them quickly and accurately identify -- to the limits of the science -- where the fissile material in a smuggler's pouch or a terrorist nuclear device originated.** "There is an important linkage between our technical capabilities and what is ultimately some sort of deterrence or, more precisely, a dissuasion policy," said Page Stoutland, radiological and nuclear countermeasures division leader for the Livermore lab's Nonproliferation, Homeland and International Security Directorate. Some contend that the Cold War model of mutually assured destruction still has validity. "If Iran is bound and determined to have nuclear weapons, let it," journalist Ted Koppel wrote in a recent New York Times op-ed. "But this should also be made clear to Tehran: **If a dirty bomb explodes in Milwaukee ... the return address will be predetermined, and it will be somewhere in Iran.**" Scott Sagan, director of the Center for International Security and Cooperation at Stanford, said he found Koppel's premise "very disturbing." **The problem, he and other experts say, is that a future nuclear attack on America may not come in the form of easily traceable intercontinental ballistic missiles, but more likely as a jury-rigged bomb smuggled into port inside a cargo container or across the border in a backpack.** "People too easily jump to the conclusion that if a terrorist organization used a dirty bomb and/or a nuclear weapon, that we would know where it came from," he said. **"The question is: Would we be able to identify that material and say, 'This came from X'?" The answer to that is: Maybe.** Forensic identification has its limits -- the science is much better at ruling out a possible origin than in positively identifying that point of origin with 100 percent certainty, May said. What's more, Ferguson noted, the presence of a specific country's fissile material in the hands of a terrorist group doesn't guarantee that the material was handed over intentionally -- or even knowingly. **"What if," he said, "terrorists got highly enriched uranium from reactors that were supplied by the United States?"** -- perhaps reactors in the United States, or reactors sold for peaceful energy production to nations that are U.S. allies, but not so good at security. **"You can imagine a terrorist group conceivably could go around to several of these research reactors, getting bits and pieces of highly enriched uranium, and finally get enough to**

**make a gun-type bomb,"** Ferguson said. "The bomb goes off, and who do we blame? ... Do we retaliate against ourselves?" Nevertheless, Ferguson and other experts believe that even if a nuclear forensic database can't form the backbone of a modern form of mutually assured destruction, it still helps close enough nuclear proliferation gaps to make it worthwhile. At a minimum, such a system could help in cases of nuclear smuggling, said Sagan, who served as a consultant to the office of the secretary of defense and at the Los Alamos National Laboratory. Increasing the ability to trace material to its source could encourage nuclear nations to be a little more careful about security, May said. **"The clearer it is that there is an attribution capability that is accepted internationally, the stronger the incentive for people in Pakistan, for instance -- which is a major place of worry -- or for some of the republics in Central Asia to make sure that nothing happens there that can be traced back to them,"** he said. "That's one of the principal positive effects. Compared to biological and chemical agents, these (nuclear) things exist in comparatively few places -- too many, but probably a hundred or fewer instead of hundreds of thousands. The bulk of them should be under pretty thorough security -- lock and key. I mean, we have not seen any theft of gold from Fort Knox, and it should be that kind of security." Even if the forensics can't prove that a country intentionally sold or gave fissile material to smugglers or terrorists, it still gives the United States or United Nations a powerful weapon to discourage rogue states from letting fissile material fall into the wrong hands, Weiner said. **"The most important thing is to enable us to go in and say, 'We know it's you. You no longer have plausible deniability. We're not going to nuke you, but this is now a very, very serious foreign policy issue between us,'"** Weiner said. "This fundamentally changes the calculation, where we can say, 'There is proof. So stop it. Now.' " Policymakers see the value of nuclear forensics. **Both the U.S. Department of Defense and the International Atomic Energy Agency, the United Nations' nuclear watchdog, have written plans to collect forensic evidence after a nuclear event,** and the Department of Homeland Security has created a domestic nuclear detection office, whose budget in fiscal year 2007 includes \$17.7 million for nuclear attribution and forensics at Livermore and other research labs. Significant obstacles remain to assembling the kind of database that experts say would be most useful. Perhaps the greatest is convincing the nuclear powers to give up information about their programs -- which most nations hold among their highest secrets. **"The question is: Does the threat of global nuclear terrorism pose such a high threat to these countries that they'd be willing to open up some of their nuclear facilities in order to reduce that threat?** Because if it's just a matter of reducing the threat to the United States, that might not be enough of an incentive," Sagan said. **It might be preferable for the United Nations, not the United States, to take the lead in creating a response team and forensic database,** experts said. One possibility would be for the Security Council to follow up on its 2004 resolution calling on member states to prevent nonstate actors from obtaining weapons of mass destruction with a new or expanded resolution. "As part of some kind of nonproliferation protocol, one could ultimately say that if you intend to possess highly enriched uranium, the international community believes that a sample should be placed in such-and-such a database to aid in forensics and attribution, should there be a loss of control of the material," Stoutland said. "Doing that kind of thing could lead to people better controlling the material; it could lead to people not having (highly enriched uranium)." The permanent five members of the U.N. Security Council, all nuclear powers, could take the lead in providing material for the database as a form of mutual self-defense, suggested Harold Smith, professor at the Goldman School of Public Policy at UC Berkeley, who oversaw nuclear, chemical and biological defense programs during the Clinton administration. "This is to our mutual benefit -- to at least have samples of the P-5 material if for no other reason than to show it did not come from a Russian arsenal, a U.S. arsenal, etc. At least there's the process of elimination," Smith said. "Let's at least take the small step." **In the event of a nuclear explosion, radiochemists would try to obtain tiny quantities of debris from the nuclear device on the ground near the point of impact and/or in the atmosphere.** They would first separate the atoms into groups of chemically similar elements and then measure the radioactivity of each group. Three types of atoms are of particular interest in a forensic analysis: Atoms of fissile material that did not undergo fission. Examining them allows scientists to identify the material used to make the device and, when compared to the number of fission fragments, to measure the efficiency or sophistication of the weapon. New atoms created by fission and by other nuclear reactions within the fissile material. When scientists compare these, they can obtain considerable insight into the nuclear processes that were involved during the explosion. Atoms of material near the fissioning core that were subjected to an intense bombardment of neutrons during the explosion and became radioactive as a consequence. These atoms provide insight into the components of the weapon and the energy of the neutrons that activated the components (Stannard, 2006).

**Source:** Opinion Journal, Richard Minter

**Title/Headline:** *Baggage Claim: The Myth Of "Suitcase Nukes".*

**Abstract:** Like everyone else rushing off the Washington subway one rush-hour morning, Ibrahim carried a small leather briefcase. No one paid him or his case much mind, except for the intern in the new Brooks Brothers suit who pushed past him on the escalator and banged his shin. **"What do you have in there? Rocks?" Ibrahim's training had taught him to ignore all provocations. You will see, he thought.** The escalator carried him up and out into the strong September sunlight. It was, as countless commentators would later say, a perfect day. As he walked from the Capitol South metro stop, he saw the Republican National Committee headquarters to his right. Two congressional office buildings loomed in front of him. Between the five-story structures, the U.S. Capitol dome winked in the sun. It was walled off in a mini-Green Zone of jersey barriers and armed police. He wouldn't trouble them. **He was close enough. He put the heavy case down on the sidewalk and pressed a sequence of buttons on what looked like standard attaché-case locks. It would be just a matter of seconds. When he thought he had waited long enough, he shouted in Arabic: "God is great!" He was too soon. Some passersby stared at him. Two-tenths of a second later, a nuclear explosion erased the entire scene. Birds were incinerated midflight. Nearly 100,000 people--lawmakers, judges, tourists--became superheated dust.** Only raindrop-sized dollops of metal--their dental fillings--remained as proof of their existence. In tenths of a second--less time than the blink of a human eye--the 10-kiloton blast wave pushed down the Capitol (toppling the Indian statue known as "Freedom" at the dome's top), punched through the pillars of the U.S. Supreme Court, smashed down the three palatial Library of Congress buildings, and flattened the House and Senate office buildings. **The blast wave raced outward, decapitating the Washington Monument, incinerating the Smithsonian and its treasures, and reducing to rubble the White House and every office tower north to Dupont Circle and south to the Anacostia River.** The secondary, or overpressure, wave jumped over the Potomac, spreading unstoppable fires to the Pentagon and Arlington, Va. Planes bound for Reagan and Dulles airports

tumbled from the sky. **Tens of thousands were killed instantly. By nightfall, another 250,000 people were dying in overcrowded hospitals and impromptu emergency rooms set up in high school gymnasiums. Radiation poisoning would kill tens of thousands more in the decades to come.** America's political, diplomatic and military leadership was simply wiped away. As the highest-ranking survivor, the agriculture secretary took charge. **He moved the capital to Cheyenne, Wyoming. That is the nightmare--or one version, anyway--of the nuclear suitcase.** In the aftermath of the September 11 attacks, this nuclear nightmare did not seem so fanciful. **A month after September 11, senior Bush administration officials were told that an al Qaeda terrorist cell had control of a 10-kiloton atomic bomb from Russia and was plotting to detonate it in New York City.** CIA director George Tenet told President Bush that the source, code-named "Dragonfire," had said the nuclear device was already on American soil. After anxious weeks of investigation, including surreptitious tests for radioactive material in New York and other major cities, Dragonfire's report was found to be false. New York's mayor and police chief would not learn of the threat for another year.

**The Suitcase Bomb:** The specter of the nuclear suitcase bomb is particularly potent because it fuses two kinds of terror. The horrible images of Hiroshima and the suicide bomber, the unseen shark amid the swimmers. **The fear of a suitcase nuke, like the bomb itself, packs a powerful punch in a small package. It also has a sense of inevitability. A December 2001 article in the Boston Globe speculated that terrorists would explode suitcase nukes in Chicago, Sydney and Jerusalem . . . in 2004.** Every version of the nuclear suitcase bomb scare relies on one or more strands of evidence, two from different Russians and one from a former assistant secretary of defense. The scare started, in its current form, with **Russian general Alexander Lebed, who told a U.S. congressional delegation visiting Moscow in 1997--and, later that year, CBS's series "60 Minutes"--that a number of Soviet-era nuclear suitcase bombs were missing.** It was amplified when Stanislav Lunev, the highest-ranking Soviet military intelligence officer ever to defect to the United States, told a congressional panel that same year that Soviet special forces might have smuggled a number of portable nuclear bombs onto the U.S. mainland to be detonated if the Cold War ever got hot. **The scare grew when Graham Allison, a Harvard professor who served as an assistant secretary of defense under President Clinton, wrote a book called "Nuclear Terrorism: The Ultimate Preventable Catastrophe."** In that slim volume, Mr. Allison worries about stolen warheads, self-made bombs and suitcase nukes. Published in 2004, the work has been widely cited by the press and across the blogosphere. Let's walk back the cat, as they say in intelligence circles. The foundation of all main nuclear suitcase stories is a string of interviews given by Gen. Lebed in 1997. **Lebed told a visiting congressional delegation in June 1997 that the Kremlin was concerned that its arsenal of 100 suitcase-size nuclear bombs would find their way to Chechen rebels or other Islamic terrorists. He said that he had tried to account for all 100 but could find only 48. That meant 52 were missing. He said the bombs would fit "in a 60-by-40-by-20 centimeter case"--in inches, roughly 24-by-16-by-8--and would be "an ideal weapon for nuclear terror.** The warhead is activated by one person and easy to transport." It would later emerge that none of these statements were true. Later that year, the Russian general sat down with Steve Kroft of "60 Minutes." **The exchange could hardly have been more alarming.**

**Steve Kroft:** Are you confident that all of these weapons are secure and accounted for?

**Alexander Lebed:** (through a translator) Not at all. Not at all.

**Steve Kroft:** How easy would it be to steal one?

**Alexander Lebed:** It's suitcase-sized.

**Steve Kroft:** You could put it in a suitcase and carry it off?

**Alexander Lebed:** It is made in the form of a suitcase. It is a suitcase, actually. You can carry it. You can put it into another suitcase if you want to.

**Steve Kroft:** But it's already in a suitcase.

**Alexander Lebed:** Yes.

**Steve Kroft:** I could walk down the streets of Moscow or Washington or New York, and people would think I'm carrying a suitcase?

**Alexander Lebed:** Yes, indeed.

**Steve Kroft:** How easy is it to detonate?

**Alexander Lebed:** It would take twenty, thirty minutes to prepare.

**Steve Kroft:** But you don't need secret codes from the Kremlin or anything like that.

**Alexander Lebed:** No.

**Steve Kroft:** You are saying that there are a significant number that are missing and unaccounted for?

**Alexander Lebed:** Yes, there is. More than one hundred.

**Steve Kroft:** Where are they?

**Alexander Lebed:** Somewhere in Georgia, somewhere in Ukraine, somewhere in the Baltic countries. Perhaps some of them are even outside those countries. One person is capable of actuating this nuclear weapon--one person.

**Steve Kroft:** So you're saying these weapons are no longer under the control of the Russian military.

**Alexander Lebed:** I'm saying that more than one hundred weapons out of the supposed number of 250 are not under the control of the armed forces of Russia. I don't know their location. I don't know whether they have been destroyed or whether they are stored or whether they've been sold or stolen. I don't know.

**Contradictions:** Nearly everything Lebed told visiting congressmen and "60 Minutes" was later contradicted, sometimes by Lebed himself. In subsequent news accounts, he said 41 bombs were missing, at other times he pegged the number at 52 or 62, 84 or even 100. When asked about this disparity, he told the Washington Post that he "did not have time to find out how many such weapons there were." If this sounds breezy or cavalier, that is because it is. Indeed, Lebed never seemed to have made a serious investigation at all. A Russian official later pointed out that Lebed never visited the facility that houses all of Russia's nuclear weapons or met with its staff. And Lebed--who died in a plane crash in 2002--had a history of telling tall tales. As for the small size of the weapons and the notion that they can be detonated by one person, those claims also been authoritatively dismissed. The only U.S. government official to publicly admit seeing a suitcase-sized nuclear device is Rose Gottemoeller. As a Defense Department official, she visited Russia and Ukraine to monitor compliance with disarmament treaties in the early 1990s. The Soviet-era weapon "actually required three footlockers and a team of several people to detonate," she said. "It was not something you could toss in your shoulder bag and carry on a plane or bus". Lebed's onetime deputy, Vladimir Denisov, said he headed a special investigation in July 1996--almost a year before Lebed made his charges--and found that no army field units had portable nuclear weapons of any kind. All portable nuclear devices--which are much bigger than a suitcase--were stored at a central facility under heavy guard. Lt. Gen. Igor Valynkin, chief of the Russian Defense Ministry's 12th Main Directorate, which oversees all nuclear weapons, denied that any weapons were missing. "Nuclear suitcases . . . were never produced and are not produced," he said. While he acknowledged that they were technically possible to make, he said the weapon would have "a lifespan of only several months" and would therefore be too costly to maintain. Gen. Valynkin is referring to the fact that radioactive weapons require a lot of shielding. To fit the radioactive material and the appropriate shielding into a suitcase would mean that a very small amount of material would have to be used. Radioactive material decays at a steady, certain rate, expressed as "half-life," or the length of time it takes for half of the material to decay into harmless elements. The half-life of the most likely materials in the infinitesimal weights necessary to fit in a suitcase is a few months. So as a matter of physics and engineering, the nuclear suitcase is an impractical weapon. It would have to be rebuilt with new radioactive elements every few months. Gen. Valynkin's answer was later expanded by Viktor Yesin, former chief of staff of Russia's Strategic Missile Forces. Mr. Yesin was asked by Alexander Golts, a reporter at the Russian newspaper Ezhenedelny Zhurnal: "The nuclear suitcases--are they myth or reality?" Let's start by noting that "nuclear suitcase" is a term coined by journalists. Journalistic parlance, if you wish. The matter concerns special compact nuclear devices of knapsack type. Igor Valynkin, commander of the 12th Main Directorate of the Defense Ministry responsible for nuclear ordnance storage, was absolutely honest when he was saying in an interview with Nezavisimaya Gazeta in 1997 that "there have never been any nuclear suitcases, grips, handbags or other carryalls." As for special compact nuclear devices, the Americans were the first to assemble them. They were called Special Atomic Demolition Munitions (SADM). As of 1964, the U.S. Army and Marine Corps had two models of SADM at their disposal--M-129 and M-159. Each SADM measured 87 x 65 x 67 centimeters [34 by 26 by 26 inches]. A container with the backpack weighed 70 kilograms [154 pounds]. There were about 300 SADMs in all. The foreign media reported that all these devices were dismantled and disposed of within the framework of the unilateral disarmament initiatives declared by the first President Bush in late 1991 and early 1992. The Soviet Union initiated production of special compact nuclear devices in 1967. These munitions were called special mines. There were fewer models of them in the Soviet Union than in the United States. All of these munitions were to be dismantled before 2000 in accordance with the Russian and American commitments concerning reduction of tactical nuclear weapons dated 1991. [When the Soviet Union collapsed, Boris Yeltsin reiterated the commitment in January 1992.] Foreign Minister Igor Ivanov said at the conference on the Nuclear Weapons Nonproliferation Treaty in April 2000 that Russia had practically completed dismantling "nuclear mines." It means that Russia kept the promise Yeltsin once made to the international community. Mr. Yesin added that all "portable" nuclear weapons were strictly controlled by the KGB in the Soviet era and were held in a single facility on Russian soil, where they were regularly counted before they were dismantled. The special mines that the press calls "nuclear suitcases" are no more. American officials, including Ms. Gottemoeller, insist that there is no evidence that any are missing, stolen or sold. American experts charged with monitoring the destruction of these weapons have repeatedly testified to Congress that no special mines are unaccounted for. What about the Russian army units trained to use the special mines? Is it possible that a few such weapons remain in their hands? According to Mr. Yesin, "they always used simulators and dummy weapons. Needless to say, the latter looked like the real thing--the same size and weight, the same control panel. Instead of nuclear materials, however, they contained sand." Despite Lebed's many changing accounts, his reputation for exaggeration, and the denial of nearly every Russian official with knowledge of Russian nuclear weapons, his tale lives on in breathless newspaper articles and Web posts. Perhaps the most amusing was an article in London's Sunday Express claiming that al Qaeda bought twenty "nuclear suitcases for 25 million pounds" (roughly \$45 million) from "Boris" and "Alexy." What, not Natasha? Still, Graham Allison puts his faith in Lebed's story. How does Mr. Allison account for the high-level rebuttals? He makes two brief arguments. "Moscow's assurance that 'all nuclear weapons are accounted for' is wishful thinking, since at least four nuclear submarines with nuclear warheads sank and were never recovered by the Soviet Union." (One was recovered by the U.S. in 1974.) This is true, but beside the point; the subs were carrying nuclear missiles, not nuclear suitcases.

**Osama Bin Laden & Al Qaeda:** No one seriously doubts Osama bin Laden's intense desire for nuclear weapons, suitcase-size or otherwise. Michael Scheuer, the former head of the CIA's bin Laden station (and an outspoken critic of the Bush administration's conduct of the war on terror), said that the CIA was aware of "the careful, professional manner in which al Qaeda was seeking to acquire nuclear weapons" since 1996. There is a plethora of human and documentary intelligence to support Mr. Scheuer's conclusion. Perhaps

the most chilling is a fatwa that bin Laden asked for and received from Shaykh Nasir bin Hamid al-Fahd in May 2003. It was called "A Treatise on the Legal Status of Using Weapons of Mass Destruction Against Infidels." The Saudi cleric concludes: "If a bomb that killed 10 million of them and burned as much of their land as they have burned Muslims' land were dropped on them, it would be permissible." Fatwas are not enough. There are only three ways for al Qaeda to realize its atomic dreams: buy nuclear weapons, steal them or make them. Each approach is virtually impossible. **Buying the bomb has not worked out well for al Qaeda. The terror organization has tried and, according to detainees, been scammed repeatedly.** In Sudan's decrepit capital of Khartoum, an al Qaeda operative paid \$1.5 million for a three-foot-long metal canister with South African markings. Allegedly it was uranium from South Africa's recently decommissioned nuclear program. According to Jamal al-Fadl, an al Qaeda leader later detained by U.S. forces, bin Laden ordered that it be tested in a safe house in Cyprus. **It was indeed radioactive, but not of sufficient quality to be weapons-grade. One American intelligence analyst said that he believed the material was taken from the innards of an X-ray machine. It is not clear what it actually was, but the canister was ultimately discarded by al Qaeda.** Al Qaeda's next attempt to buy bomb-making material involved Mamduh Mahmud Salim, a nuclear engineer. He was captured in Germany in 1998, before he could obtain any nuclear material. In a third case, al Qaeda paid the Islamic Army of Uzbekistan for some radioactive material. It turned out that the uranium al Qaeda received was not sufficiently enriched to create an atomic blast, though it could be used in a "dirty bomb." **For what it is worth, there are actually no documented cases of the Russian Mafia or Russian officials selling nuclear weapons or material.** Given that Russian gangsters have sold everything from small arms to aircraft carriers, this might seem surprising. Michael Crowley and Eric Adams, writing in Popular Science magazine, theorize that Russian security forces may be less tempted by money than is commonly assumed or that Russian mobsters find other illicit material more profitable than nuclear material. **Whatever the reason, there is simply no known case of the Russian mob selling nuclear devices or parts to anyone, let alone to al Qaeda.**

**What About Theft?: Stealing a bomb--or its component parts--is far more difficult than it sounds. The International Atomic Energy Agency maintains a detailed database of thefts of highly enriched uranium, the kind needed to make an atomic bomb.** There have been 10 known cases of highly enriched uranium theft between 1994 and 2004. Each amounted to "a few grams or less." **The total loss is less than eight grams, and even these eight grams, which have differing levels of purity, could not be productively combined.** To put these quantities in perspective, it takes some 15,900 grams--roughly 35 pounds--to make a highly enriched uranium bomb. Stealing highly enriched uranium is extremely difficult. Every nation with an active nuclear weapons program guards access to its breeder reactors and enrichment plants. Employee backgrounds are scrutinized and workers are under near-constant surveillance. **Transporting radioactive material invites detection and is a constant danger to those moving it without shielding. If it were shielded, the immense weight of the small container would be a giveaway to authorities. Could terrorists storm a reactor and steal the radioactive material? Not likely.** An investigation by Forbes magazine reveals the difficulties: Assuming attackers could shoot their way past the beefed-up phalanx of armed guards, traffic barriers and guard towers that now surround every nuclear plant, they'd still have to fight their way into the reactor building through multiple levels of remote-activated blast doors--where access requires the right key card and palm print--to get to the spent-fuel pond, says Michael Wallace, president of Constellation Energy's generation group, which operates five nuclear reactors. The pond where highly radioactive used fuel rods sit in 14-foot-long stainless steel assemblies cooling under 40 feet of water. **Terrorists couldn't just grab this stuff and run because, unshielded, it gives off a lethal dose of radiation in less than a minute. To avoid exposure, terrorists would have to force workers to use a giant crane inside the reactor to load the assemblies into huge transfer casks, then open the mammoth doors of the reactor building and use another crane to lift the cask onto a waiting truck--all the while being shot at by the National Guard.** It may be easier to steal radioactive material outside the U.S.--but not much. What about hijacking a plane and crash-diving it into a nuclear reactor? It would make a spectacular movie scene, but as Forbes explains, it would not cause much harm to those outside the plane: **Assume that terrorists could get past tightened airport security and fight off passengers to get through new, improved cockpit doors and take control of a plane. Even then they'd have to crash the jet directly into a reactor to have any chance of breaking containment.** In 2002 the Electric Power Research Institute performed a \$1 million computer simulation to assess such a risk. Conclusion: **A direct hit from a 450,000-pound Boeing 767 flying low to the ground at 350 mph would ruin a plant's ability to make electricity but not break the reactor's cement shield. Reason: A reactor, smaller in profile than the Pentagon or World Trade Center, would not absorb the full force of the plane's impact.** And, for all the force behind it, a plane, built of aluminum and titanium, has far less mass than the 20-foot-thick steel-and-concrete sarcophagus enclosing a nuclear reactor. It would be like dropping a watermelon on a fire hydrant from 100 feet. Another problem with theft is fencing the goods. **Most uranium thieves have been caught when they tried to sell the small amounts of radioactive material they have stolen. And the difficulties of theft do not end once al Qaeda gets its prize. Even if al Qaeda terrorists managed to steal a nuclear device or bought one from those standby villains of choice, Russian mobsters, they would still have to figure out how to break the codes and overturn the fail-safes.** All Russian and American devices have temperature and pressure sensors to defeat unauthorized use. Since intercontinental missiles are designed to pass through the upper atmosphere before descending to their targets, the terrorists would have to find a laboratory facility that could mimic the environment of the outer stratosphere. Good luck. **Council on Foreign Relations fellow Charles Ferguson told the Washington Post that "you don't just get it [a nuclear weapon] off the shelf, enter a code, and have it go off."**

**So Could Al Qaeda Make Its Own Bomb?: It appears that the terror network has tried and failed. In August 2001, bin Laden was envisioning attacks bigger than what happened on September 11. Almost a month before the attacks on New York and Washington, bin Laden and his deputy Ayman al-Zawahiri met with Sultan Bashiruddin Mahmood and Abdul Majeed, two officials once part of Pakistan's nuclear program. Mr. Mahmood had supervised the plant that enriched uranium for Pakistan's first bomb and later managed efforts to produce weapons-grade plutonium. Both scientists were arrested on Oct. 23, 2001. They remain under house arrest in Pakistan. At their meeting with bin Laden, they discussed plans to mine uranium from plentiful deposits in Afghanistan and talked about the technology needed to turn the uranium into bomb fuel. It was these scientists who informed bin Laden that the uranium from Uzbekistan was too impure to be useful for bomb making. Al Qaeda will keep trying, no doubt. But there is no evidence that they are near succeeding. A wide array of documents and computer hard drives found in al Qaeda safe houses reveals a serious effort to build weapons of mass destruction. The U.S. military also obtained a document with the sinister title of "Superbomb."**

In addition, CNN discovered a cache of documents at an al Qaeda safe house that outlined the terror network's WMD plans. David Albright, a physicist and president of the Institute for Science and International Security, was retained by CNN to evaluate the al Qaeda documents. **In "Al Qaeda's Nuclear Program: Through the Window of Seized Documents," a research paper for a think tank linked to the University of California at Berkeley, Albright concluded: "Whatever al Qaeda had accomplished towards nuclear weapon capabilities, its effort in Afghanistan was 'nipped in the bud' with the fall of the Taliban government. The international community is fortunate that the war in Afghanistan set back al Qaeda's effort to obtain nuclear weapons."** For now, suitcase-sized nuclear bombs remain in the realm of James Bond movies. Given the limitations of physics and engineering, no nation seems to have invested the time and money to make them. Both U.S. and the USSR built nuclear mines (as well as artillery shells), which were small but hardly portable--and all were dismantled by treaty by 2000. Alexander Lebed's claims and those of defector Stanislev Lunev were not based on direct observation. **The one U.S. official who saw a small nuclear device said it was the size of three footlockers--hardly a suitcase. The desire to obliterate cities is portable--inside the heads of believers--while, thankfully, the nuclear devices to bring that about are not** (Miniters, 2006).

**Title/Headline:** *Al-Qaida Plotting Nuclear Attack On UK, Officials Warn*

**Abstract:** British intelligence officials believe that al-Qaida is determined to attack the UK with a nuclear weapon. The announcement, from an officially organized Foreign Office counter-terrorism briefing for the media, was the latest in a series of bleak assessments by senior officials and ministers about the terrorist threat facing Britain. **UK officials have detected "an awful lot of chatter" on jihadi websites expressing the desire to acquire chemical, biological, radiological or nuclear weapons.** Asked whether there was any doubt that al-Qaida was trying to gain the technology to attack the west, including the UK, with a nuclear weapon, a senior Foreign Office counter-terrorism official said: **"No doubt at all."** The official explained: "We know the aspiration is there, we know the attempt to get material is there, we know the attempt to get technology is there." **For Al-Qaida and jihadis, a devastating nuclear attack on Britain, not just the use of a "dirty bomb", would be part of the desire and agenda to cripple the west, sources said. The network of the rogue Pakistani scientist Abdul Qadeer Khan, which is feared to have sold nuclear technology to Libya, Iran and North Korea, was broken up three years ago, but there are fears that other illegal networks may exist. British counter terrorism officials believe plots they have thwarted and plots they claim are being hatched have strong links to Pakistan.** They say hundreds of Britons travelled in the past year to Pakistan for terrorism activity, including training in camps and acting as couriers for messages. Officials also believe Britons are taking cash to terrorists in Pakistan (Dodd, 2006).

**Title/Headline:** *America Unprepared For 'Likely' Nuke Attack*

**Abstract:** The most extensive study of the effects of nuclear detonations in four major U.S. cities paints a grim picture of millions of deaths, overwhelmed hospitals and loss of command-and-control capability by government. But the three-year study by researchers at the Center for Mass Destruction Defense at the University of Georgia says a concerted effort to teach civilians what to do in the event of a nuclear attack is the best – perhaps only – thing that could save an untold number of lives that will otherwise be needlessly lost. **"If a nuclear detonation were to occur in a downtown area, the picture would be bleak there," said Cham Dallas, director of the program and professor in the college of pharmacy.** "But in urban areas farther from the detonation, there actually is quite a bit that we can do. In certain areas, it may be possible to turn the death rate from 90 percent in some burn populations to probably 20 or 30 percent – and those are very big differences – simply by being prepared well in advance." While America was once prepared for nuclear war with civil defense shelters stocked with food and supplies and educational programs on how to react to a detonation, the report says the threat of a nuclear attack within the U.S. has grown significantly in recent years. **"The likelihood of a nuclear attack in an American city is steadily increasing, and the consequences will be overwhelming,"** said Dallas. "So we need to substantially increase our preparation." **The study looked at the impact of nuclear detonations of two sizes in New York, Washington, Chicago and Atlanta.** Both 20-kiloton and 550-kiloton blasts were modeled in what the authors claim is the most advanced and detailed simulation published in open scientific literature. The entire report, which also takes into account prevailing weather patterns and block-level population data from the U.S. Census Bureau, is published in the March issue of the International Journal of Health Geographics. **In the study's worst-case scenario, one 550-kiloton detonation in New York City was shown to result in a fallout plume extending the length of Long Island, resulting in the deaths of 5 million.** A similar weapon detonated in the nation's capital would destroy hospitals in Washington, but its fallout cloud would also incapacitate hospitals as far away as Baltimore, a city 40 miles from the District of Columbia. Even a relatively small 20-kiloton blast in a downtown area would result in almost unimaginable devastation – leaving debris tens of feet thick in streets with buildings 10 stories or higher. Roughly half the population in those areas would be killed, mainly from collapsed buildings. Most of those surviving the initial blast would be exposed to a fatal dose of radiation. The larger bomb would create additional and substantial casualties from burns. **Mass fires would consume cities, reaching out nearly four miles in all directions from the detonation site.** "The hospital system has about 1,500 burn beds in the whole country, and of these maybe 80 to 90 percent are full at any given time," said William Bell, senior research scientist and a faculty member of the college of public health. "There's no way of treating the burn victims from a nuclear attack with the existing medical system." The report points out hospitals, trauma centers and other medical assets are likely to be in "the fatality plume," rendering them essentially inoperable in the crisis. **"Among the consequences of this outcome would be the probable loss of command-and-control, mass casualties that will have to be treated in an unorganized response by hospitals on the periphery, as well as other expected chaotic outcomes from inadequate administration in a crisis,"** says the report. "Vigorous, creative and accelerated training and coordination among the federal agencies tasked for WMD response, military resources, academic institutions and local responders will be critical for large-scale WMD events involving mass casualties." Bell said a 20-kiloton nuclear weapon could be manufactured by

terrorists and countries such as North Korea and Iran. **The larger warhead is commonly found in the nuclear arsenal of the former Soviet Union and is likely to be stolen by terrorists.** The report confirms other findings that America is extremely vulnerable to a nuclear attack and unprepared to deal with its aftermath. In a July 31, 2005, confidential memo to the Joint Chiefs of Staff, Pentagon analyst John Brinkerhoff concluded: **"The United States is unprepared to mitigate the consequences of a nuclear attack. We were unable to find any group of office with a coherent approach to this very important aspect of homeland security."** In other words, **after having spent more than \$300 billion to protect the homeland in the last five years, America is no closer to a civil defense strategy for a nuclear strike by terrorists.** "This is a bad situation," wrote Brinkerhoff. "The threat of a nuclear attack is real, and action is needed now to learn how to deal with one." Dallas is scheduled to address the United Nations for the second time in as many years where he will discuss options for repairing the crumbling sarcophagus surrounding the reactor that triggered the Chernobyl nuclear disaster in 1986. He will also talk about the consequences of a nuclear attack and what nations can do about it. "We want to try to encourage people to pay attention to this, because it's not all the end of the world," said Dallas. **"There are actually steps that one can take to save lives. But we're running out of time"** (World Net Daily, 2007).

**Title/Headline:** *The Likelihood Of Nuclear Terror*

**Abstract:** The threat of nuclear terrorism is having an upsurge. Terrorist expert Brian Jenkins, in an op-ed piece in the conservative *Washington Times* was cautious but saw the **possibility of a nuclear terrorist attack as real.** Another essay in that paper speculated that the **A.Q. Khan nuclear network in Pakistan could easily be activated.** All these sources emphasized foreign terrorists and rogue states, presumably because domestic terrorists are not inclined to radiological suicide. **The threat is, of course, real,** and the recommendation of sensible and well-informed people such as Michael May in the paper he circulated at the closed conference should be published and taken seriously. For one thing, **May argues that, in contrast to what many of us believe, most residents will survive a nuclear attack upon a major city.** The real danger is that **terrorists may realize the potential for massive kills by releasing the Weapons of Mass Destruction we have in or adjacent to our large cities,** such as the concentration of hazardous materials in our chemical plants, nuclear power plants, on our rail tracks, or the concentrations in our food industry. We have almost no defense against these (Perrow, 2007)

**Title/Headline:** *Al-Qaida Plans Nuclear Attacks On 7 U.S. Cities*

**Abstract:** Among the explosive revelations in "The Day of Islam":

- **In 1996, al-Qaida's "paymaster" and a top lieutenant for bin Laden walked into a U.S. embassy in Africa and spilled the beans on the terror group's activities — including that al-Qaida had purchased nuclear material in the Sudan.**
- The incredible story of a Brooklyn, N.Y., mosque that was receiving "stipends" from Uncle Sam for more than \$2 million a year up until 1993 — when it was discovered the mosque was the nerve center for the first attack on the World Trade Center.
- The fact that despite the hoopla about the war on terror, only one member of bin Laden's shura — or high command — has been killed.
- The case of a Chicago charity that raised millions for bin Laden and even paid for one of his operatives whose sole job was to acquire nuclear weapons.
- **Evidence the Saudi intelligence service claims bin Laden has an arsenal of between 40 and 70 tactical nuclear weapons. Russian sources that claim bin Laden bought 12 to 15 fully assembled nuclear weapons.**
- Ties between al-Qaida and the Chechen rebels who allegedly acquired nuclear suitcase devices.
- **Bin Laden's claim to a Pakistani journalist two months before 9/11 that acquiring nuclear was "not difficult" — claiming they were available from Russia for between \$10 million and \$20 million.**
- **Author Tom Clancy's revelations he was "first bemused, then stunned" to find how easy it is for a wealthy person to develop a nuclear device equal to that dropped on Hiroshima and Nagasaki.**
- **How atomic blueprints are available from Amazon.com! Evidence bin Laden spent between \$60 and \$100 million to build nuclear devices with the help of scientists from Pakistan, Russia, and China.**
- The damage even a low yield "junk" nuclear device would do to New York — with an estimated 250,000 dead in several days.
- The remarkable story of two British secret agents who penetrated al-Qaida's camps in Afghanistan — and reported to Britain that the terror group was finishing work on radiological weapons.
- **The stunning admission of the head of Britain's MI5 who confirmed that "renegade" scientists had provided al-Qaida with the knowledge they needed to build a nuclear device.**
- **New Jersey: the strange case of a Pakistani who died of radiological poisoning soon after 9/11, a man who had apparently served as a "mule" to transport the deadly material into the U.S.**
- **Axis of Evil: the secret alliance between al-Qaida and Iran that brings together two religious groups with one common goal: destroying the U.S. (NewsMax, 2007)**

**Title/Headline:** *Feds Hoped To Snag Bin Laden Nuke Expert In JFK Bomb Plot*

**Abstract:** Al Qaeda's so-called nuclear whiz kid - a "tantalizing terror figure" with a \$5 million bounty on his head - was the radical big

shot investigators had hoped to snag in their 18-month JFK-plot probe. The name of "invisible hand" **Adnan Gulshair el-Shukrijumah**, reportedly the man **Osama bin Laden** tapped to lead a previous scheme to detonate nuclear bombs simultaneously in several U.S. cities, came up at several points in taped conversations during the probe, according to law-enforcement sources familiar with the investigation. **Three Muslim men were nabbed in the alleged plan to attack John F. Kennedy International Airport** - the "chicken farm," as they dubbed it - which involved exploding a jet-fuel pipeline. A fourth suspect is at large. Given Shukrijumah's notoriety in the terror world and the fact that he grew up in Guyana, as did three of the suspects, probes immediately homed in on him. "Eyebrows went up," said one law-enforcement source. **"We thought he could be the invisible hand. He's always in the shadows, particularly in [the Caribbean].** He's passed through it, he's known, his name came up in the conversations. "He would have been the prize." So the feds allowed the probe to continue until the last moment, which came when **one of the suspects boarded a plane in Trinidad headed for Venezuela** - where the United States has no extradition agreement. Authorities weren't willing to risk losing him, so they "pulled the trigger" on the arrests, one source said (Fox News, 2007).

**Source:** NewsMax, Robert Mueller

**Title/Headline:** *FBI's Mueller: Al-Qaida Has Intent To Use Nuclear Weapons*

**Abstract:** Robert S. Mueller, Director of the FBI, spoke this morning at the Global Initiative Nuclear Terrorism Conference in Miami: **We are here to discuss one of the most dangerous and deadly threats we face: nuclear terrorism.** Few threats fall into the same class in terms of sheer devastation, damage, and loss. Few strike such fear in the hearts of the public. And few threats are so appealing to terrorists around the world, for the same reasons. **It has been said that the September 11th attacks were a "failure of imagination." We cannot fail to imagine the consequences of a nuclear terrorist attack. Nor can we fail to imagine that there are those for whom such an event is the end game.** Prevention must be our end game. Should there be a nuclear attack anywhere in the world, it would mean in some sense that we have failed in our mission. That is why we are here this week. This morning, **I want to talk about the threat of nuclear terrorism. I want to touch on our collective efforts in the United States to keep our citizens safe. And I want to discuss what we in the international community must do to contain this threat.** Our roadmap is clear. We must start with the source: we must secure loose nuclear material. We must share intelligence about those who wish to buy and sell such material, and we must stop those who do. **Most importantly, we must stand strong together, for nuclear terrorism is a global threat that requires a global response. By some estimates, there is enough highly enriched uranium in global stockpiles to construct thousands of nuclear weapons.** And it is safe to assume that there are many individuals who would not think twice about using such weapons. The economics of supply and demand dictate that **someone, somewhere, will provide nuclear material to the highest bidder, and that material will end up in the hands of terrorists. Al Qaeda has demonstrated a clear intent to acquire weapons of mass destruction. In 1993, Osama bin Laden attempted to buy uranium from a source in the Sudan. He has stated that it is Al Qaeda's duty to acquire weapons of mass destruction.** And he has made repeated recruiting pitches for experts in chemistry, physics, and explosives to join his terrorist movement. Bin Laden is no small thinker. Prior to 2001, Khalid Sheikh Mohammed – the mastermind of the September 11th attacks – suggested flying a small plane filled with explosives into CIA Headquarters. As noted by the 9/11 Commission, bin Laden reportedly asked him, "Why do you use an axe when you can use a bulldozer?" **If 9/11 was the "bulldozer" of which bin Laden spoke, we can only imagine the impact of a full-scale nuclear attack.** Unfortunately, Al Qaeda central is not our only concern. We face threats from other terrorist cells around the world, and from homegrown terrorists who are not affiliated with Al Qaeda, but who are inspired by its message of hatred and violence. **Several rogue nations – and even individuals – seek to develop nuclear capabilities. Abdul Khan, for example, was not only the father of Pakistan's nuclear bomb, he peddled that technology to North Korea, Libya, and Iran. Khan was one of many to prove that it is indeed a seller's market in the so-called atomic bazaar. We have often said that the next terrorist attack is not a question of if, but when.** If we up the ante to a nuclear terrorist attack, we know it is a question of if, but we cannot let it become a question of when. Now is the time to act. Together, we are training our foreign partners in WMD detection, border security, undercover investigations, nuclear forensics, and crisis management. **To date, we have trained more than 5,000 participants from more than 23 countries. We all face the prospect that at some point in the near future, a terrorist will steal, smuggle, buy, or build a nuclear weapon.** We must focus on prevention; we cannot afford to wait for a calling card to announce an attack. **Our greatest weapon is unity.** That unity is built on intelligence and interagency cooperation. It is built on the idea that, together, we are smarter and stronger than we are standing alone. **No person, no police officer, no agency, and no country can prevent a nuclear terrorist attack on its own. There are too many unlocked doors and unknown players, too many ports and porous borders.** Yet together, we can stop the smuggling of nuclear material. We can stop those who seek to buy such material on the black market. **And we can stop terrorists from using this technology to threaten our citizens. We can, and we must.** Indeed, the greatest danger for each of us here today would be to do nothing. We must take action. And we must do so together. **Our safety can only be secured with the help of the international community. Years ago, we stood across from one another, divided by walls and different ways of life. Today, we stand together in this Global Initiative. We are united in a common cause.** It is my sincere hope that in the years to come, we will have no need to meet to address this threat. Let us begin to make that hope a reality (NewsMax, 2007).

**Title/Headline:** *No Loose Nukes: Preventing A Terrorist Nuclear Attack On The U.S.*

**Abstract:** Before 9/11 most Americans found the idea that international terrorists could mount an attack on their homeland and kill thousands of innocent citizens not just unlikely but inconceivable. After nearly six years without a second attack on U.S. soil, some skeptics suggest that 9/11 was a 100-year flood. **The view that terrorists are preparing even more deadly assaults seems as far-fetched to them as the possibility of terrorists crashing passenger jets into the World Trade Center did before that fateful Tuesday morning.**

**To assess the threat of nuclear terrorism, it is necessary to answer five questions:**

**1. Who could be planning a nuclear terrorist attack?:** Al-Qaida remains a formidable enemy with clear nuclear ambitions. Former CIA director George Tenet wrote in his memoirs that al-Qaida's leadership has remained "singularly focused on acquiring weapons of mass destruction" and willing to "pay whatever it would cost to get their hands on fissile material."

**2. What nuclear weapons could terrorists use?:** They could acquire an existing bomb from one of the nuclear weapons states or construct an elementary nuclear device from highly enriched uranium (HEU) made by a state. Theft of a warhead or material would not be easy, but attempted thefts in Russia and elsewhere are not uncommon. **Once a terrorist group acquires about 100 pounds of HEU, terrorists could conceivably construct a bomb such as the one dropped on Hiroshima.**

**3. Where could terrorists acquire a nuclear bomb?:** Russia is the most likely source of materials used for a nuclear attack. North Korea is a close second. Pyongyang has boasted that it not only possesses nuclear weapons but might export them, saying, "It's up to you whether we ... transfer them." **Furthermore, research reactors in 40 developing and transitional countries still hold the essential ingredient for nuclear bombs.**

**4. When could terrorists launch the first nuclear attack?:** If terrorists bought or stole a nuclear weapon in good working condition, they could explode it today. If the weapon had a lock, detonation would be delayed for several days. If terrorists acquired 100 pounds of HEU, they could have a working elementary nuclear bomb in less than a year.

**5. How could terrorists deliver a nuclear weapon to its target?:** The illicit economy for narcotics and illegal immigrants has built up a vast infrastructure that terrorists could exploit. **Based on current trends, a nuclear terrorist attack on the United States is more likely than not in the decade ahead.** To see what such an event would mean in your neighborhood, enter your ZIP code at [www.nuclearterror.org](http://www.nuclearterror.org). As horrific as that vision is, the most important but largely unrecognized truth is that this ultimate catastrophe is preventable

**I have proposed a strategy for a no-loose-nukes agenda under a "Doctrine of Three No's":**

- 1) No unsecured nuclear weapons and weapons-usable material; they should be locked down as quickly as possible.
- 2) No new domestic capabilities to enrich uranium or reprocess plutonium.
- 3) No expansion of the nuclear club beyond its current 8.5 members (the half being North Korea).

**Faced with the possibility of an American Hiroshima, many Americans are paralyzed by a combination of denial and fatalism. Either it hasn't happened so maybe it's not going to happen or, if it is going to happen, there's nothing we can do to stop it.** Both propositions are wrong. Citizens must press their elected officials to adopt a clear agenda for action and then hold them accountable for following through (Allison, 2007).

**Title/Headline:** *Cheney Determined To Strike In US With WMD This Summer*

**Abstract:** The Cheney doctrine, which calls for a new super 9/11 with weapons of mass destruction in the US, to be used as the pretext for a nuclear attack on Iran and for martial law at home. Those who think the Republicans cannot hold the White House in 2008 have forgotten that neocons always prefer a coup d'etat to an election. As Cheney told Bob Schieffer of CBS's Face the Nation on April 15, 2007: **"The greatest threat now is "a 9/11 occurring with a group of terrorists armed not with airline tickets and box cutters, but with a nuclear weapon in the middle of one of our own cities."** Michael Chertoff's rationale was illuminated by an interview with Lt. Colonel Doug Delaney, the chair of the war studies program at the Royal Military College in Kingston, Ontario, Canada, a NATO intelligence center. Delaney was addressing the problems raised by the rising Canadian losses in Afghanistan, but he provided a valuable window into the minds of military planners when he observed, in the words of the interviewer: **"It may well be that the key to bolstering Western resolve is another terrorist attack like 9/11 or the London transit bombings of two years ago, he says. If nothing happens, it will be harder still to say this [Canadian meddling in Afghanistan] is necessary."** In other words, it may be time for a new false flag synthetic terror operation to gin up hysteria in North America to permit the present bankrupt elites to retain power and further grind down any spirit of popular resistance to such irrational rule. **Chertoff's fear-mongering was backed up by ousted Republican senator and notorious scoundrel Rick Santorum, who told a radio interviewer that "between now and November, a lot of things are going to happen, and I believe that by this time next year, the American public is going to have a very different view of this war."** Chertoff's reckless and inflammatory ventriloquism was the harbinger of the new US National Intelligence Estimate issued on July 17, 2007. The main thesis is that al Qaeda branches around the world are striving to infiltrate more operatives into the US for terror attacks on the US "homeland:" **"Although we have discovered only a handful of individuals in the United States with ties to al Qaeda senior leadership since 9/11, we judge that al Qaeda will intensify its efforts to put operatives here,"** opines the declassified summary of the underlying secret screed. **"As a result, we judge that the United States currently is in a heightened threat environment."** In a July 19 interview with Thomm Hartmann of Air America, Roberts cited Bush's July 17 executive order, which allows the US regime to seize the property of anyone found to be interfering with the reconstruction of Iraq. This radio warning was reported by the RIA-Novosti news agency of Moscow in numerous languages. The Moscow summary, dated July 20, begins: **"A former Reagan official has issued a public**

warning that the Bush administration is preparing to orchestrate a staged terrorist attack in the United States, transform the country into a dictatorship, and launch a war with Iran within a year." Also warning of new war provocations was Cindy Sheehan, who was traveling towards Washington DC to declare her challenge to failed House Speaker Pelosi. **She commented that there was a "distinct possibility" that America will be hit with another staged terror attack that will allow Bush to enact the martial law provisions he recently imposed by executive order.** These measures allow Bush to declare a domestic state of emergency in response to virtually any minor incident anywhere in the world. The Democratic Party Congressional leadership has known all about Cheney's plans for six months or more, as can be shown from the public record. On February 1, 2007, Zbigniew Brzezinski warned the Senate Foreign Relations Committee of ongoing machinations designed to procure war with Iran and beyond: **"A plausible scenario for a military collision with Iran involves Iraqi failure to meet the benchmarks, followed by accusations of Iranian responsibility for the failure; then by some provocation in Iraq or a terrorist act in the US blamed on Iran;** culminating in a 'defensive' US action against Iran that plunges a lonely America into a spreading and deepening quagmire eventually ranging across Iraq, Iran, Afghanistan, and Pakistan" (Tarpley, 2007).

**Title/Headline:** *Against Nuclear Terrorism*

**Abstract:** Graham Allison is one of America's leading experts on nuclear weapons and national security. He has served in the Department of Defense as assistant secretary of defense for policy and plans, is the director of the Belfer Center for Science and International Affairs, and a professor at the John F. Kennedy School of Government at Harvard University. **In other words, when this man speaks and writes on an issue where he has the expertise, it is prudent, very prudent, to pay attention to what he has to say.** And he has a lot to say in his new book entitled "Nuclear Terrorism: The Ultimate Preventable Catastrophe." I am a great fan of suspense thrillers and novels about spies, espionage, and international crises and disasters. How I wish that Allison's book was just another of my exciting leisure-time fictional entertainments! **But, unfortunately, this book is nonfiction: a serious, indeed extremely serious, and sober, discussion of the threat we face called "nuclear terrorism."** For example, one "dirty bomb," which simply consists of conventional explosives dispersing radioactive materials, exploded in downtown Manhattan, would make the island uninhabitable for years and result in many thousands of deaths from the immediate blast, from radiation poisoning over time, and from the immediate panic it would cause at the outset. And note: these radioactive materials are readily available in many medical and industrial facilities and, of course, explosives are so easy to obtain that they often fall into the hands of knowledgeable teenagers. Scary? Of course. But that's not the worst possibility that Allison discusses in his book. **Just suppose the bomb is a ten-kiloton nuclear weapon and it is smuggled into New York City,** not all that difficult to do since not every package container or usable vehicle can be searched or inspected. On the other hand, maybe it's already there, smuggled in long before this, just waiting to be activated. What would happen if it was detonated? Well, **according to Allison, if the bomb were set off in Times Square, up to a million people would probably die instantly. Thousands upon thousands more would be killed by collapsing buildings, fires, and the effects of radiation. Life and living, as New Yorkers have known it, would be changed forever in a matter of milliseconds. If you think it would be too difficult for a terrorist group to build a nuclear weapon, think again.** According to Allison, the only real difficulty to creating a nuclear weapon is getting one's hands on the fissionable material necessary to produce the nuclear explosion. This material is highly enriched uranium (HEU) or plutonium. Think that it's almost impossible for a would-be terrorist to obtain such material? Consider these facts the author has uncovered: In 1993, a Russian Navy captain entered a shipyard through an unguarded gate, broke into a building used to store nuclear submarine fuel, and stole three pieces of reactor core containing about ten pounds of HEU; In 1994, Czech police seized over eight pounds of HEU in the city of Prague, which was found inside a metal container in the back-seat of a car parked on a side street; In 2000, four Georgian nationals were arrested with about two pounds of HEU outside Batumi, the capital of the chaotic Adzhariya Autonomous Republic in Georgia. These are just a few examples. **Allison provides a lot more, even showing how such material could be stolen within the United States at certain nuclear storage sites.** After a chapter devoted to showing how easy it would be to acquire fissionable material, Allison devotes the next chapter to the question: **"When could terrorists launch the first nuclear attack?" You'll be surprised at the answer, I guarantee it.** The reader should pay particular attention to the sub-topic in this chapter about "Building It Yourself." The author even includes diagrams for a simple "gun-type" nuclear bomb and an implosion-type nuclear bomb. Is he being irresponsible? No, these diagrams are easily available to anyone elsewhere! Following this discussion, in the next chapter, Allison discusses the question, "How could terrorists deliver a nuclear weapon to its target?" A number of scenarios are offered and he shows how easy it would be to smuggle a nuclear device into the United States and, of course, into New York City or anywhere else. Now go back and read paragraphs two and three in this review. **So, is it hopeless? The first half of Allison's book would lead one to believe that this is the case.** But the author spends the second half of his book arguing that nuclear terrorism is preventable. And he provides a framework, a schematic of sorts, for a program of policies to prevent nuclear terrorism. First, there must be the "Three No's": No loose nukes, no new nascent nukes, and no new nuclear weapons states. Second, there must be the "Seven Yeses": Making the prevention of nuclear terrorism an absolute national priority, fighting a strategically focused war on terrorism, conducting a humble foreign policy, building a global alliance against nuclear terrorism, creating the intelligence capabilities required for success in the war on nuclear terrorism, dealing with dirty bombs, and constructing a multilayered defense. For the details of these no's and yeses, you'll just have to read the book. I think you'll find them reasonable and necessary. While Allison suggests a blueprint for prevention, it will ultimately be up to Americans and their government, hopefully in accord and alliance with other peoples of the world and their governments, to implement the policies he recommends. **"Nuclear Terrorism" is a book which needs to be read by every person who is concerned by the unprecedented threats which surround our lives today in a world which stands on the brink of a possible nuclear disaster.** Graham Allison has defined the problem, provided the facts, and suggested a solution. Now it is up to the rest of us to help create the climate wherein the solution he proposes can be implemented (Dolhenty, 2008).

**Title/Headline:** *How The U.S. Seeks To Avert Nuclear Terrorism*

**Abstract:** About every three days, **unknown to most Americans, an elite team of federal scientists hits the streets in the fight against nuclear terrorism.** The deployments are part of an effort since 2001 to ratchet up the nation's defenses. **More than two dozen specialized teams have been positioned across the nation to respond to threats of nuclear terrorism, and as many 2,000 scientists and bomb experts participate in the effort.** Spending on the program has more than doubled since it was launched. And an evolving national policy aims to create a system of nuclear forensics, in which scientific analysis **could quickly identify the source of a nuclear attack or attempted attack.** The counter-terrorism efforts are becoming routine. Scientists in specially equipped helicopters and airplanes use radiation detectors to scan cities for signs of weapons. They blend into crowds **at major sporting events,** wearing backpacks containing instruments that can identify plutonium or highly enriched uranium. "After everything else fails, we come in," said Deborah A. Wilber, the scientist who directs the Office of Emergency Response at the Energy Department's National Nuclear Security Administration. **"I don't believe it is a question of if it will happen. It is a question of when."** The scientists are also experts in the rapidly evolving field of nuclear forensics, which aims to track nuclear materials to their country of origin. **Even if a bomb detonates, fallout can be analyzed to identify the terrorists and their state sponsors. A retaliatory strike could be the response.** The idea is to force other nations to take better care of their own nuclear fuels or else find themselves in the cross hairs of the U.S. nuclear arsenal. **A successful terrorist nuclear attack would trigger the so-called national response plan.** Many federal agencies would swing into action, including the Environmental Protection Agency, the Defense Department, the Department of Homeland Security and the Department of Justice, as would myriad obscure offices unknown to the vast majority of Americans. For example, the National Atmospheric Release Advisory Center, based at the Livermore lab, would run advanced computation models of fallout patterns to provide evacuation plans for potentially millions of people. **Whether so many federal agencies could work together in the chaos of a nuclear attack, all while coordinating with state and local officials, is a matter of grave concern in Congress.** "If you tell 100 million people to go east, 25 million will go west because they don't trust the government," said Jay C. Davis, a retired weapons scientist who is working on the forensics study. The forensics study is trying to assess how authoritative the U.S. could be in **attributing a nuclear device to a particular source and in making its case to the American public and the rest of the world.** Davis said it was hoped that nuclear forensics could determine the size of a detonation within one hour; the sophistication of the bomb design within six hours; how the fuel was enriched within 72 hours; and the peculiar details of national design -- **"Does this look like a Russian, a Chinese or a Pakistani device, or something we have never seen before?"** -- within a week. What next? That part of the strategy is still evolving. **Retaliation is one option that counter-terrorism officials have suggested in congressional testimony.** Rep. Adam Schiff (D-Pasadena), who has sponsored legislation to increase funding for nuclear forensics, suggested that any policy had to be flexible. "It would be left to the administration in office to determine what the repercussions would be," he said. Deterrence might depend simply on the perception that the U.S. could respond with a counterstrike. But if nuclear fuel were traced back to Russia, would the U.S. start a nuclear exchange? And what if the nuclear materials came from the U.S.? (Vartabedian, 2008).

**Title/Headline:** *White House Fears Of Nuclear Terrorist Threat*

**Abstract:** **There are real fears in White House circles that Al Qaeda could get hold of a nuclear bomb from Pakistan.** Former US Ambassador to the UN, John Bolton, a confidante of the Administration declared: **"I think there is a very real threat that if Musharraf falls or is assassinated, that a radical Islamic government will take control."** Then you would have a very grave threat of Pakistan's nuclear arsenal being used for international terrorist purposes." The report went on to state that Osama bin Laden has always said he hopes to detonate a nuclear device in Western cities. **Pakistan has enough material for 70 nuclear weapons, an unstable military regime, strong Islamic fundamentalism in military and government circles and groups like Al Qaeda on its territory** (Wallace, 2008)

**Date:** March 7, 2008

**Source:** CBS News, Associated Press

**Title/Headline:** *Commander Warns Of Homeland Terror Threat*

**Abstract:** Al Qaeda terrorists may be plotting more urgently to attack the United States to maintain their credibility and ability to recruit followers, the U.S. military commander in charge of domestic defense said. Air Force Gen. Gene Renuart, chief of the U.S. Northern Command, also told reporters that he has not seen any direct threats tied to the U.S. presidential elections. But he said it would be rash to think that such threats are not there. "We need only to look at Spain and see that they're certainly willing to try to do something that is significant that could affect an election process," Renuart said. **"I think it would be imprudent of us to let down our guard believing that if there's no credible threat that you know of today, there won't be something tomorrow."** While he said that U.S. authorities have thwarted attacks on a number of occasions, he said **terrorist cells may be working harder than ever to plot high-impact events.** He did not point to any specific intelligence that authorities have received but said the "chatter" they are hearing **"gives me no reason to believe they're going to slow down" in their efforts to target the U.S.** "If an organization like that is to maintain credibility and continue to grow more of its extremists, it has to show tangible results," Renuart said. "So I think there may be a certain sense of urgency among that organization to have an effect. So it would tell me that they're trying harder." Asked about the terror threat, Homeland Security spokesman Russ Knocke said, **"There continues to be no credible information telling us about an imminent threat to homeland at this time."** In July, U.S. intelligence analysts, in a threat assessment, concluded that al Qaeda had rebuilt its operating capability to a level not seen since just before the Sept. 11, 2001, terrorist attacks. **The report said the terror network had regrouped along the Afghan-Pakistan border,** but it also noted that officials knew of no specific credible threat of an attack on U.S. soil. About the same time, Homeland Security Secretary Michael Chertoff raised eyebrows when he said he had a **"gut feeling" that the United States faced a heightened risk of attack.** Later, Chertoff said the U.S. has successfully lowered the risk of a large-scale domestic terrorist attack for the near future. **"We have significantly reduced the risk of a major attack in the short term,"** Chertoff told a group of editors at The Washington Post in a report posted online. The chatter, which included public audio and video tapes released on the Internet by **al Qaeda leaders, suggests that they are looking for a way to have a big impact again,** he said. Pressed for details, he said the chatter was more common but "whether that's louder or more ominous, I'm not sure I'm ready to draw that conclusion." He did, however, repeat his assertion - which he first made in July - that **he believes there are al Qaeda cells or sympathizers within the United States.** President Bush, in a speech said the United States remained under threat from terrorists. Marking the fifth anniversary of the creation of the Homeland Security Department, Bush said that in the aftermath of the Sept. 11 attacks **"it was hard to imagine that we would reach this milestone without another attack on our homeland."** Yet he said, **"On this anniversary, we must also remember that the danger to our country has not passed. Since the attacks of 9/11, the terrorists have tried to strike our homeland again and again. We've disrupted numerous planned attacks - including a plot to fly an airplane into the tallest building on the West Coast and another to blow up passenger jets headed for America across the Atlantic Ocean."** Mr. Bush said the lesson is clear: **"The enemy remains active, deadly in its intent - and in the face of this danger, the United States must never let down its guard"** (CBS News, 2008).

**Title/Headline:** *Experts To Testify Of 'Growing' Nuke Threat To U.S*

**Abstract:** The government must act to reduce the threat of nuclear terrorism in a major U.S. city, senior government officials and top terrorism experts are scheduled to tell the Senate. Testifying as part of a months-long Senate investigation into the government's ability to prevent a nuclear attack, the experts will paint **a chilling picture of a post-nuclear America: hundreds of thousands of dead, \$1 trillion in damage, and panic nationwide.** **"The prospect of terrorists detonating a nuclear device on American soil sometime within the next quarter-century is real and growing,"** according to prepared testimony from Gary Anthony Ackerman, research director of the Homeland Security Department-funded National Consortium for the Study of Terrorism and Responses to Terrorism. **"Such a calamitous attack would represent a game-changing event far exceeding the impact of 9/11 on the nation."** Rolf Mowatt-Larssen, director of the Department of Energy's Office of Intelligence and Counterintelligence, outlined several steps the government has taken to mitigate the threat. Among them are working with other governments to try to eliminate and secure nuclear stockpiles. **"Today, al-Qaeda's nuclear intent remains clear,"** his testimony says. The near-monthly reports of people trying to smuggle "real or purported" nuclear materials means "that we collectively have not done enough to suppress trafficking and ensure the security of all nuclear materials worldwide," according to his testimony. The Senate committee is conducting the government's first investigation into nuclear terrorism and the needs and plans for responding. Committee Chairman Joe Lieberman, D-Conn., said Tuesday that the hearing "is not to encourage unnecessary fear but to confront the threatening realities so that we can then deal with them in defense of our country and people." Charlie Allen, intelligence chief at the Homeland Security Department, said, **"One of our gravest concerns is the entry of a nuclear device or materials into the U.S."** In testimony, Allen said he does not believe that any terrorist group has a nuclear device in hand, but "the terrorist threat is dynamic and constantly evolving" (Hall, 2008).

**Date:** April 5, 2008

**Source:** NDTV News, Lalit K. Jha

**Title/Headline:** *Al-Qaida Nuclear Attack In Planning Stages*

**Abstract:** **Al-Qaida's nuclear attack against the US is in planning stages**, top American intelligence officials have said. Deposing before a Congressional Committee on Homeland Security early this week, **these US intelligence officials told US lawmakers that the threat of nuclear attack by the Taliban was growing and there is need to enhance its security measures.** Charles Allen, Undersecretary for Intelligence and Analysis and Chief Intelligence Officer at the Department of Homeland Security; and Rolf Mowatt-Larssen, the director of Office of Intelligence and Counterintelligence for the Department of Energy testified before this key Congressional committee on nuclear terrorism on April 2, 2008. **"There's been a long-term effort by Al-Qaida, to develop an improvised nuclear device,"** Allen said. "I have no doubt that Al-Qaida would like to obtain nuclear capability. **I think the evidence in their statements that they've made over many years publicly indicate this,**" he argued in his testimony. Giving details of the Al-Qaida preparation, based on years on intelligence inputs, Mowatt-Larssen said: **"An Al-Qaida nuclear attack would be in the planning stages at the same time as several other plots, and only Al-Qaida's most senior leadership will know which plot will be approved."** In keeping with Al-Qaida's normal management structures such as the role of Khalid Sheikh Muhammad in the 9/11 attacks, Mowatt-Larssen said there is probably a single individual in charge, overseeing the effort to obtain materials and expertise. **The intelligence officials commented that some nuclear experts / scientists may have joined Al-Qaida years ago, long before the world began paying adequate attention to the proliferation of the kinds of technologies that could yield a terrorist nuclear weapon.** Referring to the planning of the 9/11 attack, Mowatt-Larssen said it was operationally very straightforward. **"It had a very small footprint, was highly compartmented. Al-Qaida's nuclear effort would be just as compartmented and probably would not require the involvement of more than a small number of operatives who carried out 9/11,"** he said. Mowatt-Larssen then went out to divulge his information about a prototypical Al-Qaida nuclear attack plot. This would have, he said, approval and oversight from Al-Qaida's most senior leadership, with possible assistance from other groups and a planner responsible for organizing the material, expertise and fabrication of a device; operational support facilitator, responsible for arranging travel, money, documents, food and other necessities for the cell; assets in the United States or within range of other Western targets to case locations for an attack and to help move the attack team into place; and finally, the attack team itself. **This hearing was followed by another classified session wherein other details about the possible nuclear attack by the Al-Qaida terrorist network were possibly explained to the US lawmakers in details.** "Beyond the basics I have outlined here, we do not know what a terrorist plot might look like. There is, however, a chokepoint in a terrorist effort to develop a nuclear capability. It is impossible to build a nuclear weapon without fissile material," he said. The officials said that the task for the intelligence community is not easy. **"We must find something that is tactical in size but strategic in impact. We must find a plot with its networks that cut across traditional lines of counter proliferation and counterterrorism. We must stop something from happening that we have never seen happen before,"** he said. Mowatt-Larssen said the US successes against Taliban in Afghanistan have yielded volumes of information that completely changed its view of Al-Qaida's nuclear program. **"We learned that Al-Qaida wants a weapon to use, not a weapon to sustain and build a stockpile, as most states would,"** he said. "The nuclear threats that surfaced in June 2002 and continued through the fall of 2003 demonstrated that Al-Qaida's desire for a nuclear capability may have survived their removal from their Afghanistan safe haven," he said. Observing that the Al-Qaida's nuclear intent remains clear, he said it obtained a fatwa in May 2003 that approved the use of weapons of mass destruction. Al-Qaida spokesman Suleyman Abu Ghayth declared that it is Al-Qaida's right to kill four million Americans in retaliation for Muslim deaths that Al-Qaida blames on the United States. **"Osama bin Laden said in 1998 that it was an Islamic duty to acquire weapons of mass destruction. In 2006, bin Laden reiterated his statement that Al-Qaida will return to the United States. He said Al-Qaida has a track record of returning to finish a job they started. They failed at the World Trade Center in 1993. They came back in 2001. They canceled plans for chemical attacks in the US in 2003. "We do not yet know when and where they intend to strike us next, but our past experience strongly suggests they are seeking an attack more spectacular than 9/11,"** he said. "To delve a little into how they may be thinking about the nuclear option, at any given moment, Al-Qaida probably has attack plans in development. Nine-eleven was planned when the USS Cole was attacked in Yemen and when our embassies in Dar es Salaam and Tanzania were attacked in Africa," he said. In his testimony Dr. Matthew Bunn, a senior research associate for the Project on Managing the Atom at the Belfer Center for Science and International Affairs at Harvard University's School of Government said **there is greater chance than ever that the Al-Qaida would get the material and manage to make it into a bomb. "I think then the next question is if they got the material, and they managed to make it into a bomb, could they somehow deliver it to Washington, or New York, or another major city somewhere around the world. I think, in my view, the answer is yes,"** he said. Bunn said in case a bomb goes off there would be blackmailing tactics from these terrorists' organizations. **"One has to recall that the moment after a nuclear bomb goes off, someone -- either the perpetrator or another terrorist group -- is going to call up and say, "I've got five more, and they're already hidden in U.S. cities, and I'm going to start setting them off unless you do X, Y and Z." And one bomb having just gone off, they will have substantial credibility,"** he argued. "The prospect for panic, uncontrolled mass evacuation of our cities, economic chaos and disruption is, I think, very great." Deposing before the Congressional committee, Gary Ackerman, research director for the National Consortium for the Study of Terrorism and Responses to Terrorism at the University of Maryland said at present the efforts of non-state actors seeking to acquire and use nuclear weapons are growing in size and scope. **"Jihadists have, since the mid 1990s, made at least 10 statements advocating the possession or use of nuclear weapons, and there have been at least a dozen reports of jihadists' attempts to acquire nuclear weapons, fissile material or technical knowledge,"** he said. **"As an initial indicator of this trend, a recent analysis of online jihadist documents that deal explicitly with nuclear weapons has revealed that while their knowledge is still below par, there have been significant advances in the understanding of nuclear issues within the general jihadi community in only a few short years,"** Ackerman said (NDTV News, 2008).

**Title/Headline:** *Al Qaeda Supporters' Tape To Call For Use Of WMDs*

**Abstract:** Intelligence and law enforcement sources tell ABC News they are expecting **al Qaeda supporters will post a new video on the Internet in the next 24 hours, calling for what one source said is "jihadists to use biological, chemical and nuclear weapons to attack the West."** "There have been several reports that al Qaeda will release a new message calling for the use of weapons of mass destruction (WMD) against civilians," FBI spokesman Richard Kolko told ABC News in an e-mail. "Although there have been similar messages in the past, the FBI and [Department of Homeland Security] have no intelligence of any specific plot or indication of a threat to the U.S.," the e-mail said. "The FBI and U.S. intelligence community will review the message for any intelligence value." While there is no evidence of any direct threat, the FBI sent a bulletin to 18,000 law enforcement agencies across the country, out of an abundance of caution (Thomas & Cook, 2008).

**Title/Headline:** *Going Ballistic: Saving L.A. From Nuclear Terror*

**Abstract:** These days, working as a policy wonk on nuclear nonproliferation and disarmament, **I am sometimes asked whether the danger of nuclear terror is "real" – or whether, instead, certain modern-day Machiavellis are manipulating our most nightmarish fears, to promote their own cynical political agendas.** "How do you know," I am inclined to reply, "that it isn't both?" **Nuclear Terror – Mission Impossible?** During the Cold War, it became commonplace to observe that "mutually assured destruction," or MAD, was surely the most appropriate acronym in human history. But I have always preferred the label given to fun characters like me who study these things, "nuclear use theorists," whom one can hardly resist acronyming as NUTS. The NUTS today usually identify four broad scenarios that can loosely be called "nuclear terror." (This is the framework adopted, for example, by the excellent 2005 book *The Four Faces of Nuclear Terrorism* by Charles D. Ferguson and William C. Potter.) In one, perpetrators obtain – through theft, bribery, a paramilitary operation, pick your poison – an intact nuclear warhead. There are probably more than 25,000 worldwide. **Then, they find a way to transport it to a "high-value target" (e.g., a large American city). Then, they find a way to set it off. The sudden and unexpected vaporization of a major American city, without any warning whatsoever, by your everyday garden-variety nuclear warhead, would kill tens of thousands, perhaps hundreds of thousands, possibly even more than a million.** All in the blink of an eye, the snap of a finger, the single beat of a human heart. Many thousands more would die slow and agonizing deaths from radiation poisoning in the weeks that followed – and all our modern medical marvels will do little even to alleviate their suffering, let alone to save their lives. It could also plunge the planet into a worldwide depression. **It could plunge the U.S. into martial law. It could plunge the nation into military responses – without evidence any state was behind the dastardly deed – that could take us from nuclear terror to nuclear war.** In which case, the death and devastation would increase by a factor of 10. Or 100. Or more. (Khrushchev famously observed that after a nuclear exchange, "the survivors will envy the dead.") In another scenario, perpetrators obtain – through similar methods – weapons-usable plutonium or highly enriched uranium (HEU). (The latter is far more likely, since HEU is easier to handle, easier to procure, and easier to design a bomb around.) Then they manage to assemble it into a crude nuclear device, transport it to the target (unless they had actually built it in, oh, a warehouse in Culver City), and set it off. If successfully constructed with a large enough yield, such an act could have identical consequences. In another scenario, perpetrators attack or sabotage a nuclear power plant, causing not a nuclear explosion but a release of radioactivity. Such an act could kill thousands, and contaminate hundreds of square miles for many years to come. Finally, perpetrators obtain a bit of radioactive material, assemble a conventional explosive around it, and set it off in a concentrated urban area – discharging radioactivity in all directions. That's the "dirty bomb" you have heard so much about. While such a bomb could kill hundreds, contaminate several square miles, and impose a widespread psychological shock, its consequences would be nothing like those of an actual nuclear explosion. Our focus today is on the first two scenarios. They are probably less likely than the last two scenarios. Nevertheless, they are enormously, almost inconceivably, more catastrophic. In a disturbing article in the November/December 2006 issue of *Foreign Policy* magazine, Peter D. Zimmerman and Jeffrey G. Lewis constructed a chillingly plausible nuclear terror scenario. Zimmerman and Lewis argued that such a project could be undertaken **by as few as 19 terrorist operatives, including a few nuclear physicists, a few expert machinists, an experienced metallurgist, perhaps one or two ballistics specialists, and perhaps a couple of electrical engineers. This team, the authors claim, in the space of a year, for a cost of less than \$5.5 million, could easily construct the kind of simple gun-like device that killed more than 100,000 people at Hiroshima.** But only if, first, they had managed to procure the necessary HEU. Is that possible? Let's ask Mohamed ElBaradei, head of the International Atomic Energy Agency and winner of the 2005 Nobel Peace Prize. In a speech in Munich in February, he said that his agency tackles 150 cases of illicit nuclear trafficking every year. **Some of the material reported stolen has never been recovered, he said, and "a lot of the material recovered has never been reported stolen."** Right next to *Foreign Policy* on the newsstands that same month, in the November/December 2006 issue of the *Bulletin of the Atomic Scientists*, Nick Schwellenbach and Peter D.H. Stockton presented a terrifying new nuclear nightmare. **Suicide terrorists might launch a lightning paramilitary operation on an American nuclear facility, barricade themselves inside, and quickly improvise a nuclear detonation right there. How? Unbelievably, simply by holding 100 pounds of HEU six feet above a similar mass, and letting go – giving disturbing new meaning to the phrase "dropping the atom bomb."** Luis Alvarez, Nobel Laureate in Physics, said famously more than two decades ago, "With modern weapons-grade uranium, terrorists, if they have such material, would have a good chance of setting off a high-yield explosion simply by dropping one half of the material onto the other half. Most people seem unaware that if separated U-235 is at hand, it's a trivial job to set off a nuclear explosion." But surely, the American nuclear laboratories must be among the most extraordinarily secured facilities anywhere on the planet! If there are any American assets that we can guarantee terrorists will never infiltrate, it must be these, right? Not according to the people responsible for testing such security. **In 2004, a U.S. government team of mock terrorists breached the boundaries of Oak Ridge, and managed to "kill" the entire lab security force in 90 seconds.** Similar episodes have apparently taken place at Los Alamos as well. Richard Levernier, who led several such mock attacks there, says, "In

more than 50 percent of our tests ... we got in, captured the plutonium, got out again, and in some cases didn't fire a shot because we didn't encounter any guards." That astonishing revelation suggests the "dropping the bomb" scenario needn't take place in a nuclear lab. It could just as easily be done in that Culver City garage.

**Osama bin Laden: Scratching A Nuclear Itch:** Osama bin Laden's thirst for the atom bomb dates back at least to 1992, when he reportedly tried to purchase nuclear materials in South Africa. Al Qaeda operatives have apparently sought intact nuclear warheads from both Chechen separatists and Pakistani scientists – the latter most alarmingly in a chilling meeting in Afghanistan just weeks prior to the attacks of September 11, 2001. American troops in Afghanistan discovered drawings of rudimentary nuclear devices in Al Qaeda sanctuaries. **The 9/11 Commission concluded, "Al Qaeda has tried to acquire or make nuclear weapons for at least 10 years [...] and continues to pursue its strategic goal of obtaining a nuclear capability."** After his organization had murdered nearly 3,000 innocent souls on 9/11, Al Qaeda spokesman Sulaiman Abu Ghaith alleged that American policies, over the decades, had killed many more Muslims than that. He then drew what was for him a logical conclusion: **"We have not yet reached parity with them. We have the right to kill four million Americans – two million of them children."** Al Qaeda, of course, has its share of internal dissensions and disagreements. Lawrence Wright, winner of the Pulitzer Prize for his masterful study *The Looming Tower: Al Qaeda and the Road to 9/11*, discussed some of them in the June 2 issue of *The New Yorker*. Wright described an ideological and theological civil war inside the worldwide terrorist organization. He pointed to the transformation of longtime bin Laden colleague Sayyid Imam al-Sharif, known as "Dr. Fadl," who – **writing from an Egyptian prison – now conclusively rejects all Islamic justification for Al Qaeda's terror attacks, and also insists that 9/11 itself was, on balance, "a catastrophe for Muslims."** However, it scarcely needs saying that complete internal unity and ideological unanimity are hardly essential to pulling off a successful nuclear terror attack on an American city. **Zimmerman and Lewis say that no more than 19 individuals could pull it off!** Few things could be more fatuous than to read the reports of investigative journalists like Wright and conclude that because some within the jihadist world have foresworn the terrorist road, no one else remains on the march.

**MAD World:** The United States has immense military capabilities, including thousands of nuclear weapons of unimaginable destructive power. Surely, our massive nuclear arsenal will cause bin Laden, and his acolytes or imitators, to rethink aspirations for nuclear mass murder, and to step back from the atomic abyss. Won't it? Of course not. **Because our nuclear weapons, and our nuclear doctrines, are all directed at the power of states. And Al Qaeda is not a state. Osama bin Laden does not control any territory. Terrorists are non-state actors. And our vast, bristling nuclear arsenal can do nothing, absolutely nothing, to deter a non-state actor.** There are at least five fundamental reasons why this is so. First, if the terrorist does not control any territory, then there is no infrastructure, no capital city, no place to threaten to retaliate against. This is the crucial difference between Osama bin Laden and Mahmoud Ahmadinejad. For all the current turmoil about the mere possibility that Iran might someday acquire a few nuclear weapons, it is inconceivable that Ahmadinejad could ever actually use one, without ensuring both personal and national suicide. But bin Laden does not face such a constraint. Mohamed ElBaradei, in his February 2008 speech in Munich, stated this as clearly as anyone. **"This, to me, is the most danger we are facing today,"** he said. **"Because any country, even if they have nuclear weapons, would continue to have a rational approach. They know if they use a nuclear weapon, they will be pulverized. For an extremist group, there is no concept of deterrence. If they have it, they will use it."** Second, if the terrorists are not traditional "rational actors" wanting to preserve their own lives, then threatening them with nuclear obliteration is no discouragement at all. As we saw on 9/11, and in many horrific terrorist episodes since, many are quite willing to commit suicide to serve their odious aims. Third, if the terrorist does want to preserve his own life and we seek to deter him by threatening to kill him, we can do that in any conceivable circumstance with conventional weaponry alone. Fourth, **we may not know where the perpetrators are. After all, we still cannot locate bin Laden nearly seven years after the horror of 9/11.** Finally, we may not even know who the perpetrators are. Some terror attacks in recent years have been followed by no claims of responsibility at all. Imagine it's the day after, the month after, the year after the sudden vanishing of an American city, and we never get any idea at all who did it. **The U.S. Army didn't protect us on 9/11. The U.S. Air Force didn't protect us on 9/11. The U.S. Navy, with its 11 "aircraft carrier battle groups" (no other country has even one), didn't protect us on 9/11.** And the thing that protected us the least on 9/11 was our swollen atomic stockpile, our so-called "nuclear deterrent," our arsenal of the apocalypse. **More than 10,000 American nuclear warheads, of incomprehensible destructive force. And they failed utterly to deter 19 men armed with box cutters. Nor will they deter the nuclear terrorists.** What are we going to do, threaten to fire a nuclear cruise missile through the balcony window of their \$750-a-month bachelor apartment in suburban Las Vegas? **The Los Angeles office of Physicians for Social Responsibility (PSR, the American affiliate of my own organization, International Physicians for the Prevention of Nuclear War, winner of the 1985 Nobel Peace Prize) projected the results of an atomic warhead the size of the Hiroshima bomb – about 15 kilotons – detonating at noon on a weekday in downtown Los Angeles. They concluded that more than 117,000 people would perish instantly, more than 15,000 more would die within a few hours, and more than 96,000 after that would slowly wither away. Similarly, the RAND Corporation released a study in August 2006 calculating the effects of a 10-kiloton device exploding shortly after unloading onto a pier at the ports of Los Angeles and Long Beach, the busiest in the United States. They concluded that 60,000 people would die at once, 150,000 would be directly exposed to hazardous radiation, and 2 to 3 million would have to relocate immediately because their homes would be hopelessly contaminated. The aspiring nuclear terrorists are probably not in a hurry. Time is on their side. Everything we have learned since 9/11 about those in the inner circles of terror indicates that they are tough, smart, implacably dedicated, and in it for the long haul. (Recall the enormous flap when television host Bill Maher, immediately after 9/11, asserted that men who rationally chose to slam themselves into concrete buildings could hardly be called cowards.) That is not to say that a successful nuclear terror attack will be easy for aspiring nuclear terrorists to make happen. Many may try but fall short along the way. But if those who aspire to pull off the necessary sequence of events fail 999 times out of 1,000, but manage just a single time to obtain an atom bomb, or to build an atom bomb, and then to transport it into the heart of a large American city, we lose. "You have to be lucky every single time," the Irish Republican Army used to say. "We have to be lucky just once." So is there anything we can do to prevent the nightmare of nuclear terror? Indeed. There are answers in the short term, answers in the medium term, and answers – most importantly**

– in the long term. Because the only long-term solution to the threat of nuclear terror – and to all the other worrisome nuclear scenarios we can conjure – is the abolition of nuclear weapons.

**Short-Term Fixes:** In the short term, we must do everything possible to ensure that no nuclear warheads or materials find their way into the clutches of Al Qaeda or anyone else with similar mass murder ambitions. Michael Levi's important 2007 book *On Nuclear Terrorism* provides grounds for optimism. The physicist argues that nuclear terror will likely be quite a bit more difficult to pull off than some (often with political motives) have argued. Levi argues that while the "lucky every time/lucky once" framework is not untrue when considered over the course of many plots, each individual plot can be tackled from precisely the opposite perspective. **The aspiring nuclear terrorists, he argues, have to succeed at every step of a complex and difficult process. The authorities, on the other hand, only need to nab them once.** Consequently, Levi advocates a systematic, interactive, many-layered strategy of prevention, one that integrates "controls over nuclear materials and weapons, military power, diplomacy, intelligence, covert action, law enforcement, border security, and consequence management," all seeking to disrupt the aspiring nuclear terrorist at many potential chokepoints along the way. For all our worries about North Korea, Iran, and the several states that may eventually follow their lead, priority number one in the nuclear terror realm has to be Russia. **Russia today has several thousand nuclear weapons, and hundreds of tons of nuclear material, at perhaps as many as 250 sites.** "The actual amount of weapon-usable nuclear material in Russia," says national security expert Joseph Cirincione, "may not even be known by the Russian government." In 1997, retired Soviet General Alexander Lebed claimed that when the USSR unraveled at the end of 1991, Soviet authorities lost track of more than 100 nuclear weapons roughly the size of a suitcase. Lebed's widely publicized claim has never been conclusively confirmed or refuted. But what he put forth was hardly an implausible scenario. Russia is not the only country where we have to worry about loose nuclear weapons and materials. **The long history of transfers of nuclear technology and knowledge by the now infamous A.Q. Khan network certainly suggests that Pakistan, or particular Pakistani individuals, could serve as a source for aspiring nuclear terrorists.** The martial law declared by President Pervez Musharraf in late 2007, followed soon thereafter by the assassination of former Prime Minister Benazir Bhutto and subsequent electoral setbacks for Musharraf, set off a flurry of commentaries about the worrisome nuclear chaos inside Pakistan that – still – might ensue. Of course, enhancing port and border safeguards in the United States must remain a perpetually high priority. **The Bush administration, commendably, has made considerable progress in this regard since September 11, 2001. Before 9/11, not a single container crossing our border was screened for radioactivity. Today, more than 80 percent are.** Still, the sheer volume of global commerce makes this job almost impossibly big. To find smuggled nuclear materials in the vast sea of consumer goods shipped by container around the world is to seek the proverbial needle in a haystack. An article in the October 2006 issue of *Risk Analysis* magazine reported the results of a rigorous statistical evaluation of U.S. container screening capabilities, and concluded, **"The likelihood that the current screening system would detect a shielded nuclear weapon is quite low (around 10 percent)."** So it is beyond naive to imagine that these kinds of short-term steps, no matter how elaborate, can forestall the fateful day forever. Strict controls over all things nuclear may well save us in the short term. But in the medium term, we need to reduce not just the availability of nuclear weapons and materials, but also the motivations for nuclear terror.

**Medium-Range Ballistic Missions:** Western leaders would do well to recall that the very first word in the very first work of Western literature, Homer's *Iliad*, is *menis*. Anger. Wrath. Rage. During the Vietnam War, it was often said that every time we killed a Viet Cong guerrilla, we created two more. Isaac Newton's laws of action and reaction do not apply only to billiard balls. **The Bush administration has consistently rejected any suggestion that we consider what might motivate impressionable young Muslim men to show up on Al Qaeda's doorstep.** White House Press Secretary Scott McClellan blithely dismissed the "truce" that Osama bin Laden floated on January 19, 2006, indicating that President Bush had given it not a nanosecond's consideration. **"We do not negotiate with terrorists,"** he said. **"We put them out of business."** But can't we be more in the international arena than a hammer looking for nails? **Do Americans have even a clue about the depth of the bitterness, the scale of the humiliations, the extent of the resentments simmering around the planet toward us?** George Bush's foreign policies have made us new foreign enemies. George Bush's defense policies have weakened our defenses. **George Bush's responses to 9/11 have made future 9/11's – possibly far worse than the original 9/11 – far more likely to occur.** So much for Republicans being "strong on defense." **There are undoubtedly hard-core terror types out there who are determined to attack us no matter what.** Obviously, we must do everything we can to prevent them from acting, and to make sure that we get them before they get us. **But thousands more out there are still thinking about it. Thousands of young Muslim men are on the fence. They have perhaps spent their childhoods in madrasa Islamic religious schools. Their families have lived in poverty for as long as anyone can remember. They are unemployed and idle. They are looking for some purpose in life, some meaning, perhaps even some cause worth dying for. The next president must do more than simply threaten these potential perpetrators, if we want to dissuade them from marching down the dead end terrorist road.** Perhaps we could talk in a serious way about global economic inequality, about the cultural humiliations arguably at the root of the so-called "clash of civilizations." We might actually seek to dry up some of the swamps of hopelessness, exploitation, and despair around the world. We might offer the dispossessed some rewards for the better choice, some hope and opportunity, some promise of full participation in a prosperous and peaceful global civilization. **We might act on the world stage with a little less hubris and a little more humility.** We might recall the admonition of Abraham Lincoln as our Civil War wound to its bitter close, when he said, "The only lasting way to eliminate an enemy is to make him your friend." And he was a Republican. But even these kinds of steps, important though they are, are unlikely to save us indefinitely from the nightmare of nuclear terror. We need to do more than prevent the bad guys from gaining access to nuclear devices in the short term. We need to do more than reduce the motivations for seeking access to nuclear devices in the medium term. **In the long term, our only real hope for saving ourselves from the nightmare of nuclear terror is to get rid of the nuclear weapons themselves. Every last one.**

**The Long & Winding Road:** Some call it "America's nuclear hypocrisy," others the "nuclear double standard," others still "nuclear narcissism." Iranian President Mahmoud Ahmadinejad often calls it "nuclear apartheid." Why is it that some countries can possess thousands of nuclear weapons without a whisper of comment, while when others aspire to even one, it generates a torrent of righteous indignation? What's the principle? What's the argument? It is never said. And it cannot last. The Reverend William Sloane Coffin, one of the great peace activists of the 20th century, who died in 2006, liked to quote Mahatma Gandhi, who said, "A fat man cannot

speak persuasively to a skinny man about the virtues of not overeating.” **To much of the rest of the world, the nuclear double standard appears sanctimonious and self-righteous, and based on the notion that some are responsible enough to be “trusted” with these weapons of the apocalypse, while others are not.** President Bush himself, perhaps unwittingly, often manages to let slip this conceit of cultural superiority. “We owe it to our children,” he said in August of 2002, “to free the world from weapons of mass destruction in the hands of those who hate freedom.” **“We cannot allow the world’s most dangerous men,” he insisted at the end of 2005, “to get their hands on the world’s most dangerous weapons.”** Here, surely, we have the most candid, unvarnished answer to the \$64,000 nuclear question. Some are rational, sober, righteous ... and hence can be trusted with the nuclear prize. Others are simply too “dangerous,” or not sufficiently “freedom loving,” to be permitted the same. And who will decide? Who will render subjective, ad hoc, case-by-case verdicts on whether certain leaders or peoples can be trusted with nuclear weapons? Who will serve as prosecutor, judge, jury, and enforcer? **Why the Freedom Lovers, of course, in whose hands nuclear weapons already reside. The nuclear double standard is militarily unnecessary, morally indefensible, and politically unsustainable.** Try to imagine the human community in 2018, or 2045, or 2077, with the same small group of “great powers” still clinging to the nuclear chimera, still insisting that nuclear weapons are vital for their own national security but unnecessary for the national security of others. Then try to imagine all the other states in the world just placidly and permanently acquiescing to that – no bitterness, no resentment, no aspirations to challenge the nuclear status quo and obtain a few nuclear weapons of their own. The mere act of performing such a thought experiment demonstrates the wild improbability that such a future history might ever come to pass. If we refuse forever to relinquish our nuclear weapons, then we had better get used to a world not with nine nuclear weapon states, as today, but 18, or 45, or 77. That world will provide that many more opportunities for just one really bad nuclear warhead to find its way into the hands of just one group of really bad guys. And what will that mean for us, for Los Angeles? **It will mean we will simply have to await our fate, our date with our nuclear terror destiny. A comprehensive nuclear policy agenda, one fully integrating non-proliferation with disarmament, should become the most important immediate foreign policy priority for the new president who takes office on January 20, 2009.** Such a policy agenda should contain many of the kinds of short- and medium-term steps described above to diminish the danger of nuclear terror. **But that nuclear policy agenda should also state, unambiguously, that we are committed to the ultimate elimination of nuclear weapons – ours and everyone else’s. It must describe abolition not as some utopian fantasy, but instead as a concrete political goal. And it should begin to discern the path, and commence negotiations, toward a universal, verifiable, and enforceable Nuclear Weapons Convention requiring the phased dismantling and destruction of every nuclear weapon on Planet Earth, imposing strict worldwide controls with rigorous international inspection provisions over all things nuclear, and legally prohibiting nuclear weapons from ever being constructed again. Our best shot at dodging the nuclear terror bullet forever is to get serious, now, about moving toward a nuclear-weapon- free world.**

**An Inconvenient Choice:** On January 15, 2008, four lions of the American foreign policy establishment – Sam Nunn, William Perry, George Shultz, and Henry Kissinger – authored a landmark opinion piece in The Wall Street Journal, calling not just for greater attention to the nuclear peril, but also for **“turning the goal of a world without nuclear weapons into a practical enterprise among nations.”** This call to action from such mainstream figures, has, by all accounts, transformed the nuclear policy debate, and in a stroke expanded the parameters of political possibility. “The goal of a world free of nuclear weapons is like the top of a very tall mountain,” said the authors. **“From the vantage point of our troubled world today, we can’t even see the top of the mountain, and it is tempting and easy to say we can’t get there from here.”** Yet not only has the top of that mountain been painted in fine detail, but so too has the path we might take to march upward toward the summit. In 2007, a broad coalition of scientists, international lawyers, disarmament experts, and anti-nuclear organizations issued Securing Our Survival: The Case for a Nuclear Weapons Convention (available at [www.ipnw.org](http://www.ipnw.org)). **This extraordinary document contains an actual draft of a model nuclear weapons abolition treaty, with extensive commentary on both the components therein and on alternative processes by which it might come into being.** It provides perhaps the best description yet both of what a nuclear- weapon-free world might actually look like, and how we might actually get from here to there. **The American government can choose to go down something like the path advocated here. If it does not, the American people will probably simply have to await their fate.** Walt Kelly’s Pogo, in another context, said famously, **“We have met the enemy, and he is us.”** Today, in this context, we might say that we have met the victims of the device that we ourselves unleashed upon the world. And they are us. We are the ones who devised these weapons in the past. We are the ones contemplating the use of these weapons in the present **(several credible news reports have revealed that war planners in the bowels of the Pentagon have considered not just a preemptive military strike on Iran, but a preemptive nuclear strike).** We are the ones who vaingloriously insist that we – but not others – must perpetually possess these weapons indefinitely into the future. **And now, in what must surely be one of the greatest ironies in all of human history, we are the ones who may soon feel the menus of our own invention. We are the ones who may turn out to be the authors of our own annihilation. We can get it through our thick skulls that the only long-term solution to the threat of nuclear apocalypse is the abolition of nuclear weapons. If we do not, we may well be the ones, in the end, who are devoured by our own creation** (Daley, 2008).

**The following conversation occurred August 17, 2008, on Fox Television between anchor Sean Hannity and Cham Dallas, of the Center for Mass Destruction.**

**Date:** August 17, 2008

**Source:** YouTube, Fox News, Hannity’s America

**Title/Headline:** Nuclear Attack On USA

**Abstract:**

**Sean Hannity:** In the fight against terrorism many people believe we are at a greater risk than ever before of a nuclear attack but, are we prepared? Now according to Cham Dallas, of the Center for Mass Destruction, the unfortunate answer is a responding no. In fact, back in April, Dallas testified before a Senate

Committee about just how ill prepared our Nation's Capitol really is.

(Cham shows a charted simulation where a nuclear bomb is detonated in Washington D.C.)

**Sean Hannity:** What is the likelihood something like this could happen?

**Cham Dallas:** Well, my belief, and I said at the Senate committee, Homeland Security Committee, that if you go out 20 years, I say it's virtually a certainty.

**Sean Hannity:** That's frightening.

**Cham Dallas:** Inside of that it, of course are, the odds go down.

(Cham and Sean illustrate the nuclear detonation process by showing the television audience a mock nuclear bomb)

**Cham Dallas:** It's deceptively simple

(Cham and Sean proceed to detonate a plastic 1 kiloton plastic nuclear bomb on the set of Fox News. After Sean detonates the dummy bomb)

**Cham Dallas:** You have the blast, which is right there around the White House, which I showed in that simulation, and then you have thermal burn injuries which is the one I'm most concerned about, because it's hardest to respond to, and then you have that radiation plume going for miles.

**Sean Hannity:** Pretty chilling.

**Cham Dallas:** **It really is, and it's just around the corner** (Fox News, 2008).

**Date:** October 21, 2008

**Title/Headline:** *Joe Biden At Seattle Fund Raiser Transcript Says Obama Will Be Tested*

**Abstract:** "Let me tell ya something, Pakistan already is bristling with nuclear weapons, all of which can hit Israel right now, all of which can strike the Mediterranean and well into the Indian Ocean"... **"And here's the point I want to make. Mark my words. Mark my words. It will not be six months before the world tests Barack Obama like they did John Kennedy. The world is looking. We're about to elect a brilliant 47-year old senator president of the United States of America. Remember I said it standing here if you don't remember anything else I said.** Watch, we're gonna have an international crisis, a generated crisis, to test the mettle of this guy. And he's gonna have to make some really tough - I don't know what the decision's gonna be, but I promise you it will occur. As a student of history and having served with seven presidents, I guarantee you it's gonna happen. I can give you at least four or five scenarios from where it might originate. And he's gonna need help. And the kind of help he's gonna need is, he's gonna need you, not financially to help him, we're gonna need you to use your influence, your influence within the community, to stand with him. **Because it's not gonna be apparent initially, it's not gonna be apparent that we're right. Because all these decisions, all these decisions, once they're made if they work, then they weren't viewed as a crisis. If they don't work, it's viewed as you didn't make the right decision, a little bit like how we hesitated so long dealing with Bosnia and dealing with Kosovo, and consequently 200,000 people lost their lives that maybe didn't have to lose lives. It's how we made a mistake in Iraq. We made a mistake in Somalia. So there's gonna be some tough decisions. They may emanate from the Middle East. They may emanate from the sub-continent. They may emanate from Russia's newly-emboldened position because they're floating in a sea of oil"** (Sweet, 2008).

**Title/Headline:** *US Military Planning A Second 9/11*

**Abstract:** For several years now, senior officials of the Bush administration including the President and the Vice President have intimated, in no certain terms, that there will be "a Second 9/11".

**"Second 9/11":** The presumption of a Second 9/11 has become an integral part of US military doctrine. America is under attack. The US military must respond preemptively. **In the immediate wake of the invasion of Iraq (April 2003), various national security measures were put in place focusing explicitly on the eventuality of a second attack on America. In fact these procedures were launched simultaneously with the first stage of war plans directed against Iran in May 2003 under Operation Theater Iran Near Term (TIRANT).**

**Military Doctrine:** General Franks was not giving a personal opinion regarding the role of civilian deaths. He was describing a central feature of a covert military-intelligence operation going back to Operation Northwoods. The triggering of civilian deaths in the Homeland is used as an instrument of war propaganda. The objective is to turn realities upside down. The aggressor nation is being attacked. **The USA**

is a victim of war by the State sponsors of Islamic terrorism, when in reality it is the perpetrator of a large scale theater war in the Middle East. The entire “Global War on Terrorism” construct is consistent with the logic of Operation Northwoods: **Civilian casualties in America resulting from the September 11 attacks are used as “a war pretext incident” to galvanize public support for a military intervention in Afghanistan and Iraq.** As of 2005, the presumption of a Second 9/11 had become an integral part of military planning. **Statements emanating from the White House, the Pentagon and the Department of Homeland Security point to a growing consensus on the necessity and inevitability of a second terrorist attack on a major urban area in the US.** In the month following the July 2005 London bombings, Vice President Cheney is reported to have instructed US Strategic Command (USSTRATCOM) to draw up a contingency plan “to be employed in response to another 9/11-type terrorist attack on the United States”. The “contingency plan” uses the pretext of a “Second 9/11” to prepare for a major military operation against Iran. In April 2006, the Pentagon, under the helm of Donald Rumsfeld, launched a far-reaching military plan to “fight terrorism” around the World, with a view to retaliating in the case of a second major terrorist attack on America. **The presumption of the Pentagon project was that this presumed attack on America by an outside enemy would result in the loss of American lives, which in turn would be used to justify US military actions in the Middle East war theater.** The covert support of US intelligence to Islamic terrorist organizations (the outside enemy) slated to carry out the attacks, was of course not mentioned. Various “scenarios” of a second 9/11 attack on the Homeland were envisaged. According to the Pentagon a Second attack on America, would serve an important policy objective. The three Pentagon documents consisted of an overall “campaign plan” plus two “subordinate plans”. The second “subordinate plan” explicitly focused on the possibility of a “Second 9/11” and how a second major attack on American soil might provide “an opportunity” to extend the US led war in the Middle East into new frontiers: **“It sets out how the military can both disrupt and respond to another major terrorist strike on the United States. It includes lengthy annexes that offer a menu of options for the military to retaliate quickly against specific terrorist groups, individuals or state sponsors depending on who is believed to be behind an attack. Another attack could create both a justification and an opportunity that is lacking today to retaliate against some known targets, according to current and former defense officials familiar with the plan”** (Washington Post, 2006).

**Martial Law:** Since 2003, various procedures have been adopted regarding the enactment of Martial Law in the case of a so-called “National Catastrophic Emergency”. **Under martial law, the military would take over several functions of civilian government including justice and law enforcement.** Initiatives in the area of Homeland Security outlined the precise circumstances under which martial law could be declared in the case of a second 9/11. In May 2007, a major presidential National Security Directive was issued (National Security and Homeland Security Presidential Directive NSPD 51/HSPD 20) which explicitly envisaged the possibility of a Second 9/11: NSPD 51 is tailor-made to fit the premises of both the Pentagon’s 2006 “Anti-terrorist Plan” as well Vice President Cheney’s 2005 “Contingency Plan”. The directive establishes procedures for “Continuity of Government” (COG) in the case of a “**Catastrophic Emergency**”. The latter is defined in NSPD 51/HSPD 20, as “**any incident, regardless of location, that results in extraordinary levels of mass casualties, damage, or disruption severely affecting the U.S. population, infrastructure, environment, economy, or government functions.**” NSPD 51 is predicated on the notion that America is under attack and that the “Catastrophic Emergency” would take the form of a terror attack on a major urban area. **“Continuity of Government,” or “COG,” is defined in NSPD 51 as “a coordinated effort within the Federal Government’s executive branch to ensure that National Essential Functions continue to be performed during a Catastrophic Emergency.”** More recently, in May 2008, another National Security Presidential Directive was put forth by the White House entitled Biometrics for Identification and Screening to Enhance National Security (NSPD 59, HSPD 24). NSPD59 complements NSPD 51. The new directive is not limited to KSTs, which in Homeland Security jargon stands for “**Known and Suspected Terrorists**”, it includes various categories of domestic terrorists, the presumption being that these domestic groups are working hand in glove with the Islamists. **“The ability to positively identify those individuals who may do harm to Americans and the Nation is crucial to protecting the Nation.** Since September 11, 2001, agencies have made considerable progress in securing the Nation through the integration, maintenance, and sharing of information used to identify persons who may pose a threat to national security.” (NSPD 59) NSPD 59 goes far beyond the issue of biometric identification, it recommends the collection and storage of “associated biographic” information, meaning information on the private lives of US citizens, in minute detail, all of which will be “accomplished within the law” NSPD is explicitly directed against American citizens, who are now categorized as potential terrorists. **While “conspiracy theorists” have been accused of cogitating regarding the possibility of a Second 9/11, most of the insinuations emanate from official US sources including the White House, the Pentagon and Homeland Security. The fact that a “massive casualty producing events” could be used as part of a US foreign policy agenda is diabolical. The official statements are grotesque.**

**Consensus In The Election Campaign: “Al Qaeda Will Strike Again”:** While the presidential election campaign has avoided the issue of a Second 9/11, both candidates have acknowledged the dangers of a second attack. Both Barack Obama and John McCain have underscored their resolve to protect America against Al Qaeda: [Question: Who’s the enemy?] **“Al Qaeda, the Taliban, a whole host of networks that are bent on attacking America, who have a distorted ideology, who have perverted the faith of Islam, and so we have to go after them.”** (Barack Obama in response to Bill O’Reilly, John Gibson News, September 5, 2008 **“We have dealt a serious blow to al Qaeda in recent years. But they are not defeated, and they’ll strike us again if they can.”** (John McCain, Acceptance Speech, September 5, 2008).

**Mainstream Media: “The Need” For A Second 9/11:** While the Washington Post leaked the substance of the Pentagon’s classified documents pertaining to the “opportunity” of a Second 9/11, the issue has not been the object of mainstream commentary or analysis. It is worth noting, however, that in an August 2007 Fox News interview, “A Second 9/11” was heralded as a means to create awareness and unite Americans against the enemy. Broadcast on Fox News, Columnist Stu Bykofsky claimed that **America “needs” a new 9/11 to unite the American people, because they have “forgotten” who the enemy is. He also claimed that “there will be another 9/11”,** and Fox New Anchorman John Gibson concurred. Civilian casualties would contribute to uniting the country and creating awareness: **“It’s going to take a lot of dead people to wake America up,”** said John Gibson. While Stu Bykofsky’s controversial article in the Philadelphia Daily News (August 9, 2007) was, at the time, considered as outlandish, what Bykovsky was actually saying was not very different from **The**

Pentagon's ploy (modeled on Operation Northwoods) concerning the role of massive casualty producing events in triggering "a useful wave of indignation".

**The following transcript excerpt regarding nuclear terror is between columnist Stu Bykofsky and host television host John Gibson which originally aired on the "Big Story with John Gibson" on the FOX News Network, August 7, 2007, at 5PM, EST.**

**John Gibson:** In big security, to save America we need another 9/11. That's what one columnist is advocating as a way to unite America. **Nearly 6 years after the heinous terror attacks he says we have forgotten our enemy.** He says the Iraq war has divided the US, the Republicans and Democrats are on the attack over the war, we pulled together after 9/11 but he justifies his controversial statement by saying the united front just didn't last. And now, bloggers are outraged. **Some say the journalist should be fired from his job for suggesting we, quote, "need" another attack.** So is this just a means to shock or offend or does this columnist actually have a valid point? Well, he's here now live to explain: Philadelphia Daily news columnist Stu Bykofsky. So Stu, let me... let's just say it again. What do you say America needs at this point?

**Stu Bykofsky:** Well, my thesis here is that we're terribly divided, there's disunity in this country, and as a divided country we're weak. When I look back over what has pulled the country together over the past few years, 9/11 united the country and it remained united and we were all on the same team for at least a year or two.

**John Gibson:** Stu, but do you mean to say that we are going to be attacked again, we will be united again, there's a sort of inevitability to that or that in order to achieve this unity we actually need to suffer?

**Stu Bykofsky:** Uh, John, I didn't actually call for an attack on the United States. Uh, I can see where people read it that way but I didn't actually say it. **However, another attack on the United States is inevitable. I believe that, don't you?**

**John Gibson:** Yes, I do, actually, and I think that it's going to take a lot of dead people to wake America up. **I think the deal,** Steve, Stu, I'm sorry...

**Stu Bykofsky:** It's okay.

**John Gibson:** ...is the word "need". **If you say, well, it's gonna happen and it, you know, Americans are gonna die because we've let down our guard — one thing — but when you say we "need" an attack it... especially has riled relatives of the dead.**

**Stu Bykofsky:** John, uh, I can understand them being upset. Are you reading from the headline or from the text of my column which I don't have in front of me?

**John Gibson:** Well, that's a good point. Did you use the word "need" in the text or was it only the headline?

**Stu Bykofsky:** It's the headline.

**John Gibson:** So you don't actually, you don't endorse the word "need"?

**Stu Bykofsky:** Uh, no, I don't. There was a slight difference. Other people write headlines and it's not exactly what I was trying to say.

**John Gibson:** Alright, so...

**Stu Bykofsky:** But, but if you look at the context...

**John Gibson:** But, but what you are trying to say is, is that, that somehow we have been, we've let down our guard, we're fighting each other instead of the terrorists and that if we don't get it together people are going to die.

**Stu Bykofsky:** That's absolutely correct. **We're fighting like a group of rabid dogs and our attention should be turned elsewhere.** And I also say that the primary reason for that in my opinion is the, uh, the war in Iraq which has been conducted so horribly by the administration. (Chossudovsky, 2008).

**Title/Headline:** *Barack Obama Is Warned To Beware Of A 'Huge Threat' From Al-Qaeda*

**Abstract:** Security officials fear a 'spectacular' during the transition period. Barack Obama is being given ominous advice from leaders on both sides of the Atlantic to brace himself for an early assault from terrorists. General Michael Hayden, director of the CIA, this week acknowledged that there were dangers during a presidential transition when new officials were coming in and getting accustomed to the challenges. But he added that no "real or artificial spike" in intercepted transmissions from terror suspects had been detected. President Bush has repeatedly described the acute vulnerability of the US during a transition. **The Bush Administration has been defined largely by the 9/11 attacks, which came within a year of his taking office.** His aides have pointed to al-Qaeda's first assault on the World Trade Centre, which occurred little more than a month after Bill Clinton became President in 1993. There was an alleged attempt to bomb Glasgow airport in Gordon Brown's first days in Downing Street and a London nightclub attack was narrowly thwarted. Lord West of Spithead, the Home Office Security Minister, spoke recently of a "huge threat", saying: **"There is another great plot building up again and we are monitoring this."** Intelligence chiefs on both sides of the Atlantic have indicated that such warnings refer more to a general sense of foreboding than fear of an imminent or specific plan. Referring to the attacks in 1993 and 2001, General Hayden told a Washington think-tank on Thursday night: "For some people two data points create a trend line. For others, there may be more hesitation to call it that." **He said that the chief danger comes from remote areas in Pakistan that border Afghanistan. "Today virtually every major terrorist threat that my agency is aware of has threads back to the tribal areas. Whether it's command and control, training, direction, money, capabilities, there is a connection to the Fata [Pakistan's Federally Administered Tribal Areas]."** General Hayden said that al-Qaeda remained a "determined, adaptive enemy" operating "from its safe haven in Pakistan". He added: **"If there is a major attack on this country it will bear the fingerprints of al-Qaeda."** He said that the border region remained the base of al-Qaeda's leadership, which had developed a more durable structure and a deep reserve of skilled operatives. **"Al-Qaeda, operating from its safe haven in Pakistan's tribal areas, remains the most clear and present danger to the safety of the United States,"** General Hayden said. The hunt for al-Qaeda leader Osama bin Laden "is very much at the top of CIA's priority list," he added. "Because of his iconic stature, his death or capture clearly would have a significant impact on the confidence of his followers." **The CIA chief also suggested that the terror group was seeking to recruit Western-looking operatives who would not cause attention if they were standing in airport screening queues.** Hours after he spoke, a suspected US missile attack killed 12 people in Pakistan, including five foreigners. Such strikes are hugely controversial, with Islamabad claiming that they fuel anti-American extremist groups. But Mr Obama has been clear that he wants to pursue al-Qaeda aggressively across the Afghan border. In Britain, **security officials say that there is genuine concern that al-Qaeda will attempt a "spectacular" in the transition period,** but suggest that it may be aimed more at Mr Bush than Mr Obama. "As far as we know there is nothing from the intelligence world to indicate that anything has changed dramatically in recent months to put us on alert for an attack at the moment," a source said. The present threat level is "severe", which is the second-highest alert status. But a senior counterterrorism official suggested last month that this should be regarded as "the severe end of severe". This would point to Britain facing a terrorist threat nearly as high as the period in the summer of 2005 when terrorists killed 52 people on London's transport network on July 7 and attempted a similar attack on July 21. Britain and the US are sharing all intelligence on suspected terrorist activity because of the high risk of a plot involving transatlantic flights. **Al-Qaeda is understood still to be obsessed with mounting an attack using passenger airliners. There have also been warnings of al-Qaeda interest in developing a chemical, biological, radiological or nuclear (CBRN) device.** The US has anti-CBRN units on constant patrol in main cities. **Al-Qaeda is known to be experimenting with biological agents, particularly anthrax, which they acquire from dead animals and then create cultures.** The key man involved in these experiments is Abou Kabbah al-Masri, who was engaged in the biological trials including tests on rabbits that were uncovered in Afghanistan when the Taliban were overrun after the US invasion in 2001. James Lewis, a security expert with the Centre of Strategic and International Studies in Washington, said that **al-Qaeda may wish to provoke a reaction from the next US Administration designed to show the rest of the world that "America is still the evil crusader".** Last month Joe Biden, the Vice-President-elect, told campaign donors: "Watch, we're going to have an international crisis, a generated crisis, to test the mettle [of Mr Obama]." Mr Lewis said that many Muslims were intrigued by Mr Obama's arrival in the White House and "there may be political downsides" in attacking America too early. **"It is hard to fathom the level of sophistication of their operatives and whether the chatter we intercept is dissent or intent. If they are going to do something, they may wait until after the inauguration."** "At present there are policemen standing on policemen at possible targets. That won't be the case three months into the new administration" (Evans, 2008).

**Title/Headline:** *Report Urges Focus On Nuclear Terrorism*

**Abstract:** The report also noted that Pakistan, which has been unstable recently, had also made some progress. "Today, security upgrades in Russia are nearing completion, and there is significant progress in Pakistan." The report cited an alarming incident last year when armed men broke into the Pelindaba nuclear research facility, which houses a high-quality stockpile of highly enriched uranium, in South Africa. Intruders breached a 10,000-volt electric security fence, shot a guard in the chest and spent nearly 45 minutes in the facility's emergency control center before escaping, according to the report. Although three suspects were arrested in the breach of the facility they were later released with no charges brought. The report also cited a 2006 interdiction of a Russian national stopped in Georgia who was carrying 100 grams of radioactive cesium, which he sought to sell for \$1 million. **According to U.S. intelligence and counterterrorism officials, the greatest threat of radiological attack comes from Al Qaeda or another like-**

**minded terrorist group. In testimony before the House Permanent Select Committee on Intelligence, Director of National Intelligence Michael McConnell said, "Al Qaeda and other terrorist groups are attempting to acquire chemical, biological, radiological and nuclear weapons and materials. McConnell assess Al Qaeda will continue to try to acquire and employ these weapons and materials." Osama bin Laden has said that obtaining a weapon of mass destruction is a "religious duty." In 1993, according to the FBI, he sought to purchase uranium from a source in Sudan. In 2003, Saudi cleric Nasir bin Hamad al Fahd issued a fatwa titled "A Treatise on the Legal Status of Using Weapons of Mass Destruction against Infidels." The Harvard report noted that the incoming administration needed to bolster counterterrorism and intelligence efforts to develop an international focus on preventing a nuclear plot by disrupting terrorist groups and their fundraising while addressing anti-American sentiment. "The next U.S. president has an historic opportunity ... to reduce the danger of nuclear terrorism to a fraction of its current level during his first term in office," according to the report (Ryan, 2008).**

**Title/Headline:** *Panel Foresees Unconventional Terror Threat*

**Abstract:** An independent commission has concluded that terrorists will most likely carry out an attack with biological, nuclear or other unconventional weapons somewhere in the world in the next five years unless the United States and its allies act urgently to prevent that. **In a report to be released this week, the congressionally mandated panel found that with countries like Iran and North Korea pursuing nuclear weapons programs, and with the risk of poorly secured biological pathogens growing, unconventional threats are fast outpacing the defenses arrayed to confront them.** "America's margin of safety is shrinking, not growing," the bipartisan panel concluded. **"Were one to map terrorism and weapons of mass destruction today, all roads would intersect in Pakistan," the report states, citing the country's terrorist haven along the border with Afghanistan and its tense relations with its nuclear rival, India.** "Pakistan is an ally, but there is a grave danger it could also be an unwitting source of a terrorist attack on the United States - possibly with weapons of mass destruction," the report said. The report is the result of a six-month study by the Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism, which Congress created last spring in keeping with one of the recommendations of the Sept. 11 Commission. The nine-member panel received classified briefings, conducted several site visits, including meetings in Russia, and interviewed more than 250 government and independent experts in several countries. **"Unless the world community acts decisively and with great urgency, it is more likely than not that a weapon of mass destruction will be used in a terrorist attack somewhere in the world by the end of 2013,"** the report states in the opening sentence of the executive summary. Several of the recommendations are not new and have been pursued with varying degrees of success by the Bush administration. **On Pakistan, for example, the panel urges the Obama administration to work with Pakistan to eliminate that country's terrorist havens, secure its nuclear and biological materials, counter extremist ideologies and constrain a "nascent nuclear arms race in Asia** (Schmitt, 2008).

**Title/Headline:** *Bob Chapman Warns Of False Flag Nuke Attack*

**Abstract:** International Forecaster Bob Chapman warned that, "Patriots in EU and US intelligence believe that the Gaza operation underway right now might have zero to do with Hamas missiles being fired into Israel—but instead might be an IDF WMD planting expedition—that can then be attributed to Hamas—followed by a "nuclear winter"—**type WMD event on US soil which will then be blamed on Hamas/Iran—which will then set the stage for a US nuclear attack on Iran**" (Prison Planet, 2009).

**Date:** February 4, 2009

**Source:** NY Daily News, James Gordon Meek

**Title/Headline:** *Former VP Dick Cheney Warns Of Nuclear Attack On United States Under President Obama*

**Abstract:** Former Vice President Dick Cheney stated that **there's a "high probability" the U.S. will get nuked by terrorists during President Obama's watch. "The ultimate threat to the country [is] a 9/11-type event where the terrorists are armed with something much more dangerous than an airline ticket and a box cutter - a nuclear weapon or a biological agent of some kind," Cheney went on to state that, "perhaps hundreds of thousands of people" would perish in such a strike, and that "there's a high probability of such an attempt."** Cheney also appeared to miss his role defending ex-President George W. Bush for "the dark side" of fighting terrorists. In his first interview since leaving office, Cheney described that effort to protect the country as "a tough, mean, dirty, nasty business." "We're not going to win this fight by turning the other cheek," Cheney added. The ex-veep had little kind to say about Obama's plan to shut down the terrorist prison at Guantanamo Bay. Cheney griped that Democrats "are more concerned about reading the rights to an Al Qaeda terrorist" than protecting the U.S. from Osama bin Laden's gang. Some think "if we just go talk nice to these folks, everything's going to be okay," he said. "They're optimistic . . . We were" (Meek, 2009).

**Title/Headline:** *A Single Nuke Could Destroy America*

**Abstract:** Iran launched a “communications satellite” into orbit. At this very moment, North Korea is threatening to do the same. The ability to launch an alleged communications satellite belies a far more frightening truth. **A rocket that can carry a satellite into orbit also can drop a nuclear warhead over any location on the planet in less than 45 minutes.** Far too many timid or uninformed sources maintain that a single launch of a missile poses no true threat to the United States, given our retaliatory power. A reality check is in order and must be discussed in response to such an absurd claim: **In fact, one small nuclear weapon, delivered by an ICBM can destroy the United States** by maximizing the effect of the resultant electromagnetic pulse upon detonation. An electromagnetic pulse (EMP) is a byproduct of detonating an atomic bomb above the Earth’s atmosphere. When a nuclear weapon is detonated in space, the gamma rays emitted trigger a massive electrical disturbance in the upper atmosphere. Moving at the speed of light, this overload will short out all electrical equipment, power grids and delicate electronics on the Earth’s surface. **In fact, it would take only one to three weapons exploding above the continental United States to wipe out our entire grid and transportation network. It might take years to recover from, if ever. This is not science fiction.** If you doubt this, spend a short amount of time skimming the Report of the Commission to Assess the Threat to the United States from Electromagnetic Pulse Attack from April 2008. You will come away sobered. Even as the new administration plans to spend trillions on economic bailouts, it has announced plans to reduce funding and downgrade efforts for missile defense. **Furthermore, the United States’ reluctance to invest in a modern and credible traditional nuclear deterrent is a serious concern.** What good will a bailout be if there is no longer a nation to bail out? Fifty years ago, it was not Sputnik itself that sent a dire chill of warning around the world; it was the capability of the rocket that launched Sputnik. The rocket that lofted Sputnik into orbit also could have served as an ICBM. Yet for all its rhetoric, the Soviet Union was essentially a rational power that recognized the threat of mutual destruction and thus never stepped to the edge. **The world is different today. Intercontinental range missiles tipped with nuclear weapons in the hands of leaders driven by fanaticism, leaders that support global terrorism,** leaders that have made repeated threats that they will seek our annihilation . . . can now at last achieve that dream in a matter of minutes. Those who claim that there is little to fear from Iran or North Korea because “at best” they will have only one or two nuclear weapons ignore the catastrophic level of threat we now face from just “a couple” of nuclear weapons. Again: **One to three missiles tipped with nuclear weapons and armed to detonate at a high altitude — to achieve the strongest EMP over the greatest area of the United States — would create an EMP “overlay” that triggers a continent-wide collapse of our entire electrical, transportation, and communications infrastructure.** Within weeks after such an attack, tens of millions of Americans would perish. The impact has been likened to a nationwide Hurricane Katrina. Some studies estimate that 90 percent of all Americans might very well die in the year after such an attack as our transportation, food distribution, communications, public safety, law enforcement, and medical infrastructures collapse. We most likely would never recover from the blow.

#### **Two things need to be done now and without delay:**

- 1) Make clear in the strongest of terms that, if either Iran or North Korea launches a rocket on a trajectory headed toward the territory of the United States, we will shoot it down. The risk of not doing so is beyond acceptable. And if they construe this as an act of war, so be it, for they fired the first shot. The risk of sitting back for 30 minutes and praying it is not an EMP strike is beyond acceptable, beyond rational on our part.
- 2) Funding for EMP defense must be a top national priority. To downgrade or halt our missile defense program, which at last is becoming viable after 25 years of research, would be an action of criminal negligence.

Surely, with such a threat confronting us, a fair and open debate, with full public access and the setting aside of partisan politics, is in order. In the meantime, a policy must be stated today that we will indeed shoot down any missile aimed towards the United States that is fired by Iran or North Korea. America’s survival, your survival, and your family’s survival might very well depend on it. **Former House Speaker Newt Gingrich is a Senior Fellow at the American Enterprise Institute. William Forstchen is the author of "One Second After," an account of a town struggling to survive after an EMP weapon is used against the United States** (Gingrich & Forstchen, 2009).

**Source:** Huffington Post, Sheldon Filger

**Title/Headline:** *Will Al-Qaeda Nuke America?*

**Abstract:** It has been nearly eight years since Al-Qaeda struck the United States on September 11, 2001. **In the aftermath of that transformational event, some have speculated that a future strike on the U.S. by Osama bin Laden would be more devastating, involving perhaps a nuclear weapon.** This apocalyptic scenario has been the plot of various novels, including my own nuclear terrorism thriller, "King of Bombs". However, the passage of nearly a decade has lulled some into a state of complacency. Could it be that George W. Bush and Dick Cheney were right in deciding to invade Iraq? After all, it was their rationale (after no weapons of mass destruction were found) that fighting in Iraq meant the United States did not have to fight Al-Qaeda in the homeland. **Could that be why Al-Qaeda has not launched a second attack on the homeland, after eight years?** In evaluating the possibility of future Al-Qaeda operations in the United States, it is useful to look back at an earlier plot that predated 9/11. On February 26, 1993 an Islamist radical cell linked to what would eventually be known as Al-Qaeda detonated 1,500 pounds of explosive material, consisting of oil and nitrates, in the underground parking garage at the World Trade Center. The resulting explosion killed six and injured more than 1,000. As destructive as this attack was, it did

not fulfill the tactical and strategic objectives of the perpetrators. The intention of the attackers was to bring down one of the Twin Towers in such a manner that it would topple over its twin, resulting in mass casualties and destruction. However, many mistakes were made by the plotters, ensuring that the detonation would not bring about the collapse of the building, while leaving a trail of forensic clues which would lead to the eventual apprehension of most of the plotters of the attack. It would be more than eight years before Al-Qaeda struck again, with vastly more devastating results. **Until 9/11, there was a level of complacency that inhibited American policymakers from correctly evaluating the threat of a jihadist cell striking at the American homeland, despite repeated and successful Al-Qaeda attacks directed at American targets overseas.** This intellectual myopia on the part of U.S. decision-makers would be described in the official report of the bipartisan 9/11 Commission as a "failure of imagination." Could history be repeating itself? **The American government, during the Clinton and subsequent Bush administrations, failed to recognize that Al-Qaeda was a transnational terrorist organization unlike any other.** Furthermore, policymakers ignored clear threats by the leadership of Al-Qaeda to attack the American homeland. Several of these warnings were issued personally by Osama bin-Laden to international journalists. Since 9/11, Al-Qaeda has launched dozens of attacks throughout the world. This figure does not include Iraq and Afghanistan, where the number certainly runs into the hundreds, if not thousands. The jihadist followers of Osama bin-Laden have struck targets in diverse regions including Europe, North and East Africa, Turkey, the Philippines and Indonesia. On October 12, 2002 a jihadist group linked to Al-Qaeda attacked three targets on the Indonesian Island of Bali, including a bar frequented by European and Australian tourists, killing more than 200. On March 11, 2004 Al-Qaeda set off multiple bombs on Spanish trains in Madrid, killing nearly 200. On July 7, 2005 Al-Qaeda operatives trained in Pakistan detonated bombs that struck London's transit system, resulting in 52 fatalities and hundreds of injuries. These are but a few of a long list of murderous terrorist operations successfully carried out by Al-Qaeda since 9/11. Based solely on operational tempo, Al-Qaeda's capability to mount attacks worldwide appears intact. There are indications that it may even have grown substantially. Experts who monitor Al-Qaeda believe two factors have contributed to the enhancement of this terrorist organization's capacity. In the first place, Al-Qaeda has developed a sophisticated capability to utilize the Internet as a recruitment tool as well as an operational asset. Thousands of jihadist websites spread the message of Osama bin-Laden's Islamist ideology to a large segment of disaffected Muslims, especially among immigrants in Europe. Secondly, the Iraq war is believed by many to have energized Al-Qaeda, and attracted support and sympathy throughout the Islamic world. Some defenders of the Bush administration's decision to invade and occupy Iraq maintain that the war has made America safer, by attracting jihadists who would otherwise come to America to wage warfare. However, in testimony before the Senate Select Committee on Intelligence in 2005, then CIA Director Porter J. Goss stated that, **"these jihadists who survive will leave Iraq experienced and focused on acts of urban terrorism. They represent a potential pool of contacts to build transnational terrorist cells, groups and networks."** In 2007 the National Intelligence Estimate, reflecting the consensus view of America's intelligence gathering agencies, concluded that Al-Qaeda had reconstituted its command and control infrastructure in sanctuary areas inside Pakistan, astride the border with Afghanistan. Ominously, the NIE concluded that: **"We assess that Al-Qaeda's homeland plotting is likely to continue to focus on prominent political, economic, and infrastructure targets with the goal of producing mass casualties, visually dramatic destruction, significant economic aftershocks, and/or fear among the U.S. population. The group is proficient with conventional small arms and improvised explosive devices, and is innovative in creating new capabilities and overcoming security obstacles. We assess that Al-Qaeda will continue to try to acquire and employ chemical, biological, radiological, or nuclear material in attacks and would not hesitate to use them if it develops what it deems is sufficient capability."** Looking back at the 8-year interval between the attacks on the World Trade Center and the subsequent eight years, we observe a number of key characteristics about Al-Qaeda and its leadership. **Osama bin-Laden and his deputy, Ayman al-Zawahiri, are utterly committed to the victory of their interpretation of Islam,** which means the reestablishment of a united Islamic caliphate ruled under strict shariah law. An essential preliminary to achieving this historic triumph, in their view, is the expulsion of all "infidel" influence within the Islamic world, meaning principally the United States, and the emasculation of America's economic power. While this goal seems preposterous to an American mind, within the context of Islamist radicalism Osama bin-Laden has articulated a rational and cogent strategy for achieving his aims, **Al-Qaeda and its senior leadership think in terms of a long timeframe for achieving their goals. Patience characterizes their operational planning, particularly involving major targets.** Thus, in their mode of thinking, eight years was a reasonable period of time to improve upon their first attack on the World Trade Center mounted in 1993. The 9/11 attack displayed ruthless execution and bold planning. It also established a benchmark for future attacks on America, with a far higher threshold of destruction required than what Al-Qaeda customarily inflicts during its attacks in Europe, Africa, the Middle East and Indonesia. Anytime since 9/11, Al-Qaeda could have attacked transit systems, shopping malls and other "soft targets" in the United States. However, such terrorist incidents would be purely tactical, lacking any strategic consequences. **Al-Qaeda has probably determined that any future attack on America, to be viewed as successful and strategic, must exceed the level of carnage inflicted on 9/11 by a significant degree.** That is probably why the National Intelligence Estimate released in 2007 emphasized the likelihood that Al-Qaeda is planning to hit the American homeland again, possibly with a weapon of mass destruction. When Osama bin-Laden attacked the World Trade Center and Pentagon on 9/11, he had a strategic objective clearly in mind. Mass casualties were the means to his goal, rather than the ends. By inflicting a shock on the American psyche of such dramatic proportions, he sought to induce the United States to militarily intervene in Afghanistan, repeating the experience of the former Soviet Union. He anticipated that a long, drawn-out war of attrition would demoralize the United States, cripple her economy and lead to its collapse, replicating what occurred to the Soviet Union. What he did not anticipate was that the U.S. would only send a small expeditionary force to Afghanistan, while devoting the bulk of its military resources towards the subjugation of Iraq, whose ruling regime had no connection with the events of September 11, 2001. In that sense, the strategic value of the consequences of 9/11 for Al-Qaeda probably exceeded their highest expectations. **In planning for its next attack on the United States, Al-Qaeda would seek to inflict a loss of such staggering proportions that it would again impel the United States into behaviors that would serve its ultimate existential goals.** To achieve such an aim with conventional means, such as ordinary explosives or airplanes (as on 9/11) is probably an unlikely scenario. **As suggested by the NIE on Al-Qaeda planning for a future operation on U.S. soil, it is likely that Osama bin-Laden is exploring ways of utilizing a weapon of mass destruction in a future attack.** The NIE speculates on the means of WMD that Al-Qaeda may be focusing on. Though biological and chemical weapons are possibilities, they are unlikely to be used by Al-Qaeda. These weapons are notoriously difficult to employ, as demonstrated in a terrorist attack on the Tokyo subway involving nerve gas. More importantly, while such weapons may, under certain circumstances, be deadly, they limit their effect to people, while leaving property intact. Al-Qaeda's methodology and doctrine stresses physical damage along with loss of human life. **The iconic image of the twin towers**

dissolving on 9/11 was more valuable to Al-Qaeda than the actual number of fatalities. For those same reasons, a radiological weapon, commonly dubbed a "dirty bomb," also would not be of much interest to Al-Qaeda. If Al-Qaeda is planning a future attack on America that will exceed 9/11 in its impact, there is a high probability that this operation would involve the detonation of a nuclear weapon in a major urban center within the continental United States. The capacity for even a crude nuclear weapon to inflict vast carnage and destruction within a densely populated city is unmatched by any other weapon or scenario that Al-Qaeda could conceivably employ. **Captured documents and other anecdotal information point to a very high level of longstanding interest by Osama bin Laden in nuclear weapons.** In recent years, both Osama bin-Laden and Ayman al-Zawahiri have issued repeated warnings that America would face attacks worse than 9/11, unless it fulfilled all of Al-Qaeda's demands, including withdrawal of its physical presence from anywhere defined as Islamic territory. In an Internet broadcast message, al-Zawahiri warned, "You are facing the Islamic rage ... what awaits you, should you press on, is far worse than anything you have seen." In a macabre video marking the sixth anniversary of 9/11, Osama bin Laden offered a chilling message. Warning the American people that they were responsible for the continuation of the Iraq war by virtue of having reelected President Bush, he went on to propose two alternatives for ending America's involvement in Iraq: "The first is from our side, and it is to continue to escalate the killing and fighting against you. The second way is to reject America's democratic system and convert to Islam...I invite you to embrace Islam." **By fulfilling all of the theological requirements for a future attack on America, it appears that Osama bin-Laden is laying the groundwork for something "far worse" than 9/11.** While his call for Americans to "embrace Islam" seems irrational to a Western mindset, in the context of Osama bin-Laden's world this is a supremely rational act for a jihadist warrior to undertake. Having provided fair warning and an opportunity to convert to his enemy, **he no longer feels any moral restraint on inflicting the ultimate destruction on the American homeland.** As reflected in the NIE referred to earlier, **the American intelligence community has high confidence that if Al-Qaeda ever acquired a nuclear weapon, they would unquestionably use it against an American target.** Those within leadership circles who downplay the threat of nuclear terrorism from Al-Qaeda claim that it is beyond the capability of Al-Qaeda to manufacture or otherwise obtain such weapons. Unfortunately, there is much expert opinion that holds a contrary view. It may be difficult for Al-Qaeda to acquire an intact nuclear weapon, though not inconceivable. It is known that during the break-up of the former Soviet Union, much of that nation's nuclear arsenal was insecure. Rumors have circulated for many years that during that chaotic period, Al-Qaeda obtained several Soviet nuclear weapons through the black market. **It is impossible to know if that in fact happened, though another possible source of intact nuclear weapons is Pakistan, a nuclear-armed state that happens to be where the top Al-Qaeda leadership is believed to be in hiding.** At present, a radical Islamist uprising is underway in significant parts of Pakistan, eroding the stability of the nation's fledgling civilian government. A more likely scenario involves Al-Qaeda making its own nuclear bombs. **Though challenging, this would be within the capability of an organization with the proven sophistication of Al-Qaeda.** Much of the information on making nuclear devices is within the public domain, and it is known that Osama bin-Laden met personally with two senior scientists involved with Pakistan's nuclear weapons establishment, prior to 9/11. **The barrier to building a nuclear bomb is not technical know-how but materials. Atomic weapons require fissile materials, either uranium 235 or plutonium. These materials require a national industrial infrastructure to create, so Al-Qaeda cannot fabricate fissile materials on its own.** Unfortunately, with the collapse of the Soviet Union, a vast quantity of fissile materials became dangerously insecure, vulnerable to theft or being sold by the Russian Mafia. The U.S. Congress recognized the danger, and provided funding for a program that assists the Russians in improving security at facilities that store nuclear weapons and fissile materials. In the many years that this program has been in existence, only half of the insecure Russian nuclear sites have had their security upgraded. At the present rate of funding and implementation, it may be another 10 years before the remaining nuclear sites are secure, though the Obama administration has demonstrated a far higher level of concern on this issue than the previous Bush presidency. In addition, there are many other sites throughout the world, including the United States, which store fissile materials under less than optimum security. **It would be an act of extreme optimism to believe that Al-Qaeda will sit and wait ten years until all these nuclear sites have upgraded their security arrangements.** Possibly, Al-Qaeda might already have such materials in its possession. Depending on the design of the bomb, as little as 35 pounds of uranium 235 would be needed to build a device with a yield similar to the weapon that destroyed Hiroshima in 1945. Should Al-Qaeda actually build such a weapon, it is highly unlikely that it would be detected by present security protocols and technology, should a jihadist cell seek to surreptitiously insert it into the United States. **Contrary to public perception, nuclear weapons emit little radiation, which can be easily shielded. Once inside American borders, Al-Qaeda could deliver a nuclear bomb to any city by van or SUV. Should a nuclear bomb ever be detonated in an American city, the carnage would defy our imagination.** It is estimated that a ten-kiloton device, less powerful than the Hiroshima bomb, detonated in mid-town Manhattan during the workday, would immediately kill approximately 500,000 people. A similar number would be fated to die in the following days and weeks from the effects of radiation poisoning. **Beyond the immensity of the carnage and destruction, America would be irreversibly transformed. Fear would dominate the country, with tens of millions of Americans contemplating the evacuation of their cities, uncertain if other bombs exist and would be detonated.** Economic paralysis would ensue as the borders closed, while the financial markets, already weakened by the current Global Economic Crisis, would completely collapse. **Civil liberties would be largely suspended, as the nation entered a new Dark Age, in which survival would take precedence over liberty.** Likely, America's relationship with the world would be radically transformed in manner that suited Al-Qaeda's ultimate agenda. In an interview conducted with the journalist Robert Fisk in 1997, Osama bin-Laden made his ultimate objective regarding the United States unambiguously clear. **"I pray to God that He permits us to turn America into a shadow of itself," the Al-Qaeda leader told Fisk.** While knowledgeable national security specialists take seriously the threat of weapons of mass destruction being employed in any future Al-Qaeda atrocity on American soil, outside their small circle this vital issue of national survival has barely seeped into the public consciousness. **Yet, should Al-Qaeda actually detonate a nuclear weapon in an American city, the entire world as we know it would cease to exist** (Filger, 2009).

**Title/Headline:** *Al Qaeda Says Would Use Pakistani Nuclear Weapons*

**Abstract:** If it were in a position to do so, Al Qaeda would use Pakistan's nuclear weapons in its fight against the United States, a top leader of the group said in remarks aired Sunday. Pakistan has been battling al Qaeda's Taliban allies in the Swat Valley since April

after their thrust into a district 100 km (60 miles) northwest of the capital raised fears the nuclear-armed country could slowly slip into militant hands. **"God willing, the nuclear weapons will not fall into the hands of the Americans and the mujahideen would take them and use them against the Americans,"** Mustafa Abu al-Yazid, the leader of al Qaeda's in Afghanistan, said in an interview with Al Jazeera television. Abu al-Yazid was responding to a question about U.S. safeguards to seize control over Pakistan's nuclear weapons in case Islamist fighters came close to doing so. **"We expect that the Pakistani army would be defeated (in Swat) ... and that would be its end everywhere, God willing."** Asked about the group's plans, the Egyptian militant leader said: **"The strategy of the (al Qaeda) organization in the coming period is the same as in the previous period: to hit the head of the snake, the head of tyranny -- the United States. "That can be achieved through continued work on the open fronts and also by opening new fronts in a manner that achieves the interests of Islam and Muslims and by increasing military operations that drain the enemy financially."** The militant leader suggested that naming a new leader for the group's unit in the Arabian Peninsula, Abu Basir al-Wahayshi, could revive its campaign in Saudi Arabia, the world's top oil exporter. "Our goals have been the Americans ... and the oil targets which they are stealing to gain power to strike the mujahideen and Muslims." "There was a setback in work there for reasons that there is no room to state now, but as of late, efforts have been united and there is unity around a single leader." **Abu al-Yazid, also known as Abu Saeed al-Masri, said al Qaeda will continue "with large scale operations against the enemy" -- by which he meant the United States. "We have demanded and we demand that all branches of al Qaeda carry out such operations," he said, referring to attacks against U.S.-led forces in Iraq and Afghanistan.** The militant leader said al Qaeda would be willing to accept a truce of about 10 years' duration with the United States if Washington agreed to withdraw its troops from Muslim countries and stopped backing Israel and the pro-Western governments of Muslim nations. Asked about the whereabouts of al Qaeda's top leaders, he said: "Praise God, sheikh Osama (bin Laden) and sheikh Ayman al-Zawahri are safe from the reach of the enemies, but we would not say where they are; moreover, we do not know where they are, but we're in continuous contact with them" (Ersan, 2009).

**Title/Headline:** *Swiss Open Probe Of Al-Qaida Nuke Physicist Case*

**Abstract:** **Switzerland has opened its own investigation into the case of a nuclear physicist France suspected of al-Qaida links, an official said Sunday.** The French suspect, who worked at the world's largest atom smasher on the Swiss-French border and at a Swiss technology institute, is unspecified in Switzerland's investigation, but it is the same case as the French one, Swiss Federal Prosecutor's Office spokeswoman Walburga Bur said. **She said the investigation was opened at the end of October and is directed at an unknown person or persons on suspicion of supporting a criminal organization.** In line with French and Swiss judicial policy, authorities have not identified him. Bur, who confirmed a report in the weekly NZZ am Sonntag, refused to say more about the case. **The 32-year-old Frenchman of Algerian origin had been working on the Large Hadron Collider and teaching at the Swiss Federal Institute of Technology in Lausanne. He was arrested at his home in Vienne, France, on Oct. 8. Lab officials say he hasn't been at work for most of the year. The French suspect the scientist of involvement with Al-Qaida in the Islamic Maghreb, a North African group that targets Algerian government forces and sometimes attacks foreigners. French investigating magistrate Christophe Teissier has filed preliminary charges against him for criminal association with a terrorist enterprise.** The broad charge is often used in terror-related cases in France. French judicial officials have said the suspect has acknowledged that he corresponded online with the group and vaguely discussed plans for terror attacks. Under French law, preliminary charges mean the investigating judge has determined there is strong evidence to suggest involvement in a crime. It gives the investigator time to pursue the inquiry before deciding whether to send the suspect to trial or drop the case. **The particle physicist was one of more than 7,000 scientists working to prepare for operation of the new collider this winter.** The massive machine, in a 27-kilometer (17-mile) circular tunnel under the border, aims to discover more about the makeup of matter and to explore phenomena such as antimatter and the Big Bang theory on the origin of the universe. **James Gillies, spokesman for the host European Organization for Nuclear Research, or CERN, has said there was nothing at the collider of interest to terrorists.** Officials say the facility has areas with extremely cold helium to supercool the electrical circuits, high magnetic fields and beams of protons and other subatomic particles, but none of its research has the potential for military application and all its results are published in the public domain. **Jerome Grosse, a spokesman for the Lausanne institute, said the suspect had not been seen at work there for most of the year, but that he had been in touch by e-mail.** Gillies said he also hadn't been seen at CERN for months. The massive machine, in a 27-kilometer (17-mile) circular tunnel under the border, aims to discover more about the makeup of matter and to explore phenomena such as antimatter and the Big Bang theory on the origin of the universe. **James Gillies, spokesman for the host European Organization for Nuclear Research, or CERN, has said there was nothing at the collider of interest to terrorists.** Officials say the facility has areas with extremely cold helium to supercool the electrical circuits, high magnetic fields and beams of protons and other subatomic particles, but none of its research has the potential for military application and all its results are published in the public domain (Bruppacher & Higgins, 2009).

**Title/Headline:** *CIA 'Suicide Bomber' Vows Revenge In New Video*

**Abstract:** The man believed to be the suicide bomber who killed seven CIA employees and contractors appeared in a newly released video, in which he vows revenge for the killing of a Taliban leader. The video shows Humam Khalil Abu-Mulal al-Balawi, whom a former U.S. intelligence official identified as the suicide bomber. Al-Balawi mentions Baitullah Mehsud, the leader of the Taliban in Pakistan who was killed in a missile strike. **"We will never forget the blood of our leader Baitullah Mehsud, may God have mercy on his soul,"** he says in Arabic, according to a CNN translation. "It will remain that **we take revenge (for his death) in America and outside America.** It is a trust on every person who left everything for the sake of God, whom Baitullah Mehsud supported." Al Qaeda's commander of operations in Afghanistan, Mustafa Abu Yazid, said this week that the attack avenged Mehsud's death. Mehsud **was the leader of Tehrik-i Taliban Pakistan (TTP).** The Yemen-based group Al Qaeda in the Arabian Peninsula has claimed responsibility for the Christmas Day plot. It is impossible to know whether the date on the video is accurate, or whether al-Balawi was aware of AbdulMutallab's alleged plans. If al-Balawi did know about the plot, it could indicate a greater degree of communication between TTP and Al Qaeda than previously thought. In an analysis of the video, IntelCenter said there is a connection between the two groups. But IntelCenter also pointed out al-Balawi appears in the video next to TTP leader Hakimullah Mehsud, and that it was TTP that released the video. **"The TTP and Al Qaeda have a close relationship, and in all likelihood Al Qaeda was involved at some level in the operation"** (CNN, 2010).

**Title/Headline:** *Doomsday Clock Set Back By A Minute*

**Abstract:** The infamous Nuclear Doomsday Clock was set back one minute, from 11:55 to 11:54, reversing a precipitous slide toward midnight, the zero hour, and ultimate self-destruction. The clock was reset to reflect a **"more hopeful state of world affairs,"** the Bulletin of the Atomic Scientists announced at the New York Academy of Sciences and over a live feed on the Internet. Forty policymakers, scientists and Nobel laureates on the board of the Bulletin -- an online magazine that covers threats to humanity -- decided to move the clock after spirited debates about current trends in science and politics. **"We are poised to bend the arc of history toward a world free of nuclear weapons,"** the board said in a statement. "For the first time since atomic bombs were dropped in 1945, leaders of nuclear weapons states are cooperating to vastly reduce their arsenals and secure all nuclear bomb-making material. And for the first time ever, industrialized and developing countries alike are pledging to limit climate-changing gas emissions that could render our planet nearly uninhabitable." **The clock has been steadily ticking toward midnight since the mid-'90s, as increased terrorism destabilized regions of the world and India and Pakistan tested nuclear bombs.** "I suppose we tend to be the eternal pessimists because the Bible says it's going to get worse. So any time they move [the Doomsday Clock] back, the general reaction is scorn." (Zak, 2010).

**Title/Headline:** *Nuclear Threat Is "Real": Weapons Expert*

**Abstract:** **The risk of nuclear terrorism is "real" and it is only because of "sheer dumb luck" that an all-out nuclear attack has not occurred since World War II**, Professor Gareth Evans of Australia said here on Monday. "The nature of the risks are real," Evans said. "It's sheer dumb luck that we have succeeded as a world in surviving ... a major nuclear catastrophe since 1945. It's not a function of good policy or anything other than luck." Evans, who is co-chairman of the International Commission on Nuclear Disarmament and Non-Proliferation (ICNND), presented the December 2009 report "Eliminating Nuclear Threats." The 230-page report comes in a "new environment of optimism," said Evans, noting bilateral disarmament talks between the U.S. and Russia. An independent global panel of 15 commissioners, produced the unanimous report, which Evans called "realistic" and "pragmatic" in the way it was put together, and "not just a wish list." There is a new opportunity for nuclear disarmament and non-proliferation -- the first time since the post-Cold War years, said the report. In May, the United Nations will hold a conference aimed at reviewing the Non-proliferation Treaty (NPT), and in April, U.S. President Barack Obama will host an international nuclear security summit. **The world has come "hellishly close to a (nuclear) catastrophe on many occasions during the Cold War**, which are only now beginning to come to light after all these years," said Evans. **"You cannot make any assumption at all that the status quo will continue."** (Xinhau News, 2010).

**Title/Headline:** *What's The Next U.S. Terror Threat*

**Abstract:** White House national security adviser Janes Jones stated that “Thirty years ago, one of my predecessors would have said nuclear

war with Russia. **Today, as I'm in this chair, I can tell you it's proliferation, the acquisition of a weapon of mass destruction by a terrorist organization. The difference between a nation-state doing so and a rogue group of a terrorist organization is that nation-states can be controlled. They know if they're going to use one what's going to happen. But terrorist groups will have no such limitation. That's one aspect of the next decade that we're going to have to focus on...It's very clear that radical terrorist organizations, the most prominent of which of course is Al Qaeda will continue to try to obtain weapons of mass destruction - which I think is their singular goal, which would be a huge game changer.**" When asked what would qualify as a "game changer," Jones replied "The threat of a weapon of mass destruction, whether it's nuclear or chemical or biological, is a fundamentally different order of threat, magnitude of threat, to our societies. And probably the reaction to our knowing that's out there would foster changes in the way we live that are probably very hard to imagine." In the same article, Dianne Feinstein, a California U.S. Congresswoman, and the Senate Intelligence Committee chair, stated that **"In this new decade, we must pay attention to (radical Islamic) madrassas, and madrassas exist by the thousands all over Pakistan, all over most Muslim countries."** She went on to state that **"What we're going to see is the emergence of the lone wolf rather than the planning of large numbers of people to carry out large attacks...Explosives are getting more sophisticated.** And we've seen new areas which have become safe havens as well as operational theaters for these groups, namely Yemen, Somalia and as a matter of fact virtually the entire Maghreb (Page, Frank, & Johnson, 2010)

**Title/Headline:** *Former WMD Chief: Al Qaeda Awaiting Nukes*

**Abstract:** CIA officer Rolf Mowatt-Larssen, who served as chief of the CIA's Weapons of Mass Destruction Department, accused the U.S. government of seriously misreading Al Qaeda's operational objectives. **"Al Qaeda's reasoning,"** according to Mowatt-Larssen's new report from Harvard's Kennedy School, **"runs counter to analytic convention that equates the ease of acquisition of chemical, biological or radiological weapons with an increasing likelihood of terrorist use — i.e., a terrorist attack employing crude weapons is therefore more likely than an attack using a nuclear or large scale biological weapon. In fact, it is the opposite"** of that conventional wisdom, according to the analysis, entitled "Al Qaeda Weapons of Mass Destruction Threat: Hype or Reality." Al Qaeda's motivations suggest **"the greatest threat is posed by the most effective and simple means of mass destruction, whether these means consist of nuclear, biological, or other forms of asymmetric weapons."** The details he provides of Al Qaeda's scheming in this report are nothing short of chilling. "Considering the potential that such weapons hold in fulfilling Al Qaeda's aspirations," it says, **"their WMD procurement efforts have been managed at the most senior levels,** under rules of strict compartmentalization from lower levels of the organization, and with central control over possible targets and timing of prospective attacks." He noted that **"Al Qaeda's patient, decade-long effort to steal or construct an improvised nuclear device (IND) flows from their perception of the benefits of producing the image of a mushroom cloud rising over a U.S. city, just as the 9/11 attacks have altered the course of history."** Mowatt-Larssen concludes that "This lofty aim helps explain why Al Qaeda has consistently sought a bomb capable of producing a nuclear yield, as opposed to settling for the more expedient and realistic course of devising a 'dirty bomb,' or a radiological dispersal device." In 1996, Ayman al-Zawahiri, emir of the Egyptian Islamic Jihad, which eventually merged into Al Qaeda, was detained in Russia where he may have been seeking nuclear weapons or material. **Al-Zawahiri later stated that Al Qaeda obtained nuclear weapons from the former Soviet Union.** According to Mowatt-Larssen, "There is no indication that the fundamental objectives that lie behind their WMD intent have changed over time." According to the Kennedy School analysis, "Osama bin Laden's morality-based argument on the nature of the struggle between militant Islamists and the U.S.-led coalition of secular forces focuses the group's planning on the acquisition of strategic weapons that can be used in mass casualty attacks, rather than on the production of tactical, more readily available weapons such as 'dirty bombs,' chemical agents, crude toxins and poisons." If this former WMD chief for the CIA is to be believed, a big reason we have not suffered a repeat of 9/11 more than eight years later may be that **Osama bin Laden and Al Qaeda are patiently working toward the day when they can successfully hit us with something a lot bigger** (Kettle, 2010).

**Title/Headline:** *Al Qaeda Terror Leaders Have Eye On Chemical, Biological Or Nuclear Attack On U.S. Soil: Report*

**Abstract:** Al Qaeda planners are lying in wait, plotting another major attack on U.S. soil involving weapons of mass destruction, according to a dire new report. Osama bin Laden's terror network has made several attempts to acquire large-scale biological, chemical or nuclear

weapons in the years since the Sept. 11 attacks, according to a new report. Former high-ranking CIA official Rolf Mowatt-Larssen reported in a paper for Harvard's Kennedy School that al Qaeda operatives are desperate to launch the most devastating terror attack yet. **"We have done things that have made the country safer," Mowatt-Larssen told the News. "But we have to ask ourselves does that mean they can't mount another attack like 9/11 with 19 core, well-trained terrorists?"** "It doesn't require a giant organization to pull off a spectacular terrorist attack like that. We have to be careful that we don't become complacent." Mowatt-Larssen, who led the U.S.'s probe into whether or not Al Qaeda had acquired WMDs in the wake of the Sept. 11, 2001, attacks, speculates that the lack of another major attack is due in part to luck. **"If Osama bin Laden and his lieutenants had been interested in employing crude chemical, biological and radiological materials in small scale attacks, there is little doubt they could have done so by now,"** wrote Mowatt-Larssen in his report. The report, released ahead of a congressional meeting to assess the country's preparedness for the type of major attack Mowatt-Larssen is warning about, the Washington Post reported. That commission released a sobering report in December 2008 that predicted a major attack involving WMDs by 2013. "After New York and America were attacked in 1993, we fell asleep," Sen. Charles Schumer (D.-NY) said in a statement. "We learned on 9-11, when America and New York were attacked again, that we can never – ever – make that mistake again. "We must be vigilant in protecting Americans and our nation's infrastructure from potential acts of terrorism and we must ensure that we are providing our local and national law enforcement authorities with the resources they need to get the job done." One of the motivations for his report, Mowatt-Larssen said, was the concern that government officials were getting too bogged down in focusing on the potential for smaller scale terrorist attacks like individual suicide bombers or plots to bring down a single aircraft. **"Just like a football coach that might say, 'We're never going to fumble, we're never going to have an interception,' well that's not going to last long,"** he said. **"In the war on terror, we're going to have to -- as hard as it is for people to hear this message -- we're going to have to get used to making risk management decisions that means we're not going to stop everything. But the important thing, the most important thing, is stopping the next 9/11"** (Sacks, 2010).

**Title/Headline:** *Obama Gets 'F' On Stopping Spread Of Weapons Of Mass Destruction*

**Abstract:** A bipartisan, independent commission on stopping the spread of weapons of mass destruction says that **the Obama administration has failed in its first year in office to do enough to prevent a germ weapons attack on America or to respond quickly and effectively should such an attack occur.** In a 19-page report card being published Tuesday, the Commission on the Prevention of Weapons of Mass Destruction, Proliferation and Terrorism, chaired by former Senators Bob Graham, a Democrat from Florida, and **Jim Talent, a Missouri Republican, gives the new administration the grade of "F" for failing to take key steps the commission outlined just over a year ago in its initial report.** Specifically, the commission concludes that the Obama administration, like the three administrations before it, has failed to pay consistent and urgent attention to increasing the nation's ability to respond quickly and effectively to a germ attack that would inflict massive casualties on the nation. **The commission repeated its warning that unless nations acted decisively and urgently, it was more likely than not that a WMD will be used in a terrorist attack somewhere in the world by the end of 2013, and that the terrorists' weapon of choice would be biological, rather than nuclear.** The administration's delayed response to the H1N1 virus, the report concludes, demonstrated that the United States was "woefully behind in its ability to rapidly produce rapidly vaccines and therapeutics, essential steps for adequately responding to a biological threat, whether natural or man-made." Even with time to prepare, the report noted, the epidemic peaked "before most Americans had access to vaccine." **And a bio-attack, it warned, would have no such warning. The administration's lack of urgency was also reflected in its lack of priority on producing and distributing enough vaccines and other medical countermeasures for Americans, its reluctance to insist that hospitals have enough surge capacity to treat people who would be infected in a bioterror attack, and the lack of a national plan to coordinate federal, state and local efforts following a bioterror strike, the document asserts.** Ultimately, the commission chairman and vice chairman say, the "lack of preparedness" and "consistent lack of action" reflect "a failure of the U.S. government to grasp the threat of biological weapons." Unlike its effort to prevent a nuclear attack, the Obama administration has shown "no equal sense of urgency" about preventing or responding to germ warfare that might cause comparable death and suffering, the commission concludes. The report assigns 17 grades that it says highlight the issues of greatest priority in protecting Americans from WMD. The commission gave the administration a "D+" for its efforts to tighten oversight of high-containment labs in which experiments involving the deadliest pathogens are conducted. There were still far too many Federal, state, and local agencies regulating germs in sometimes conflicting ways, it states. The commission also gave Congress a failing grade for failing to consolidate the estimated 82 to 108 committees and subcommittees that oversee some part of the Department of Homeland Security. **"Virtually no progress has been made since consolidation was first recommended by the 9/11 Commission in 2004,"** the report asserts. The Obama administration disputed the findings of the report Tuesday, arguing that the president has accomplished a "great deal" in his first year in office. White House spokesman Nick Shapiro cited a recently signed executive order establishing "federal capability to rapidly provide medical countermeasures to supplement state and local response in the event of a large-scale biological attack." He said Obama would launch a new initiative aimed at addressing potential "public health threats" during his State of the Union address Wednesday. The Graham/Talent WMD Commission, as it is known, is a legacy of the 9/11 Commission, which recommended its creation to examine WMD proliferation threats in its own report. **In December, 2008, the WMD commission concluded in its final report that American national security faced ever growing threats from unconventional weapons, and from biological weapons in particular. Its report, "World at Risk," unanimously concluded that bioterrorism was the most likely WMD threat the nation confronted given the exponential growth of biological technology and the stated desire of Al Qaeda and other terrorist groups to acquire such weapons.** It called upon the administration to take 13 steps to reduce America's vulnerability to such an attack.

The new report card assesses the progress that the Obama administration has made in implementing its recommendations. The report is not uniformly negative. It gives the Administration high marks -- an "A" -- for the reviews it has conducted into how best to store and secure dangerous pathogens, and two "A-minus" grades for appointing a WMD coordinator and restructuring how the White House oversees homeland security issues. **But it warns that such steps are not commensurate with the threat the nation faces from terrorist groups searching for unconventional weapons in asymmetrical warfare.** Robert Kadlec, President Bush's former special adviser on bio-defense policy, declined to comment on the commission's failing grade in the area in which he worked, saying there was still "ample opportunity to provide more focus and resources" for bio-preparedness in the administration's remaining three years. "This is a hard problem which deserves high priority," he said. Two defenders of the administration's policies, both of whom asked not to be identified by name because they were speaking without authorization, said that **the Obama White House gave bio-defense and countering nuclear proliferation high priority. One official said that Obama's second presidential security directive -- the first being the reorganization of the White House national security apparatus -- mapped out a national strategy to defend the nation against biological attacks. He also predicted that the administration would seek increases in its new budget for bio-defense and global surveillance programs.** Having been extended for one more year of work in 2009, the 9-member WMD Commission is disbanding after issuing this final report card. But staff members said that its chairman and vice-chairman intend to form a non-profit organization to continue pressing the government to do more to counter WMD threats (Miller, 2010).

**"The era of nuclear terrorism has arrived". ~Liam Fox**

**Date:** February 6, 2010

**Source:** Telegraph, Sean Rayment

**Title/Headline:** *Tories Would Back War with Iran*

**Abstract:** Liam Fox, the current Shadow Defense Secretary and Member of British Parliament, stated that under Iranian President Mahmoud Ahmadinejad's regime, the "export of terrorism and instability" was part of the country's foreign policy and warned **"the era of nuclear terrorism has arrived"**. Fox went on to state that, "Iran provides us with a unique worry. You have an increasingly militarized state where the Revolutionary Guard have a greater say economically and politically than ever before and where a hard-line theocrat is at the top. Iran is a regime that seems intent on staying in office at any cost, including the death, disappearance and torture of its own nationals and they are embarked on a program which the UN says can be for no other purpose than to develop a nuclear weapon capability."

**We know that Iran, more than any other country, is willing to export instability and terror as part of its foreign policy.** We saw what they did when we were in Iraq. "The Iranians funded some of the insurgency and supplied and trained them. We have seen their role with Hezbollah and Hamas." Fox concluded that, **"Do we really want to add nuclear material into that particular mix? If Iran becomes a nuclear-weaponed state, Turkey is likely to be next, quickly followed by Saudi Arabia, and Egypt and you will have a nuclear arms race in the world's most unstable region"** (Rayment, 2010).

**Title/Headline:** *Al-Qaeda Is A Wounded But Dangerous Enemy*

**Abstract:** New assessments of al-Qaeda by the top U.S. counterterrorism experts offer grounds for both optimism and concern a year after President Obama took office. **Officials say al-Qaeda's ability to wage mass-casualty terrorism has been undercut by relentless U.S. attacks** on the network's leadership, finances and training camps. But even in its weakened state, the group has shifted tactics to focus on small-scale operations that are far harder to detect and disrupt, analysts say. The deadly November shooting rampage at Fort Hood, Tex., and the failed Christmas Day attempt to bomb an airliner -- both examples of the low-tech approach -- have raised the fear level in Washington and across the country. **Some terrorism experts say the worst could be still to come as a wounded jihadist movement thrashes about in search of a victory.** "The noose is tightening, and al-Qaeda's leadership is accelerating efforts that were probably in place anyway," said Andy Johnson, former staff director of the Senate intelligence committee and now national security director for the Washington think tank Third Way. **"Intelligence confirms that they are finding it difficult to be able to engage in the planning and the command-and-control operations to put together a large attack,"** CIA Director Leon Panetta said Tuesday in testimony before the Senate Intelligence Committee. **But intelligence officials also warned lawmakers of worrisome new evidence of al-Qaeda's ability to adapt. In an annual "threat assessment" to Congress, spy agencies described the emerging threat as more geographically dispersed and also low-tech, favoring lone operatives and conventional explosives.** Director of National Intelligence Dennis C. Blair, who presented the assessment to House and Senate panels, said the attempted bombing of Northwest Airlines Flight 253 over Detroit is emblematic of an evolving threat that relies on "small numbers of terrorists, recently recruited and trained, and short-term plots." **The new tactics are less spectacular but also much harder to detect and disrupt,** he said. "A handful of individuals and small, discrete cells will seek to mount attacks each year, with only a small portion of that activity materializing into violence against the homeland," he said. **Blair testified that he thought another attempted strike by terrorists was "certain" in the next six months.** "We have been warning since September 11 that al-Qaeda-inspired terrorists remain committed to striking the United States," he said. "What is different is that we have names and faces to go with that warning. We are therefore seeing the reality" (Warrick & Finn, 2010).

**Title/Headline:** Cheney: Al Qaida Wants Nukes, Obama Doesn't Take It Seriously. Boogah Boogah!

**Abstract:** On This Week with Jonathan Karl, Darth Cheney lays the groundwork for a full-bore Republican attack on the Obama administration in the event of another terrorist attack.

**Jonathan Karl:** Another thing from the vice president, he also addressed the possibility of another 9/11-style attack. (Video Clip Starts)

**Joe Biden:** The idea of there being a massive attack in the United States like 9/11 is unlikely, in my view. But if you see what's happening, particularly with Al Qaida in the Arabian Peninsula, **they have decided to move in a direction of much more small-bore, but devastatingly frightening attacks.** (Video Clip Ends)

**Jonathan Karl:** Is he right?

**Dick Cheney:** I don't think so. And I would point to a study that was released just within the last week or two up at the Kennedy School at Harvard by a gentleman -- Mowatt-Larssen's his name, I believe. He was CIA for 23 years, director of intelligence at the Energy Department for a long time, that looks at this whole question of weapons of mass destruction and Al Qaida and comes to the conclusion that **there's a very high threat that Al Qaida is trying very hard to acquire a weapon of mass destruction and, if they're successful in acquiring it, that they will use it.** I think he's right. I think, in fact, the situation with respect to Al Qaida to say that, you know, that was a big attack we had on 9/11, but it's not likely again, I just think that's dead wrong. I think the biggest strategic threat the United States faces today is **the possibility of another 9/11 with a nuclear weapon or a biological agent of some kind, and I think Al Qaida is out there even as we meet trying to figure out how to do that.**

**Jonathan Karl:** And do you think that the Obama administration is taking enough serious steps to prevent that?

**Dick Cheney:** **I think they need to do everything they can to prevent it.** And if the mindset is it's not likely, then it's difficult to mobilize the resources and get people to give it the kind of priority that it deserves (Madrak, 2010).

**Date:** February 14, 2010

**Source:** CBS News, Face The Nation

**Title/Headline:** *Dueling VPs: Biden, Cheney Parry On Terror*

**Abstract:** Vice President Dick Cheney's comments contending that President Barack Obama is "trying to pretend" that the U.S. is not at war with terrorists. Cheney stated that, "To say that, you know, that was a big attack we had on 9/11, but it's not likely again, I just think that's dead wrong. **I think the biggest strategic threat the United States faces today is the possibility of another 9/11 with a nuclear weapon or a biological agent of some kind, and I think Al Qaeda is out there even as we meet trying to figure out how to do that.**" Cheney said the administration needs to do everything possible to prevent that, "And if the mindset is 'It's not likely,' then it's difficult to mobilize the resources and get people to give it the kind of priority that it deserves." These comments came in response to Vice President Joe Biden's statement that **"The threat of al Qaeda acquiring control of a nuclear weapon is legitimate but unlikely."** Biden went on to state, "The reason why I do not think it's likely, is because of all the resources we have put on this, considerably more than the last administration did, to see to it that it will not happen. **We agree, the worst nightmare is the possession of nuclear weapons or a radiological weapon by Al Qaeda,**" Biden added that, "The reason it's unlikely is because we have been relentless, absolutely relentless in isolating al Qaeda. I don't know what Dick doesn't understand. **The worry is legitimate.** The reason why I do not think it's likely is because of all the resources we have put on this, considerably more than the last administration did, to see to it that it will not happen" (CBS News, 2010).

**Title/Headline:** *Canadian Nuke Scientist Vanishes With 'Absolutely No Trace'*

**Abstract:** A Canadian nuclear scientist who has not been seen for more than a month has simply vanished, leaving "absolutely no trace at all," police say. Lachlan Cranswick, 41, a physicist from the Chalk River Laboratories nuclear facility in Ottawa, was last seen on Jan. 18, when he left his job and boarded a bus to Deep River, his hometown along the Ottawa River with a population of roughly 4,300. Later that day, or possibly the next morning, Cranswick took out the garbage -- and the single man described as a meticulous loner

has not been seen since. **"It is open and there is nothing else we can do with it,"** said Const. Darin Faris, the Deep River police officer conducting the investigation. **"Every bit of information, every lead that came in, everything ... has led us nowhere."** Faris said Cranswick's friends notified police of his disappearance six days after he was last seen, leading to fruitless searches of a 9-mile-long stretch of land along the Ottawa River. Helicopters, tracking dogs and civilians were unable to find a trace of the man. Faris said investigators have no reason to believe Cranswick was targeted or that he was a victim of a crime. **"It's not like he's a reactor designer or that he knows how to use them,"** Faris told FoxNews.com. "He's not someone who, if you gave him highly enriched uranium, he could make a bomb. He's not that kind of person." Investigators at first thought Cranswick had gotten lost while walking along several nearby trails, but every item he typically took on those trips -- at least two flashlights, a whistle and a GPS system -- was found in his unlocked home, along with his wallet, keys and passport. **"We don't believe he got lost,"** Faris said. **"He's meticulous in all points of detail."** Faris acknowledged the possibility that Cranswick lost his way and fell through ice on the Ottawa River, or perhaps he was attacked by a wolf, coyote or bear, but investigators have found no evidence to support those theories. "The average person would come to the conclusion -- it's not a good feeling," he said. **"There's absolutely no evidence either way. There's absolutely no trace at all."** Daniel Banks, a colleague of Cranswick's at Chalk River Laboratories, said he saw no change in Cranswick's demeanor prior to his disappearance. **"There was no indication he was going anywhere,"** Banks said. **"Everyone has said that he seemed normal, especially during the time leading up to the disappearance."** Cranswick, an avid curler, specialized in conducting experiments in structural chemistry and Earth sciences, Banks said (Miller, 2010).

**Title/Headline:** *Al Qaeda-Linked New Jersey Man Sharif Mobley, Arrested In Yemen, Worked In Nuclear Power Plants*

**Abstract:** A New Jersey man charged in Yemen as an Al Qaeda member worked at nuclear power plants in the U.S., officials said. Sharif Mobley, a 26-year-old American native of Somali heritage, was arrested in Yemen this month in a roundup of suspected Al Qaeda members. He was being treated at a hospital in San'a when he killed one guard and wounded another in an escape attempt, officials said. **Before Mobley moved to Yemen two years ago, ostensibly to learn Arabic and study the Koran, he worked for several contractors at three nuclear power plants in New Jersey from 2002 to 2008,** PSE&G Nuclear spokesman Joe Delmar said. Mobley carried supplies and did maintenance work at the plants on Artificial Island in Lower Alloways Creek and worked at other plants in the region as well, Delmar said. He satisfied federal background checks as recently as 2008, Delmar said. Mobley was always supervised, caused no problems and was not believed to have breached security at the plants, said Mike Drewniak, a spokesman for New Jersey Gov. Chris Christie. Mohammed Albasha, spokesman for the Yemeni Embassy in Washington, said there was no immediate connection between Mobley's activities or capture in Yemen and his work at the plants. **It was not immediately clear if Mobley worked at any of the region's other power plants.** Joe Szafran, a spokesman for Exelon Corp., which owns nuclear plants at three facilities in eastern Pennsylvania, referred questions to the FBI. The FBI declined to comment on the case. "We don't know nothing. We're trying to hear something," Mobley's father, Charles Mobley, told New Jersey's WMGM-TV. **Sharif Mobley is the latest example of what anti-terrorism experts fear is a growing trend: the radicalization of American Muslims who join overseas terrorist groups.** Yemeni groups are of special concern, as are Somali-Americans. The Al Qaeda branch in Yemen was linked to the failed Christmas Day bombing of a Detroit-bound airliner. Maj. Nidal Hasan, the Army psychiatrist accused of killing 13 people in the Fort Hood shooting spree, exchanged e-mails with an extremist cleric in Yemen. **Young Somali-American men have been traveling from the U.S. to fight jihad in Somalia, raising fears they are receiving terror training.** Mobley graduated from high school in 2002 in the rural southern New Jersey town of Buena and lived in Philadelphia and Newark, Del. In recent years, Mobley organized religious pilgrimages to the Middle East for other Muslims. Umar Hassan-El, assistant imam at the Islamic Society of Delaware's mosque in Wilmington, Del., told the Associated Press he roomed with Mobley during a 2004 pilgrimage to Mecca. **"He gave no indication that he would join a group that he's alleged to be a part of right now,"** said Hassan-El. **"I never heard that boy ever talk about shooting anybody, killing anybody."** Roman Castro, 25, a high school classmate who served with the Army in Iraq, told the Associated Press that the last time he saw Mobley, about four years ago, Mobley yelled, **"Get the hell away from me, you Muslim killer!"** Former classmate Dawn Bass said she was "shocked" to learn of the allegations against Mobley, who she said was a "sweetheart" who was "always showing off in the back of the classroom doing his karate moves and stuff." She said, Mobley "was just a regular kid, he was always talking to everybody - he was not shy" (Kates, 2010).

**Title/Headline:** *The Dangers Of Nuclear War: U.S.-Russian Nuke Deal No Cure For Real Threat*

**Abstract:** After nearly a year's negotiations, the U.S. and Russian governments finally reached an agree-ment on further reduction and limitation of nuclear weapon arms. The agreement will be signed on April 8, limiting the total number of warheads to less than 1,550. Overall, it is good for world peace and stability as well as the prevention of nuclear proliferation, but we shouldn't be over-optimistic about the treaty. The motivations behind the treaty are clear. Russia is opposed to the U.S. missile defense system and its deployment in Eastern Europe. **The U.S. continues to expand the scope of the missile defense system, which constitutes a real threat to Russia in Eastern Europe.** With 95 percent of the world's total nuclear warheads, the U.S. and Russia are the world's two largest nuclear powers. Russia has more than 14,000 missiles and the U.S. has more than 9,000. This remains one of the few areas where the former U.S.'s national strength is as great as ever, so the U.S. is active in working toward compromise in this field. Yet the treaty has its problems. In the existing agreements, the number of nuclear warheads was limited to between 1,500 and 2,200. This new agreement itself has no new breakthroughs and has not met the expectations of the international community. Half a year ago, the limit of 1,500 was proposed, but in the end, it became 1,550, no big breakthrough at all. The most fundamental problem is that the provisions do not eliminate nuclear weapons but instead change their level of readiness. **Nuclear weapons have three states of readiness: fully equipped and ready to be fired, readied but with the head and body separated, and finally, in storage conditions with the warhead removed.** This treaty reduces the number of

fully equipped nuclear weapons to less than 1,550, but the excess missiles will not be destroyed, only moved to a different state of readiness. They could be activated and re-weaponized in only a short span of time. Despite the agreement, the U.S. also continues to work on developing new nuclear weapons itself. While some are being moved from the frontlines, lighter, more accurate weapons are being developed, as well as so-called bunker-busters designed to penetrate deeply into the Earth. The U.S.-Russian agreement only limits bilateral development, but the real concern is the spread of nuclear weapons worldwide. The U.S. is planning to hold a nuclear safety summit on April 13 where the core issue is the nuclear non-proliferation. **Once nuclear technology spreads, and especially if terrorist organizations get their hands on nuclear materials, the consequences are unpredictable, and it is in every country's interests to prevent this.** U.S. standards on nuclear proliferation are also inconsistent. **It gives tacit approval to Israel's nuclear weapons program, and makes no effort to discourage Japan from stockpiling raw materials that could, in theory, produce thousands of nuclear weapons.** In contrast, the U.S. has been particularly sensitive to Iran and North Korea. Iran has not tested nuclear weapons, but claims to developing civilian nuclear facilities. However, the U.S. has been strongly working for sanctions against it as a consequence and even considering military actions. Out of political considerations, the U.S. has adopted two completely different standards on the use of nuclear technology by various nations. **To make a convincing case for non-proliferation, the U.S. should apply the same standards to every country** (Guoan, 2010).

**Title/Headline:** *The Domsday Dilemma*

**Abstract:** During his presidential campaign, Obama embraced a dream first articulated by President Reagan: the abolition of nuclear weapons. The idea is no longer all that radical. In January 2007, an op-ed piece calling for a nuclear-weapons-free world appeared in *The Wall Street Journal*, signed by Reagan's secretary of state George Shultz; Nixon's and Ford's secretary of state, Henry Kissinger; Clinton's secretary of defense Bill Perry; and Sam Nunn, the former chairman of the Senate Armed Services Committee and longtime wise man of the defense establishment. **"The Four Horsemen of the Apocalypse," as they were quickly dubbed, had gotten together to give cover to politicians. "We wanted the candidates of both parties to feel they could debate the issue freely," said Nunn.** In a speech in Prague last spring, Obama noted that **"in a strange turn of history, the threat of global war has gone down, but the risk of a nuclear attack has gone up."** He warned that with more nations acquiring nuclear weapons, or wishing to, the scary but oddly stable reign of **"mutual assured destruction" was giving way to a new disorder.** "As more people and nations break the rules, we could reach the point where the center cannot hold." Obama stated "clearly and with conviction America's commitment to seek the peace and security of a world without nuclear weapons." But, he added, **"I'm not naive. This goal will not be reached quickly—perhaps not in my lifetime."** And he threw in an important caveat: **"Make no mistake. As long as these weapons exist, the United States will maintain a safe, secure, and effective arsenal to deter any adversary, and guarantee that defense to our allies."** Nuclear policy will be front and center for **Obama this spring, but in a way that may reveal more about limits than possibilities.** On April 8, the president will sign an arms-control treaty with Russia that will set limits on numbers of warheads and launchers, lower than any previously agreed. Progress, to be sure. But it's not entirely clear that a polarized Congress will find the two-thirds majority to ratify the treaty. Its most impassioned opponent, Sen. Jon Kyl, Republican of Arizona, is already demanding to know whether the **"New START" treaty represents "a new era in arms control or unilateral disarmament."** For their part the Russians are still smarting from perceived humiliations at the end of the Cold War and are increasingly dependent on nuclear weapons as their conventional forces wither. They seem unlikely to go much further in cutting their arsenal. The prospect of nuclear proliferation is anxiety-inducing for all presidents, especially as terrorists try to get their hands on loose nukes. **Obama is convinced that nuclear terrorism now poses a greater threat than the remote possibility of a nuclear war.** On April 12 and 13, he will host a Washington summit of more than 40 heads of government with the aim of getting tougher measures to secure the fissile material still lying unprotected around the world. He's set a deadline of four years for truly securing the most dangerous materials. His own advisers suspect he is being overambitious but see the summit as a "consciousness-raising exercise." **Every five years, the signers of the 1968 Nuclear Non-Proliferation Treaty meet to review progress, and in May they will meet again.** The Obama team hopes to use the conference to push his no-nukes agenda, but he will be resisted by countries, like Iran, that resent American power. At the same time, Obama can't cut America's arsenal as much as he might like. Countries long under U.S. nuclear protection, like Japan, may decide they need their own nuclear arms as American power declines in the world. Countries choosing to stay under the nuclear umbrella will want reassurances that they can depend on it. **Obama's dream of a nuke-free world will encounter the stiffest resistance at home—from the people who make and safeguard nuclear weapons. America's nuclear systems are aging, raising questions about the reliability of bombs, planes, and missiles.** The U.S. Senate never ratified the 1996 Comprehensive Nuclear-Test-Ban Treaty, and though the White House has talked hopefully of getting a vote on the CTBT sometime in a first Obama term, congressional staff experts are skeptical. "The CTBT is going nowhere," says a staffer who declined to be named. "The Republicans are not going to go for it." **The GOP rationale: the United States needs to at least preserve the option of testing the reliability of old weapons or developing new ones.** Obama is supposed to release a long-delayed Nuclear Posture Review and the hope is to lay out a **"paradigm shift" in thinking—to move away from war planning and focus on steps toward a nuclear-free world. There will be ambitious plans to safeguard against proliferation, in part by strengthening the International Atomic Energy Agency; by providing nuclear fuel to countries that need it (so they don't try to enrich their own uranium); and by better securing nuclear materials from reactors around the world used for research and medicine, ingredients that might be used to build a "dirty bomb."** These are all sensible steps. But on the question of what Obama will do with America's own nuclear weapons, the president is sure to fall shy of his ambitions. **Obama has rejected calls to scrap one leg of the "triad" of U.S. nuclear forces: missiles, submarines, and bombers. He does want to get away from the alert status known as "prompt launch,"** so there is talk of "repositioning" U.S. forces so they could not be quickly taken out by surprise. (The old standards were "launch on warning" or "launch under attack." **Obama wants to avoid any kind of hasty response.**) **But the United States is likely to keep some ICBMs on alert against a Russian or Chinese missile attack.** Obama will call for improved communications with the Russian leadership to avoid what are tactfully called "misperceptions." **Obama is also unlikely to make a "no first use" pledge, though the wording will be fudged.** The new members of NATO—former Soviet satellites like the Baltic states—would be aghast at any such promise. As for future reductions, the United States has already removed all battlefield nukes from Europe.

The Russians have not. Obama's advisers are hoping to trade some of America's "reserve force" of intercontinental weapons for those Russian tactical weapons. But Obama is still faced with the age-old question of targeting America's strategic weapons. **Will American missiles be aimed at Moscow or Beijing—or Tehran? No, cities are off-limits. But even if the targets are military forces, millions would still die. Obama is still pondering the dilemma; the matter is said by administration officials to be under secret review** (Barry & Thomas, 2010).

**Source:** ABC News

**Title/Headline:** *On Nuclear Terrorism, A Muted Perception Of Threat*

**Abstract:** Barely half of Americans see nuclear terrorism as a top-level threat and most doubt a two-day summit of world leaders in Washington will do much to address it – challenges for President Obama as he seeks to marshal support for international action. Just 12 percent of Americans in a new ABC News/Washington Post poll call the chance that terrorists could obtain nuclear weapons “the single biggest threat the world faces,” language to some extent similar to Obama’s Sunday, when he called nuclear terrorism “the single biggest threat to U.S. security.” An additional 36 percent call the issue “one of the biggest” world threats; that’s a net total of just under half, 48 percent, calling it either the biggest threat or one of the biggest. **About as many, 45 percent, call it a major world threat but not one of the biggest, or less of a threat than that. Expectations for the summit, moreover, are not optimistic.** Forty percent express confidence it will result in better controls on nuclear materials, including just 7 percent who are very confident of that outcome. Fifty-six percent are not confident of progress – half of them, “not at all.” Obama is meeting with officials of 46 other nations in what’s been described as the biggest U.S.-hosted gathering of world leaders since the United Nations was formed 65 years ago. He called the summit to push his proclaimed goal of securing the world’s nuclear materials within four years, warning that al Qaeda and similar terrorist groups are trying to obtain a nuclear weapon. **Beyond his talks with his counterparts on the world stage, this poll suggests Obama has work to do persuading average Americans of the threat level. Concern peaks among African-Americans, but among other groups only about half, or modestly more, call nuclear terrorism either the single greatest world threat or one of the biggest.** Despite today’s partisanship on many issues, this result is similar (ranging from 46 to 50 percent) among Democrats, Republicans and independents alike. One difference is a gender gap: Fifty-four percent of women see it as a top threat, vs. 43 percent of men. **(To put the perceived threat in context, the question asked respondents to think about nuclear terrorism in light of other threats, including terrorists using other types of weapons, and conflicts among nuclear-armed nations.)** There is a partisan division on confidence in the summit, being held today and tomorrow in Washington. Among Democrats, who are far more apt to back Obama, 54 percent express confidence the effort will result in better controls on nuclear materials. That falls to 37 percent of independents and 30 percent among Republicans.

*This ABC News/Washington Post poll was conducted by telephone April 7-11, 2010, among a random national sample of 1,032 adults. **Title/Headline:** *Nuclear Blast Victims Would Have To Wait*

**Abstract:** The White House has warned state and local governments not to expect a "significant federal response" at the scene of a terrorist nuclear attack for 24 to 72 hours after the blast, according to a planning guide. President Obama told delegates from 47 nations at the Nuclear Security Summit on Tuesday that it would be a "catastrophe for the world" if al-Qaeda or another terrorist group got a nuclear device, because so many lives would be lost and it would be so hard to mitigate damage from the blast. **A 10-kiloton nuclear explosion would level buildings within half a mile of ground zero, generate 900-mph winds, bathe the landscape with radiation and produce a plume of fallout that would drift for hundreds of miles, the guide says. It was posted on the Internet and sent to local officials. The document is designed to help local officials craft plans for responding to a nuclear blast.** The prospect is anything but far-fetched, says Rick Nelson of the Center for Strategic and International Studies. "Do I think in my lifetime I'll see the detonation of a nuclear device? I do." **One challenge he says, will be to persuade survivors to stay indoors, shielded from dangerous radiation until they're given the all-clear or told to evacuate. "In all likelihood, families will be separated," he says. "It's going to be scary to sit tight, though it's the right thing to do."** The government's planning scenarios envision a terrorist strike in an urban area with a 10-kiloton device, slightly smaller than the roughly 15-kiloton Hiroshima bomb. **A 10-kiloton device packs the punch of 10,000 tons of TNT. The chaos that would inevitably follow such a blast would make it difficult for the federal government to react quickly. "Emergency response is principally a local function," the document says, though "federal assistance will be mobilized as rapidly as possible."** The "Planning Guidance for Response to a Nuclear Detonation" was developed by a task force headed by the White House Homeland Security Council. It was circulated to state and local government officials and first responders in January 2009. The report has never been formally released to the public, White House spokesman Nick Shapiro says. It offers practical guidance to first responders and advice on radiation measurement and decontamination. Disaster experts say local governments aren't prepared for a nuclear attack. **"There isn't a single American city, in my estimation, that has sufficient plans for a nuclear terrorist event,"** says Irwin Redlener of Columbia University's Mailman School of Public Health. The message for families is simple, he says: Stay put. Wait for instructions. If you've been outside, dust off, change, shower. **"What citizens need to know fits on a wallet-sized card," Redlener says. "A limited amount of information would save tens of thousands of people"** (Sternberg, 2010).

**Title/Headline:** *TTP Declarations: Targeting American Cities*

**Abstract:** On May 2, 2010, the new YouTube page Tehreek-e-Taliban Pakistan, "Tehreke Taliban's Channel," which was launched on the same date, posted three videos. The first, which the YouTube page titled "Hakeemullah Mehsud is Alive and Healthy and Delivering news about Attacks on USA," is 2:17 long, and shows a still satellite image of North America with a still image of Hakimullah Mehsud. Speaking in Urdu, he states that the date is April 19, 2010 and **threatens bombings in U.S. "states and cities";** as he speaks, explosions are shown taking place across the map. The second video, which the YouTube page also titled "Hakeemullah Mehsud is Alive and Healthy and Delivering news about Attacks on USA," is 8:42 minutes long, and shows Hakimullah Mehsud sitting surrounded by masked, armed

men. Speaking in the Pashtu language, he states that the date is April 19, 2010, and discusses attacks on the U.S. In the third video, which is 1:06 minutes long, Qari Hussain Mehsud, a key leader of the Tehreek-e-Taliban Pakistan and a close lieutenant of Hakimullah Mehsud, claims responsibility for the May 1, 2010 failed car bomb plot in the Times Square, against a backdrop of still images.

**The following messages are alleged to be purported in the videos:**

- "America which is the Biggest Evil of this world, it has savagely massacred millions of innocent Muslims in Afghanistan, Iraq and Pakistani Tribal areas. And has martyred respected Arab mujahideen brothers, who announced the implementation of Islamic system. For this the Satanic America martyred them, and rejoiced on it as their victory.
- "Alhamdulillah, today I want to assure Ummat-e-Muslimah [i.e. Islamic Ummah] that our Moral is at its peak, we haven't felt weak for a micro-second. From now on, the main targets of our Fidaeen are American Cities. [*Explosions start taking place on the map*]
- "America/Nato you will pay for your crimes."
- "The time is very near when our Fidaeen [i.e. suicide bombers] will attack the American states in their major cities. And inshaALLAH we will succeed in our attacks. Our fidaeen have penetrated the terrorist America, we will give extremely painful blows to the fanatic America. I request you all to be steadfast and firm in your Jihad."
- "Not to forget about the respected and innocent sister from Pakistan Dr. Afia Siddiqui who has been stripped naked in order to make Fun of the dignity and respect of the Muslim Ummah. Our hearts are in severe pain seeing our sister in such un-human and disrespectful condition. The flames in our hearts will only be lightened when our Fidaaen will deliver precise and destructive attacks on the terrorist America bringing it down to its knees. inshaAllah.
- "InshaALLAH very soon in some days or a month's time, the Muslim ummah will see the fruits of most successful attacks of our fidaeen in USA. Please don't worry for the pain and suffering that in your heart. America the extremist has Lost terribly.
- "This is also a revenge for the Global American interference & terrorism in Muslim Countries, especially in Pakistan for Lal Masjid operation (MEEMRI, 2010).

**Title/Headline:** *Opinion: Where Are All The Terrorist Attacks?*

**Abstract:** As the details of the Times Square car bomb attempt emerge in the wake of Faisal Shahzad's arrest, one thing has already been made clear: **Terrorism is fairly easy.** All you need is a gun or a bomb, and a crowded target. Guns are easy to buy. Bombs are easy to make. Crowded targets -- not only in New York, but all over the country -- are easy to come by. **If you're willing to die in the aftermath of your attack, you could launch a pretty effective terrorist attack with a few days of planning, maybe less.** But if it's so easy, why aren't there more terrorist attacks like the failed car bomb in New York's Times Square? Or the terrorist shootings in Mumbai? Or the Moscow subway bombings? After the enormous horror and tragedy of 9/11, why have the past eight years been so safe in the U.S.? There are actually several answers to this question. **One, terrorist attacks are harder to pull off than popular imagination -- and the movies - - lead everyone to believe.** Two, there are far fewer terrorists than the political rhetoric of the past eight years leads everyone to believe. **And three, random minor terrorist attacks don't serve Islamic terrorists' interests right now.**

**Hard To Pull Off:** Terrorism sounds easy, but the actual attack is the easiest part. Putting together the people, the plot and the materials is hard. **It's hard to sneak terrorists into the U.S. It's hard to grow your own inside the U.S. It's hard to operate; the general population, even the Muslim population, is against you.** Movies and television make terrorist plots look easier than they are. It's hard to hold conspiracies together. It's easy to make a mistake. **Even 9/11, which was planned before the climate of fear that event engendered, just barely succeeded.** Today, it's much harder to pull something like that off without slipping up and getting arrested.

**Few Terrorists:** But even more important than the difficulty of executing a terrorist attack, there aren't a lot of terrorists out there. **Al-Qaida isn't a well-organized global organization with movie-plot-villain capabilities; it's a loose collection of people using the same name.** Despite the post-9/11 rhetoric, there isn't a terrorist cell in every major city. If you think about the major terrorist plots we've foiled in the U.S. -- the JFK bombers, the Fort Dix plotters -- they were mostly amateur terrorist wannabes with no connection to any sort of al-Qaida central command, and mostly no ability to effectively carry out the attacks they planned. The successful terrorist attacks -- the Fort Hood shooter, the guy who flew his plane into the Austin IRS office, the anthrax mailer -- were largely nut cases operating alone. Even the unsuccessful shoe bomber, and the equally unsuccessful Christmas Day underwear bomber, had minimal organized help -- and that help originated outside the U.S. **Terrorism doesn't occur without terrorists, and they are far rarer than popular opinion would have it.**

**Small Attacks Aren't Enough:** Lastly, and perhaps most subtly, there's not a lot of value in unspectacular terrorism anymore. **If you think about it, terrorism is essentially a PR stunt.** The death of innocents and the destruction of property isn't the goal of terrorism; it's just the tactic used. And acts of terrorism are intended for two audiences: for the victims, who are supposed to be terrorized as a result, and for the allies and potential allies of the terrorists, who are supposed to give them more funding and generally support their efforts. **An act of terrorism that doesn't instill terror in the target population is a failure, even if people die. And an act of terrorism that doesn't impress the terrorists' allies is not very effective, either.** Fortunately for us and unfortunately for the terrorists, 9/11 upped the

stakes. It's no longer enough to blow up something like the Oklahoma City Federal Building. **Terrorists need to blow up airplanes or the Brooklyn Bridge or the Sears Tower or JFK airport -- something big to impress the folks back home. Small no-name targets just don't cut it anymore.** Note that this is very different than terrorism by an occupied population: the IRA in Northern Ireland, Iraqis in Iraq, Palestinians in Israel. Setting aside the actual politics, all of these terrorists believe they are repelling foreign invaders. That's not the situation here in the U.S.

**So, To Sum Up:** If you're just a loner wannabe who wants to go out with a bang, terrorism is easy. You're more likely to get caught if you take a long time to plan or involve a bunch of people, but you might succeed. If you're a representative of al-Qaida trying to make a statement in the U.S., it's much harder. You just don't have the people, and you're probably going to slip up and get caught" (Schneier, 2010).

**Source:** New York Times

**Title/Headline:** *Al Qaeda's Nuclear Plant*

**Abstract:** All eyes are on Faisal Shahzad, the man charged with the attempted bombing in Times Square. But perhaps we ought to be concerned a bit less with Mr. Shahzad, a failed terrorist now in custody, and significantly more with **Sharif Mobley — a New Jersey native, a former high school wrestler and, until shortly before he moved to Yemen to allegedly join Al Qaeda, a maintenance worker at five nuclear power plants along the East Coast.** Since his arrest by Yemeni security forces, **American law enforcement officials have taken pains to emphasize that Mr. Mobley's low security clearance makes it unlikely that he passed crucial details about American nuclear-plant security to Al Qaeda. But it doesn't take top-level clearance to know how to set off a nuclear meltdown.** All it takes is information on perimeter security — information Mr. Mobley possesses about every plant where he worked. **A nuclear power plant is very different from a coal- or gas-burning plant. If something goes wrong at such a plant, boilers can be quickly shut down, averting disaster.** But there's no way to quickly shut off a reactor: the heat that builds up inside it is so intense that even if something goes wrong, cooling water must continue to circulate through its systems for days before it is safe. If the cooling system malfunctions, even if the rest of the plant is operating safely, the heat will literally melt the reactor and its concrete containment shell, releasing radioactive gas into the atmosphere — in other words, a partial nuclear meltdown like that at Three Mile Island in Pennsylvania in 1979. And it turns out that damaging a reactor's cooling system is a lot easier than getting to the core. You don't have to obtain access to the nuclear fuel, get into the control room or penetrate the containment shell. Most of the critical components of the cooling system, including pumps and water intake pipes, sit unprotected outside. **If you can get a car bomb or a team with demolition charges near these components, you can shut off the cooling water to the reactor, and physics will take care of the rest.** Even low-level employees at a nuclear plant would have the information necessary to pull off such an attack, like the number of guards, their weapons and procedures at entry gates — even someone as low-level as Sharif Mobley. **We don't yet know what kind of plant-security information, if any, Mr. Mobley passed on to Al Qaeda. But we do know that the organization has been interested in attacking American nuclear plants for years; it even considered including a plant on its Sept. 11 target list.** For now, we have no choice but to assume that Mr. Mobley did in fact pass on details about plant security, and we need to take immediate steps to head off any possible terrorist attack. Defensive schemes at the plants where Mr. Mobley worked need to be significantly changed so that his information is no longer of value to any potential attacker. Guard procedures, for example, must be altered. Where such changes cannot adequately compensate for the potential risk Mr. Mobley presents, then defenses need to be strengthened. Security perimeters need to be widened. And more barriers must be put in place against car bombs. Once we have dealt with the plants where Mr. Mobley worked, we need to institute similar procedures at the remainder of the nuclear plants in the United States, because the unfortunate truth is that the defensive schemes at these sites are essentially all alike. **For too long we've assumed that a nuclear plant is safe as long as its reactor is protected. Sharif Mobley knew better. Now, chances are, so does Al Qaeda** (Faddis, 2010).

**Title/Headline:** *Senators Say Nation Needs New Defenses Against New Type of Terrorist*

**Abstract:** Ten days after the attempted car bombing in Times Square and the arrest of Pakistani-American Faisal Shahzad, the Senate Intelligence Committee was formally briefed by the FBI and members of the intelligence community, with both the chairman, Sen. Dianne Feinstein, D-Calif., and ranking Republican, Sen. Kit Bond, R-Mo., calling that unacceptable. "It's very hard to understand why this briefing was so difficult to come about," Feinstein puzzled, with Bond adding, "After 10 days, we finally have a briefing. It's very frustrating...I've been kept completely in the dark." After an hour-and-a-half long briefing, both senators emerged to say the country needs new defenses against a new kind of terrorist, like Shahzad, and said **the nation's citizens should be prepared to put up with more inconveniences to protect the nation with officials trying to balance civil liberties in the course of doing so. "In this case, Shahzad was almost completely under the radar, which in many ways is even more ominous. We want to improve our defenses. It's clear, we're facing a new kind of attacker who's already here, able to hide in plain sight, and we need to think about new defenses,"** Sen. Feinstein told reporters. When asked what can be done about this, Feinstein replied, **"What can be done is improving our screening. And this is difficult, because you have 180,000 people going to Pakistan a year, and you've got...60,000 coming back.** And you also have other countries which are of great concern. So, this is not an easy magic solution. And we've got a country that respects individual rights and civil rights, and we don't want to harass people unnecessarily, but there are things we should look at." **Feinstein did give a ringing endorsement to a push made by a group of her Democratic colleagues Tuesday for Secretary of State Hillary Clinton to place the Pakistani Taliban on the Foreign Terrorist Organization list, something the State Department said it is discussing. And Feinstein had another group she would add, an insurgent network in the tribal region of Afghanistan and Pakistan with ties to the Taliban. "I think there is a very high likelihood that there were interactions between (Faisal Shahzad) and the Pakistani Taliban. I also believe that the Pakistani Taliban ought to be on the designated list, the terrorist list, as well as the Haqqani network ought to be on the**

designated terrorist list. I just looked at the criteria for that, and I believe they fulfill that. So I think that's something that the Administration should do forthwith," Feinstein said" (Fox News, 2010).

**Title/Headline:** *Taliban Planning Attacks In Washington*

**Abstract:** **There is a strong belief in the U.S counter-terrorism community that we will see additional attacks unfold in primarily New York City and Washington, D.C., in the next five- to six-month timeframe,** says Fred Burton, vice president of intelligence at Stratfor Global Intelligence. U.S. law enforcement officials would not comment on the investigation or intelligence that suggests as many as a half dozen plots may have been in the works. WNYW-TV in New York reported that Shahzad told interrogators he wanted to attack **Rockefeller Plaza, Grand Central Terminal, the World Financial Center and the Connecticut headquarters of defense contractor Sikorsky** -- if the Times Square attack worked. As for D.C., Burton says there have been no specific targets identified. "Although I certainly lean toward public transportation, like subways and other large areas that would be open to the public, such as heavily transited tourist areas." Some counter-terrorism professionals suggest the Times Square event ushered in a new understanding of the Pakistani Taliban's capabilities. **"If they did it once, they will do it again,"** says Offer Baruch, a former member of Israel's Shin Bet. **"The Taliban doesn't need to come and say this is what we want to do. They've already proved they have the capability. The guy [Shahzad] was here. It doesn't matter how immature it [his plot] was. They already have a cell here on American soil."** Baruch says he believes U.S. authorities have not commented publicly on the threat to Washington and other places to maintain an advantage over the terrorists. Sources in Washington also indicated there is significant pressure on the counter-terrorism and security elements of the Obama administration to maintain tight control of what the public is told about the investigation. **"I think they have some kind of intelligence information that something is going to happen, and they are in the process of investigating it,"** Baruch says. "The authorities want to buy some time to continue to investigate and collect evidence and put their hands on the suspect before they announce it." **"We know that they [Pakistani Taliban] helped facilitate it,"** says Attorney Eric H. Holder. **"We know that they probably helped finance it."** But Rahimullah Yusufzai, who is well-connected to the Taliban and the last-known journalist to interview al-Qaida leader Osama bin Laden, believes their capabilities are being exaggerated. "They don't really have money to give the person [potential terrorist]. They can't make a plan for the person to attack targets in the U.S. They can't send explosives from here. I don't think the Taliban even knows where Times Square is. I don't think they know how to use a credit card or how to book an airline ticket. These things they can't do." Yusufzai, who lives near Pakistan's troubled tribal region, sees no proof they could do it. **"I think there has been no evidence yet that the Pakistani Taliban has been able to strike outside Pakistan and Afghanistan. Their main area of operation is Pakistan. They can strike anywhere in Pakistan and they have been helping the Afghan Taliban."** Additionally, referencing the Fort Hood shooting in November 2009, he says the organization has lied about its exploits. "Last year, [Taliban Leader] Baitullah Meshud, before he was killed in a U.S. missile strike, said that there was some incident in the U.S. in which a Muslim American fired at people and killed 14. Meshud claimed responsibility for that incident, which was not true." Regardless of who allegedly supported the plotting and planning of the Times Square attempt, former State Department Counter-terrorism Agent Dennis Pluchinsky, who now lectures at George Mason University, warns there are two types of terrorism evolving in the U.S.: leaderless terrorism and command-and-control terrorism. "If you're talking about the December 2009 attack over Detroit or the recent attack in Times Square, these are examples of what we call command-and-control terrorism." **Pluchinsky says command-and-control terrorism means the operatives "were under the command and control of a larger parent terrorist organization."** **Pluchinsky says leaderless terrorism, which is on the rise in the U.S., usually involves ill-trained terrorists operating on their own.** "If you look at this from a counter-terrorism perspective, that bomb should have worked on that aircraft going into Detroit," Burton says. **"That bomb should have worked at Times Square. The bomb-makers will go back to the drawing board and eventually get it right."** Baruch says he expects more plots. **"The Taliban, al-Qaida [and] any affiliate radical Islamic organization would love to make some points in the war against the west. The biggest reward they can gain is conducting some kind of attack on American soil"** (Green, 2010).

**Title/Headline:** *The Effects Of A Nuclear Detonation In LA: Must See Video For All First Responders*

**Abstract:** What if the bad guys are somehow able to defeat us and set off a nuclear weapon in downtown LA? Not a dirty bomb, but an actual 10 kiloton nuclear device that results in the stereotypical mushroom cloud over the city. This briefing was conducted at the Radiological or Nuclear Incident & Clinical Application Seminar. It is presented by Brooke Buddemeier from the Lawrence Livermore National Laboratories and Global Security. Buddemeier works with DHS on preparation of cities for a nuclear detonation. He is a Certified Health Physicist and radiation safety specialist. I think you will agree this is an eye opening presentation. I encourage you to watch it from beginning to end and absorb some critical information we don't often see in the public domain.

#### **Technical:**

- A 10 KT detonation gives off the light of 1,000 midday suns at about a mile away and can cause temporary blindness that can last for about 15 seconds or more.
- A 10 KT detonation is the equivalent of 5000 Oklahoma City attack truck bombs
- 3 miles out of from the epicenter, glass will break in buildings - 800,000 people in LA affected within this 3 mile circle
- But, it's not all bad news - if you can get to shelter you could survive the fallout and there is particle decay as time goes by.

#### **Planning:**

- There is apathy in planning - most feel that if a nuclear weapon goes off response doesn't matter, we're all casualties, it's every man for himself. Or it is overwhelming to think about first response to such an event, therefore a lack of planning.
- **There are no regional response plans for a nuclear detonation**
- There is a misunderstanding about local and federal response and responsibilities
- There is a lack of understanding about the technical aspects of a detonation and the right way to respond
- The first hours are critical and doing the right thing could mean saving hundreds of thousands of lives - or, doing the wrong thing could lead to the death of hundreds of thousands.

It is hard to wrap our minds around this type of an attack, but we must. **The threat exists - al Qaeda has expressed interest in obtaining nuclear material and building a device; Hezbollah's sponsor Iran is a nuclear State; radical Islamist terrorist groups in Pakistan could get access through an attack on a facility, planting a mole, or a from a sympathetic scientist or engineer.** We must continue planning as first responders. How do we communicate when the radios, cellphones and computers go down as a result of an electromagnetic event? **Do we rush out to help (first instinct) or shelter, survive, then help? Where are our shelters and is the public aware? Do we practice for this type of event and if so, is it realistic?** We have to better educate our citizens. An educated populace is less fearful and their will to survive a detonation will be much higher armed with some knowledge than just operating from a position of fear. We can't be afraid to have this conversation with our public, they deserve to know and prepare. **They shouldn't over rely on the government during times of crisis, as we've seen time and time again in the past. It strikes me that the generations before us were much more prepared - they knew the location of fallout shelters, for starters. Remember when the bank, the schools, etc in your hometowns had those black and yellow shelter signs?** Our parents and grandparents had canned food and water as rations, a radio with batteries, a rallying point and safe area in their homes. There were civil preparedness drills and videos on TV about what to do in the event of a nuclear detonation or related emergency. **It was a part of every day life that a nuclear attack was possible - not inevitable, but possible. This is our reality today, as well, although the average person probably gives it no thought at all** (Hesterman, 2010).

**Title/Headline:** *CNN Poll: Fear Of Terrorist Attack In U.S. Rises*

**Abstract:** For the first time in nearly four years, a majority of Americans think that a terrorist attack is likely to occur somewhere in the United States in the next few weeks, according to a new national poll. But a CNN/Opinion Research Corporation survey released Friday morning indicates only one in 20 Americans think that terrorism is the most important problem facing the country today. **Fifty-five percent of people questioned say an act of terrorism in the U.S. over the next few weeks is likely, up 21 points from last August. Forty-three percent said such an attack is not likely, down 21 points from August.** "Eight in ten Americans don't think that a terrorist attack is likely in their community, but the 17 percent who do worry about being targeted by terrorists is the highest that number has been since 2002," says CNN Polling Director Keating Holland. **"Nonetheless, terrorism ranks dead last when Americans are asked to name the country's most important problem."** The economy, at 45 percent, tops the list, with the deficit, at 12 percent, and health

care, at 11 percent, the only other issues in double digits. Only four percent of those questioned in the poll say terrorism is the country's top issue. **The survey's release comes one day after the Obama administration released its first National Security Strategy, a 52-page outline of the president's strategic approach and priorities on battling terrorism.** The NSS, required by Congress of every administration to be prepared every four years, for the first time combines homeland security and national security, focusing not only on threats internationally but on the threat of home-grown radicals inspired and recruited by al Qaeda. The CNN/Opinion Research Corporation poll was conducted May 21-23, with 1,023 adult Americans questioned by telephone. The survey's overall sampling error is plus or minus three percentage points (CNN, 2010).

**Title/Headline:** *Medical Preparedness And Response To Nuclear Terrorism*

**Abstract:** The medical and public health community is still in its infancy in terms of preparedness for the detonation of a nuclear device. Today, detonation of a compact, portable nuclear device by a small group of terrorists is a real threat. These devices, known by a variety of names—suitcase nukes, mini-nukes, or improvised nuclear devices (INDs)—are small enough to put in a backpack or suitcase and can yield an explosion of up to 20 kilotons.

**Challenges To Emergency Medical Response:** All nuclear detonations result in significant structural and environmental destruction from the blast, heat, and radiation. The level of physical destruction in and beyond the response area and the potential loss of critical medical infrastructure in surrounding areas at relatively remote distances will create significant barriers to normal emergency medical responses. In addition, dangerous levels of radiation in the immediate response area and downwind from the radiation plume will make it difficult to respond rapidly to victims of the blast. Operational and logistical problems with the delivery of supplies, patient transport, and emergency communication will further complicate emergency medical response. The medical effects will be catastrophic, both for people in the immediate area and for people within a radius of several miles. Survivability in the short and intermediate term will depend on the degree and type of physical injury combined with the degree of exposure to radiation (Waselenko et al., 2004). The radiation effects will have immediate, delayed, and long-term health consequences for both victims and emergency response personnel. Under any scenario that includes the release of a nuclear weapon, there will be thousands, possibly tens of thousands, of casualties. In the immediate aftermath, there will be an urgent need for a large number of specialized beds for patients with burns, blunt and penetrating trauma, eye injuries, and other injuries that would quickly overwhelm the existing overtaxed health system.

**Preparing For The Worst:** Since the horrific events of September 11, 2001, the nation has been working toward improving preparedness to threats to public health ranging from infectious diseases to weapons of mass destruction. Preparing for any emergency begins with asking “what if” security officials fail to prevent the release of a biological or chemical weapon or the detonation of an IND in an urban area or a highly populated American city. The medical and public health community is still in its infancy in preparing to respond to such an unthinkable event (IOM, 2009). The detonation of an IND would cause a level of destruction and risk to health that would be a mega-disaster of national significance (Figure 1). In such an attack, federal authorities would have to be immediately engaged in the emergency response and not wait for requests from state or local officials, as they would in a typical scenario. Medical preparedness for a nuclear detonation will require using all of the measures taken for many types of natural and manmade disasters. It will also require a radical change in thinking about how we provide emergency medical care. Finally, because this would be an intentional attack, planners must include preparations to respond to multiple detonations or the release of biological or chemical weapons. These challenges will require an all-hazards approach to emergency medical preparedness, which will be only one component in the general emergency response plan for a major disaster.

**Response Plans For Weapons Of Mass Destruction:** One of the earliest efforts to plan for responding to weapons of mass destruction was the Metropolitan Medical Response System Program (MMRS), which was started in 1995. This federal program was an early attempt to encourage integrated planning for large-scale disasters in several urban cities. The intent was to link first responders (e.g., police, fire, and emergency medical services) with public health and emergency management officials. Many other public and nonpublic efforts have been undertaken by a variety of federal, state, and local agencies to prevent, mitigate, or respond to the threat of a nuclear weapon. The Urban Area Security Initiative (UASI), for example, provided funds to multiple urban areas to address preparedness specifically for detonation of a nuclear weapon. The program was designed to improve capabilities and preparedness planning in response to improvised explosive devices in high-density, high-threat urban areas.

**Health Effects Of A 10-Kiloton Nuclear Device:** Because there have been few experimental ground-level detonations, most of what we know comes from sophisticated models estimating the effects of an IND. Based on these models, current estimates for a 10-kiloton release (a small suitcase bomb) are about 40,000 to 50,000 people killed within the first 24 hours from blast effects and burns and more than 130,000 injured from radioactive fallout (Marrs, 2007). Factors that modelers use to estimate human casualties include population density, time of day, geographic location, wind speed, and so on. Thus, even with conservative estimates, the health care system would quickly be overwhelmed (Bell and Dallas, 2007). The immediate types of injuries sustained from an explosion of this

type would include a combination of blast, burn, and penetrating traumas. For initial survivors, acute and chronic radiation illness would be another problem, which, when combined with traumatic injuries, is known to increase mortality (Flynn, 2006).

**The First 72 Hours:** The management goal in a typical disaster is to move from chaos to controlled disorder as quickly as possible. In a disaster like an IND, the period of chaos would be magnified because of fear, the size of the affected area, and the loss of local response capacity, that is, responders who are used to working together. Traditional preparedness planning is based on the assumption that local communities will be the responders for the first 48 to 72 hours. Thus planning focuses on optimizing the response until outside assistance arrives, as needed. The mobilization of meaningful federal assistance is expected to take from 48 to 72 hours. **The explosion of an IND or other weapon of mass destruction, however, would be immediately understood as an event of national importance, and local, state, and federal planners must harmonize their plans in a way that immediately nationalizes the response.** Although the local community may be on its own for some period of time for logistical reasons, **it is clear that, without immediate nationalization, there cannot be a reasonable emergency medical response.** Because of the loss of a significant amount of the local critical infrastructure (e.g., ambulances, hospitals and clinics, and associated personnel), the response plan should be designed to use regional and national health resources for the most severely affected patients. **Medical standards of care may also change dramatically, under appropriate medical supervision and ethical guidelines, in disaster situations.** For example, critically ill patients might have to be treated in a school gymnasium instead of a hospital because of the volume of patients, **and non-physician caregivers might be authorized to give injections and perform other procedures, even minor surgical procedures.** **First responders will have to address the early loss of command and control and operational communications** (mostly because of blast or burn effects, less so from the electromagnetic pulse). Situational threat awareness, accurate weather information, and the status of the medical system infrastructure are critical pieces of information essential for effective control and command of the medical response. Risk communication to the public will be a major challenge; messages must be clear, consistent, and as accurate as possible. **Maintaining public trust will be of great importance for health officials, who will have to make difficult decisions based on incomplete information. Managing fear, post-traumatic stress disorders, as well as traditional mental health concerns (e.g., depression) will also be critical.** In an emergency, immediate care (first aid) is often provided by bystanders and others in the general area of the event. In the case of an IND explosion, however, the area will be contaminated with radiation, **and even able-bodied survivors may be unable or unwilling to assist because of concerns about the risk of lethal exposure.** Significant search and rescue may also be delayed because of contamination of the site. The decontamination of victims will be an essential medical procedure, not only to protect patients, but also to protect care providers from continued radiation exposure. In general, however, most experts recommend that emergency care not be delayed because of fear of a contaminated patient. **Removing a patient's clothing will usually reduce the amount of contamination by 90 percent.**

**Conclusion:** Ensuring that an emergency medical system can respond to a nuclear emergency requires a proactive, nontraditional approach to disaster planning and response. This can be accomplished within the traditional framework of all-hazard planning, **but it will require immediate recognition of the national nature of the emergency, an "all in" response from the beginning,** and complex decisions in response to an emergency that has elements of different types of disasters. **The prospect of responding under continued threat of multiple intentional detonations or the use of conventional or unconventional weapons could further complicate the situation.** Moving successfully from chaos to controlled disorder will require that emergency planners effectively integrate response to the unique challenges of a particular event with the medical response scenario. **In the event of the unthinkable, even a resilient community will be slow to recover** (Benjamin, 2010).

**Title/Headline:** *Report: Justice Department Unprepared For WMD Strike*

**Abstract:** The U.S. Justice Department has failed to put together an adequate plan for responding to an attack involving weapons of mass destruction, the agency's inspector general stated. In a new report, the IG said the department **does not assign a single entity or individual responsible for managing responses to incidents involving weapons of mass destruction.** The report said **no specific WMD event operational response plan exists at the Bureau of Alcohol, Tobacco, Firearms and Explosives; the Drug Enforcement Administration; or the U.S. Marshals Service.** None of those three Justice Department components provides training for responding to a WMD incident or regularly participates in WMD response exercises, the report said. "We found the response planning among all the components, including the FBI, to be inconsistent and not well coordinated," Inspector General Glenn Fine said. Only the FBI has taken adequate steps to prepare a response to a potential WMD strike, the IG said. **"Preventing terrorist attacks, including WMD attacks, is the department's highest priority,"** the deputy attorney general's office wrote in a letter to the IG. **The deputy attorney general's office said it has given the FBI lead responsibility to prevent WMD attacks in the United States and in responding to WMD attacks, should they occur.** "We also agree that the FBI is not the only department entity responsible for addressing WMD attacks, and that the entire department must be prepared to respond effectively to a WMD attack or any other emergency event should one occur," the letter to the IG added (Fox News, 2010).

**Source:** The Fog Of Nuclear Geopolitics, Bohdan Szczepowicz

**Title/Headline:** *How To Anticipate And Avoid Nuclear Terror*

**Abstract:** **Nuclear Terror: It is not a question if, but when, where, and how it happens. It does not matter anymore who will do it. What is unnerving and new is the fact that it may be impossible to determine who is to blame and where to retaliate or even take preventive action to avoid nuclear terror. What is misleading is the fact that countries are tightening security measures all over the world in the belief that this will minimize or eliminate the threat. Nothing could be farther from the final truth. As we make it more difficult to obtain freedom or autonomy for so called oppressed minorities, wherever they may be, by tightening security they will sooner or later realize that only possession and blackmail with a nuclear weapon will bring them to the attention of the world (Szuprowicz, 2010).**

**Date:** June 5, 2010

**Source:** The Fog Of Nuclear Geopolitics, Bohdan Szczepowicz

**Title/Headline:** *The Most Valuable Real Estate In Nuclear Terror Era*

**Abstract:** **US foreign policy of progressive nuclear disarmament is setting it up as a prime target for nuclear terror blackmail. Welcome to the age of nuclear insecurity. Continuity of Government (COG) programs at federal, state and even local levels do exist. Secret shelter areas and evacuation procedures are designed to take care of selected leaders and bureaucrats but average businessmen, city dwellers, suburbanites and country folk are not included. Operations duplicated in more secure areas would provide Continuity of Business (COB), if primary facilities are made inoperative. Better security measures, designed to discover and prevent terrorism as such, may in fact accelerate nuclear terror as the only weapon in the hands of determined insurgent organizations with political agendas. If it is made impossible to launch conventional terror attacks, they will look to nuclear blackmail as the most effective means to get results. United States, promoting human rights and democracy, is the obvious choice for such threats. The world is edging toward nuclear terror. It's no longer a question of if, but when, where, and how it will happen. America, the hope and envy of the world, is the preferred target, yet in popular politics nuclear terror as a subject is taboo. New York, Washington, and major government and finance centers are believed to be the main target areas of terrorists. On the other hand nuclear terror blackmail may be employed by more sophisticated insurgents demanding that United States pressures other governments to liberate oppressed minorities. In order to do that it is necessary to keep intact administrative structures and foreign policy systems. As a result nuclear terror may be threatened or demonstrated in other places like Las Vegas, Houston or San Francisco. Particularly vulnerable are also locations near Minuteman sites, stealth bomber bases, and naval facilities servicing nuclear submarines as well as command, control and communications centers that acquire intelligence and provide retaliation capabilities. This may also be an opportune time to initiate a national Real Estate Nuclear Terror Survival (RENTS) organization to service the whole industry in North America (Szuprowicz, 2010).**

**Title/Headline:** *DOD: Rogue WMDs Major Threat To US*

**Abstract:** **The risk of weapons of mass destruction falling into the hands of terrorists is the gravest threat facing the United States, a Pentagon official has said. Asked about the existential threats against Washington, Undersecretary of Defense for Policy Michele Flournoy said there were many, but warned that "the thing that keeps me awake at night is a nexus between terrorism and massive destruction." She told a Washington symposium on US security that the United States needs to better prepare for "the possibility that a terrorist organization could either acquire a ready-made weapon or fabricate something improvised that would have a catastrophic effect for us." The senior Defense Department official spoke on the same day lawmakers in the US House of Representatives introduced a bill on prevention and deterrence of possible WMD attacks in the United States. "This is urgent. This is a big deal," Democrat and law co-author Bill Pascrell said, adding that the legislation addresses "how do we prepare, how do (we) detect, how do we build the state of the art to detect weapons of mass destruction?" The bill cited a December 2008 report by a bipartisan congressional commission which sounded an alarm over America's "shrinking" margin of safety. The draft report warned that without swift and decisive action by Obama, it was "more likely than not that a weapon of mass destruction would be used in a terrorist attack somewhere in the world by the end of 2013." Asked about the realistic threat of a such an attack, the bill's co-author, Republican Pete King, said: "There is nothing I've seen that says that this will not happen." WMDs, he said, "are the ultimate nightmare scenario" (NewsMax, 2010).**

**Title/Headline:** *Intel Memos Warn Radical Cleric's Call To Kill Americans May Inspire Attacks*

**Abstract:** **Two new intelligence memos obtained by Fox News point to increasing alarm over radical cleric Anwar al-Awlaki's recent call to kill American civilians. The first memo, which refers to the cleric as Aulaqi, was written by the Department of Homeland Security's Office of Intelligence and Analysis and dated May 26. It warned that the cleric could "inspire" groups to launch terror**

**attacks.** "The FBI and DHS/Office of Intelligence and Analysis are concerned that Anwar Aulaqi's support for **violence against U.S. military and civilian targets could inspire terrorist groups or individuals to conduct attacks in the United States,**" the memo said. The intelligence note stated that Awlaki "affirmed his support for the actions of alleged Fort Hood shooter Major Nidal Hasan and alleged Northwest flight 253 bomber Umar Farouk Abdulmutallab. **Aulaqi called for Muslims in the U.S. Army to follow the example of Major Hasan and also urged his supporters not to distinguish between U.S. military and U.S. civilian targets.**" The intelligence note said the cleric's statements are escalating and becoming more extreme, though he is now on the CIA's kill-or-capture list. A separate intelligence memo, obtained by Fox News, confirms what is now the widely-held belief that Al Qaeda in the Arabian Peninsula or Al Qaeda in Yemen has set its sights on the West. The document from Intelink, which disseminates information across the intelligence community, stated that the failed Christmas Day bombing indicates **"the group is also prepared to strike directly at the West itself, and to operate beyond the Arabian Peninsula for the first time"** (Herridge, 2010).

**Date:** June 19, 2010

**Source:** ABC News, Brian Ross

**Title/Headline:** *Radical Cleric On CIA Hit List Taunts U.S. Military And Obama: On the Run in Yemen, Anwar Al-Awlaki Says "Ominous Clouds Gathering"*

**Abstract:** The radical Muslim cleric **Anwar Al-Awlaki, whose killing has been approved by President Barack Obama,** today taunted the American President and the United States military in an audio address posted online. **"Imperial hubris is leading American to its fate: a war of attrition, a continuous hemorrhage that would end with the fall and splintering of the United States of America,"** said Awlaki. The site for the audio message features a picture of him juxtaposed with those Major Nidal Hassan, accused of the Ft. Hood shootings, and Omar Farouq Abdulmutallab, charged with the attempted bombing of an American jetliner on Christmas Day, 2009. A U.S. counter-terrorism official said there's no reason to believe the voice on the tape isn't Awlaki, and said the message contained "well-worn themes of hatred, violence and attempts at fear mongering. It's not just extremist bravado, it's trash." **The American born and educated cleric also called on Muslims in the U.S. to do as he did in waging jihad against the U.S.** "I could not reconcile between living in the US and being a Muslim, and I eventually came to the conclusion that jihad against America is binding upon myself, just as it is binding on every other able Muslim," said Awlaki in the message, speaking in English. Awlaki has been on the run since late last year when he was linked with both Major Hassan and Abdulmutallab. U.S. officials have told ABC News and other news agencies that the President approved efforts to target Awlaki with a missile strike in Yemen, where he is believed to be hiding (Ross, 2010).

**Title/Headline:** *Extreme DIY: Building A Homemade Nuclear Reactor In NYC*

**Abstract:** **Mark Suppes is part of a growing community of amateur "fusioneers". Many might be alarmed to learn of a homemade nuclear reactor being built next door.** But what if this form of extreme DIY could help solve the world's energy crisis? By day, Mark Suppes is a web developer for fashion giant Gucci. **By night, he cycles to a New York warehouse and tinkers with his own nuclear fusion reactor.** The warehouse is a non-descript building on a tree-lined Brooklyn street, across the road from blocks of apartments, with a grocery store on one corner. **But in reality, it is a lab.** In a hired workshop on the third floor, a high-pitched buzz emanates from a corner dotted with metal scraps and ominous-looking machinery, as Mr Suppes fires up his device and searches for the answer to a question that has eluded some of the finest scientific minds on the planet. **In nuclear fusion, atoms are forcibly joined, releasing energy. It is, say scientists, the "holy grail" of energy production - completely clean and cheap. The problem is, no-one has found a way of making fusion reactors produce more energy than they consume to run. 'I was inspired' Mr Suppes, 32, is part of a growing community of "fusioneers" - amateur science junkies who are building homemade fusion reactors, for fun and with an eye to being part of the solution to that problem.** He is the 38th independent amateur physicist in the world to achieve nuclear fusion from a homemade reactor, according to community site Fusor.net. Others on the list include a 15-year-old from Michigan and a doctoral student in Ohio. **"I was inspired because I believed I was looking at a technology that could actually work to solve our energy problems, and I believed it was something that I could at least begin to build,"** Mr Suppes told the BBC. While they might un-nerve the neighbours, fusion reactors of this kind are perfectly legal in the US. **"As long as they [private citizens] obtain that material [the components of the reactor] legally, they could do whatever they want,"** says Anne Stark, senior public information officer for California's Lawrence Livermore National Laboratory. During fusion, energy is released as atomic nuclei are forced together at high temperatures and pressures to form larger nuclei. **Scientists say devices like Mr Suppes' pose no real threat to neighbouring communities or the environment because they contain no nuclear materials, such as uranium or plutonium. "There is no chance of any kind of accident with fusion,"** says Neil Calder, communications chief for Iter, a multi-national project begun in 1985 with the aim of demonstrating the feasibility of fusion power. **"There's no CO2 pollution, there's no greenhouse gases, you can't use it for proliferation [the spread of nuclear weapons] - it has so many advantages,"** he said.

**'Mechanics To Janitors':** Government-led efforts to produce power from fusion have been going on around the world for 50 years. Iter - funded by the EU, US, Japan, Russia, India, China, and South Korea - is working on a multi-billion dollar, advanced reactor, due to be built in the south of France by 2019. **But the availability of equipment and technology has seen an increasing number of amateurs enter the fray. "We have people in the whole gamut, from physicists to electronics people to car mechanics to even one janitor - and all these people share a common bond to do nuclear fusion in their home,"** said Richard Hull, founder of Fusor.net. Some experts are sceptical that all these people are producing fusion reactions, but when he demonstrates his device, Mr Suppes says a bubble meter placed next to the reactor indicates that a fast neutron, a by-product of fusion, has been produced. The amateur scientist began building his reactor two years ago, purchasing parts on eBay with \$35,000 of his own money and about \$4,000 he raised on a website that connects artists and inventors with private investors. **"Real researchers that are working at Los Alamos [US Department of Energy National Laboratory]**

and are working at Lawrence Livermore are following this and commenting on it, even though it's not an officially sanctioned project," he says.

**Tricky Situation:** Mr Suppes sees his work in nuclear fusion as more than just a hobby, and he intends to try to build one of the world's first break-even reactors - a facility producing as much energy as it uses to operate. "He now has to go out and do what everybody else has to do, which is to convince people to invest in his project - whether its government funding or private funding to carry him through," said Mr Calder. Mr Suppes is hoping to build a break-even reactor from plans created by the late Robert Bussard, a nuclear physicist who drew up plans for a fusion reactor that could convert hydrogen and boron into electricity. **Work on a scaled up version of a Bussard reactor, funded by the US Navy, has already been taking place in California. But Mr Suppes believes he will be able to raise the millions of dollars it takes to build a Bussard reactor because he feels someone with enough money "will feel they cannot pass up the opportunity" to find out if it will work.** Iter said it would be wrong to dismiss out of hand the notion that an amateur could make a difference. "I won't say something that puts these guys down, but it's a tricky situation because there is a great deal of money and time and a lot of very experienced scientists working on fusion at the moment," said Mr Calder. **"But that does not eliminate other ideas coming from a different group of people."**

**What Neighbours Say:** For Mr Suppes, convincing the experts is one thing. **Convincing the locals is another problem entirely. "A homemade nuclear fusion reactor being built in Brooklyn - I would have thought there would be some sort of rules and laws about messing around with nuclear fusion in your apartment,"** said Brooklyn resident Stephen Davis. "I'm not sure I'd like that living right next to me." **"The fact that he's trying to form a new kind of energy is all well and good,"** said another local, Christopher Wright. **"But without the proper scientific work behind it, I don't know if it's too good of an idea."** But others had a more positive outlook on Mr Suppes' reactor. "I think it's a good idea. If a guy can make an invention like that, it should definitely be spread around so we don't need to depend on oil," Brooklynite Chris Stephens told the BBC. **"We need to do something that's new and more creative for society." We have people in the whole gamut [building reactors] from physicists to electronics people to car mechanics to even one janitor. Mr Suppes is hoping to build a break-even reactor from plans created by the late Robert Bussard, a nuclear physicist who drew up plans for a fusion reactor that could convert hydrogen and boron into electricity. Work on a scaled up version of a Bussard reactor, funded by the US Navy, has already been taking place in California. But Mr Suppes believes he will be able to raise the millions of dollars it takes to build a Bussard reactor because he feels someone with enough money "will feel they cannot pass up the opportunity" to find out if it will work. Iter said it would be wrong to dismiss out of hand the notion that an amateur could make a difference. "I won't say something that puts these guys down, but it's a tricky situation because there is a great deal of money and time and a lot of very experienced scientists working on fusion at the moment,"** said Mr Calder. **"But that does not eliminate other ideas coming from a different group of people"** (Danzico, 2010).

**Title/Headline:** *U.S. Is Unprepared For New Generation Of Terror Bombs, Experts Say*

**Abstract:** The Department of Homeland Security quietly issued a warning to police and intelligence agencies, alerting them that it was picking up chatter that **terrorists had renewed interest in placing improvised explosive devices (IEDs) in airport luggage.** The shudder was not because the information was new -- but because the **experts know how ill-prepared the U.S. is for a potential wave of sophisticated bombs that have been developed over the past decade.** **"It is not a matter of if it happens, it is a matter of when, and we just aren't ready,"** a bomb technician told FoxNews.com. **"There have been four attempted IED attacks in the United States this year that we know about,"** said Thomas Ruskin, a former New York Police Department counter-terror officer, referring to the attempted car bombing in Times Square, the failed "underwear bombing" of a plane on Christmas Day and two federal indictments alleging bombing conspiracies. Several explosives experts both inside and outside the government, all of whom asked not to be named, painted a picture for Fox News of a nation woefully unprepared to deal with sophisticated IEDs. And much of the blame, they said, lies with DHS's failure to pay greater attention to the way terrorists are most likely to strike. **"We know the preferred weapon will be explosive, so why doesn't the DHS pay more attention?"** one asked (Barnes, 2010).

**Title/Headline:** *Nukes And Other WMD: Are Nuclear Weapons Really More Bang For The Buck?*

**Abstract:** **"Saudi Arabia's decision last week to sign a nuclear cooperation pact with France marks a major step forward for a pan-Arab drive toward nuclear power,"** reports UPI. "All told, 13 Middle Eastern states, including Egypt, have announced plans — or dusted

off old plans — to build nuclear power stations since 2006. All say they have no intention of seeking to develop nuclear weapons. But there is concern that once they've mastered the technology they'll seek to counter Iran's alleged push to acquire such weapons by doing so themselves." How is it that when a state ponders going nuclear, it always seems to find the money? It's true that it takes advantage of a tendency on the part of its citizens to: 1. Agree that no expense be spared when it comes to defense and 2. Take national pride in a nuclear energy program (even more so in a nuclear weapons program). Or is that embarking on nuclear weapons program isn't as expensive as one would think? **Conventional thinking holds that nuclear weapons are cheaper than non-nuclear weapons.** In other words, they ostensibly represent a means for a state with limited conventional forces to level the playing field with states that boast larger conventional forces or even nuclear weapons. The editor of the *Nonproliferation Review* and perhaps the world's leading nuclear weapons auditor Stephen Schwartz wrote at Nuclear Threat Initiative: **The belief underpinning the rapid increase in nuclear weapons during the 1950s was summed up in the phrase, "a bigger bang for a buck."** According to this widely accepted idea, nuclear weapons were more cost effective than conventional ones because pound for pound they could deliver more "killing power." The thinking was that nuclear weapons would replace conventional weapons, saving large amounts of money and deterring war. But in reality nuclear weapons supplemented conventional weapons and the United States developed enormous arsenals of both, wiping out any potential savings envisioned by those who championed a large and robust nuclear arsenal. **Obviously, a nuclear weapons program won't cost a state as much as the Manhattan Project, with its pioneering research and design — \$28 billion (in today's dollars) or \$7 billion apiece for the two bombs.** That wheel doesn't need reinventing (unfortunately). But, the issue of states supplementing their conventional weapons instead of replacing them aside, how are nuclear weapons cheaper? In the summer of 2001, *Nonproliferation Review* published an article by Dr. Stanley Erickson, a scientist who today works in the private sector developing port inspection systems for the Domestic Nuclear Detection Office. His piece, titled **Economic and Technological Trends Affecting Nuclear Nonproliferation, shows how states might afford — or, more to the point, convince themselves they can afford — such an undertaking. Continued worldwide economic growth [at that time, just before 9/11] has raised the GNP of many states [some of which] may indeed be crossing the threshold where economic strength would allow the development of a nuclear weapon program without crippling their economy or conventional military forces, even if done rapidly.** Dr. Erickson adds that "new technologies have been developed to produce nuclear materials [which] may be done with much less capital expenditure." These include laser processes for isotopic separation. But, "There is little point for a state to develop nuclear weapons if delivery systems for these weapons are beyond the state's capabilities. The preferred method for nuclear weapon delivery among the major powers has been ballistic missiles. ... However, cruise missiles may be a more achievable delivery system for many countries." Cruise missiles — talk about your budget delivery systems. Then there are submarines. Wait, a nuclear submarine costs \$2 billion plus. But Dr. Erickson is referring to "conventionally powered submarines . . . with electric generators [from which] a short-range cruise missile [can be launched] from torpedo tubes while the submarine is submersed." Along with laser isotope separation and launching cruise missiles from the torpedo tubes of electric submarines, there's yet another avenue the aspiring, but cost-conscious nuclear power can pursue. **What's an illicit nuclear program without underground research and manufacturing facilities? Huh? How can that not be expensive? Turns out that while it's not necessarily cheap, it's less costly than you might think.** Modern self-propelled tunneling machinery allows nuclear facilities to be built many times faster and cheaper than they were 20 years ago. Automated tunneling equipment . . . continues to become more efficient and less expensive [allowing] a tunnel two to 10 meters (m) in diameter to be bored at the rate of several m per day or more. . . . Other types of automated equipment allow supports and linings to be put in place at the same rate as the boring proceeds. [Tunnel boring machines] have lowered the cost and delay barriers that might have formerly inhibited the placing of facilities underground. **One more option remains available to a state developing a nuclear weapons program on the cheap: skip developing a delivery system, such as missiles, in favor of prepositioning. What does prepositioning involve? Nuclear weapons smuggled, instead of launched or dropped from bombers, into another state such as the United States. Of course, you know that as nuclear terrorism. But what's to stop a state, instead of a non-state actor (terrorist group), from attempting to plan such an attack?** Conveniently Dr. Erickson is one of the few to publicly address that subject, which we'll address in a future post. Meanwhile, though, a state aspiring to nuclear weapons would still be required to develop a delivery systems lest the International Atomic Energy Agency and the rest of the world draw the conclusion that it planned to either emulate nuclear terrorists, or equally troublesome, supply them with SADMs (special atomic demolition munitions), such as low-yield nuclear suitcases or backpacks. Thus, no totally scrimping on a delivery system (Wellen, 2010).

**Title/Headline:** *The Power Of Zero*

**Abstract:** After spending years trying to thwart the nuclear black market, a former CIA spy says **the only way to prevent terrorists from getting the bomb is to eliminate all of the world's nukes. The smoke was still drifting off the World Trade Center when the CIA discovered that Osama bin Laden had secretly met just a few days before the attack with a top Pakistani nuclear scientist, seeking help in building a nuclear bomb.** Immediately, nuclear terrorism jumped to the top of the list of urgent threats to the civilized world. My clandestine work as a CIA operations officer became **laser-focused on counter-proliferation as we mobilized to prevent a nuclear 9/11.** We knew that the horror of a nuclear bomb detonated in a major city would dwarf any catastrophe previously suffered by our country—the death toll would be in the hundreds of thousands and the economic and social devastation sudden and catastrophic. **Nine years later, who is winning this contest of wills between the civilized world and terrorist groups trying to buy, build, or steal a nuclear bomb?** I would like to believe the bad guys are losing, but, in fact, time favors them as long as nuclear-bomb-grade materials and weapons exist in the world. A valiant team effort by the CIA and our many partners around the globe has prevented an attack thus far. But my experience as part of that effort tells me that the only way to end this danger is to lock down all nuclear materials and eliminate nuclear weapons in all countries. I am now dedicated to achieving this urgent goal as a leader of the Global Zero movement to rid the world of nuclear weapons. To help deliver a wake-up call to the public and policymakers, I recently participated in a chilling documentary that's in theaters now, *Countdown to Zero*, produced by Lawrence Bender and Participant Media—the team that made *An Inconvenient Truth*. This extraordinary film explains why living in a world with nuclear weapons and materials is simply not a viable option. Our only hope of survival is to drain the swamp as soon as we possibly can. **The alternative is for nuclear weapons to spread around the world and, sooner or later, for**

terrorists to incinerate the heart of a major city. According to the International Atomic Energy Agency, there have been at least 25 incidents of lost or stolen nuclear explosive material. If we estimate that the amount of recovered material represents 10 to 30 percent of the total amount that's made it onto the black market over the years, that translates into sufficient material to build two to five nuclear weapons. The CIA is trying to ensure that none of this falls into the hands of terrorists, but it's an uphill battle if the leakage of materials continues. We may not precisely know the scale of the illicit trafficking in fissile materials, but **we do know that rogue salesmen are peddling nuclear technology on the black market.** The enterprising father of the Pakistani nuclear bomb, A. Q. Khan, hawked his wares for years before my group at the CIA caught him red-handed and put him out of business for selling a nuclear bomb to Libya in late 2003. If terrorists get their hands on highly enriched uranium (a grapefruit-size quantity would be sufficient), they could smuggle it into a targeted city and detonate it on site. A hundred pounds of highly enriched uranium could fit in a shoebox—and 100,000 shipping containers come into the U.S. every day. Existing radiation sensors at the docks stand little chance: there are simply not enough of them, and **it's easy to hide highly enriched uranium in common materials that also give off a slight radioactive signature, like kitty litter. And building a bomb is no longer a well-guarded secret. Graduate students at U.S. scientific laboratories routinely design nuclear weapons (minus the fissile material) using off-the-shelf commercial equipment.** After spending years in the nuclear underworld, working to block the proliferation of nuclear weapons and material to other nations or to terrorist groups, **I believe we are losing ground and that bold action is needed.** The only way to avert a disaster is to put all nuclear-bomb-grade materials and nuclear weapons in all countries under ironclad control as soon as possible (as President Obama advocated during his Nuclear Security Summit earlier this year), and then to eliminate the stockpiles completely. This cannot be done overnight or unilaterally. It will require years of hard work. We will need to strengthen the monitoring of nuclear activities to verify compliance and root out any black marketeering. **International inspectors must be able to investigate any facility in the world without restrictions.** In the previous century, America led the world and defined the age—defeating Hitler, rebuilding Europe through the Marshall Plan, promoting civil rights for all people, sending men to the moon. **Now we must again lead the world to conquer the gravest danger of this young century—nuclear terrorism** (Wilson, 2010).

**Title/Headline:** *Lawmakers Tackle Gaping Flaws In WMD Attack Preparedness*

**Abstract:** A Senate Judiciary subcommittee will assess government preparedness for a terrorist attack with weapons of mass destruction in the wake of a report calling Justice Department planning inadequate. The Subcommittee on Terrorism and Homeland Security will hear testimony from senior Justice Department and Homeland Security officials concerning the ability of the United States to prevent as well as respond to an attack using a WMD. The hearing comes after several damning reports about the country's ability to prevent such an attack, including a report card this year from a **blue-ribbon commission that gave the White House three failing grades on WMD preparedness.** "The Department of Justice as a whole ... has not implemented adequate WMD response plans. As a result, the Department is not fully prepared to provide a coordinated response to a WMD incident," the report said. In January 2010, the Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism issued a "report card" assessing the government's progress in implementing preventive measures recommended by the commission in a December 2008 report. The Obama administration received mixed grades in the January report, including three Fs, for failure to prepare effectively for a biological attack, failure to recruit and train a new generation of national security experts and failure to reform congressional oversight on intelligence and national security. Retired Col. Randall Larsen, USAF, the executive director of the commission, will also testify before the subcommittee. "We gave America, as a whole, an 'F,'" Larsen said. The blue-ribbon commission, chaired by former Sens. Bob Graham (D-Fla.) and Jim Talent (R-Mo.), was created by Congress following a recommendation from the 9/11 Commission. Graham and Talent's initial report in 2008 **warned that a terrorist attack using WMDs was "likely" to occur somewhere in the world by 2013, with the United States being a prime target.** "Congress has got a lot on its minds, but this should be one of its highest priorities," Larsen said. "All these little battles we have to fight, I don't think we'd have to be doing that if members of Congress really understood the threat," he added. The commission's latest report slammed Congress for failing to consolidate nearly 100 committees and subcommittees that oversee some aspect of the Department of Homeland Security. "Virtually no progress has been made since consolidation was first recommended by the 9/11 Commission in 2004," the report stated. The Obama administration disputed the commission's findings, arguing that the president had accomplished a "great deal" since taking office. The commission's report laid out a range of measures the federal government should pursue to reduce the United States' vulnerability to such an attack, including increased security and awareness at biological research labs and strengthening international treaties against the spread of biological and nuclear weapons. At a press conference last month, Graham and Talent joined members of the House Homeland Security Committee to announce the introduction of the Weapons of Mass Destruction Prevention and Preparedness Act of 2010, a bipartisan bill that aims to enact the commission's recommendations. Committee Chairman Bennie Thompson (D-Miss.) described it as "a major step forward on the threat from WMD." The bill is the House companion to legislation introduced by Sens. Joe Lieberman (I-Conn.) and Susan Collins (R-Maine) in 2009. Both bills have cleared committee but have yet to be brought to the floor for a vote. Lieberman and Collins, respectively chairman and ranking member of the Senate Homeland Security Committee, presided at a June 30 hearing on nuclear terrorism where they heard alarming testimony from government officials concerning the United States's ability to prevent a nuclear attack. **Lieberman said the officials' testimony was "a real alarm bell going off" in terms of the country's preparedness.** "The threat of nuclear terrorism is growing faster than our ability to prevent an attack on our homeland," he said at the hearing (Stiles, 2010).

**Title/Headline:** *Shame On The History Channel For Terrorizing Your Audience*

**Abstract:** Yes, I am annoyed with *The History Channel*. I'll be forever grateful for most of their programming, but it's always possible that they could be running out of ideas. **They are about to broadcast a program entitled *Day After Disaster*, and I believe that the message of terror and survivalism is completely inappropriate, especially because many children will be watching along with their parents**

who have come to trust them for decent programming. I won't hate you forever if you watch it, but let me explain some of my objections. Placed against the context of the rising hysteria in America over the fact that an African-American man was elected President and he has not gone away--the hysteria that is fed and nurtured by right-wing media--the idea of another attack patterned (by the writers) after Nine-Eleven could be a very destabilizing influence on the many people who watch the program. **Did they ask Glenn Beck to produce it? Well, no, but it seems that the *Homeland Security Department* had something to do with it.** This is an excellent example of how media is a tool of politics, ginning up the fear in an election season. **Militias are also on the rise, fed by irresponsible fools both in the media and, to their everlasting shame, in the Congress.** The trailer begins with a dramatic, "Washington, D. C. has been nuked ..." Well, yeah, D. C. could be nuked, if by "nuked" you mean a small "dirty bomb" that was trucked in by a suicide bomber or perhaps flown on a small private plane. That is, if a small private plane, or an aircraft of any description, could breeze through the skies of the District of Columbia without the *Federal Aviation Agency*, the military or *Homeland Security* paying any attention ... duh. You see, a Hiroshima-type nuclear bomb does not detonate on contact. It does not fall to the ground from an airplane, or strike an object in a vehicle crash, and go "boom." The typical nuclear device detonates hundreds of feet above its Ground Zero, which uses the force from the weapon downwards as well as outwards. This is stuff I learned from watching TV programs--it isn't a closely-guarded secret. But unless the entire United States Armed Forces, especially the Air Force, falls asleep at the switch, there isn't going to be another Hiroshima over the White House. And in case it comes to mind, I'd like to remind everyone that the Air Force was scrambled during Nine-Eleven, but they were ordered to fly to coordinates that were useless; I don't know why, and I'd prefer not to guess. I am assuming that the program will go into this. I don't know what other content is more important. **If you want to terrorize millions of Americans with visions of Washington being nuked, I should hope that the program would emphasize that this would be very difficult. Don't assume that Washington is unguarded. The military has an ever-improving dragnet of fail-safe technology wrapped around it.** In 1961 an Air Force officer told my father (in my presence) that an aircraft doesn't leave the ground on Planet Earth without the Air Force knowing about it. **Do you think that there is less security now, since Nine-Eleven? Absence of evidence is not evidence of absence. I hope *The History Channel* is familiar with the concept of security--which has become a joke but absolutely is not a joke behind the closed doors of the Pentagon.** The people who have brought our military down are the Chicken Hawks and the toy soldiers--the civilians like Donald Rumsfeld who think that war is a magnificent adventure. Generals don't think this way. **I must consider the possibility that the nuclear attack will be attributed to a Fifth Column in Washington, something like the famous film "*Seven Days in May*," which speculated on a military coup. But since the right-wing media blathers constantly about President Obama being a potential Nazi dictator, or a Muslim Ayatollah-in-training, or a black nationalist in disguise, I must say that it would be in extremely poor taste to characterize our President as a player in this scenario, to say the least.** In a spiritually-oriented response to all this, I want to quote a postwar theologian who wrote once that "despair isn't something that you fight with. It is something you run away from." If it wasn't C. S. Lewis, it was George MacDonald or a theologians like him. But the point is well taken. I don't believe that there is a point to a program that basically says, "What are you gonna do if D. C. is nuked?" **If it happens, the Department of Homeland Security will certainly be history, which would be just as well considering that their incompetence would most likely be to blame. So a television mini-course on survivalism will do much to address ... what?** What's the bottom line here? If Tucson is targeted because there are many military installations in Arizona, hey, I might be killed. But what of it? Death is a possibility--physical death. Human suffering goes on only so long, and then it is over. It may be that *over* just means that you cease to exist, but in that context it's fine. And if The Next Life is out there, beyond the transition, well, there's nothing to fear. **So whatever *The History Channel* decides to do with their sensationalistic subject matter, I won't see it. I refuse to be terrorized by Cable Television, for heaven's sake** (Fernandez, 2010).

**Title/Headline:** Alert Over At PPL Nuclear Plant

**Abstract:** The alert is over at the nuclear power plant in Luzerne County. According to a release from PPL, workers were able to stop the leak of freon that caused the alert. PPL ended the alert after 11:30 p.m. Tuesday. Both units at the facility are in operation. The plant had been on alert since 9:30 a.m. Tuesday but officials stress the public was not in any danger. PPL officials said freon gas was leaking from an important equipment cooling system inside unit one's reactor building. Workers were forced to evacuate the area. **"I understand events like this can make people anxious because you talk about an emergency at a nuclear power plant but it's really confined to the reactor building itself,"** explained PPL spokesman Joe Scopelliti. He added no radiation is involved. Scopelliti is helping to man the plant's information center near Wilkes-Barre. **It opens whenever an emergency situation is in effect. There are four classifications when something goes wrong at the plant. One, the notification of unusual event; two, an alert, which in effect now; three, a site area emergency and four, a general emergency. Only the last two affect the public. PPL doesn't expect this situation to escalate beyond alert. "The fact that we have an emergency, even though it's a low-level emergency attracts a lot of attention so we want people to know what's going on,"** Scopelliti added. **"All the safety equipment is still available to do it. We can start it from different locations. Now our attention is on this leak so we can stop it and move away from this emergency.** Officials said they don't know how the leak started but they added the building does have a back-up cooling system so it is able to operate as it should. No one was hurt and the public was not in danger but 19 municipalities were notified there was a problem at the plant. The power plant is required to notify the public of anything abnormal going on inside, even if it doesn't impact those living nearby. **"It's important that they do it to alert the people,"** said Chris D. Angelo. He is among the thousands of people who live within minutes of the plant. **"It's like 10 minutes from our house."** **"At least they're letting us know. Other places could let us just fly by and not let us know. It's nice to know they're letting us know everything that's going on,"** said Chris Martinez of Berwick (Meyer, 2010).

**Date:** August 6, 2010

**Source:** U.S. State Department, NTI (Nuclear Threat Initiative)

**Title/Headline:** *WMD Terrorism Remains Grave Threat, U.S. Says*

**Abstract:** The possibility that a terrorist organization might launch a WMD attack remains one of the "gravest threats" to the security of the United States and its allies, the U.S. State Department said in its annual terrorism report. The "Country Reports on Terrorism 2009" addressed the threat of terrorism involving chemical, biological, radiological and nuclear weapons and Washington's response to those dangers. The State Department noted that al-Qaeda and other extremist groups have expressed interest in acquiring nuclear weapons. "The diffusion of scientific and technical information regarding the Global Initiative to Combat Nuclear Terrorism. Assembly of nuclear weapons, some of which is now available on the Internet, has increased the risk that a terrorist organization in possession of sufficient fissile material could develop its own crude nuclear weapon," the report says. "The complete production of a nuclear weapon strongly depends on the terrorist group's access to special nuclear materials as well as engineering and scientific expertise." Due to the proliferation efforts of "irresponsible countries" like North Korea, "the number of potential sources of an unsecured nuclear weapon or materials is challenging worldwide efforts to control and account for nuclear material," according to the State Department. Extremists could also look to underground smuggling networks and international criminal organizations for aid in acquiring or developing anuclear devices, the report says. **While the terrorist detonation of a radiological "dirty bomb" would not be as calamitous as a terrorist nuclear attack, the prevalence of radioactive substances "in nearly every country" means it is much easier to acquire the materials to construct such a weapon, the report says.** "Most radioactive materials lack sufficient strength to present a significant public health risk once dispersed, while the materials posing the greatest hazard would require terrorists to have the expertise to handle them without exposure to incapacitating doses of radiation or detection during transit across international borders," the report says. However, detonation of a radiological weapon -- which would use conventional explosives to disperse radioactive material -- could cause a significant amount of panic and financial "disruption," the State Department said. The report notes the potential for a bioterrorism strike, as "the materials required to produce a biological weapon are available in laboratories worldwide, and may threat agents could be isolated from nature." **Al-Qaeda is believed to have pressed harder than other terrorist groups to obtain or produce biological weapons, according to the report,** which cites the U.S. discovery of an unfinished laboratory in Afghanistan. **"If properly produced and released, biological agents can kill on a massive scale and, if terrorists use a pathogen that can be transmitted from person to person, the disease could quickly spread through commercial air travel across oceans and continents before authorities realize their nations have been attacked,"** the report says. The State Department noted efforts by extremists to acquire and deploy readily available toxic chemicals: "The growth and sophistication of the worldwide chemical industry, including the development of complex synthetic and dual-use materials, may make the task of preventing and protecting against this [chemical weapons] threat more difficult." **In its efforts to combat the threat of a WMD terror attack, the United States has implemented multiple initiatives which include the Global Initiative to Combat Nuclear Terrorism.** The initiative is jointly led by Russia and the United States and encompasses 77 members who have given their approval to several central nuclear security principles. Since its inception, the program has carried out 34 multinational operations and held five high-level forums. The United States has a number of priorities in the effort against WMD terrorism, the report says. **These include identifying extremists' "intentions, capabilities and plans" to produce or obtain unconventional weapons and the likelihood of that occurring; preventing terrorists from acquiring the materials, know-how or other means of carrying out such an attack,** "with a particular focus on weapons-usable fissile materials, dangerous pathogens and poisonous chemicals"; and deterring would-be attackers and their allies from considering or actually carrying out a strike. Among the programs used to reduce the WMD terror threat, the report says, are the Proliferation Security Initiative, which is intended to interdict smuggling of WMD materials; the Global Threat Reduction Initiative to secure or eliminate vulnerable nuclear and radioactive materials; and the Global Initiative to Combat Nuclear Terrorism, "a cross-cutting strategic framework of 77 partners and four observers who are determined to strengthen individual and global capacity to prevent, detect, and respond to a nuclear terrorist event" **The report says that last year the al-Qaeda "core in Pakistan remained the foremost security threat to the U.S. homeland,"** according to a State Department release. **Intelligence agencies found that al-Qaeda entities, notably al-Qaeda in the Arabian Peninsula, continued to plan strikes against the United States.** The terrorist network "suffered several significant setbacks in 2009 due to Pakistani military operations aimed at eliminating militant strongholds, leadership losses, and increased difficulty in raising money, training recruits, and planning attacks outside of the region," the department said. **"Al-Qaeda continued its efforts to encourage key regional affiliates and terrorist networks to pursue a global agenda, using both the Internet as a means to distribute propaganda and telecommunications infrastructure to plan attacks and coordinate movements,"** the release says. There were 10,999 terrorist strikes around the world in 2009 that killed 14,971 people, the State Department found. That number, however, was the lowest since in five years. The deadliest year for terrorist attacks in that period was 2006 which saw 14,443 strikes that killed 22,736 individuals, according to the report. Cuba, Iran, Sudan and Syria were all cited as state sponsors of terrorism, with Tehran accused of being the leading backer of militant extremist groups, according to a Defense Department release. **Extremist groups were also active in Afghanistan, Iraq, Lebanon, Pakistan, Somalia, Yemen and elsewhere, according to the report (NTI, 2010).**

**Title/Headline:** *Former Los Alamos Scientist Indicted On Nuclear Charges*

**Abstract:** A former Los Alamos National Laboratory nuclear scientist and his wife were indicted on charges of trying to provide nuclear secrets to Venezuela, but U.S. officials stressed the Venezuelan government knew nothing about the plans. The officials said they have no information from the undercover operation that Hugo Chavez's government has any plans to try to build a nuclear weapon. Pedro Mascheroni, 75, and Roxby Mascheroni, 67, are U.S. citizens who worked as contractors at Los Alamos in New Mexico, officials said Friday. In 2008, Mascheroni, who had left the laboratory years earlier, had a series of conversations with an undercover FBI agent posing as an official of the Caracas government, according to the indictment. "Mascheroni allegedly said he could help Venezuela develop a nuclear bomb within 10 years and that under his program Venezuela would use a secret underground nuclear reactor to produce and enrich plutonium and an open, above-ground reactor to produce nuclear energy," the Justice Department said. According to a U.S. Justice Department statement, Mascheroni allegedly asked about obtaining Venezuelan citizenship and described how he expected to be paid for his classified nuclear work for Venezuela. Mascheroni said his fee for producing certain information was \$793,000, the indictment alleges. U.S. Attorney Kenneth Gonzalez said the charges against the couple "are very serious." He said laws were designed to keep "restricted data" from getting to the wrong people (Frieden, 2010).

**Title/Headline:** *Ex-Los Alamos Scientist, Wife Indicted in Alleged Atomic Weapon Conspiracy*

**Abstract:** A scientist and his wife who both once worked at Los Alamos National Laboratory before becoming outspoken critics were arrested Friday after an FBI sting operation and charged with trying to sell nuclear secrets to Venezuela. The scientist, Pedro Leonardo Mascheroni, is being detained until a hearing Monday morning in Albuquerque, New Mexico. His wife, Roxby Mascheroni, was released on a variety of conditions, including a monitor attached to her. The investigation first drew attention last October when federal agents reportedly seized six computers, two cameras, two cellphones and hundreds of files from the scientist, Pedro Leonardo Mascheroni. Mascheroni declared his innocence to The New York Times last year, saying, "If I were a real spy, I would have left the country a long time ago." After their arrest Friday morning, the two appeared in federal court in Albuquerque, New Mexico and were accused of dealing with an FBI undercover agent posing as a Venezuelan agent. The government did not allege that Venezuela or anyone working for it sought U.S. secrets. The pair were indicted for allegedly communicating classified nuclear weapons data to a person they believed to be a Venezuelan government official. Accused in a 22-count indictment are Mascheroni, 75, a naturalized U.S. citizen from Argentina, and Marjorie Roxby Mascheroni, 67, a U.S. citizen. Both were formerly contract employees at Los Alamos. According to the indictment, Mascheroni told an undercover agent he could help Venezuela develop a nuclear bomb within 10 years and that under his program, Venezuela would use a secret, underground nuclear reactor to produce and enrich plutonium, and an open, aboveground reactor to produce nuclear energy. In July 2008, the FBI agent provided Mascheroni with 12 questions purportedly from Venezuelan military and scientific personnel. According to the criminal charges, Mascheroni delivered to a post office box in November 2008 a disk with a coded 132-page document on it that contained "restricted data" related to nuclear weapons. Written by Mascheroni and edited by his wife, the document was entitled "A Deterrence Program for Venezuela" and it laid out Mascheroni's nuclear weapons development program for Venezuela. Mascheroni stated that the information he was providing was worth millions of dollars, and that his fee for producing the document was \$793,000, the indictment alleges. Earlier in the investigation, Mascheroni allegedly asked the FBI agent about obtaining Venezuelan citizenship. He told the undercover agent he should be addressed as "Luke," and that he would set up an e-mail account solely to communicate with the undercover agent, according to the indictment. Mascheroni used the account to communicate with the agent and to arrange for deliveries of materials at the post office box used as a dead-drop location. If convicted, the couple face up to life in prison. Mascheroni was laid off from Los Alamos in 1988. He filed a discrimination lawsuit against the company in 1994, alleging that he lost favor with his supervisors after he sought to promote one of his projects over one that he criticized. Over the years, he has repeatedly raised questions before Congress about the management of the nation's nuclear laboratories and arsenal and promoted his laser to ensure weapon reliability (Fox News, 2010).

**Title/Headline:** *United States Could 'Absorb' Another Terror Attack, Obama Says in Woodward Book*

**Abstract:** President Obama, after being warned repeatedly by his advisers about the threat of another terror attack on U.S. soil, said in an interview two months ago that the United States could "absorb" another strike. The comment was included in the new book by journalist Bob Woodward, "Obama's Wars," excerpts of which were reported by The Washington Post and The New York Times. The book depicts the contentious debate the Obama administration endured to craft a new strategy in Afghanistan. According to the Post, Obama spent the bulk of the exhaustive sessions pressing for an exit strategy and resisting efforts to prolong and escalate the war. Despite warnings of another attack, he suggested the United States could weather a new strike. "We can absorb a terrorist attack. We'll do everything we can to prevent it, but even a 9/11, even the biggest attack ever . . . we absorbed it and we are stronger," Obama reportedly said. According to the book, Obama said, "I have two years with the public on this" and pressed advisers for ways to avoid a big escalation in the Afghanistan war. The comment on absorbing an attack drew tough criticism Wednesday from Liz Cheney, daughter of former Vice President Cheney and chairwoman of Keep America Safe. "This comment suggests an alarming fatalism on the part of President Obama and his administration," she said in a statement. "Once again the president seems either unwilling or unable to do what it takes to keep this nation safe. The president owes the American people an explanation" (Fox News, 2010).

**Title/Headline:** *'Credible But Not Specific' Threat of New Terrorist Attack*

**Abstract:** Officials in Europe, US on High Alert for Commando-Style Raids After Capture of Suspected German Terrorist. **US and European officials said Tuesday they have detected a plot to carry out a major, coordinated series of commando-style terror attacks in Britain, France, Germany and possibly the United States. A senior US official said that while there is a "credible" threat, no specific time or place is known.** President Obama has been briefed about the threat, say senior US officials. US law enforcement officials say they have been told the terrorists were planning a series of "Mumbai-style" commando raids on what were termed "economic or soft" targets in the countries. **Pakistani militants killed 173 people with guns and grenades during the 2008 attacks in Mumbai, India.** In testimony before Congress last week, Homeland Security Secretary Janet Napolitano said, **"We are all seeing increased activity by a more diverse set of groups and a more diverse set of threats."** "We currently have reached a spike in the threat of an attack, which is unquestionable," said the head of the French National Police last week. He also said France was at particular risk from al Qaeda's North African affiliate. **The new threat to France, and to Germany and Britain and the U.S., is coming from Pakistan, according to intelligence officials.** The captured German reportedly said several teams of attackers, all with European passports, had been trained and dispatched from training camps in Waziristan and Pakistan. Officials say the German claimed the attack plan had been approved by Osama Bin Laden. In the last four years, **dozens of German citizens have been recruited to train in al Qaeda-connected camps in Pakistan,** according to US and German law enforcement officials. German language jihadi videos on the internet help to attract more trainees. "Some are German converts, many are Turks, many are Arabs," said Guido Steinberg, a counter-terrorism analyst at the German Institute for International and Security Affairs. **"Right now we already have the first Afghans and even Iranians in these circles. It's a very mixed bunch of people -- quite international."** Steinberg said that many of the German jihadis who train in Pakistan are killed, "but those who come back are a threat. **"And they are a threat not only to Germany," added Steinberg, "but also to our allies and especially the U.S. because they are extremely anti-American."** In a statement to ABC News, Director of National Intelligence James Clapper declined to discuss the threat. **"We are not going to comment on specific intelligence, as doing so threatens to undermine intelligence operations that are critical to protecting the U.S. and our allies,"** said Clapper. **"As we have repeatedly said, we know al Qaeda wants to attack Europe and the United States** (Esposito, Schwartz, Cole, & Schecter, 2010).

THE SUNDAY TIMES

**Title/Headline:** *Al-Qaeda Woos Recruits With Nuclear Bomb Website*

**Abstract:** An Al-Qaeda website containing detailed instructions in Arabic on how to make nuclear, "dirty" and biological bombs has attracted more than 57,000 hits and hundreds of readers' inquiries. Terrorism experts are warning that the site could be boosting the organisation's appeal to would-be assassins in Britain and abroad. **The manual, posted on October 6 on a forum titled Al-Firdaws, or Paradise, contains 80 pages of instructions and pictures of kitchen bomb-making techniques. It is divided into nine lessons under the overall heading The Nuclear Bomb of Jihad and the Way to Enrich Uranium, and is dedicated as a "gift to the commander of the jihad fighters, Sheikh Osama Bin Laden, for the purpose of jihad for the sake of Allah".** As well as describing how to make a nuclear bomb from enriched uranium — impossible for the layman — the manual explains how to make simple bombs that can blow up anything from electrical generators to petrol stations. The site encourages its readers to look for materials such as radium, which it says is an "effective alternative to uranium and available on the market". It is unclear who the author is or where he is based: he describes himself simply as "Layth al-Islam", or the "Lion of Islam", belonging to a group called "the Black Flags". "Fight them so that Allah will punish them at your hands and will put them to shame and will give you victory over them," he writes, quoting the Koran. "Perhaps nuclear weapons represent a technology of the 1940s. However, the Crusaders, the allies of the Satan, Allah's curse be upon them, insist on depriving the jihad fighters of the right to have these weapons." The site's appeal is evident from the enthusiasm of its correspondents. One of the most recent, Mariyam al-Jihadiyya, writes: "God bless you for this precious topic . . . fight them, through your hands God tortures them . . . and heal the hearts of the faithful people." Beneath she includes a couple of pictures for her hero. "I love you, Osama," she writes. Other users complain that not all the site's links are activated, and several urge caution. "Don't talk about things you don't understand," writes one. For enthusiasts there are links to a mailing service that provides regular updates on bomb-making techniques. Nuclear physicists were alarmed by the site. **"Normally you just get generic principles, but this appears to be more like a proper instruction manual,"** said John Hassard, reader in physics at Imperial College, London. **"The thing about this website that is striking is that it is very particular. A lot of effort has been put into it."** He said that while it was highly unlikely that amateur bomb-builders could get hold of fissile material, smuggling networks with access to nuclear materials from the break-up of the Soviet Union could use the information. **"It is a very real threat and one which we can't afford to ignore,"** he said. **"I would say this is public enemy No 1."** Experts on Al-Qaeda said the organisation appeared to be moving from a phase where it preached a fatwa permitting the use of weapons of mass destruction — issued two years ago — to one where it encourages its followers to produce both "dirty" bombs and smaller devices similar to those used in the London Tube attacks. **"Al-Qaeda strives to move directly from the stage of obtaining the WMD to the stage of using it,"** said Matti Steinberg, an Israeli expert on the organisation. He said efforts by Al-Qaeda, whose members are Sunni Muslims, to produce a nuclear weapon also reflected its fear that Shi'ite Iran was on the brink of producing a bomb. Bin Laden wanted to "balance the efforts by Iran to obtain the first Shi'ite bomb by building the first Sunni one". While assessing the website's influence on young British Muslims is difficult, terror experts believe it is an important potential recruiting tool. Jeevan Deol, a terrorism

analyst at the London School of Oriental and African Studies, said that while Al-Qaeda could not match western military capabilities and intelligence, its use of "cyberwarfare" helped redress the balance. "They are using the web in a focused way for propaganda and recruiting," said Deol. "Some jihadi kid in Leeds clicks on it and thinks, 'Wow, 50,000 hits — we don't see Osama on telly any longer but we're big, we're bad and extremely engaged in all these things'" (Mahnaimi & Walker, 2010).

**Title/Headline:** *Americans Need To Get 'Perspective' On Terrorism, Says Expert On Counter-Terror*

**Abstract:** A US security official said yesterday the country was capable of withstanding another terrorist attack and bouncing back, saying Americans needed to put extremist threats in "perspective". Michael Leiter, head of the National Counterterrorism Center, said despite recent successes there was no guarantee that intelligence and law enforcement agencies could prevent every attempt by extremists to attack the United States. **"We're not going to have a perfect batting average and it's important that Americans understand that,"** Leiter told a conference on intelligence reform. "It's important that we approach this with national resilience that in fact shows that this country is not going to be defeated by" extremists, Leiter said. "We do have to put the threat in perspective," he said. His comments came amid heightened US and Western alerts over potential terror attacks against European cities, and after a wave of arrests by France's anti-terrorism squad. **Leiter said security agencies faced the threat of "low-probability," large-scale attacks involving possible weapons of mass destruction** as well as "high probability", smaller-scale attacks such as the shooting rampage at Fort Hood last year that left 13 dead. But terrorist attacks should not be viewed as "cutting into the fabric of our society," he said. President Barack Obama made similar remarks in a new book by Washington Post journalist Bob Woodward, saying the country could handle a potential attack. **"We can absorb a terrorist attack. We'll do everything we can to prevent it, but even a 9/11, even the biggest attack ever... we absorbed it and we are stronger"** (AFP, 2010).

**Title/Headline:** *Mission To Stop Nuclear Terrorism*

**Abstract:** To the Warsaw motorists returning from their Saturday afternoon shopping trips, it looked like a nuclear emergency. **Frantic policemen, some wearing ski masks and all armed with submachineguns, flashed their headlights and leant out of their patrol car windows, shouting and waving to make the traffic pull over and stop at the side of the road as helicopters clattered overhead.** Then a convoy of seven lorries rumbled past, armed police in the cabs and radioactive warning signs stuck on the shipping containers they carried. **The frightened-looking motorists and their families didn't know it but this convoy two weeks ago wasn't an emergency; it was no exercise though, and the cargo being moved through the Warsaw suburbs in a top secret operation was the stuff of nightmares.** The lorries carried enough bomb-grade uranium for terrorists to build eight nuclear devices, sealed inside thick metal flasks weighing five tons each to stop radiation leaking. **The shipment, at the beginning of a 3,500 mile journey to a Russian reprocessing plant where it will be made safe, was part of an effort to secure hundreds of tons of highly enriched uranium worldwide before terrorists can acquire it.** "The world is a safer place because of this shipment," said Andrew Bieniawski, a senior official with the US government's Global Threat Reduction Initiative, as the convoy and its sinister-looking escort of **Polish** special forces police started off. **American intelligence officials believe that if al Qaeda could get its hands on a piece of highly enriched uranium (HEU) the size of a grapefruit, let alone a consignment as big as the Polish one, the destruction of a city like London, New York or Washington would follow.** So far, such a nightmare has been confined to Hollywood thrillers. **But the US government is so concerned at the threat of nuclear terrorism that next year the budget for making bomb-grade material secure worldwide will be increased by 67 per cent to \$558 million dollars (£352 million).** The American effort, constantly expanded since the attacks of September 11th 2001, is intended to deal with weapons-grade uranium in 28 nations around the world, most of it the Cold War legacy of the Atoms for Peace programmes when America and Russia shared nuclear secrets with their allies. **Most of the HEU in Eastern Europe has been stored since Soviet times, often in badly maintained and poorly guarded facilities where for years underpaid staff were potentially vulnerable to bribery by well-funded terrorists.** Last year a massive new effort to dramatically reduce the amount of civilian HEU worldwide was announced by President Barack Obama in a high-profile speech in Prague, his first major foreign policy speech delivered abroad. **The President has made countering nuclear terrorism a top priority and described it as "the greatest danger we face". He has committed the United States to secure the world's vulnerable civilian bomb-grade material by the end of 2013. He has taken the threat so seriously that over the next three years the President wants to spend \$7.9 billion on nuclear nonproliferation programmes, including homeland security to detect nuclear bombs or material being smuggled into America, as well as programmes like the Global Threat Reduction Initiative.** The shipment in Poland was the biggest the Americans have organised anywhere. It started its journey at a nuclear research reactor in a forest outside Warsaw, where HEU had been stored in cooling ponds for years. The convoy, escorted by more than 100 policemen, moved rapidly to a railway yard on the outskirts of the capital where it was loaded onto a goods train for the overnight journey 200 miles north to the port of Gdansk. The route took it past villages and towns whose sleeping inhabitants had no idea of the deadly cargo passing so close to them. At every stage technicians checked that radioactivity was not leaking. On arrival in Gdansk it was loaded onto a specially converted ship, with thick metal radiation-proof plates installed, for a sea voyage to the Russian Arctic port of Murmansk. The consequences of spreading radiation in a crash ruled out air transport. **In Murmansk it was loaded on to another train for the last stage of the journey, hundreds of miles across Russia to a reprocessing plant beyond the Ural mountains, deep in Siberia. In the past year this journey, lasting three weeks, has been repeated five times, moving 1,000 lbs of Polish HEU in total - enough to make 18 atom bombs - at a cost to the US taxpayer of \$60 million.** The Global Threat Reduction Initiative decided to forgo its usual secrecy rules and invite The Sunday Telegraph to observe the final shipment, in order to make its work in Poland public; details can now be revealed after it arrived safely at its destination. Intelligence agencies will not reveal their reasons for being so frightened now about what for years seemed a remote and unlikely risk. But it may be because of the deeply troubling cases of smuggling that surface from time to time in Eastern Europe, hinting at the existence of a nuclear black market. **Such**

attempts at illicit nuclear sales have been made at least twice this year, once in Moldova, when a gang attempted to sell a small amount of nuclear material, and once in Georgia where several smugglers were arrested with an undisclosed amount of uranium. That was a far more disturbing case, according to investigators who said it showed a worrying level of organisation. **Since the end of the Cold War the International Atomic Energy Authority, the UN's nuclear watchdog, has logged 800 incidents of radioactive material going missing or being seized by smugglers.** A handful of cases have involved weapons-grade material. Nobody knows whether gangsters or corrupt officials really could deliver enough material for a home-made bomb to terrorists or rogue states. US officials fear that anyone trying to acquire HEU on a nuclear black market will want it to destroy an American city. **"We know that terrorists are actively seeking to acquire this material to target the United States,"** Mr Bieniawski said. "If they acquire it, they have basically overcome the main hurdle to getting a bomb. The risk is low but we can't just trust to luck when we are talking about the catastrophic effects of a nuclear weapon." Since work started in 2004 HEU has been removed from 18 nations, including five in the past year - Romania, Libya, Taiwan, Turkey, and Chile, where the shipment was briefly delayed by February's earthquake. **Until the attacks of September 11, 2001, there was little concern about the estimated 2000 tons of HEU stockpiled around the world,** much lying around half-forgotten in badly-guarded facilities in poor countries with corruption problems. Facilities often lacked armed guards, secure fences, even locks that worked properly. American efforts which had begun in the chaos of Russia in the 1990s to secure vulnerable nuclear material were stepped up worldwide after 2001; **as long ago as 1998 Osama bin Laden spoke of his determination to acquire the bomb "to terrorise the enemies of God".** Frank Barnaby, an author and former Aldermaston nuclear physicist, said: **"The really frightening thing about HEU is that it is so easy to make an atom bomb out of it. You only need a couple of PhD students and a small amount of material. I think we should be very frightened about the possibility of nuclear terrorism; I'm surprised it hasn't happened yet."** The American experts hope their work with 130 nations will make that nightmare less likely. In some cases they have strengthened defences at plants judged vulnerable to theft. But their preferred method is to remove HEU for reprocessing. "That way it is made safe, permanently," Mr Bieniawski said. Poland, like many nations with HEU stockpiles, has to send the material abroad because it has no reprocessing plant of its own. The American officials were at pains to stress that they have complete trust in Russia to keep to its end of the deal and reprocess the uranium sent inside its borders in US-funded shipments. Under an agreement between Mr Obama and Russian President Dmitry Medvedev last year, the USA and Russia each take back uranium they supplied to friendly countries. So Romania and Poland sent theirs to Russia, while that of Chile and Turkey has been reprocessed in the United States. **There are, however, glaring omissions in President Obama's plan; the Global Threat Reduction Initiative cannot make HEU safe in a few nuclear nations, most notably Pakistan and North Korea,** which are judged to pose the greatest risk of terrorists obtaining the raw material for a bomb. As a Polish member of the team working on the operation said: **"This shipment makes nuclear nightmares less likely." But not impossible** (Meo, 2010).

**Title/Headline:** *NNSA Office of Emergency Operations Develops Cutting-Edge Nuclear Terrorism Software*

**Abstract:** The National Nuclear Security Administration (NNSA) today announced that its Office of Emergency Operations has developed and delivered a new X-ray image processing capability to the nation's emergency response community. **X-Ray Toolkit (XTK) is an application used by field responders and NNSA Laboratory experts to acquire, process and analyze X-ray images obtained during a potential nuclear terrorism incident.** XTK development was sponsored by NNSA's Emergency Operations technology integration program and implemented by its stabilization program "We have received overwhelmingly positive feedback about the XTK software from our operational partners across the nation," said NNSA Associate Administrator for Emergency Operations Joseph Krol. **"The application of state-of-the-art technical products to the nuclear counterterrorism mission is a central part of NNSA's mission and an important aspect of our vision for this program. It also showcases our ability to leverage six decades of nuclear security expertise into a product that can be used by first responders from coast to coast.** XTK was designed for joint use by Explosive Ordnance Disposal (EOD) and NNSA Laboratory personnel during nuclear render safe operations, where specialized procedures, methods and tools prevent the detonation of a nuclear device. Previous software was converted for use from the medical diagnostic industry, not specifically designed for use by EOD experts. **Accordingly, XTK provides for the intuitive and efficient transfer of data from the site of a potential incident to NNSA Laboratories.** This allows for critical information to seamlessly transfer from field responders to NNSA nuclear security experts during a crisis situation. **Sandia National Laboratories worked closely with NNSA Emergency Operations personnel during the development, testing, and training phases of this project.** Additional information for XTK development was obtained from NNSA response team members, FBI Special Agent Bomb Technicians, Department of Defense EOD experts and numerous state and local responders. **Established by Congress in 2000, NNSA is a semi-autonomous agency within the U.S. Department of Energy responsible for enhancing national security through the military application of nuclear science in the nation's national security enterprise. NNSA maintains and enhances the safety, security, reliability, and performance of the U.S. nuclear weapons stockpile without nuclear testing; reduces the global danger from weapons of mass destruction; provides the U.S. Navy with safe and effective nuclear propulsion; and responds to nuclear and radiological emergencies in the U.S. and abroad** (NNSA, 2010).

**Title/Headline:** *EXCLUSIVE: Al Qaeda Leader Dined At The Pentagon Just Months After 9/11*

**Abstract:** Anwar Al-Awlaki may be the first American on the CIA's kill or capture list, but he was also a lunch guest of military

**brass at the Pentagon within months of the Sept. 11, 2001, terror attacks, Fox News has learned.** Documents exclusively obtained by Fox News, including an FBI interview conducted after the Fort Hood shooting in November 2009, state that **Awlaki was taken to the Pentagon as part of the military's outreach to the Muslim community in the immediate aftermath of the attacks.** The incident was flagged by a current Defense Department employee who came forward and told investigators she helped arrange the meeting after she saw Awlaki speak in Alexandria, Va. **The employee "attended this talk and while she arrived late she recalls being impressed by this imam. He condemned Al Qaeda and the terrorist attacks. During his talk he was 'harassed' by members of the audience and suffered it well," reads one document.** According to the documents, obtained as part of an ongoing investigation by the specials unit "Fox News Reporting," there was a push within the Defense Department to reach out to the Muslim community. **"At that period in time, the secretary of the Army (redacted) was eager to have a presentation from a moderate Muslim."** In addition, Awlaki "was considered to be an 'up and coming' member of the Islamic community." After her vetting, Aulaki (Awlaki) was invited to and attended a luncheon at the Pentagon in the secretary of the Army's Office of Government Counsel. **"Awlaki, a Yemeni-American who was born in Las Cruces, N.M., was interviewed at least four times by the FBI in the first week after the attacks because of his ties to the three hijackers Nawaf al-Hazmi, Khalid al-Mihdhar and Hani Hanjour.** The three hijackers were all onboard Flight 77 that slammed into the Pentagon. Awlaki is now believed to be hiding in Yemen after he was linked to the alleged Ft. Hood shooter Major Nidal Malik Hasan, who e-mailed Awlaki prior to the attack. Sources told Fox News that Awlaki, who is a former Muslim chaplain at George Washington University, met with the Christmas Day bomber Umar Farouk Abdulmutallab in Yemen and was the middle-man between the young Nigerian and the bombmaker. Awlaki was also said to inspire would-be Times Square bomber Faisal Shahzad. **Apparently, none of the FBI's information about Awlaki was shared with the Pentagon.** Former Army Secretary Tommy White, who led the Army in 2001, said he doesn't have any recollection of the luncheon or any contact with Awlaki. **"If this was a luncheon at the Office of Government Counsel, I would not necessarily be there," he said. The Pentagon has offered no explanation of how a man, now on the CIA kills or capture list, ended up at a special lunch for Muslim outreach.** After repeated requests for comment on the vetting process beginning on October 13th, an Army spokesman insisted Wednesday that the lunch was not an Army event. **"The Army has found no evidence that the Army either sponsored or participated in the event described in this report,"** spokesman Thomas Collins said. Collins also noted that the FBI document referred to the "Office of Government Counsel" but should read "Office of General Counsel." Collins said he believed the event was sponsored by the office of the Secretary of Defense. A spokeswoman there said she would look into it and get back to Fox News. **A former high-ranking FBI agent told Fox News that at the time Awlaki went to lunch at the Pentagon, there was tremendous "arrogance" about the vetting process at the Pentagon. "They vetted people politically and showed indifference toward security and intelligence advice of others," the former agent said (Herridge, 2010).**

**Title/Headline:** *Ex-Agent: CIA Flaws Make New Terror Attack Likely*

**Abstract:** The CIA hasn't eliminated the flaws that limited its effectiveness prior to the 9/11 attacks, says former CIA agent Ishmael Jones, a pseudonym for the author of a prominent book about the agency. And that ineffectiveness means **we will almost certainly face another terrorist attack at some point, he tells Newsmax.TV. "It's just a matter of time,"** says Jones, author of "The Human Factor: Inside the CIA's Dysfunctional Intelligence Culture." He warns against U.S. overconfidence. **"Nuclear weapons and 1930s technology are easier and easier to acquire,"** says Jones. **"That's our threat. They could strike us at anytime if we don't do a better job on intelligence. We have a terrorist attack coming in the future absolutely."** He's disappointed with the leadership of the CIA under Leon Panetta, saying the agency's director represents more of the same. "I thought the appointment of Panetta would be a hopeful thing, because as a politician he would have close connections to the president and therefore power to make changes," Jones says. "But unfortunately he's just brought the seamy side of politics. He's a leaker, he's a player. He's not a leader. So there hasn't been the change we need." Jones spent 15 years working for the CIA in human intelligence in various countries. Most experts believe human intelligence is vital, he notes. "After 9/11, Congress gave the CIA \$3.5 billion to get more officers on the street in foreign countries," Jones says. "This money was spent without essentially a single new effective officer appearing on a foreign street. A lot of people were hired, but they're stacked up in buildings in the D.C. area and throughout the U.S., where they're ineffective." **It's a violation of the CIA's charter to have more than 90 percent of its employees living and working entirely in the United States, he says. The problem is not a lack of foreign-language speakers,** Jones says. "I think the place was chalk full of foreign-language speakers," he says. But those skills aren't being used properly. "This is one of the ploys the CIA has always done when there's an intelligence failure," Jones says. "They go to Congress and say we need better people who speak languages and can pose as different nationalities. Give us another \$3 billion over five years, and we'll deliver that." Bottom line: **"The CIA already has all the talent it needs. It just has weak leadership,"** he says. Jones approves of the clandestine overseas prisons established by former President George W. Bush. They served an important purpose, and Jones says colleagues of his who worked at them saw no torture. "They'd capture a young terrorist, be nice to him, and he'd start talking," allowing them to foil imminent terrorist attacks, Jones says. But he feels differently about waterboarding. **"In human intelligence, we have to use volunteer information, not anything derived by torture"** (Weil, 2010).

**Title/Headline:** *American Al-Qaeda Spokesman Adam Gadahn Continues Group's Focus On Encouraging Lone Wolf Attacks in West, Calls On Muslims In Detroit, London, And Paris To Carry Out Terror Operations*

**Abstract:** Al-Qaeda's media production company Al-Sahab posted a video featuring American Al-Qaeda operative Adam Gadahn, aka 'Azzam Al-Amriki. The video came out as response to the March 10, 2010 "Mardin: Abode of Peace" conference in Mardin, Turkey, in which a number of Islamic scholars from various countries convened to denounce violent jihad; this was the same conference that was criticized by the radical Yemeni-American cleric in the second issue of Al-Qaeda in the Arabian Peninsula's English-language Inspire magazine. In addition to his comments on the conference, Gadahn devoted much of his talk to calling on Muslims living in the West to

carry out attacks in their host countries. **This is another in a series of statements from Al-Qaeda leaders aimed at encouraging "lone wolf" attacks** (MEMRI, 2010).

**Title/Headline:** *American Al Qaeda May Now Pose Most Clear Threat To Homeland Security*

**Abstract:** American Al Qaeda may now pose the most clear and present threat to the homeland, top government sources tell ABC News. Americans have risen high in Al Qaeda's leadership and are now helping shape strategy for attacks on the U.S. One source told ABC that it is clear these **homegrown Al Qaeda want to spill American blood. American Al Qaeda may be even more dangerous than foreign fighters, sources say, because they know the nation's psyche and its "soft" targets**, and its American recruits can often move about the country freely. In fact, during a speech to the top police chiefs in the country Monday, Homeland Security Secretary Janet Napolitano shared a stark assessment: **"The stark reality that I shared with Congress recently – and that I'm sharing with you today – is that we at the Department of Homeland Security, and I venture to say the FBI as well, are operating under the premise that individuals prepared to carry out terrorist acts are already in the country, and may carry out these acts of violence with little or no warning,"** Napolitano said. So who are these self-proclaimed traitors now in the Al Qaeda leadership? The Yemeni-American cleric Anwar Al Awlaki, once a propagandist, has now gone operational, and sources say Awlaki is emerging as a top threat to America, perhaps even enemy number one after Osama Bin Laden himself. Awlaki has ties to the Fort Hood shooter, and U.S. officials say he was a key figure behind the Christmas plot to blow-up an airplane over Detroit. While Awlaki is known to many Americans, he is now joined by a supporting cast of radicalized, and dangerous, former Americans. Adnan Shukrijumah lived in Florida and was in the U.S. at least 15 years as a permanent resident. He is now believed to be a top Al Qaeda operational leader. The government says he helped plan a failed plot on the New York City subway system last year. **Anwar Awlaki and Shukrijumah are both believed to be actively plotting attacks right now. And sources tell ABC that Al Qaeda desperately wants another hit on the homeland before the tenth anniversary of the 9/11 attacks** (Thomas, Cloherty & Ryan, 2010).

**Title/Headline:** *Nuclear Smuggling: The Expert View*

**Abstract:** Insider thieves are the new nuclear threat. Protect the materials and prevent the terrorism. The dark netherworlds of nuclear smuggling still pose a terrible danger to us all. Terrorists are seeking nuclear weapons and the materials to make them. Unfortunately, it doesn't take a Manhattan Project to make a crude nuclear bomb – numerous government studies have warned that a sophisticated terrorist group might pull it off, if they could get enough nuclear material. And with bits of highly enriched uranium (HEU) continuing to show up in the hands of hustlers and smugglers, the obvious question is: of which iceberg are we seeing the tip? Fortunately, controlling the essential ingredients of nuclear weapons – plutonium and HEU, neither of which occur in nature – offers a choke point on the pathway to the bomb. **If we can keep terrorists from getting these materials, we can prevent nuclear terrorism.** Already, years of co-operative efforts under the US Nunn-Lugar programme and related efforts have dramatically improved security for nuclear weapons and materials at scores of sites. Potential nuclear bomb material has been removed from dozens more, cutting out the risk of nuclear theft at those sites. These successes represent, in a real sense, bombs that will never go off. In Washington in April, leaders from 47 countries agreed to secure all vulnerable nuclear stockpiles in four years. Now the time has come to flesh out the specifics and move from words to deeds. **The world needs to forge agreement that all nuclear warheads, plutonium, and HEU must have at least a common baseline of nuclear security measures in place – for example, protection against a couple of small teams of well-armed, well-trained outsiders, or a well-placed insider thief.** Countries where terrorists and thieves can pose more substantial threats need still higher levels of security. **New measures to protect against insider thieves – who have perpetrated nearly every known nuclear material theft to date – must be put in place.** Every country that has these materials needs an urgent review of each site where they exist, to assess whether the continuing use of these materials at that site is worth the costs and risks, and whether security there can provide effective protection. **Over time, the world should phase out the civilian use of HEU, which is still used to fuel more than 100 research reactors around the world, many with minimal security measures in place.** Overcoming complacency is the key to success. Many policymakers and nuclear managers around the world wrongly dismiss the danger, arguing that since they have never had an incident at their facility there is no need to upgrade security, and that in any case terrorists could not possibly make a nuclear bomb. They are wrong. **Al-Qaida's nuclear bomb programme was in earnest, and progressed as far as carrying out explosive tests in the desert in Afghanistan before the 9/11 attacks. Nuclear security measures around the world are demonstrably insufficient to cope with the capabilities and tactics terrorists and thieves have already used in non-nuclear attacks.** We need a broad range of steps to counter this deadly complacency, from detailed briefings on the real threat to "red team" exercises, in which well-trained teams test security at nuclear sites. **Another nuclear security summit is slated for 2012 in Seoul. The world needs intensive diplomacy and action on the ground between now and then, so that the leaders there will be able to say that the steps already taken and the further steps agreed to at that summit will be enough to keep the essential ingredients of nuclear bombs out of terrorist hands** (Bunn, 2010).

**Title/Headline:** *Officials 'Confident' Missile Shot Off Los Angeles Not From Foreign Military*

**Abstract:** A military official told Fox News that the U.S. military is closer to getting an answer and hopes to have a statement soon. John Cornelio, a spokesman with North American Aerospace Defense Command/U.S. Northern Command, said **officials are "very confident" the mystery missile "was not fired from a foreign military, that's not what we are working with."** "If it were an attack we would have known it and we would have done something about it," Cornelio said. Earlier in the day, Col. Dave Lapan said **the military doesn't know exactly what the so-called mystery missile was so can't say it's harmless.** A local CBS affiliate in Los Angeles on Monday evening captured on video the image of the "spectacular" projectile flying about 35 miles out to sea, west of Los Angeles and north of Catalina Island. **The Missile Defense Agency told Fox News it did not launch any test missile Monday night that could explain the dramatic images.** The Navy and the Air Force were also unable to offer an explanation. Lapan said it does not appear that whatever was flying was part of a "regularly scheduled missile test." **He noted that before a missile test, notifications are sent to mariners and airmen. This does not appear to be the case here.** At this point, the military is working only with video taken from the local news camera, and NORAD and Northcom apparently were not able to detect the contrail on their own. **It appears from the video, Lapan said, the object was launched from the water and not U.S. soil, though at this point there is no way to be certain.** If a test missile or an accidental missile was launched in the region it would have either come from Naval Air Station Point Mugu or Vandenberg Air Force Base. At sea it could have come from a U.S. submarine or a surface ship. But so far, it all remains a mystery (Fox News, 2010)

**Source:** Prison Planet, Paul Joseph Watson, Alex Jones

**Title/Headline:** *Glenn Beck: Government Preparing To Stage Terror*

**Abstract:** In an unprecedented outburst on his Fox News show earlier this week, **Glenn Beck identified the threat that we have been warning about for over a year, that the powers behind the Obama administration are preparing to stage a false flag event that will be blamed on its political opposition to derail the movement against big government.** Discussing how the leftists need violence to realize their political agenda, Beck featured a clip that we wrote an article about on Sunday, where former Clintonite and Democrat operative Mark Penn says Obama needs an OKC bombing-style event to regain his popularity. **"Remember, President Clinton reconnected through Oklahoma, right?" said Penn on Chris Matthews' Hardball show on Thursday. "And the president right now seems removed. It wasn't until that speech [after the bombing] that [Clinton] really clicked with the American public. Obama needs a similar" defining moment, according to Penn.** As we have documented, Penn is not the only prominent insider to invoke exploitation of terror as a means of reinvigorating the big government agenda. **Back in July, former senior advisor to President Bill Clinton Robert Shapiro wrote in the Financial Times that only an OKC bombing or 9/11 style event could provide Obama with the opportunity to demonstrate that he is a strong leader.** After reading a letter written by Tides CEO and founder Drummond Pike that encouraged advertisers to boycott Fox News in a thinly veiled threat that implied Beck's rhetoric is leading to another OKC bombing, Beck stated, **"They are setting up an Oklahoma City, they are claiming that one is coming and they're already marked the one who caused it,"** referring to himself. The fact that Beck is mimicking our talking point on the threat of staged terror is another indication that he employs a team of researchers to listen regularly to the Alex Jones Show, as a prominent Fox insider told us directly earlier this year. The accuracy of the source was verified after Lou Dobbs was confirmed as joining Fox News, something we had predicted after also being told this would happen by the same source. **After years of Beck ridiculing so-called conspiracy theorists for talking about the government staging 9/11 or the Gulf of Tonkin, he is now finally beginning to realize the fact that major catalyzing events are often staged for political purposes.** Beck follows in the footsteps of fellow talk show host Michael Savage, who after similarly deriding anyone who talked about government staged terror as a conspiracy nut, is now using similar rhetoric. **During his show on March 3 2009, Savage warned that the government was preparing to "create a crisis along the lines of the Reichstag fire,"** and that once Obama's contrived image began to collapse as it is now doing, **"Rahm Emanuel and his gang will set off a Reichstag fire in this country of some kind,"** in order to enforce a "military dictatorship". **As most historians agree, the Reichstag fire of 1933 that allowed Adolf Hitler to persecute his political enemies was wholly if not in part the work of Hermann Göring, Joseph Goebbels, and a cadre of Nazi storm troopers who aided Communist patsy Marinus van der Lubbe in torching the government building in Berlin.** The fact that people like Beck and Savage are now openly talking about government staged terror is a revealing benchmark in how far we have come from people who broach such subjects being demonized as lunatics to the issue of false flag terror now becoming a central facet of political discourse (Watson & Jones, 2010).

**Title/Headline:** *Britain's Top Soldier Says Al-Qaeda Cannot Be Beaten*

**Abstract:** The UK's Telegraph is reporting the the new head of Britain's armed forces, Gen Sir David Richards, has warned that **the West cannot defeat al-Qaeda and militant Islam. He said defeating Islamist militancy was "unnecessary and would never be achieved".** However, he argued that it could be "contained" to allow Britons to lead secure lives. Gen Richards, 58, said the threat posed by **"al-Qaeda and its affiliates" meant Britain's national security would be at risk for at least 30 years** (National Terror Alert, 2010).

**Abstract:** In little noticed comments made during an appearance on Judge Andrew Napolitano's show on Fox News, **Glenn Beck warned that the Obama administration wouldn't hesitate to exploit a terror attack targeting airliners to blame the event on people protesting naked body scanners and TSA groping in airports.** The Fox News host said that the government was deliberately provoking the American people to rise up so they could squelch the growing resistance with an iron fist, noting that Obama has failed to give a single speech addressing the TSA revolt even amidst the biggest holiday travel period of the year. **"Let's get people to rise up and say no scanners....something happens, the President then has the ability to finally give a speech on airport security and say 'I was trying to protect you and these people stood up against these scanners, and these people died because of it....you have to stop listening, I'll protect you,'" said Beck, implying that the Obama administration would exploit a terror attack to blame it on those protesting against scanners and TSA groping in airports. Beck added that people in the Obama administration were probably having casual conversations surrounding the potential of a terror attack targeting airline travel along the lines of, "Gee, it wouldn't be so bad, would it?"** Beck made similar comments earlier this month when he suggested that the Obama administration was preparing to stage an event that would be blamed on opponents of big government.

**Title/Headline:** *Color-Coded Terror Warnings On Track To Disappear*

**Abstract:** Goodbye danger defined as yellow, orange and red. The Homeland Security Department is looking to scrap the five-tiered color-coded terror warning system in favor of a streamlined one with as few as two alerts. The post-9/11, Bush-era system has been criticized as too vague to be useful in communicating the terror threat to the public, either ignored or the butt of jokes. **One option under consideration is to go to two threat levels instead of five: elevated and imminent.** When the threat level would change to imminent under the new model, government officials would be expected to be as specific as possible in describing the threat without jeopardizing national security. **And an imminent threat would not last longer than a week, meaning the public wouldn't see a consistently high and ambiguous threat level.** The 8-year-old alert system, with its rainbow of colors -- from green, signifying a low threat, to red, meaning severe -- has become a fixture in airports, government buildings and on newscasts. Over the past four years, millions of travelers have begun and ended their trips to the sound of airport recordings warning that the threat level was orange, an alert that has become so routine that many now simply tune it out. This could be the last holiday season they hear the monotonous message. **U.S. officials confirmed the recommendation for a change had been made to President Barack Obama, who has final say in the matter.** The details of the proposal were described to The Associated Press on condition of anonymity because no final decisions have been made. The current system was one of the Bush administration's most visible anti-terrorism programs. **The color has stayed the same since 2006: yellow for the country as a whole, meaning an elevated or significant risk, and orange for the aviation sector, a high risk.** But the government has changed security protocols during that time without changing the color of the threat. In July 2009, Homeland Security Secretary Janet Napolitano ordered a review of the system. Earlier this year, the department decided the best way forward would be to scrap the colors and use more descriptive language to talk about terror threats. **With a new system, there would be an understanding with the public that there is a baseline level of vigilance needed in the U.S., but when the government gets information that suggests the threat is more specific, the new system would be used to communicate those details. One of the recommended names for the new system is the National Terrorist Advisory System, replacing the current Homeland Security Advisory System.** As part of her review in 2009, Napolitano solicited comments from the public about the current system. **Some likened the color-coded system to the boy who cried wolf. Others criticized it for not following the natural color spectrum** (Sullivan, 2010).

**Source:** Activist Post

**Title/Headline:** *6 Reasons To Start World War III If You Are A Globalist*

**Abstract:** The average person can barely imagine why World War III would be anything but a civilization-ending event. And, yet, we have heard Neocons ramping up rhetoric that suggests a new world war would be a viable option to correct a dying dollar and economy. Or, perhaps it is simply a sound investment if you are a Globalist. RAND Corporation documents point to a desire for total war abroad and at home. The recent reactivation of North and South Korea tensions could be a potential catalyst in an East-West World War scenario possibly involving nukes. **However, the next World War doesn't necessarily need to be a conflagration; it could be a steady, slow, coldly calculated design to plunge the globe into austerity and totalitarian control through regulations such as those proposed by Codex Alimentarius and Agenda 21.** So, if one puts on the thinking cap of a sociopath, one might find the following 6 reasons are perfect to start World War III, by nukes or by stealth, and further the agenda of world governance.

**Distraction:** Regional conflicts both military and financial are being exposed as blatant economic looting and divide-and-conquer techniques. **Protests are erupting across the globe as people are waking up to their enslavement en masse.** Simultaneously, the high-tech police state is unfolding; endgame legislation is being passed to criminalize independence and control the Internet; and a reduction in the standard of living is minimizing the ability to purchase even simple distractions like cable TV. **The greatest awakening is that an exponential number of people are beginning to realize that their voice has no meaning in the political arena.** The left-right political paradigm is in grave danger, and has been made even more glaringly obvious by recent actions such as Obama awarding the medal of freedom to Bush, Sr. Add to this the calls for arresting Bush, Jr. as a war criminal (and the subsequent questioning of why Obama would not support such a trial) and we begin to see indications that people are seeing through The Quigley Formula. With such a populist uprising against all forms of oppression, the time appears to be ripe for the ultimate distraction.

**Boost The Dollar:** The first thing that happened when shots were fired between North and South Korea was a flight to the dollar, just like every other crisis. Russia and China just announced that they quit the dollar, and yet the dollar refuses to collapse despite fundamentals that are truly sickening. It is almost as if there are too many crises for the Russia-China announcement to even matter. Perfect timing. Rather, it would be a fine strategy for the dollar to rebound before being dissolved into a global currency, as the dollar backs the premier world superpower. We now have a twin storyline of both financial and military wars leading toward the same goal. This could be the beginning of a monetary and real WWII strategy set up to coordinate a universal collapse to benefit global interests. And let's not forget on which currency it actually reads New World Order.

**Global Hegemony:** The elimination of "rogue nations" is at the heart of the Globalist agenda, which seeks consolidation into the hands of a few powerful regions. In fact, it has been the stated goal of The Trilateral Commission since its inception in 1973 under Rockefeller and Brzezinski. Brzezinski's response in 1974 to the question, What is The New World Order? says it all: **"We need to change the international system for a global system in which new, active, and creative forces -- recently developed -- should be integrated."** Since then, integration has been used to great effect by the U.S. to start wars where "terrorist" regimes can be subverted or dismantled, and their flags (resources) captured. China is in a similar position with the vassal rogue state of North Korea where they can cattle prod it to action when convenient. China is now being pressured by the global community to rein in the regime. Perfect, they can consolidate their holdings in a similar fashion to what the U.S. has already done with South Korea. This new Korean conflict could have the perfect dual effect of the Western world running to the safety of the Anglo-American establishment (and the dollar), while the East seeks the backing of China to correct instability in the region. And all the while Russia and Iran are there for a potential final solution.

**A "Feel Good" War:** For those not attuned to the larger Globalist agenda, America is in dire need of a feel-good war . . . another Nazi Germany-style threat possessing undisputed intentions of global dominance. Enter China from stage left. Communist China has not condemned North Korea for their latest actions, and has given early warnings to the U.S. about naval exercises in their "exclusive economic zone." If this continues, they only enhance their position as the perfect common enemy of the West. Those who are naturally opposed to Globalism see China as the prime example of the policies which will lead to global tyranny. **A war with China, or Communism in general, will give the West more than just a bogeyman in a cave, but one that truly is seen as a physical and economic threat to Western civilization.** Mass opposition to the lies that led to wars in the Middle East have all but exhausted the Bin Laden version of Goldstein pushed in that Orwellian storyline. Time to roll out the real threat, as the Globalist agenda accelerates toward its endgame.

**Investment In The Military-Industrial Complex:** 54% of the U.S. Federal budget is spent on the military in all of its forms, as it continues to expand at warp speed overseas and on the streets of America. Traditional weapons of physical destruction, as well as high-tech weaponry and mind-controlled soldiers straight out of science fiction are set to align with the surveillance and tracking capabilities of biometrics and predictive behavior criminology. New wars are always needed; particularly small-scale regional conflicts such as those suggested over and over again by Zbigniew Brzezinski and other Globalist geo-politicians. However, their own writings indicate a time when the regional conflicts must morph into a global one in order to fulfill the final agenda of an integrated scientific global dictatorship which comes after the consolidation required by World War III. The final war won't have a name because it will be global governance unabashedly unleashed against the people it has systematically enslaved. This final war has one goal:

**Depopulation:** This part of the agenda is still difficult for most people to grasp, but it is imperative to ask the question, What will global governance offer once its objectives of "order out of chaos" are achieved? We need only look at the results on a country-by-country basis when Globalist organizations like the World Bank and IMF have taken over: more poverty, more sickness, and a decrease in life expectancy. They already have been operating by stealth with soft-kill weapons designed to weaken resistance and cause sterility. The Russian geopolitical analyst, Konstantin Sivkov, who believes WWII has begun already stated that, "History shows that the 'elite' of selfish civilizations do not get stopped by human sacrifices if there is a guarantee that they, themselves, will survive in bunkers."

**They Have The Bunkers:** We may or may not hear WWII announced on the evening news, but we can look for the signs of global consolidation that defines the agenda of the New World Order. With every new conflict and every new piece of legislation it seems that those signs are becoming more obvious by the day (Activist Post, 2010).

The  
New York  
Times

**Date:** December 15, 2010

**Source:** The New York Times, William J. Broad

**Title/Headline:** *U.S. Rethinks Strategy For The Unthinkable*

**Abstract:** Suppose the unthinkable happened, and terrorists struck New York or another big city with an atom bomb. What should people there do? The government has a surprising new message: Do not flee. Get inside any stable building and don't come out till officials say it's safe. **The advice is based on recent scientific analyses showing that a nuclear attack is much more survivable if you immediately shield yourself from the lethal radiation that follows a blast, a simple tactic seen as saving hundreds of thousands of lives.** Even staying in a car, the studies show, would reduce casualties by more than 50 percent; hunkering down in a basement would be better by far. **But a problem for the Obama administration is how to spread the word without seeming alarmist about a subject that few politicians care to consider, let alone discuss.** So officials are proceeding gingerly in a campaign to educate the public. "We have to get past the mental block that says it's too terrible to think about," W. Craig Fugate, administrator of the Federal Emergency Management Agency, said in an interview. **"We have to be ready to deal with it" and help people learn how to "best protect themselves."** Officials say they are moving aggressively to conduct drills, prepare communication guides and raise awareness among emergency planners of how to educate the public. Over the years, Washington has sought to prevent nuclear terrorism and limit its harm, mainly by governmental means. It has spent tens of billions of dollars on everything from intelligence and securing nuclear materials to equipping local authorities with radiation detectors. **The new wave is citizen preparedness.** For people who survive the initial blast, the main advice is to fight the impulse to run and instead seek shelter from lethal radioactivity. Even a few hours of protection, officials say, can greatly increase survival rates. Administration officials argue that the cold war created an unrealistic sense of fatalism about a terrorist nuclear attack. **"It's more survivable than most people think," said an official deeply involved in the planning, who spoke on the condition of anonymity.** **"The key is avoiding nuclear fallout."** The administration is making that argument with state and local authorities and has started to do so with the general public as well. Its Citizen Corps Web site **says a nuclear detonation is "potentially survivable for thousands, especially with adequate shelter and education."** A color illustration shows which kinds of buildings and rooms offer the best protection from radiation. In June, the administration released to emergency officials around the nation an unclassified planning guide 130 pages long on how to respond to a nuclear attack. It stressed citizen education, before any attack. Without that knowledge, the guide added, "people will be more likely to follow the natural instinct to run from danger, potentially exposing themselves to fatal doses of radiation." Specialists outside of Washington are divided on the initiative. **One group says the administration is overreacting to an atomic threat that is all but nonexistent.** Peter Bergen, a fellow at the New America Foundation and New York University's Center on Law and Security, recently argued that the odds of any terrorist group obtaining a nuclear weapon are "near zero for the foreseeable future." But another school says that the potential consequences are so high that the administration is, if anything, being too timid. **"There's no penetration of the message coming out of the federal government,"** said Irwin Redlener, a doctor and director of the National Center for Disaster Preparedness at Columbia University. **"It's deeply frustrating that we seem unable to bridge the gap between the new insights and using them to inform public policy."** White House officials say they are aware of the issue's political delicacy but are nonetheless moving ahead briskly. The administration has sought "to enhance national resilience — to withstand disruption, adapt to change and rapidly recover," said Brian Kamoie, senior director for preparedness policy at the National Security Council. He added, **"We're working hard to involve individuals in the effort so they become part of the team in terms of emergency management."** A nuclear blast produces a blinding flash, burning heat and crushing wind. **The fireball and mushroom cloud carry radioactive particles upward, and the wind sends them near and far.** The government initially knew little about radioactive fallout. But in the 1950s, as the cold war intensified, scientists monitoring test explosions learned that the tiny particles throbbed with fission products — fragments of split atoms, many highly radioactive and potentially lethal. But after a burst of interest in fallout shelters, the public and even the government grew increasingly skeptical about civil defense as nuclear arsenals grew to hold thousands of warheads. **In late 2001, a month after the Sept. 11 attacks, the director of central intelligence told President George W. Bush of a secret warning that Al Qaeda had hidden an atom bomb in New York City.** The report turned out to be false. But atomic jitters soared. **"History will judge harshly those who saw this coming danger but failed to act," Mr. Bush said in late 2002.** In dozens of programs, his administration focused on prevention but also dealt with disaster response and the acquisition of items like radiation detectors (Broad, 2010).

**Title/Headline:** *WikiLeaks Cables: Yemen Radioactive Stocks 'Were Easy Al-Qaida Target'*

**Abstract:** A senior government official in Yemen warned US diplomats that poor security at the country's main store of radioactive products could allow dangerous material to fall into the hands of terrorists, according to a leaked US embassy cable. **The official told the Americans that the lone guard standing watch at Yemen's national atomic energy commission (NAEC) facility had been removed from his post and that its only closed circuit TV security camera had broken down six months previously and was never fixed.** "Very little now stands between the bad guys and Yemen's nuclear material," the official warned, in a cable dated 9 January this year sent from the Sana'a embassy to the CIA, the FBI and the department of homeland security as well as the US secretary of state in Washington and others. **Yemen, the Arab world's poorest nation, has emerged as al-Qaida's most active base, after Iraq and Afghanistan. It is home to Al-Qaida in the Arab Peninsula (AQAP), the group behind a series of attacks on western targets, including the failed airline cargo bomb plot in October and the attempt to bring down a US passenger jet over Detroit on**

**Christmas Day last year.** The Nigerian-born Detroit bomber, Umar Farouk Abdulmutallab, was radicalised in Yemen, according to security sources. The cable, classified as secret by the US ambassador Stephen Seche, and sent during the immediate aftermath of the Christmas Day bomb, describes how the "worried" official implored the US to help convince the Yemen government "to remove all materials from the country until they can be better secured, or immediately improve security measures at the NAEC facility". **The cable revealed that the facility holds large quantities of radioactive material used by hospitals, local universities for agricultural research and in oilfields. The international community fears radioactive isotopes could be used to make a dirty bomb – a device combining simple explosives with radioactive materials, which it would disperse over a wide area. The isotopes are not explosive themselves, unlike nuclear material such as uranium.** Although unlikely to kill a large number of people, such a device could cause tremendous damage and disruption by creating large no-go areas contaminated by radioactivity. International experts said today the lack of security at the Yemen facility would be a "high priority" for the US government. Told of the cable's revelation of the type of materials and the amount stored in Yemen's NAEC facility, **Matthew Bunn, a former White House science adviser who specialises in nuclear threat and terrorism, said: "Holy cow. That's a big source. "If dispersed by terrorists it could make a very nasty dirty bomb capable of contaminating a wide area,"** said Bunn, an associate professor at Harvard University's John F Kennedy school of government, who compiles an annual assessment of the nuclear terrorism threat titled *Securing the Bomb*. **Such a bomb would be "enough to make a mess that would cost tens of billions of dollars in cleanup costs and economic disruption, with all sorts of controversy over how clean is clean, how will people go back there", he said. "It's the type of thing that the US programme have been working on securing all over the world.** The global threat reduction initiative (GTRI) in the department of energy has two missions: one, to get rid of enriched uranium and two, to improve security on radioactive facilities so that dirty bombs cannot be used. **"The location in Yemen is obviously of particular concern given terrorism, given Al-Qaida in the Arab Peninsula headquartered there, also the spotty effectiveness of the government. "I would think it would be a high priority to do something about it."** While a dirty bomb has never been detonated, **terrorists have been accused of plotting such attacks.** A Briton, Dhiren Barot, admitted plotting to build a radioactive bomb in the UK and was convicted in 2006. The leaked US cable revealed that, in the days following the official's warning over security and probably as a result of US diplomatic pressure, the radioactive material was moved to a more secure facility and the remainder of it was likely to follow. In a section of the cable titled *Comment*, it read: **"Post will continue to push senior ROYG (Republic of Yemen Government) officials to increase security at all national atomic energy commission facilities and provide us with a detailed accounting of all radioactive materials in the country."** A spokesman for the US state department said: "We decline to comment on any cable. A team from the US department of energy visited Yemen in February and continues to work with the government on security upgrades at relevant sites as part of its global threat reduction initiative." The US national nuclear security administration declined to comment on the cable or any action taken as a result of it. A spokesman added: **"I am not going to comment on upgrades to any specific sites. I can say that we have programmes to co-operate with more than 100 countries around the world to secure vulnerable nuclear material, improve security at nuclear facilities, and prevent nuclear smuggling. We are working day and night to prevent terrorists from acquiring nuclear material, no matter the source"** (McVeigh, 2010).

**Source:** Fox News, Associated Press

**Title/Headline:** *WikiLeaks: Yemen Nuclear Material Was Unsecured*

**Abstract:** A storage facility housing some radioactive material in Yemen, home to one of the most active branches of al-Qaida, was left unguarded for up to a week, according to a secret U.S. diplomatic cable released by WikiLeaks on Monday. The message dated Jan. 9 relates the worries of a Yemeni official about the unguarded state of a National Atomic Energy Commission facility. **It said the material was not secured for a week after its lone guard was removed and its surveillance camera was broken.** The official, whose name was removed, presses the U.S. Embassy in the Yemeni capital of Sanaa to urge his own government to secure the material. **"Very little now stands between the bad guys and Yemen's nuclear material," the official is quoted as saying in the cable. Yemen, the Arab world's poorest country, hosts a particularly active offshoot of al-Qaida.** Militants there have attacked Yemeni government forces and facilities and plotted attacks against the U.S., including this year's failed attempt to bring down American planes with explosives hidden in ink cartridges and an attempted bombing of an airliner bound for Detroit last Christmas. **Matthew Bunn, a Harvard University expert on nuclear theft and terrorism, said the material in Yemen included some "very nasty" substances and could be far more dangerous if "dispersed" in a terrorist attack. "But I believe it has since been removed to a secure location," he said.** The widespread fear by counterterrorism officials of al-Qaida militants finding access to radioactive material has its roots in the concept of a "dirty bomb," which combines radioactive material like the ones left unguarded in Yemen and conventional explosives. Radioactive sources are used for a wide variety of peaceful purposes in industry, medicine, agriculture, research and education. When they are safely managed and protected, the risks to the public are considered low. **Yemeni Foreign Abu Bakr al-Qirbi told the U.S. ambassador in Yemen on Jan. 7 that "no radioactive material was currently stored in Sanaa and that all 'radioactive waste' was shipped to Syria."** According to the cable, the radioactive material was used by local universities for agricultural research, Sanaa hospitals and by international oil companies. The facility's lone guard was removed on Dec. 30, 2009, according to the cable. **The site's single closed circuit TV camera had been broken for the last six months, it added.** Yemeni officials could not immediately be reached for comment. The cable said the embassy routinely pushed senior Yemeni officials to account for the nation's radioactive material and ensure the security of storage facilities. **Yemen is struggling to contain an increasingly bold al-Qaida branch despite generous help from the United States and other Western nations.** The Obama administration's counterterror chief John Brennan said Friday that despite the tension in U.S.-Yemeni relations over counterterrorism issues, the two nations were ratcheting up efforts to capture or kill militants. **Brennan's comments appeared to reassure Americans that Yemen was cooperating in the hunt for al-Qaida. They were made one day after U.S. officials said they had intelligence indicating al-Qaida's Yemen offshoot was planning another attack during this holiday season** (Fox News, 2010)

**Title/Headline:** *Swiss Men With CIA Links Face Nuclear Secrets Trial*

**Abstract:** A judge yesterday called for the prosecution of three Swiss engineers suspected of smuggling nuclear weapons technology following allegations that the US pressured Switzerland to destroy incriminating evidence to conceal their work for the CIA. Swiss federal magistrate Andreas Mueller made his recommendations at the end of a six-year investigation into the activities of engineers Urs Tinner, his brother Marco and their father Friedrich, who were arrested in 2004 on suspicion of smuggling but later released. **They said they had worked for the CIA since 2003 as informers. The three are suspected of supplying technology to a nuclear smuggling ring in Pakistan run by Abdul Qadeer Khan, a nuclear scientist reputed to be the "father" of Pakistan's atomic bomb.** Mr Khan, who now lives under government surveillance in Pakistan, is suspected of having aided Iran, Libya and North Korea with uranium enrichment programmes. **The Tinnings are alleged to have played a bizarre dual role as nuclear weapons smugglers who at the same time worked for the CIA as informers and banked on the agency's protection. "There are many parts," Mr Mueller said yesterday. "It's like a puzzle and if you put the pieces together, you get the whole picture."** The Tinnings claim to have helped supply the CIA with information about nuclear projects in Libya. They also admit to working for the Khan network and according to independent US reports they supplied the CIA with key information about its activities. But they claim not to have known that Mr Khan's aim was to produce nuclear weapons and they deny having supplied him with the relevant technology. **Allegations that the US had pressured Switzerland to bury the case against the Tinnings surfaced in 2008, after the Swiss government ordered 100 pages of evidence against them to be shredded.** Copies of the documents have since reappeared (Paterson, 2010).

**Date:** December 27, 2010

**Title/Headline:** *Swiss Official Urges 3 Charged With Nuke Smuggling*

**Abstract:** Smuggling charges should be brought against three Swiss engineers suspected of giving nuclear weapons technology to a **rogue network in Pakistan**, a magistrate said Thursday, in a case involving CIA ties, shredded documents and national security implications. Investigating magistrate Andreas Mueller said his recommendation that the trio, two brothers and a father, face trial is based on an exhaustive probe into an alleged nuclear smuggling ring. Mueller submitted his confidential report to federal prosecutors, who will decide whether to bring charges on violating Swiss nonproliferation laws. **Mueller oversaw the last three years of a six-year federal probe against Urs Tinner, his brother Marco and their father Friedrich.** The politically sensitive case was slowed down after the Swiss government repeatedly ordered evidence destroyed in the case, allegedly under pressure from senior U.S. officials. The Tinnings are suspected of links to the nuclear smuggling network of Abdul Qadeer Khan — the creator of Pakistan's atomic bomb. **They allegedly supplied Khan's black market nuclear network with the technical expertise and equipment used to make gas centrifuges. Khan sold the centrifuges for secret nuclear weapons programs in countries that included Libya and Iran before his operation was disrupted in 2003.** Mueller, who said he is relieved to be done with the investigation, harshly criticized the Swiss government for having "massively interfered in the wheels of justice by destroying almost all the evidence." He said the government also ordered federal criminal police not to cooperate with him. "There are many parts. It's like a puzzle and if you put the puzzle together you get the whole picture," Mueller said at a news conference. "There is not (just) one piece of evidence, there are many pieces of evidence." U.S. officials in Bern had no immediate comment. **Mueller said he recommended the three face charges for "supporting the development of atomic weapons" in violation of nonproliferation laws, while Marco Tinner should face additional charges of money laundering.** Mueller's 174-page report "is now being studied in detail" by the Swiss attorney general's office, which "will inform the public in due course" on whether charges will be filed against the Tinnings, Federal Prosecutors Office spokeswoman Jeannette Balmer said. Mueller said the Tinnings did not deny working for the A.Q. Khan network, but claimed they did not know his aim was to produce nuclear weapons. **He also said the Tinnings had worked for the CIA since June 2003. "The findings are that the Tinnings might be part of the Khan network," Mueller told The Associated Press after the news conference. "And beginning where they should have known that Khan produced atomic weapons, in May 1998, until they started to collaborate with the secret services, in June 2003, they in their specific roles were part of this network, and delivered parts to the network that the network then itself delivered to other countries, (such) as Libya,"** Mueller said. He told AP that "there is no contrary proof that they were not on the payroll" of the CIA. In June 2009, the Swiss government ordered the destruction of about 100 pages of evidence linked to Mueller's investigation of the Tinner family, saying they contained information that could have endangered national security and needed to be kept out of "the wrong hands." **The Cabinet, or Federal Council, said those documents were "the most explosive" material in the case's file of more than 1,000 pages.** Copies of some of the shredded files have reportedly resurfaced, however, and could form part of the case against the Tinnings — who have repeatedly maintained they are innocent. **The documents are copies of files destroyed in 2007 under a previous order that led to protests from lawmakers and legal experts, who said the government had undermined the prosecution in the smuggling case.** The copies were found in prosecutors' archives in December 2008. Less sensitive documents, such as those dealing with uranium enrichment, were ordered kept under high security at the Federal Justice Department. The government said investigators, prosecutors, courts and the Tinner family's lawyers would be able to view them under tight restrictions, but the documents would be destroyed at the end of legal proceedings. **A report this week by a Washington-based think tank found the Swiss authorities, the CIA and the Tinnings were all responsible for failing to limit the spread of nuclear weapon technology and know-how.** The Institute for Science and International Security's report particularly pointed blame at Swiss justice and U.S. intelligence officials for their failure to cooperate. It also says the Tinnings persuaded businesses to make parts for machines without knowing their true purpose. **Mueller said the shredding of files had complicated an already complex case and made it harder to piece together a complete picture of the Tinnings' alleged involvement in the Khan ring.** Switzerland's highest criminal court has criticized the government for opting to destroy further evidence and said it was disappointed not to be informed earlier. Complicating the case further are claims by Urs Tinner that he supplied the CIA with information that led to the breakup of Khan's network. In a recent documentary, Tinner told Swiss TV he tipped off U.S. intelligence

about a delivery of centrifuge parts meant for Libya. **The shipment was seized at the Italian port of Taranto in 2003, forcing Libya to admit and eventually renounce its efforts to acquire nuclear weapons. Former Swiss Justice Minister Christoph Blocher said the government decided to destroy the original documents after he refused in 2007 an American request to hand over thousands of the files.** Urs Tinner was released in December 2008 after almost five years in investigative detention and has yet to be charged. **A Swiss parliamentary panel has investigated the government-ordered shredding of thousands of files of evidence in the case.** The Khan network was disrupted when Western intelligence agencies intercepted the centrifuge parts meant for Libya's nuclear weapons program (Fox News, 2010).

**Title/Headline:** *Napolitano Meets With Karzai, Talks About Ways To Intercept IED Chemicals*

**Abstract: Homeland Security Secretary Janet Napolitano spoke with officials Saturday about ways to stop terrorists from transporting bomb-making chemicals across the Afghanistan-Pakistan border during a meeting with Afghan President Hamid Karzai and other members of his administration.** Napolitano's agency has about two dozen customs and border officials in the war-torn country, with more on the way, many training Afghan forces. **The nation's emerging security force is tasked with patrolling a porous border with Pakistan where Taliban fighters and Islamic extremists cross freely, along with opium and materials used to manufacture improvised-explosive devices.** Napolitano, who landed in Afghanistan on New Year's Eve on an unannounced visit, talked about how the two countries could work together to better intercept this trafficking during the meeting with Karzai and Finance Minister Omar Zakhiwal on Saturday. **She said in a written statement that civilian officials in her department have made "significant progress" in working with Afghan officers toward disrupting Al Qaeda operations along the border.** Napolitano also said 52 former U.S. customs and border patrol officers would arrive in Afghanistan in 2011, to complement the 25 on the ground -- up from 11 a year ago. Halting the flow of billions of dollars of cash from Afghanistan is a top U.S. priority. Since 2007, an estimated \$3 billion in cash has flowed out of Afghanistan through the country's two major airports, most of it to Dubai, according to Afghan police and intelligence officials. Zakhiwal's office said in a statement he and Napolitano discussed the cash-flow issue and that an action plan to address it was deemed "as necessary." The statement did not elaborate on what steps might be taken. But the ministry said the U.S. has been providing assistance to better organize the network of money transfer enterprises -- commonly known as hawalas -- and improving the way in which cash transfers are regulated and tracked. **While taking large amounts of money is not illegal under Afghan law, the scope of the transfers has alarmed U.S. and other international officials because it could be aid funds that have been diverted, drug money or Taliban cash** (Fox News, 2010).

**Roughly three weeks prior to Super Bowl XLV on February 6, 2011, the following article regarding Iran's nuclear program was published. Should a nuclear terror attack transpire, the Globalists want people looking at anybody and everybody but them.**

**Date:** January 21, 2011

**Source:** Fox News

**Title/Headline:** *Leaked U.S. Cable: Iran Clears Major Milestone In Quest for Nuclear Bomb*

**Abstract: Iran gained the "technical ability" to produce highly enriched uranium in sufficient quantities to make nuclear weapons in 2009, U.S. officials believe, marking a major achievement in Tehran's controversial atomic program, according to leaked diplomatic cables.** The U.S. assessment, released by WikiLeaks and published in Britain's Guardian newspaper, came after a meeting of international nuclear experts in Vienna in April 2009. **"Iran had now demonstrated centrifuge operations such that it had the technical ability to produce highly enriched uranium (HEU) if it so chose," U.S. Ambassador Gregory Schulte said. Just weeks prior to the assessment, the International Atomic Energy Agency concluded Iran had enriched about one ton of uranium and needed just half a ton more to be ready to manufacture its first warhead.** The report came as Iran and six world powers sought common ground Friday at talks jeopardized by Tehran's refusal to discuss demands that it curb its nuclear activities. The two sides sat down with no sign they were ready to budge from widely differing positions revealed after a first round of talks in Geneva last month. **While the six would like to kickstart talks focused at freezing Iran's uranium enrichment program, Tehran has repeatedly said "that" activity is not up for discussion.** Instead, Iranian officials are pushing an agenda that covers just about everything except its nuclear program: global disarmament, Israel's suspected nuclear arsenal, and Tehran's concerns about U.S. military bases in Iraq and elsewhere in the region. "We want to discuss the fundamental problems of global politics at Istanbul talks," said Iranian chief negotiator Saeed Jalili, while President Mahmoud Ahmadinejad suggested any push to restrict the meeting to Iran's nuclear program would fail. **"They employed all their might and tried hard to prevent Iran from going nuclear," Iranian state TV quoted Ahmadinejad as saying. "But Iran went nuclear and there will be no way back."** A diplomat familiar with the talks says the six powers will seek to nudge Iran toward acknowledging the need to reduce worries that the Islamic Republic might turn its enrichment program to making weapons. **He asked for anonymity because the talks are closed. Tehran denies such aspirations, insisting it wants only to make nuclear fuel. But concerns have grown because its uranium enrichment program could also make fissile warhead material, because of its nuclear secrecy and also because it refuses to cooperate with attempts to investigate suspicions that it ran experiments related to making nuclear weapons. Iran came to the table warning that it was in no mood to compromise. "Resolutions, sanctions, threats, computer virus nor even a military attack will stop**

**uranium enrichment in Iran,"** Ali Asghar Soltanieh, Iran's envoy to the International Atomic Energy Agency, told Iranian state TV. The enrichment program has sparked U.N. Security Council sanctions, been targeted by the Stuxnet malware virus -- thought to have been manufactured by Israel or the U.S. -- and has provoked the threat of military strikes from both America and Israel (Fox News, 2011).

**Title/Headline:** *Nuclear Watchdog Chief Warns Of Nukes Falling Into The Wrong Hands*

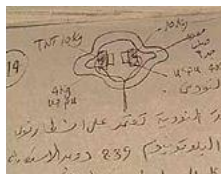

**Abstract:** While the mood here at Davos has been optimistic about recovery from the global credit crisis, the consensus is that the world is far from out of the woods. Austerity and cutbacks are the buzzwords in this exclusive ski resort for this week, at least. Among those worried about funding his project in this tight environment is Yukiya Amano, director general of the International Atomic Energy Agency, or IAEA. He is here at the World Economic Forum making the case for his agency. **"We are aware of the difficulties of countries (who fund the IAEA). I need to strike a good balance of the needs of the agency and the capacity of countries to contribute."** Amano is also here to make sure political leaders at this global meeting are fully aware of some of the risks we all face in the area of nuclear proliferation. He does not just mean North Korea and Iran. **"Another risk is nuclear material falling into the hands of terrorists. Some people do not believe this is a real risk. But the IAEA has a database and, on average, every two days we receive information about the illicit trafficking of nuclear materials or radioactive materials and this may only be the tip of the iceberg."** Amano would not specify where the "loose nukes" threat lies, only saying that terrorists target the weakest link in the network. There have been cases of arrests in the former Soviet republic of Georgia, through which people have attempted to smuggle small amounts of highly enriched uranium. Georgia has an active task force that is vigorously following the trade in illicit materials, with effect. Amano told Fox News, **"Nowadays, with the current level of world technology, terrorists can make nuclear weapons -- well, dirty bombs, at least."** Of course, the topic of Iran is still a major concern for the nuclear watchdog. Talks between six world powers and Iran last weekend in Turkey broke down. **"Regarding the Istanbul meetings, it was a disappointment, because no significant progress was made."** Amano, who has a reputation for being much tougher and direct about the problems with the Iran file than his predecessor, Nobel Peace Prize winner Mohamad El Baradei, continued, "Iran's cooperation with the IAEA is not sufficient and therefore we cannot confirm the absence of certain nuclear or undeclared activities or that Iran's program is only for peaceful purposes." While Iran continues to insist that its nuclear program is peaceful, and that it is cooperating fully with the IAEA, the group of world powers, including the United States, which met with Iranian negotiators last weekend, pushed to have Iran agree to measures that would help the international community gain clarity about Tehran's program. Iran flatly refused. Amano said, **"There are some activities with a military dimension. I'm not saying Iran has a nuclear weapon, but there are some activities that have some military aspects and we have some concerns."** Iran has not agreed to the Additional Protocol of the Non-Proliferation Treaty, which would allow inspectors to visit undeclared but suspect sites. That is a worry, especially after the sudden discovery of a new enrichment facility near the holy city of Qom in September 2009. Amano said his team is not certain to what extent the Stuxnet computer worm sent Iran back. But to the extent to which it poses a danger to any nuclear program, the agency is studying it. Finally, while the very serious and real concerns about proliferation mount, made even more acute now by the fact that more and more countries are embracing nuclear energy as a green and stable fuel source, Amano says his agency also has untapped potential to help with the management of water, and treatment of cancer around the world. **"The IAEA has expertise in nuclear medicine and radiotherapy which are very effective in diagnosis and treatment. Then there is water. Water has some isotopes. If we monitor the radio isotopes coming from water, we can measure where aquifers for ground water are and if we can measure the resource we can better control it."** In the meantime, though, much of the world's attention is focused on Iran and a resolution to its nuclear stand-off with the international community. The IAEA needs funding to keep its inspectors highly trained and with the most current equipment to do their job. But as proliferation experts say, the inspectors can only be as good as the cooperation they get from countries they are inspecting (Kellogg, 2011).

**The Hegelian Dialectic:** Problem (nuclear terror), Reaction (terror/fear) & Solution (North American Union).

**Conclusion:** Nuclear Terrorism is Globalist's "Ace up the Sleeve" so to speak, and it has likely been in the works for at least 50 years. As more and more people worldwide wake up to the reality of the current political, economic, and environmental situation, it appears that The Powers That Be believe that only a nuclear terror attack will terrorize the people back to sleep and back in line. Desperate governments do desperate things, and Nuclear Terror a last ditch attempt to regain control of society.

## The Nuclear Bible: Nuclear Terror Quotes

**Intro:** The following quotes regarding nuclear terror, Pakistan, and the end of America come from politicians and scholars from every walk of life. Interestingly, they are all singing the same tune in that nuclear terror will happen, Pakistan is to blame, and America will exist as a free nation no more.

Al Qaeda Nuclear Blueprint “LOL!” ~The World

"The era of nuclear terrorism has arrived." ~**Liam Fox**, Current Shadow Defense Secretary and Member of British Parliament (Exactly one year before Super Bowl XLV, February 6, 2010)

**“Unless the world community acts decisively and with great urgency, it is more likely than not that a weapon of mass destruction will be used in a terrorist attack somewhere in the world by the end of 2013.” ~Study by the Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism**

**Regarding nuclear terrorism:** "Is real, it is serious, it is growing, and it constitutes one of the greatest threats to our national security and, indeed, to global security." ~**John Brennan**, White House's Chief Counterterrorism Adviser

**"Young people in college were not even born when the Berlin Wall fell, and so they are not really cognizant of the Cold War and what that meant. Now, truly, the genie is out of the bottle and you have the possibility that terrorists ... could be stealing a bomb or buying a bomb"**  
~**Valerie Plame**, Former CIA Agent

**Regarding nuclear terrorism:** “My greatest fear is the Iranians acquire a nuclear weapon and give it to a terrorist organization. And there is a real threat of them doing that.” ~**John McCain**, United States Senator (Arizona)

“When we think of the major threats to our national security, the first to come to mind are nuclear proliferation, rogue states and global terrorism.” ~**Barack Obama** (Barry Soetoro), President of the United States

**Regarding Nuclear Terrorism:** "I don't believe it is a question of if it will happen. It is a question of when." ~**Deborah A. Wilber**, Director of the Office of Emergency Response at the Energy Department's National Nuclear Security Administration

“The only certain way for terrorists to achieve bona fide mass destruction would be to use a nuclear weapon.” ~**Gilmore Commission**

**“Nuclear proliferation - the proliferation of WMDs altogether - is one of the greatest dangers of our time.” ~Timothy Garton Ash, British Historian & Author**

**"We must find something that is tactical in size but strategic in impact. We must find a plot with its networks that cut across traditional lines of counter proliferation and counterterrorism. We must stop something from happening that we have never seen happen before."**  
~**Rolf Mowatt-Larssen**, Director of Office of Intelligence and Counterintelligence for the Department of Energy

**“For the risks that the leaders of a rogue state will use nuclear, chemical or biological weapons against us or our allies is the greatest security threat we face.” ~Madeleine Albright, United States Secretary of State (Former)**

“There is a risk that security weaknesses could allow terrorists to steal enough material, or even an actual device. The most crucial step in preventing nuclear terrorism is, therefore, to keep terrorists from acquiring access to such materials or devices... Given these risks, both highly enriched uranium and plutonium merit access controls as strict as those prescribed for nuclear weapons.” ~**Weapons of Mass Destruction Commission**, Weapons of Terror: Freeing the World of Nuclear, Biological, and Chemical Arms (WMD Commission, 2006)

“Nuclear terrorism is still often treated as science fiction. I wish it were. But unfortunately we live in a world of excess hazardous materials and abundant technological know-how, in which some terrorists clearly state their intention to inflict catastrophic casualties. Were such an attack to occur, it would not only cause widespread death and destruction, but would stagger the world economy... [creating] a second death toll throughout the developing world.” ~**General Kofi Annan**, Former UN Secretary, A Global Strategy for Fighting Terrorism (March 10, 2005)

“The gravest threat faced by the world is of an extremist group getting hold of nuclear weapons or materials.” ~**Mohammed ElBaradei**, Former Director-General of the International Atomic Energy Agency, Address to the United Nations General Assembly (September 14, 2009)

“We have firm knowledge, which is based on evidence and facts, of steady interest and tasks assigned to terrorists to acquire in any form what is called nuclear weapons, nuclear components.” ~**Anatoly Safonov**, Special Representative of the Russian President for International Cooperation in the Fight Against Terrorism and Transnational Organized Crime, (September 27, 2007)

“Is nuclear mega-terrorism inevitable? Harvard professors are known for being subtle or ambiguous, but I'll try to be clear. 'Is the worst yet to come?' My answer: Bet on it. Yes.” ~**Dr. Graham Allison**, Director of Harvard University's Belfer Center for Science and International Affairs

“Nuclear terrorism is one of the most serious threats of our time. Even one such attack could inflict mass casualties and create immense suffering and unwanted change in the world forever. This prospect should compel all of us to act to prevent such a catastrophe.” ~**U.N. Secretary-General Ban-Ki Moon** (June 13, 2007)

## **The Nuclear Bible: Quotes on Nuclear Terrorism In America**

**Regarding Nuclear Terrorism in America:** “Not a matter of if, but when.” ~**Gen. Eugene Habiger**, Former Executive Chief of Strategic Weapons at the Pentagon

“They like to play with people's minds, feel superior when doing so and they [The Elite] are going to hit America with a nuclear attack. That's certain.” ~**Eric May**, U.S. Army Captain

**Regarding Nuclear Terrorism in America:** “Virtually a certainty.” ~**Warren Buffet**, Philanthropist

**Regarding Nuclear Terrorism in America:** “We're not going to have a perfect batting average and it's important that Americans understand that.” ~**Michael Leiter**, Head of the National Counterterrorism Center at the White House

**Regarding Nuclear Terrorism in America:** “I don't believe in inevitability. But I think it's pretty close to being inevitable... Yes, I think it's probably a near thing.” ~**Michael Scheuer**, CIA's Osama bin Laden Desk

“The prospect that a nuclear-capable state may lose control of some of its weapons to terrorists is one of the greatest dangers the United States and its allies face.” ~**2006 Quadrennial Defense Review (QDR)**

“9/11 woke us up, a nuclear 9/11 could shut us down.” ~**Howard Bloom**, Graduate Psychology Department at New York University

"The fate of the world for the next Islamic year, if bin Laden has his way, will include the nuclear destruction of the United States." ~**Dr. Ayman Muhammad Rabaie** al-Zawahiri, Al Qaeda's Alleged # 2 Man

"I've been telling you for years that if they don't get their way, if all of this stuff that's happened does not enable them to bring about their world totalitarian socialist government, disarm the American people and create their New World Order, they'll blow up an American city with an atomic bomb. They will do it. I have said it probably a couple of hundred times." ~**William "Bill" Cooper** (September 11, 2001)

"The United States is unprepared to mitigate the consequences of a nuclear attack. We were unable to find any group of office with a coherent approach to this very important aspect of homeland security." ~**John Brinkerhoff**, Pentagon Analyst, Confidential Memo to the Joint Chiefs of Staff (July 31, 2005)

"The prospect of terrorists detonating a nuclear device on American soil sometime within the next quarter-century is real and growing. Such a calamitous attack would represent a game-changing event far exceeding the impact of 9/11 on the nation." ~**Gary Anthony Ackerman**, Research Director of the U.S. Homeland Security Department-Funded National Consortium for the Study of Terrorism and Responses to Terrorism

"The greatest threat now is a 9/11 occurring with a group of terrorists armed not with airline tickets and box cutters, but with a nuclear weapon in the middle of one of our own cities...there's a high probability of such an attempt." ~**Dick Cheney**, Former Vice President of the United States

"Sooner or later there will be a nuclear 9/11 [by Islamic terrorists] in an American city or that of a US ally... A terrorist nuclear attack against an American city could take many forms. A worst case scenario would be the detonation of a nuclear device within a city. Depending upon the size and sophistication of the weapon, it could kill hundreds of thousands or even millions of people." ~**David Krieger**, Nuclear Age Peace Foundation

"Washington and New York, two primary targets for Al Qaeda." ~**Howard Bloom**, Graduate Psychology Department at New York University

"I think, in fact, the situation with respect to Al Qaida to say that, you know, that was a big attack we had on 9/11, but it's not likely again, I just think that's dead wrong. I think the biggest strategic threat the United States faces today is the possibility of another 9/11 with a nuclear weapon or a biological agent of some kind, and I think Al Qaida is out there even as we meet trying to figure out how to do that." ~**Dick Cheney**, Former Vice President of the United States

"I think then the next question is if they [Al Qaeda] got the material, and they managed to make it into a bomb, could they somehow deliver it to Washington, or New York, or another major city somewhere around the world. I think, in my view, the answer is yes." ~**Dr. Matthew Bunn**, Senior Research Associate for the Project on Managing the Atom at the Belfer Center for Science and International Affairs at Harvard University's School of Government

"Al Qaeda's patient, decade-long effort to steal or construct an improvised nuclear device (IND) flows from their perception of the benefits of producing the image of a mushroom cloud rising over a U.S. city, just as the 9/11 attacks have altered the course of history." ~**Rolf Mowatt-Larssen**, Director of Office of Intelligence and Counterintelligence for the Department of Energy

"A terrorist, massive, casualty-producing event [will occur] somewhere in the Western world - it may be in the United States of America - that causes our population to question our own Constitution and to begin to militarize our country in order to avoid a repeat of another mass, casualty-producing event." ~**General Tommy Franks**, Cigar Aficionado (December 2003)

"No greater fear than a terrorist who is inside the United States with nuclear weapons." ~**Thomas Kean & Lee Hamilton**, Chair and Vice-Chair of the 9/11 Commission

"Sooner or later there will be a nuclear 9/11 [by Islamic terrorists] in an American city or that of a US ally... A terrorist nuclear attack against an American city could take many forms. A worst case scenario would be the detonation of a nuclear device within a city. Depending upon the size and sophistication of the weapon, it could kill hundreds of thousands or even millions of people."  
~**David Krieger**, Nuclear Age Peace Foundation (October 6, 2003)

"For the first time, preventing nuclear proliferation and nuclear terrorism is now at the top of America's nuclear agenda." ~**Barack Obama**

"The likelihood of a nuclear weapon attack in an American city is steadily increasing, and the consequences will be overwhelming,"  
~**Cham Dallas**, Director of the Center for Mass Destruction Defense (CMADD)

"The prospect of terrorists detonating a nuclear device on American soil sometime within the next quarter-century is real and growing. Such a calamitous attack would represent a game-changing event far exceeding the impact of 9/11 on the nation." ~**Gary Anthony Ackerman**, Research Director of the Homeland Security Department-Funded National Consortium for the Study of Terrorism and Responses to Terrorism

"Protecting Americans from nuclear terrorism rises above politics." ~**Lee H. Hamilton**

"The thing that keeps me awake at night is a nexus between terrorism and massive destruction...the possibility that a terrorist organization could either acquire a ready-made weapon or fabricate something improvised that would have a catastrophic effect for us." ~**Michele Flournoy**, Pentagon Undersecretary of Defense for Policy

"The threat of nuclear terrorism is growing faster than our ability to prevent an attack on our homeland." ~**Joseph Lieberman**, United States Senator (Connecticut) (2010)

"I'm absolutely convinced that the threat we face now, the idea of a terrorist in the middle of one of our cities with a nuclear weapon, is very real and that we have to use extraordinary measures to deal with it." ~**Dick Cheney**, Vice President of the United States (Former)

"The greatest threat to U.S. and global security is no longer a nuclear exchange between nations, but nuclear terrorism by violent extremists and nuclear proliferation to an increasing number of states." ~**Barack Obama** (Barry Soetoro), President of the United States

One of our gravest concerns is the entry of a nuclear device or materials into the U.S."  
~ **Charles E. Allen**, Undersecretary for Intelligence and Analysis and Chief Intelligence Officer at the Department of Homeland Security

## The Nuclear Bible: Quotes on Future Terror Attack

"It's the lone-wolf strategy that I think we have to pay attention to as the main threat to this country...Al Qaeda can be expected to continue and try to attack the United States until Osama bin Laden and his No. 2, Ayman al-Zawahri, are dead." ~**Leon Panetta**, Director of the CIA

"The near-term attacks ... will either rival or exceed the 9/11 attacks... And it's pretty clear that the nation's capital and New York city would be on any list..." ~**Tom Ridge**, Former DHS Secretary, December 2003

"Just like a football coach that might say, 'We're never going to fumble, we're never going to have an interception,' well that's not going to last long. In the war on terror, we're going to have to -- as hard as it is for people to hear this message -- we're going to have to get used to making risk management decisions that means we're not going to stop everything. But the important thing, the most important thing, is stopping the next 9/11." ~**Rolf Mowatt-Larsen**, Director of Office of Intelligence and Counterintelligence for the Department of Energy

"What we're going to see is the emergence of the lone wolf rather than the planning of large numbers of people to carry out large attacks...Explosives are getting more sophisticated." ~**Dianne Feinstein**, United States Senator (California)

"We now have capabilities in science and technology that raise the very realistic possibility that a small group of terrorists could kill not only thousands of people, as they did on September 11th, but hundreds of thousands of people. And that has changed the dimension of the threat we face." ~**Michael Chertoff**, Former Homeland Security Secretary, Yale University (April 7, 2008)

"We assess that Al-Qaeda's homeland plotting is likely to continue to focus on prominent political, economic, and infrastructure targets with the goal of producing mass casualties, visually dramatic destruction, significant economic aftershocks, and/or fear among the U.S. population. The group is proficient with conventional small arms and improvised explosive devices, and is innovative in creating new capabilities and overcoming security obstacles. We assess that Al-Qaeda will continue to try to acquire and employ chemical, biological, radiological, or nuclear material in attacks and would not hesitate to use them if it develops what it deems is sufficient capability." ~**National Intelligence Estimate (NIE, 2007)**

## The Nuclear Bible: Quotes on Al Qaeda & Osama bin Laden

"If there was ever a detonation in New York City or London or Johannesburg, the ramifications economically, politically, and from a security perspective would be devastating. And we know that organizations like al Qaeda are in the process of trying to secure a nuclear weapon -- a weapon of mass destruction that they have no compunction of using." ~**Barack Obama** (Barry Soetoro), President of the United States

"The enemy that struck on 9/11 is weakened and fractured yet it is still lethal and planning to hit us again." ~**Dick Cheney**, Former Vice President of the United States (January 7, 2006)

"Al Qaeda has tried to acquire or make nuclear weapons for at least 10 years [...] and continues to pursue its strategic goal of obtaining a nuclear capability." ~**The 9/11 Commission**

“Our main enemy is al Qaeda and its affiliates. Their allies choose their victims indiscriminately. They murder the innocent to advance a focused and clear ideology. They seek to establish a radical Islamic caliphate, so they can impose a brutal new order on unwilling people, much as Nazis and communists sought to do in the last century. This enemy will accept no compromise with the civilized world.”

~**President George W. Bush**, CENTCOM Coalition Conference, (May 1, 2007)

“Credible reporting indicates that Al Qaeda is moving forward with its plans to carry out a large-scale attack in the United States in an effort to disrupt our democratic process...” ~**Tom Ridge**, Former DHS Secretary (July 8, 2004)

“Al-Qaeda strives to move directly from the stage of obtaining the WMD to the stage of using it.” ~**Matti Steinberg**, Israeli Al-Qaeda Expert

“We’re fighting a war on terror because the enemy attacked us first, and hit us hard ... Al Qaeda’s leadership has said they have the right to “kill four million Americans,... For nearly six years now, the United States has been able to defeat their attempts to attack us here at home. Nobody can guarantee that we won’t be hit again ... All these authoritative statements point in chorus in the same direction: The enemy will strike again!” ~**President Dick Cheney**, Former U.S. Vice President, United States Military Academy Commencement, West Point, New York (May 26, 2008)

“The terrorists who have succeeded in carrying out spectacular attacks against Western targets in the past have been college-educated, technically proficient men who are capable of manufacturing and deploying chemical, radiological, and biological weapons. Al Qaeda attracts the kind of highly educated men who one day might be able to pull off such an attack.” ~**Peter Bergen**

“One mushroom cloud would change history. My deepest fear is that this is exactly what they [Al Qaeda] intend.” ~**George Tenet**, Director of the CIA (Central Intelligence Agency)

“Bin Laden’s final act could be a nuclear attack on America.” ~**Graham Allison**, Harvard Professor

“Bin Laden is a Creature of the CIA. He was created by the CIA. He was financed by the CIA. He was trained by the CIA.” ~**Bill “William Cooper**, 9/11/2001

“My greatest concern, and what keeps me awake at night, is that al-Qaida and its terrorist allies and affiliates could very well attack the United States.” ~**Leon Panetta**, Director of the CIA

“Al-Qaida wants a nuclear weapon to use.” ~**Charles E. Allen**, United States Department of Homeland Security’s Office of Intelligence and Analysis

“Al Qaeda’s reasoning runs counter to analytic convention that equates the ease of acquisition of chemical, biological or radiological weapons with an increasing likelihood of terrorist use — i.e., a terrorist attack employing crude weapons is therefore more likely than an attack using a nuclear or large scale biological weapon. In fact, it is the opposite.” ~**Rolf Mowatt-Larssen**, Director of Office of Intelligence and Counterintelligence for the Department of Energy

**On Al Qaeda’s future attacks:** “They want the most bang for the buck, and that is nuclear,” ~**Paul L. Williams**, Former FBI Official

“Today, as I’m in this chair, I can tell you it’s proliferation, the acquisition of a weapon of mass destruction by a terrorist organization. The difference between a nation-state doing so and a rogue group of a terrorist organization is that nation-states can be controlled. They know if they’re going to use one what’s going to happen. But terrorist groups will have no such limitation. That’s one aspect of the next decade that we’re going to have to focus on...It’s very clear that radical terrorist organizations, the most prominent of which of course is Al Qaeda will continue to try to obtain weapons of mass destruction - which I think is their singular goal, which would be a huge game changer.” ~**Janes Jones**, White House National Security

"There's been a long-term effort by Al-Qaida, to develop an improvised nuclear device," ~**Charles E. Allen**, United States Department of Homeland Security's Office of Intelligence and Analysis

"Jihadists have, since the mid-1990s, made at least 10 statements advocating the possession or use of nuclear weapons, and there have been at least a dozen reports of jihadists' attempts to acquire nuclear weapons, fissile material or technical knowledge. As an initial indicator of this trend, a recent analysis of online jihadist documents that deal explicitly with nuclear weapons has revealed that while their knowledge is still below par, there have been significant advances in the understanding of nuclear issues within the general jihadi community in only a few short years." ~**Gary Ackerman**, Research Director for the National Consortium for the Study of Terrorism and Responses to Terrorism at the University of Maryland

"It is the duty of Muslims to prepare as much force as possible to terrorize the enemies of God." ~**Osama bin Laden** (CIA Code Name: Tim Osmond)

"An Al-Qaida nuclear attack would be in the planning stages at the same time as several other plots, and only Al-Qaida's most senior leadership will know which plot will be approved." ~**Rolf Mowatt-Larssen**, Director of Office of Intelligence and Counterintelligence for the Department of Energy

## The Nuclear Bible: Quotes on Pakistan

"A very serious possibility that the next mass casualty terrorist attack on the United States will be postmarked Pakistan. What we're seeing going on in Pakistan now is a very dangerous phenomenon. The ideology of al Qaida, the ideology of global Islamic jihad that all jihadists should focus on the United States as the ultimate enemy, is gaining ground with groups beyond al Qaida." ~**Bruce Riedel**, Senior Fellow, Brookings Institution

"Let me make this clear. There are terrorists holed up in those mountains, that murdered 3,000 Americans... You have got to deal with Pakistan." ~**Barack Obama** (Barry Soetoro), President of the United States

"There is a lethal proximity between terrorists, extremists, and nuclear weapons insiders... The greatest threat of a loose nuke scenario stems from insiders in the nuclear establishment working with outsiders, people seeking a bomb or material to make a bomb. Nowhere in the world is this threat greater than in Pakistan. As Pakistan moves forward to face an uncertain future, the government faces an ongoing challenge to its authority and myriad threats against which it must defend... With the passage of time, the odds steadily increase that Pakistan will face a serious test of its nuclear security... For its part, the United States must be fully prepared to respond to this eventuality." ~**Rolf Mowatt-Larssen**, Senior fellow at Harvard University's Belfer Centre for Science and International Affairs & Former Head of U.S. Department of Energy's Intelligence and Counterintelligence Office

"Pakistan is an ally, but there is a grave danger it could also be an unwitting source of a terrorist attack on the United States — possibly with weapons of mass destruction." ~**Commission on Prevention of Weapons of Mass Destruction Proliferation and Terrorism**

"Pakistan already is bristling with nuclear weapons, all of which can hit Israel right now, all of which can strike the Mediterranean and well into the Indian Ocean." ~**Joe Biden**, U.S. Vice President

"Poorly secured nuclear material in the former Soviet Union, or secrets from a scientist in Pakistan could help build a bomb that detonates in Paris. The poppies in Afghanistan become the heroin in Berlin. The poverty and violence in Somalia breeds the terror of tomorrow." ~**Barack Obama** (Barry Soetoro), President of the United States

"There are 18 million potential delivery vehicles that could be used to smuggle a nuclear device into the United States. That is the number of cargo containers that arrive in the country annually. Of them, only 3 percent are inspected, and bills of lading do not have to be produced until the containers reach their destination, according to current regulations. Radioactivity is invisible, as was the case in the Chernobyl disaster in 1986. There is no way of knowing in advance the impact on health 10 years hence. It is more a weapon of mass disruption than mass destruction. An unidentified former chief of Pakistan's Inter-Services Intelligence (ISI) agency is believed to be the man who coordinated bin Laden's nuclear ambitions. One local intelligence source speculated that before September 11, a dirty bomb could have been smuggled out of Afghanistan in a truck all the way to Karachi and then shipped out in a cargo container." ~**Arnaud de Borchgrave**, The Washington Times (December 10, 2001)

**Pakistan:** "The world's No. 1 nuclear proliferator." ~**Carnegie Endowment for International Peace**

"Al Qaeda, operating from its safe haven in Pakistan's tribal areas, remains the most clear and present danger to the safety of the United States," ~**Michael Hayden**, U.S. General

"Pakistani state failure would provide transnational terrorist groups and other extremist organizations an opportunity to acquire nuclear weapons and a safe haven from which to plan and launch attacks." ~**General David H. Petraeus**, Commander, U.S. Central Command (March 31, 2009)

"Were one to map terrorism and weapons of mass destruction today, all roads would intersect in Pakistan. It has nuclear weapons and a history of unstable governments, and parts of its territory are currently a safe haven for al Qaeda and other terrorists." ~**Commission on Prevention of Weapons of Mass Destruction Proliferation and Terrorism**

"The most dangerous country for the U.S. now is Pakistan. ... We haven't been this vulnerable since the British burned Washington in 1814." ~**Robert Gallucci**, Former U.N. Weapons Inspector, Dean of Georgetown University's School of Foreign Service

"I think there is a very real threat that if Musharraf falls or is assassinated, that a radical Islamic government will take control. Then you would have a very grave threat of Pakistan's nuclear arsenal being used for international terrorist purposes." ~**John Bolton**

"A greater possibility of a nuclear meltdown in Pakistan than anywhere else in the world. The region has more violent extremists than any other, the country is unstable, and its arsenal of nuclear weapons is expanding." ~**Rolf Mowatt-Larssen**, Former investigator with the CIA and the US Department of Energy

"America's margin of safety is shrinking, not growing... Were one to map terrorism and weapons of mass destruction today, all roads would intersect in Pakistan." ~**Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism**

"It's very clear. This is a threat that we share, we have a common enemy. There is no time to waste in going after that common enemy as hard and fast as we can and we cannot tolerate having people encouraged, directed, trained and sent from Pakistan to attack us... I'm not saying that they're at the highest levels but I believe that somewhere in this government are people who know where Osama bin Laden and al Qaeda is, where Mullah Omar and the leadership of the Afghan Taliban is and we expect more cooperation to help us bring to justice, capture or kill, those who attacked us on 9/11... We've made it very clear that, if, heaven forbid, that an attack like this, if we can trace back to Pakistan, were to have been successful, there would be very severe consequences." ~**Hillary Clinton**, U.S. Secretary of State

“There really may be a terror strike, hah, legitimately, coming out of Pakistan. This should be the major news. Every day, virtually, they’re sending predator drones in and killing scores of innocent people. I believe the number is well over a 1000 now in the last year. This is as old as the Old Testament; it’s an eye for an eye. You have the greatest refugee crisis going on in Pakistan since Rwanda and they are escalating that war even more. And of course, the CIA is behind sending these drones in. Since when was the CIA supposed to be in the battle like this? I thought they were only there to collect intelligence. So we are really looking at something Alex where we have well over 200,000 Pakistani’s in this country. They are watching their families get murdered. You think they are gonna be angry? They are going to say when terrorists strike they hate our freedom and liberty. How about they hate your foreign policy and they hate you for killing innocent people. Look what happened in Pakistan yesterday; they strafed a passenger bus. There is plenty of hatred out there. False-flag or real, we are forecasting in 2010 a 9/11 magnitude terror strike. With the [U.S.] foreign policy going in the direction it’s going in, of course there is going to be major reprisals against the United States. Anybody that thinks differently is out of their mind. You can’t invade other countries, occupy them, kill hundreds of thousands of people and not want people to get even with you. How they do it; whether it’s nuclear, a biological attack, whether it’s a, whatever it might be, in a stadium, in a shopping mall, it’s going to happen.” ~**Gerald Celente**

**"It may be that A. Q. Khan & Associates already have passed bomb-grade nuclear fuel to the Qaeda, and we are in for the worst" ~Paul Leventhal, President of the Nuclear Control Institute**

"I wouldn't be at all surprised if nuclear weapons are used over the next 15 or 20 years first and foremost by a terrorist group that gets its hands on a Russian nuclear weapon or a Pakistani nuclear weapon. " ~**Bruce Blair**, President of the Center for Defense

**"Were one to map terrorism and weapons of mass destruction today, all roads would intersect in Pakistan." ~Study by the Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism**

## **The Nuclear Bible: Quotes on Post Nuclear America**

"If one bomb goes off, there are likely to be more to follow. This fact, that nuclear terrorism will appear as a syndrome rather than a single episode, has major consequences." ~**Ashton Carter**, Senior Defense Department Official

“It means the potential of a weapon of mass destruction and a terrorist, massive, casualty-producing event somewhere in the Western world – it may be in the United States of America – that causes our population to question our own Constitution and to begin to militarize our country in order to avoid a repeat of another mass, casualty-producing event. Which in fact, then begins to unravel the fabric of our Constitution. Two steps, very, very important.... the Western world, the free world, loses what it cherishes most, and that is freedom and liberty we’ve seen for a couple of hundred years in this grand experiment that we call democracy” ~**Tommy Franks**, Retired U.S. General

“We are on the precipice of a crisis, a Constitutional crisis. The checks and balances, which have been at the core of this Republic, are about to be evaporated by the nuclear option.” ~**Charles Schumer**, United States Senator, New York

“We may yet work up to some serious shooting war, or maybe some acts of urban genocide committed with rogue nuclear weapons. But if that were the case, why would we call that "9/11"? If Washington disappeared in a mushroom cloud, we'd give that huge event a different name.” ~**Bruce Sterling**, American Author

**"If those [Nuclear] Bombs go off, there will be no fucking Constitution." ~FBI Agent, Unthinkable**

"The United States will make clear that it reserves the right to respond with overwhelming force – including potentially nuclear weapons – to the use of [weapons of mass destruction] against the United States, our forces abroad, and friends and allies." ~**NSPD 17**

**"One has to recall that the moment after a nuclear bomb goes off, someone -- either the perpetrator or another terrorist group -- is going to call up and say, "I've got five more, and they're already hidden in U.S. cities, and I'm going to start setting them off unless you do X, Y and Z." And one bomb having just gone off, they will have substantial credibility." ~Dr. Matthew Bunn, Senior Research Associate for the Project on Managing the Atom at the Belfer Center for Science and International Affairs at Harvard University's School of Government**

"The media will convince the American people that a state of anarchy exists within the major cities. They are now building their case almost nightly on TV and daily in the newspapers. When public opinion has been won to this idea, they intend to state that a terrorist group armed with a nuclear weapon has entered the United States and that they plan to detonate this device in one of our cities (This is now being set up by the crisis in the Middle East). The Government will then suspend the Constitution and declare martial law." ~**William "Bill" Cooper**, Author of *Behold The Pale Horse*

## **The Nuclear Bible: Quotes on Nuclear War**

"Have no fear for atomic energy 'cause none of them can stop the time." ~**Bob Marley**

"Pro football is like nuclear warfare. There are no winners, only survivors." ~**Frank Gifford**, NFL Hall of Famer

"The World will note that the first atomic bomb was dropped on Hiroshima a military base. That was because we wished in this first attack to avoid, insofar as possible, the killing of civilians." ~**President Harry S. Truman**, Radio Speech to America (August 9, 1945)

"For while the threat of nuclear holocaust has been significantly reduced, the world remains a very unsettled and dangerous place."  
~**William S. Cohen**, United States Secretary of Defense (Former)

"We have discovered the most terrible bomb in the history of the world. It may be the fire destruction prophesied in the Euphrates Valley Era, after Noah and his fabulous Ark.... This weapon is to be used against Japan ... [We] will use it so that military objectives and soldiers and sailors are the target and not women and children. Even if the Japs are savages, ruthless, merciless and fanatic, we as the leader of the world for the common welfare cannot drop that terrible bomb on the old capital or the new. ... The target will be a purely military one... It seems to be the most terrible thing ever discovered, but it can be made the most useful." ~**President Harry S. Truman**, Diary, July 25, 1945)

"It would be our policy to use nuclear weapons wherever we felt it necessary to protect our forces and achieve our objectives." ~**Robert McNamara**, Former United States Secretary of Defense

"After World War II, the Americans became more aggressive and oppressive, especially in the Muslim world. American history does not distinguish between civilians and military, and not even women and children. They are the ones who used the bombs against Nagasaki. Can these bombs distinguish between infants and military? America does not have a religion that will prevent it from destroying all people."  
~**Osama bin Laden**

"So today, I state clearly and with conviction America's commitment to seek the peace and security of a world without nuclear weapons. I'm not naive. This goal will not be reached quickly – perhaps not in my lifetime. It will take patience and persistence. But now we, too, must ignore the voices who tell us that the world cannot change. We have to insist, 'Yes, we can.'" ~**Barrack Hussein Obama**, (Barry Soetoro), President of the United States

"My guess is that nuclear weapons will be used sometime in the next hundred years, but that their use is much more likely to be small and limited than widespread and unconstrained." ~**Herman Kahn**, Former Nuclear Strategist, RAND Corporation

“As far as I know, the most conservative estimates of the number of Americans who would be killed in a major nuclear attack, with everything working as well as can be hoped and all foreseeable precautions taken, run to about fifty million.” ~**George Wald**, American Scientist & Nobel Prize Winner (1967)

“As a nuclear power - as the only nuclear power to have used a nuclear weapon - the United States has a moral responsibility to act.” ~**Barack Obama** (Barry Soetoro), President of the United States

“I told my therapist I was having nightmares about nuclear explosions. He said don't worry it's not the end of the world.” ~**Jay London**, American Comedian

## **The Nuclear Bible: Miscellaneous Quotes**

“Nuclear weapons kill Americans - they don't kill Republicans or Democrats - they kill Americans.” ~**Joe Wilson**, United States House of Representatives (South Carolina)

“Experts estimate that terrorists with 50 kilograms of highly enriched uranium (HEU), an amount that would fit into six one-litre milk cartons, need only smuggle it across borders in order to create an improvised nuclear device that could level a medium-sized city.” ~**High-Level Panel on Threats, Challenges, and Change, A More Secure World: Our Shared Responsibility** (United Nations, 2004)

“It is not viable for one country to demand a right to increase and upgrade its nuclear weapons capabilities while asking others to eliminate theirs.” ~**John Bruton**, Irish Politician

“Right now what we have is a dictatorship run by a gang...It's a gang under Obama ...Savage predicts: a Reichstag fire-like event, sometime in the next year or two, in America, that will have been conducted by the government and blamed upon subversive elements in order to permit a dictatorship, a naked dictatorship, to emerge in this country [United States].” ~**Michael “Weiner” Savage**, American Radio Host

“The challenges of our time threaten the peace and prosperity of every single nation, and no one nation can meet these challenges alone...[T]he theft of loose nuclear materials could lead to the extermination of any city on Earth.” ~**Barack Obama** (Barry Soetoro), President of the United States of America

“A nuclear weapon reaching a terrorist group, which will not hesitate to use it immediately. They will send it in a container with a GPS to a leading port in the U.S., Europe, or Israel.” ~**Ehud Barak**, Israeli Defense Minister

“[Al Shabaab operatives] are certainly a real threat to U.S. security and an increasing threat to U.S. security...They [Al Shabaab] have been pretty busy in Texas.” ~**Joan Neuhaus Schaan**, Rice University Baker Institute Fellow

“But I think now these terrorists would probably do something much more spectacular than bring down a plane; they'll probably blow up a mall at Christmas, or blow up a major sporting event, or poison the water supply, or even blow up a big city subway system...they'd kill a lot more people” ~**John Duncan**, U.S. Congressman

“Nuclear holocaust might eliminate the Internet.” ~**Taylor Hanson**, Musician

“All we need is the right major crisis and the nations will accept the New World Order.” ~**David Rockefeller**

“The really frightening thing about HEU [Highly Enriched Uranium] is that it is so easy to make an atom bomb out of it. You only need a couple of PhD students and a small amount of material. I think we should be very frightened about the possibility of nuclear terrorism; I'm surprised it hasn't happened yet.” ~**Frank Barnaby**, Former Aldermaston Nuclear Physicist

“Nuclear weapons and TV have simply intensified the consequences of our tendencies, upped the stakes.” ~**David Foster Wallace**, American Author

"One hundred suitcase-size nuclear bombs were lost by Russia." ~**Gerald Celente**, Professional Futurist, Trends Research

"We consider the Super Bowl so high profile that we see it as attractive to terrorists." ~**Milt Ahlerich**, NFL Vice-President of Security, Former FBI Agent of 25 Years

"We must perfect a worldwide system of accountability for nuclear, biological and chemical weapons." ~**Richard Lugar**, United States Senator (Indiana)

"I dare to say that at any given time, daytime or nighttime, one can get on a boat and traverse back and forth between Texas and Mexico and not get caught. If smugglers can bring in tons of marijuana and cocaine at one time and can smuggle 20 to 30 persons at one time, one can just imagine how easy it would be to bring in 2 to 3 terrorists or their weapons of mass destruction across the river and not be detected. Chances of apprehension are very slim." ~**Sheriff Sigifredo Gonzalez**

"Watch, we're gonna have an international crisis, a generated crisis, to test the mettle of this guy [Obama]. And he's gonna have to make some really tough - I don't know what the decision's gonna be, but I promise you it will occur. As a student of history and having served with seven presidents, I guarantee you it's gonna happen. I can give you at least four or five scenarios from where it might originate. And he's gonna need help. And the kind of help he's gonna need is, he's gonna need you, not financially to help him, we're gonna need you to use your influence, your influence within the community, to stand with him." ~**Joe Biden**, U.S. Vice President

"We need the UN, to deal with the threats to our common security from nuclear, chemical and biological weapons, not only in the case of Iraq. They must be tackled by the international community together, by strengthening conventions, treaties and agreements." ~**Ylva Anna Maria Lindh**, Former Swedish Minister for Foreign Affairs

"A nation can survive its fools, and even the ambitious. But it cannot survive treason from within. An enemy at the gates is less formidable, for he is known and carries his banner openly. But the traitor moves amongst those within the gate freely, his sly whispers rustling through all the alleys, heard in the very halls of government itself. For the traitor appears not a traitor; he speaks in accents familiar to his victims, and he wears their face and their arguments, he appeals to the baseness that lies deep in the hearts of all men. He rots the soul of a nation, he works secretly and unknown in the night to undermine the pillars of the city, he infects the body politic so that it can no longer resist. A murder is less to fear." ~**Marcus Tullius Cicero**

Regarding the Super Bowl: "Our tactical teams have been training throughout the year for different scenarios -- active shooter, bombs, and other hazards related to chemical, biological, radiological, or nuclear threats." ~**John Gillies**, FBI Special Agent

"We must dare to think 'unthinkable' thoughts. We must learn to explore all the options and possibilities that confront us in a complex and rapidly changing world. We must learn to welcome and not to fear the voices of dissent. We must dare to think about 'unthinkable things' because when things become unthinkable, thinking stops and action becomes mindless." ~**James W. Fulbright**

"The tough mind is sharp and penetrating, breaking through the crust of legends and myths and sifting the true from the false. The tough-minded individual is astute and discerning. He has a strong austere quality that makes for firmness of purpose and solidness of commitment. Who doubts that this toughness is one of man's greatest needs? Rarely do we find men who willingly engage in hard, solid thinking. There is an almost universal quest for easy answers and half-baked solutions. Nothing pains some people more than having to think" ~**Martin Luther King**

"How will they get their great war? How will they engineer it? How will they sell it? Will they let terrorists in with a nuke, or will they stage the nuke attack?" ~**Alex Jones**

“When hostilities commenced in Europe, in 1939, it was realized by these groups that the American people had no intention of entering the war. They knew it would be worse than useless to ask us for a declaration of war at that time. But they believed that this country could be entered into the war in very much the same way we were entered into the last one. They planned: first, to prepare the United States for foreign war under the guise of American defense; second, to involve us in the war, step by step, without our realization; third, to create a series of incidents which would force us into the actual conflict. These plans were of course, to be covered and assisted by the full power of their propaganda. Our theaters soon became filled with plays portraying the glory of war. Newsreels lost all semblance of objectivity. Newspapers and magazines began to lose advertising if they carried anti-war articles. A smear campaign was instituted against individuals who opposed intervention. The terms "fifth columnist," "traitor," "Nazi," "anti-Semitic" were thrown ceaselessly at any one who dared to suggest that it was not to the best interests of the United States to enter the war. Men lost their jobs if they were frankly anti-war. Many others dared no longer speak. We are on the verge of a war for which we are still unprepared, and for which no one has offered a feasible plan for victory--a war which cannot be won without sending our soldiers across the ocean to force a landing on a hostile coast against armies stronger than our own. We are on the verge of war, but it is not yet too late to stay out. It is not too late to show that no amount of money, or propaganda, or patronage can force a free and independent people into war against its will. It is not yet too late to retrieve and to maintain the independent American destiny that our forefathers established in this new world. The entire future rests upon our shoulders. It depends upon our action, our courage, and our intelligence. If you oppose our intervention in the war, now is the time to make your voice heard.” ~**Charles Lindbergh**, United States Senator (September 11, 1941)

“War is murder. And the military preparations now being made for a potential major confrontation are aimed at collective murder. In a nuclear age the victims would be numbered by the millions. This naked truth must be faced.” ~**Alva Myrdal**, Swedish Politician & Nobel Prize Winner (1982)

**Conclusion:** Should a nuclear attack occur in America, the aforementioned individuals should be immediately questioned as potential suspects tried in a court of law accordingly. It is still a mystery how certain politicians are so privy to the inner working of Al Qaeda and their top secret plan to nuke America, unless they actually are Al Qaeda!

## The Nuclear Bible: Nuclear Scholars & White Papers

**Intro:** The following scholarly whitepapers, research papers, think tanks papers, and journal articles cover the topics of Nuclear Terror and Pakistan in-depth. The plan is clear; terrorists WILL acquire nuclear weapons. Whether they make it, steal it, find it or buy it, they will acquire one. If these papers are to be believed, nuclear terror is written in stone, and once one nuke goes off another will follow.

### A Few Educated Guesses:

**Nuke # 1:** The NFL Super Bowl XLV , Arlington (Dallas), Texas, USA (February 6, 2011)

**Nuke # 2:** Washington D.C., USA (February 9, 2011, March 9, 2011 (Ash Wednesday), or the 9<sup>th</sup> of a month yet to be determined.

**Date:** August 1997

**Source:** Institute For Science And International Security, Kevin O'Neill

**Title/Headline:** *The Nuclear Terrorist Threat*

**Abstract:** The proliferation of nuclear weapons or radiological dispersal devices to terrorist groups is perhaps one of the most frightening threats to U.S. security. Nuclear materials, technologies and know-how are more widely available today than ever before. Small quantities of both fissile materials and highly radioactive materials, sufficient to manufacture a radiological dispersal device, are actively traded on the black market. **Although terrorist groups are not suspected of actually acquiring such materials in large quantities, it is difficult to know for sure. A nuclear detonation by a terrorist group would likely result in an unprecedented number of casualties.** In contrast, a radiological dispersal attack would probably be less violent, but could significantly contaminate an urban center, causing economic and social disruption. **Both types of attacks would have significant psychological impacts on the entire population.** Whether terrorists could make nuclear weapons has been addressed by many governmental and nongovernmental groups. The fundamental conclusion is that terrorists would find obtaining the wherewithal to make nuclear weapons a difficult task. **Nonetheless, terrorist organizations could over time develop such a capability, if they can obtain sufficient fissile material, likely through theft. Experts and governments officials have long acknowledged that a sub-national terrorist group could gather the technical skills and information needed to manufacture a nuclear weapon, given access to the necessary materials.** In the mid-1970s, the Congressional Office of Technology Assessment (OTA) concluded that “a small group of people, none of whom have ever had access to the classified literature, could possibly design and build a crude nuclear device.” In order to manufacture a crude nuclear weapon, **a terrorist organization needs to possess specialized expertise in areas such as high explosives, propellants, electronics, nuclear physics, chemistry and engineering.** Knowledge of the physical and chemical properties of plutonium or highly enriched uranium (HEU) is essential. The terrorist group also must obtain detailed design drawings of weapons components and of the final assembled device. In the past, such information was difficult to come by in the open literature. **Today, according to Defense Department and Energy Department officials, important and useful information about the design and assembly of nuclear weapons or weapons components can be found on internet sites and World Wide Web pages.** Given this anonymity, the internet can function as an instantaneous, global clearinghouse of information and provide a useful first source for terrorist groups, which otherwise would have to search the public literature in more conspicuous ways. Terrorists bent on assembling a nuclear explosive must acquire sufficient quantities of plutonium or HEU that is in a weapons-usable form. Depending on the quantity and form of material that it initially acquires, **a subnational terrorist group may need to convert fissile materials from one form to another, requiring expertise in chemistry and access to necessary chemicals and equipment. Much of the world's less-protected stocks of fissile material cannot be used directly in nuclear weapons.** By one recent estimate, over 700 tonnes of plutonium is contained in highly radioactive spent nuclear reactor fuel that has been discharged from commercial nuclear power reactors.<sup>4</sup> Before this plutonium could be used in nuclear weapons, it would have to be separated from the remaining uranium, cladding and fission products in a laboratory or reprocessing facility. **It is highly unlikely that a subnational terrorist group would be able to gain access to such facilities or carry out such activities without being detected.** The detonation of a crude nuclear device by a terrorist group would be devastating. Although the actual yield of such a device is highly variable, the OTA concluded that “a clever and competent group could design and construct a device which would produce a significant nuclear yield (i.e., a yield *much* greater than the yield of an equal mass of high explosive)” (emphasis in original). **Beyond the immediate physical damage caused by a nuclear terrorist attack, the psychological, economic and sociological impacts of such an attack would be devastating.** Unlike natural disasters, a nuclear attack may occur without warning, leaving little chance for preparation. **An attack in an urban area would not only kill large numbers of people, it also could render the area virtually uninhabitable for a long period of time.** Survivors may have to be relocated; hospitals and shelters would quickly become filled with displaced persons, many of them injured or suffering from radiation exposure. **The trauma of such an attack would leave lasting psychological and emotional scars on the survivors.** The clean up task would no doubt rival even the largest efforts undertaken following comparable natural disasters, such as hurricanes, **and would require long-term commitments from local, state and federal relief programs. The proliferation of nuclear weapons or radiological dispersal devices to terrorist groups is perhaps one of the most frightening threats to U.S. security.** Nuclear

materials, technologies and know-how are more widely available today than ever before. Small quantities of both fissile materials and highly radioactive materials, sufficient to manufacture a radiological dispersal device, are actively traded on the black market. **Although terrorist groups are not known to have actually acquired such materials, it is difficult to know for sure.** A nuclear detonation by a terrorist group would likely result in an unprecedented number of casualties. In contrast, a radiological dispersal attack would probably be less violent, but could significantly contaminate an urban center, causing economic and social disruption. Both types of attacks would have significant psychological impacts on the affected population. Opinions on terrorism are changing. In the past, analysts have regarded nuclear terrorism as unlikely, given the international backlash against such an attack. **Today, a new breed of terrorists, motivated by religious rather than political goals, seem less concerned with creating large numbers of casualties. Such groups might use nuclear weapons if given the chance** (O'Neill, 1997).

**Title/Headline:** What If The Terrorists Go Nuclear?

**Abstract:** As the United States proceeds with its war on terrorism, one of the darkest clouds hanging over the campaign is the question of whether the perpetrators of the Sept. 11 horrors could strike again, this time with nuclear weapons. It seems doubtful that U.S. intelligence can definitively answer this question. Absent perfect foresight, one can nonetheless outline some of the **plausible threats and identify the range of U.S. responses that could reduce the exposure of citizens and troops to nuclear attack. The most accessible nuclear device for any terrorist would be a radiological dispersion bomb. This so-called 'dirty bomb' would consist of waste by-products from nuclear reactors wrapped in conventional explosives, which upon detonation would spew deadly radioactive particles into the environment.** This is an expedient weapon, in that radioactive waste material is relatively easy to obtain. Radioactive waste is widely found throughout the world, and in general is not as well guarded as actual nuclear weapons. **In the United States, radioactive waste is located at more than 70 commercial nuclear power sites, in 31 states. Enormous quantities also exist overseas — in Europe and Japan in particular. Tons of wastes are transported long distances, including between continents (Japan to Europe and back). In Russia, security for nuclear waste is especially poor, and the potential for diversion and actual use by Islamic radicals has been shown to be very real indeed.** In 1996, Islamic rebels from the break-away province of Chechnya planted, but did not detonate, such a device in Moscow's Izmailovo park to demonstrate Russia's vulnerability. **This dirty bomb consisted of a deadly brew of dynamite and one of the highly radioactive by-products of nuclear fission — Cesium.** Extreme versions of such gamma-ray emitting bombs, such as a dynamite-laden casket of spent fuel from a nuclear power plant, would not kill quite as many people as died on Sept. 11. **A worst-case calculation for an explosion in downtown Manhattan during noontime: more than 2,000 deaths and many thousands more suffering from radiation poisoning. Treatment of those exposed would be greatly hampered by inadequate medical facilities and training. The United States has only a single hospital emergency room dedicated to treating patients exposed to radiation hazards, at Oak Ridge, Tenn.** A credible threat to explode such a bomb in a U.S. city could have a powerful impact on the conduct of U.S. foreign and military policy, and could possibly have a paralyzing effect. Not only would the potential loss of life be considerable, but also the prospect of mass evacuation of dense urban centers would loom large in the minds of policy-makers. **A terrorist attack on a commercial nuclear power plant with a commercial jet or heavy munitions could have a similar affect to a radiological bomb, and cause for greater casualties. If such an attack were to cause either a meltdown of the reactor core (similar to the Chernobyl disaster), or a dispersal of the spent fuel waste on the site, extensive casualties could be expected.** In such an instance, the power plant would be the source of the radiological contamination, and the plane or armament would be the explosive mechanism for spreading lethal radiation over large areas. **The threat from radiological dispersion dims in comparison to the possibility that terrorists could build or obtain an actual atomic bomb. An explosion of even low yield could kill hundreds of thousands of people. A relatively small bomb, say 15-kilotons, detonated in Manhattan could immediately kill upwards of 100,000 inhabitants, followed by a comparable number of deaths in the lingering aftermath.** Fortunately, bomb-grade nuclear fissile material (highly enriched uranium or plutonium) is relatively heavily guarded in most, if not all, nuclear weapon states. Nonetheless, the possibility of diversion remains. **Massive quantities of fissile material exist around the world. Sophisticated terrorists could fairly readily design and fabricate a workable atomic bomb once they manage to acquire the precious deadly ingredients (the Hiroshima bomb which used a simple gun-barrel design is the prime example).**

**Pakistan:** Another potential source of diversion is the Pakistani nuclear arsenal, estimated to number around 30-50 atomic bombs with explosive yields ranging from 1 to 15 kilotons. The weapons are probably assembled at Wah (50 miles from Afghanistan), and are stored primarily at Sargodha near a missile complex close to the border with India and only about 250 miles from Afghanistan. **Pakistan's military government is walking a tightrope between pressure from the Bush administration on one side and anti-American Islamic militants on the other.** Growing street opposition from the latter could certainly de-stabilize or even topple the regime, and in the midst of such dissolution, the weakening of nuclear security would inevitably occur. **The ranks of government and military personnel are also fairly riddled with sympathizers of the radical Islamic faction, posing a distinct risk of insiders colluding to spirit away a bomb or two for bin Laden or other terrorists.** In any case, control over Pakistan's arsenal could all too readily buckle in a serious crisis inside the country. **Pakistani weapons are believed to lack sophisticated locks and other safeguards to prevent their unauthorized use. Loose nukes in the region would have unpredictable consequences, almost all of which would militate against the U.S. cause, not to mention the safety of U.S. forces dispatched there.** With such a panoply of possible threats, there are a number of actions that could be taken in the near term to shore up nuclear security. **The Pakistani situation, in particular, deserves careful monitoring — using surveillance and intelligence assets in the region. The U.S. government could urge Pakistani authorities to further consolidate and/or disable their nuclear devices, and beef up security around storage sites — and even offer security equipment and guards. In**

fact, the U.S. government should be prepared to provide arsenal security even without Islamabad's permission if emergency circumstances dictate. **The U.S. government also could begin drawing up contingency plans to 'rescue' the arsenal if the need arises. U.S. Special Operations forces should be kept on high alert for quick, covert insertion to the sites to disable or even re-locate weapons to prevent their capture by unauthorized persons.** It must be noted, however, that inserting commandos on short notice to gain control over the arsenal would put them in considerable jeopardy, and disarming the weapons could be dangerous indeed. **Pakistani weapons are believed to have quite primitive safety devices — they almost certainly lack the "one-point" safety design of U.S. weapons — which means that a Pakistani nuclear weapon could more easily detonate if subjected to conventional firefights between soldiers using grenades or similar munitions. Therefore, it would be highly desirable for nuclear experts from the Department of Energy to accompany any military troops in such a scenario.** DoE nuclear response teams, known as Nuclear Emergency Search Teams (NEST), are formed in a crisis from nearly 1,000 highly trained and knowledgeable individuals, and could be dispatched to the region to assist in locating and disarming any weapons. **The teams and their equipment, some on alert staging out of Nellis Air Force Base in Nevada, know the design of Pakistani weapons (based on defector reports), and could x-ray the weapons and devise a disabling procedure on the spot. Compared to the military's commandos, these experienced civilian teams would stand a better chance of blowing up the triggering mechanisms on Pakistani weapons without causing the bomb to go off.** Another option for response in a crisis would be for such a joint military-civilian insertion mission to link up with a Russian counterpart to conduct search and disable missions together in the region. The mutual benefits would be considerable, and such a joint U.S.-Russian operation would have lasting positive effects on future cooperation.

**Nuclear Terror Within The United States:** The first steps to mitigate the possibility of nuclear terrorism would be serious and rapid effort to build intelligence capabilities that might warn of a potential attack, and as explained above, to take actions aimed at shoring up possible sources of nuclear material. In the meantime, increased monitoring at ports also must continue and be intensified, despite the negative ramifications on international trade. Inspection of containers up to Sept. 11 has been rather cursory, and infrequent. **This is changing, just as already the U.S. government and airlines are scrambling to beef up airline and airport security. Some of the additional security measures would include those exported to Russia under the Nunn-Lugar program.** A prime example is the transfer of nuclear materials detectors to Russia, which were then emplaced at strategic border crossings, ports and airports to detect diversion. **The U.S. government might consider the use of such equipment at similar American locations, particularly ports, as a method to detect and intercept materials being smuggled into the country. In addition, there are a number of methods to increase security around nuclear power plants that already are being discussed by U.S. authorities and nuclear plant operators, such as expanding the perimeters of restricted airspace.** Such measures should be implemented as rapidly as possible. Finally, NEST operations would go into effect if a credible threat of a dirty bomb or a full-fledged nuclear weapon were to manifest itself. **If the information available would allow the U.S. teams to locate the city affected, hundreds of team members would fan out along a matrix of the threat region to detect the bomb. Carrying gamma- and neutron-detectors inside carrying cases to preserve secrecy, the NEST members would cover the suspect area on foot, in vans and helicopters — going in and out of buildings hoping to register the tell-tale signals of a hidden bomb.** Once found, the bomb is x-rayed, "sniffed" and otherwise analyzed to determine its characteristics. **Obviously, intelligence that helps localize the bomb is the main key to success. Just as obviously, intelligence of such quality is seldom available — as proven on Sept. 11. Such a search could be truly looking for a needle in a haystack, as detection normally would succeed only if the detectors come within a few feet or so of the hidden bomb.** Disabling a bomb is easy by comparison. A radiological bomb might be surrounded by a tent enclosure several tens of feet in height and width, then filled with a special foam to contain the deadly radioactive material (such as Cesium 137) if the bomb explodes during further defusing attempts. For a nuclear device, a set of options for disabling the weapon are available including using explosives to wreck the bomb's wiring to prevent the triggering of the nuclear detonators. **Because of the difficulty inherent in finding a nuclear weapon once it entered the country, near-term U.S. response efforts would be best focused on prevention and intervention to secure possible sources of nuclear terrorism (Blair, 2001).**

**Title/Headline:** *Nuclear Terrorism*

**Abstract:** Recent reports of alleged terrorist plans to build a 'dirty bomb' have heightened longstanding concerns about nuclear terrorism. This briefing outlines possible forms of attack, such as: **Detonation of a nuclear weapon. Attacks involving radioactive materials. Attacks on nuclear facilities.** The detonation of a nuclear weapon, although extremely difficult for terrorists to accomplish, could have devastating consequences. Terrorists might attempt either to steal a nuclear weapon or construct their own device from illegally acquired nuclear material. **There are over 30,000 nuclear weapons worldwide, more than 90% of which belong to the USA or Russia.** Nuclear weapons are held under high security, although standards vary internationally and the US National Intelligence Council (NIC) has voiced concerns about internal security at Russian weapons complexes. **There is no evidence to date that any terrorist group has acquired nuclear weapons or enough nuclear material to construct one – although there is evidence that both Aum Shinrikyo and Al Qaida have attempted to do so.** The yield of a nuclear weapon constructed or stolen by terrorists could range from only a few tonnes to many thousands of tonnes. However, even a low yield device could have significant consequences. Attacks involving radioactive materials Radiological attacks involve dispersal of radioactive material but not a nuclear explosion. They pose fewer technical difficulties than deploying a nuclear weapon. Many radioactive materials are easier to acquire than nuclear materials and are used extensively in many countries, in medicine, industry, agriculture and research. Alternatively terrorists might set off a dirty bomb, using conventional explosives to disperse radioactive material over a wide area. **To date, no terrorist group has detonated a dirty bomb.** The effects are hard to predict, as they would depend on factors such as weather conditions and the type of material used. People could be exposed to radioactivity, not only from the initial dust cloud, but also from particles that settled on the ground and buildings or entered water or food

supplies. **Although such an attack may not necessarily result in large numbers of casualties, there could be significant psychological and social impact.** According to the Federation of American Scientists, dirty bombs could contaminate large urban areas above recommended exposure limits, with potentially serious economic implications. The duration of any contamination would depend on the type of radioactive material used. **In March 2002, the IAEA announced a programme of activities aimed at protection against nuclear terrorism, including measures to upgrade the physical protection of nuclear and radioactive materials worldwide.** The IAEA will need an additional \$34.5 million annually to bring this about. As of June 2002, IAEA member states had pledged an additional \$7.5 million towards this project. This allows work to begin but is less than required to meet the programme needs. **The most devastating form of nuclear terrorism would be the detonation of a nuclear weapon – although this would also be the most difficult form of attack.** Terrorists may face fewer technical difficulties dispersing radioactive material in a radiological attack. This may not result in mass casualties but could have major psychological and economic impact. The IAEA is taking measures to strengthen international conventions and guidelines relating to the physical protection of nuclear and radioactive materials and nuclear facilities (Parliamentary Office Of Science And Technology, 2002).

**Title/Headline:** *A Nuclear 9/11: Imminent Or Inflated Threat?*

**Abstract:** The possibility that terrorists might crash a hijacked airliner into a nuclear power plant is one of the more nightmarish scenarios to have surfaced since the al Qaeda attacks on the Pentagon and the World Trade Center on Sept. 11, 2001. However, disagreement remains as to whether a plant could survive such an attack as well as the likely consequences. According to a January/February 2002 article in the *Bulletin of the Atomic Scientists*, an average nuclear power plant contains 1,000 times as much long-lived radioactivity than was released by the Hiroshima bomb. The spent fuel pools at such a plant are said to contain 'some multiple of that — several Chernobyl's worth.' **However, unlike an atomic bomb, any damage from a terrorist attack on a nuclear power plant would result almost entirely from the release of radioactivity, not the initial blast, although casualties would be similar.** According to a Nuclear Regulatory Commission (NRC) study, a meltdown at one of Southern California's San Onofre reactors could cause: **130,000 'prompt' fatalities; 300,000 latent cancers; and 600,000 cases of genetic defects.** Another study carried out for the NRC in 1980 estimated that such an incident would cost up to \$314 billion (around \$700 billion in today's dollars). Others remain less convinced of the dangers posed by such an incident. One controversial September 2002 article in *Science* magazine, by Douglas M. Chapin and 18 other members of the National Academy of Engineering, claims that the implications of the 1986 Chernobyl accident are not applicable to American reactors, as on that occasion the fissile materials were mainly dispersed into the atmosphere by burning graphite. This article also goes on to claim that: **'The terrible and widespread consequences of that accident — increased suicide, alcoholism, depression, and unemployment, plus 100,000 unnecessary abortions — were caused primarily by fear of radiation and by poor planning based on that fear.'** Such findings contrast with those of the United Nations, which highlights a 25-fold increase in childhood thyroid cancers in some cities in Belarus, and explicitly link this to the accident at Chernobyl. Another study, by Richard L. Garwin, estimates that some 24,000 unidentified deaths are likely to be caused by the radioactive material released at Chernobyl.

**Nuclear Power Plant Survivability:** Nuclear power plants are designed to withstand extreme events such as hurricanes, tornadoes and earthquakes, but not necessarily to survive attacks by terrorists using large airliners such as Boeing 757s or 767s as ballistic missiles. The Nuclear Control Institute (NCI) — an organization often critical of safety at nuclear plants — estimates that a direct, high-speed hit by a large commercial passenger jet would 'have a high likelihood of penetrating a containment building' that houses a power reactor. **According to the NCI, such an incident could cause a significant release of radiation into the environment and result in tens of thousands of cancer deaths.** The authors of the September 2002 *Science* article disagree, citing a 1988 test in which an unmanned plane was flown at around 480 mph into a 12-foot thick concrete wall. **The plane was destroyed by the impact, its engines only piercing the structure by a couple of inches, while the main body penetrated even less.** The article also concluded that the greater impact of larger planes was offset by their absorption of more energy in their collapse, and that higher speed, while increasing the impact, would not do so 'enough to matter.' **However, a report by Sandia National Laboratories — which conducted this test — says it was meant to measure the jet's impact not the strength of the wall.** Moreover, the wall in question was not embedded in the ground as would be the case with that of a nuclear power plant. Consequently, according to the official test report, 'the major portion of the impact energy went into movement of the target and not in producing structural damage.' For their part, while Chapin *et al* concede that the test was not intended to measure the survivability of a concrete structure in such an incident, they maintain that it nonetheless confirms that large aircraft disintegrate on impact, causing little penetration. **This appears to ignore that fact that the F-4 Phantom fighter used in the tests is considerably smaller and lighter than a large civilian airliner. It also does not address the dangers posed should an aircraft be crashed into a plant's spent fuel pool rather than its reactor.**

**Spent Fuel Pools:** Such pools, generally around 40-feet deep, are made of reinforced concrete walls four or five feet thick with stainless steel liners. They are used to store and cool spent nuclear fuel, and can hold five to ten times more long-lived radioactivity than the reactor core itself. The biggest risk with such pools is said to stem from water loss. **If this happens the spent fuel can become exposed to air and steam. Its zirconium cladding would then react exothermically (giving off heat) and catch fire at 1,000 degrees Celsius.** Ironically, this process may be aided by the pools' safety equipment that is packed between fuel assemblies to guard against the risk of criticality by controlling water chemistry and absorbing neutrons. **According to the NRC, this safety equipment could restrict air and water flow to exposed spent fuel assemblies in the event of a terrorist attack that compromised the integrity of the cooling pool.** This could release up to 100 percent of the highly dangerous isotope cesium 137 contained in the pool. **A 1997 study for the NRC**

estimates that a severe pool fire could cause up to 28,000 cancer fatalities, render some 188 square miles of territory uninhabitable, and cause \$59 billion in damage. Moreover, as the NRC acknowledges, the risk of a zirconium fire cannot be dismissed even years after spent fuel has been moved into storage.

**The Wrong Threat?:** Such risks notwithstanding, recent computer analyses conducted by the Electric Power and Research Institute (EPRI) on behalf of the Nuclear Energy Institute — a trade association of utilities and nuclear energy firms found that a used fuel pool, the reactor containment structure, used fuel 'dry' storage facilities, and used fuel transportation containers would all survive a direct impact from a fuel laden airliner. Some, such as NCI President, Edwin Lyman, dispute such findings, claiming "we can't take anything the [nuclear] industry says at face value." **Underlying the seeming interminable nature of such disagreement is the fact that the debate often appears less about the risk posed by a terrorist attack on a nuclear power plant than more general safety concerns over such plants.** These concerns pre-date the terrorist attacks of Sept. 11, 2001, and may be distorting the actual risks posed by a terrorist kamikaze attack on such a target by a large airliner. **The willingness of al Qaeda and their fellow travelers to commit such an act cannot be doubted after the attacks on New York and the Pentagon.** Similarly, while as outlined above, consensus does not exist as to the damage any breach of a nuclear reactor would entail, the weight of scientific opinion suggests that such an event could be catastrophic — more so if the spent fuel pool is the target of the attack. However, not only does the recent EPRI study conclude that nuclear power plants are structurally secure against attack by terrorists crashing airliners into them, but 'Silent Vector' — an exercise conducted by the Center for Strategic and International Studies (CSIS) that examined the vulnerability of America's energy industry to terrorist attack — concluded that nuclear power plants were relatively secure. According to CSIS President John Hamre, **"Nuclear plants remain the best-defended parts of the energy infrastructure."** Conversely, chemical storage sites and liquefied natural gas facilities were found to **"remain a problem."** As such findings indicate, the risk of terrorists crashing a hijacked airliner into a nuclear plant is not the only potential threat facing America's energy infrastructure. Nor is it necessarily the greatest. **Moreover, by storming their hijackers and causing the plane to crash before reaching its target, United Airlines flight 93's passengers showed that hijacking an American airliner for use as a ballistic missile will never again be as easy as it once was.** In addition, according to a Dec. 8, 2002, *New York Times* article, **19 percent of guards at the Indian Point nuclear facility allegedly do not believe they provide sufficient protection for the plant against terrorist attack.** As this shows, an attack using an airliner is not the only danger when considering plant security, and probably not the most likely. **Looked at together, all these factors suggest that only an independent study of the vulnerabilities of America's entire civilian infrastructure can give a true picture of the threat posed to it by terrorists. Huge though such an undertaking might be, it is the only way to comprehensively assess and prioritize the terrorist threat to American soil (Burgess, 2003).**

**Date:** August 9, 2004

**Source:** Harvard, Belfer Center For Science And International Affairs, Graham Allison

**Title/Headline:** *Nuclear Terrorism: The Ultimate Preventable Catastrophe*

**Abstract:** In *Nuclear Terrorism: The Ultimate Preventable Catastrophe*, Graham Allison, founding dean of Harvard's modern John F. Kennedy School of Government, a former top Pentagon official, and one of America's leading scholars of nuclear strategy and national security, gives us an urgent call to action. **He makes the case that nuclear terrorism is inevitable—if we continue on our present course—and he sets out an ambitious but achievable plan for preventing a catastrophic attack before it's too late.** Given the number of capable groups with serious intent, the increasing accessibility of weapons or nuclear materials from which elementary weapons could be constructed, and the countless ways by which terrorists could smuggle a weapon across America's borders, **Allison argues that if the U.S. and other governments keep doing what we are doing now, a nuclear terrorist attack is inevitable. Yet Allison is no pessimist. He contends that the big and underreported news is that nuclear terrorism is preventable. "As a simple matter of physics, without fissile material, there can be no nuclear explosion. There is a vast – but not unlimited – amount of it in the world, and it is within our power to keep it secure,"** Allison writes. "No fissile material, no nuclear explosion, no nuclear terrorism. It is that simple." The centerpiece of a strategy to prevent nuclear terrorism must be to deny terrorists access to nuclear weapons and materials. **To do this, we must shape a new international security order according to a doctrine of the Three No's: No loose nukes, No new nascent nukes, and No new nuclear states.** Allison provides in plain and accessible terms the "who, what, where, when and how" of nuclear terrorism – and explains how we can act now to prevent it (Allison, 2004).

**Date:** September 22, 2004

**Source:** CRS Report From Congress, Jonathan Medalia

**Title/Headline:** *Nuclear Terrorism: A Brief Review Of Threats And Responses*

**Abstract:** It would be difficult for terrorists to mount a nuclear attack on a U.S. city, but such an attack is plausible and would have catastrophic consequences, in one scenario killing over a half-million people and causing damage of over \$1 trillion. Terrorists or rogue states might acquire a nuclear weapon in several ways. **The nations of greatest concern as potential sources of weapons or fissile materials are widely thought to be Russia and Pakistan.** Russia has many tactical nuclear weapons, which tend to be lower in yield but more dispersed and apparently less secure than strategic weapons. It also has much highly enriched uranium (HEU) and weapons

grade plutonium, some said to have inadequate security. **Many experts believe that technically sophisticated terrorists could, without state support, fabricate a nuclear bomb from HEU; opinion is divided on whether terrorists could make a bomb using plutonium. The fear regarding Pakistan is that some members of the armed forces might covertly give a weapon to terrorists or that, if President Musharraf were overthrown, an Islamic fundamentalist government or a state of chaos in Pakistan might enable terrorists to obtain a weapon.** Terrorists might also obtain HEU from the more than 130 research reactors worldwide that use HEU as fuel. If terrorists acquired a nuclear weapon, they could use many means in an attempt to bring it into the United States. **This nation has many thousands of miles of land and sea borders, as well as several hundred ports of entry. Terrorists might smuggle a weapon across lightly-guarded stretches of borders, ship it in using a cargo container, place it in a hold of a crude oil tanker, or bring it in using a truck, a boat, or a small airplane.** The architecture of the U.S. response is termed “layered defense.” The goal is to try to block terrorists at various stages in their attempts to obtain a nuclear weapon and smuggle it into the United States. The underlying concept is that the probability of success is higher if many layers are used rather than just one or two. Layers include threat reduction programs in the former Soviet Union, efforts to secure HEU worldwide, control of former Soviet and other borders, the Container Security Initiative and Proliferation Security Initiative, and U.S. border security. Several approaches underlie multiple layers, such as technology, intelligence, and forensics. **Many policy options have been proposed to thwart or respond to nuclear terrorism, such as developing new detection technologies, strengthening U.S. intelligence capability, and improving planning to respond to an attack. Congress funds programs to counter nuclear terrorism and holds hearings and less-formal briefings on the topic. Many Members have introduced bills in this area. This report is intended for background, not for tracking current developments. It would be difficult for terrorists to attack a U.S. city using a nuclear weapon, but such an attack is plausible and would have catastrophic consequences.** A report of June 2004 by the National Commission on Terrorist Attacks upon the United States found that even though an attempt by al Qaeda in 1994 to purchase uranium failed, **“al Qaeda continues to pursue its strategic objective of obtaining a nuclear weapon.”** A book by the Center for Nonproliferation Studies emphasizes the urgency of taking steps to reduce the risk that terrorists could obtain nuclear weapons or materials. A May 2004 report by Harvard University’s Project on Managing the Atom finds that a nuclear attack “would be among the most difficult types of attacks for terrorists to accomplish,” but that with the necessary fissile materials, “a capable and well-organized terrorist group plausibly could make, deliver, and detonate at least a crude nuclear bomb capable of incinerating the heart of any major city in the world.” An earlier report by the same group estimated the consequences of a ten kiloton weapon (two-thirds the yield of the Hiroshima bomb) detonated at Grand Central Station in Manhattan as over a half-million people killed immediately, hundreds of thousands injured, the possibility (depending on wind direction) of having to evacuate all of Manhattan, much of lower Manhattan permanently destroyed, direct costs of well over \$1 trillion, indirect costs several times that, and the prospect for nationwide panic and economic chaos if terrorists subsequently claimed to have another bomb.

**Weapon Acquisition:** Experts have raised concerns that terrorists might try to acquire two types of nuclear weapons. In the simplest, a “gun-type” weapon, a mass of uranium highly enriched in the fissile isotope 235 (highly enriched uranium, or HEU) is shot down a tube (resembling an artillery tube) into another HEU mass, creating a supercritical mass and a nuclear explosion. The Hiroshima bomb used this approach; its designers had such high confidence in it that they did not test this type of weapon prior to using it. The second type, an implosion weapon, typically uses weapons-grade plutonium (WGPU, composed mainly of the isotope 239). A shell of WGPU is surrounded by chemical explosives arrayed to produce a symmetrical inward-moving (implosion) shock wave that compresses the plutonium enough to be supercritical. The Nagasaki bomb was of this type. It is much more complex in design and manufacture than a gun-assembly weapon. An implosion device was tested in New Mexico prior to use on Nagasaki. A National Academy of Sciences report asserts, “Crude HEU weapons could be fabricated without state assistance.” **Some experts believe that terrorists could create an implosion weapon; others disagree. Terrorists or rogue states might acquire nuclear weapons or fissile materials in various ways.** The source of greatest concern is Russia. It has much fissile material. A National Nuclear Security Administration (NNSA) document shows that considerable work remains for the disposition of this material, and a National Academy of Sciences report states that the risk of diversion of special nuclear material (SNM, or fissile material) from Russia is “high” because “large inventories of SNM are stored at many sites that apparently lack inventory controls, and indigenous threats have increased.” **A related concern is that Pakistan might be the source of nuclear weapons or materials for terrorists under several scenarios: (1) Islamists in the armed services might provide such assistance covertly under the current government; (2) if that government were overthrown by fundamentalists, the new government might make weapons available to terrorists; or (3) such weapons might become available if chaos, rather than a government, followed the overthrow.** Other nations are seeking nuclear weapons. According to press reports, Iran has a program to produce HEU, North Korea has reprocessed WGPU from spent nuclear fuel, and “there is little disagreement inside the [U.S.] government over the intelligence indicating North Korea has been secretly building uranium enrichment capability in violation of the 1994 accord.” **The prospect that some nations might provide such materials to other states or to terrorists is a source of concern. A.Q. Khan, the father of Pakistan’s atomic bomb, ran a covert operation for many years that reportedly provided Libya, North Korea, and Iran with equipment for making HEU and plans for making an atomic bomb.** Such nations might use these weapons themselves, or leak or sell weapons, material, or expertise to terrorist groups. Nuclear research reactors offer still another route to obtaining a weapon. *Securing the Bomb* states, **“More than 130 research reactors still use HEU as their fuel, in more than 40 countries. Most of these facilities have very modest security — in many cases, no more than a night watchman and a chain-link fence.”** A gun-assembly weapon need not be particularly large. The Hiroshima bomb, according to one source, weighed 8,900 pounds and was 10 feet long and 28 inches in diameter. Much of that size and weight, however, was taken up by an armored steel shell and stabilizing fins, as well as by arming, fuzing, and firing devices. The gun barrel — the actual nuclear explosive device — measured 6 feet in length by over 6 inches in diameter and weighed about a half-ton. **Simple improvements might shrink size and weight. A terrorist-made implosion weapon or a weapon stolen from a nation’s arsenal could be smaller. In short, a weapon could fit in a car, boat, or small airplane, and would occupy a small corner of a shipping container.**

**Weapon Delivery:** The United States has many thousands of miles of land and water borders, as well as several hundred sea, land, and air ports of entry — 317 by one count — giving terrorists many pathways to smuggle a nuclear bomb into this nation. There are many types of borders, as the following table shows — oceans (tropical to temperate to Arctic), land and river borders with Mexico and

Canada, and the Great Lakes. Each poses its own set of opportunities for smugglers. **Legal and illegal crossings into the United States also present terrorists with different risks and opportunities. Legal crossings are points, such as seaports, airports, and border stations on roads entering the United States. Illegal crossings are lines — the thousands of miles of unguarded stretches of coasts and land borders. Securing points poses different requirements from securing lines.** Points have an immense volume of traffic, almost all of it legal, and a corresponding concentration of people and resources of U.S. Customs and Border Protection (CBP). The task of CBP is to find the needle in the haystack while expediting legal traffic. Attempts to smuggle a nuclear weapon through a legal crossing would run the risk that the weapon might be detected by computerized screening of cargo manifests, imaging devices (similar to x-rays), neutron activation devices, or physical inspection, as discussed below. **That risk is reduced by the need for CBP agents to process huge numbers of vehicles, vessels, and passengers, leaving little time or attention for those not raising suspicions, and by the low radioactivity of fissile uranium-235 — approximately one hundred-millionth that of radioactive material that might be used in a “dirty bomb.”** On the other hand, risk to smugglers is reduced because CBP faces an immense task in patrolling the vast stretches of borders. **Terrorists could avoid the risks attendant to smuggling across both points and lines if they could place a weapon on board an airplane or ship bound for the United States and detonate it before it could be inspected, such as in the air above a city or as it entered a seaport.** Scenarios for smuggling a nuclear weapon across unguarded coasts or borders are similar to those for smuggling bales of marijuana, many of which are reportedly flown in, brought by small boats, or carried across land borders; the difficulty of patrolling the borders makes such scenarios feasible. **A key difference between smuggling marijuana and a nuclear weapon is that in the former case, losses due to interception by CBP are expected and are viewed as a cost of doing business. Terrorists attempting to smuggle a nuclear weapon into the United States, in contrast, would presumably have only one or a few weapons and would have to go to great lengths to succeed.** Conversely, because of the great value of a nuclear weapon to terrorists, methods that create a substantial probability of detecting an attempt to smuggle a weapon into the United States might deter such an attempt. Another scenario commonly discussed is smuggling a nuclear weapon in a shipping container. **These metal boxes, typically 8 by 8 by 20 feet or 8 by 8 by 40 feet, are used to transport vast quantities of goods ranging from clothes to computers to automobile engines. Some 7 million containers enter the United States by ship each year; container ships may carry several thousand containers.** From seaports, they are transported by truck or rail throughout the country. The concern is that if terrorists could place a bomb in a container overseas, they could ship it into the United States and transport it anywhere in the country. Under the Container Security Initiative (CSI), discussed below, CBP agents and their foreign counterparts screen containers being loaded onto container ships at certain foreign ports, and the foreign agents inspect containers that the screening identifies as suspicious, based on ports of call, manifest data, shipping company, etc. **Terrorists, however, might try to circumvent CSI by acquiring a trusted shipping company to avoid suspicion, falsifying manifest data, infiltrating CSI ports, shipping from non-CSI ports. A nuclear explosion in a U.S. port from a bomb in a shipping container would have not only direct effects, but could also have far reaching effects on the world economy because of its dependence on container traffic, an effect magnified by industry’s use of “just-in-time” deliveries. According to Robert Bonner, Commissioner of Customs and Border Protection, Simply put, the shipping of sea containers would stop.** The American people, for one, would not likely permit one more sea container to enter the United States until there was a significantly greater assurance — such as 100% inspections — **Another possible scenario is the use of an oil tanker to transport a nuclear weapon. The Middle East is the dominant source of anti-American terrorism, the United States imports an average of more than 2 million barrels of crude oil a day from Persian Gulf nations, this crude oil is transported by ship, and it would be very difficult to detect a bomb inside a supertanker. Part of the difficulty of detecting a bomb inside a floating vat of crude oil would arise from the sheer size of supertankers, which carry 100,000 deadweight tons or more of crude oil.** For example, two supertankers built in 2003 for COSCO (China Ocean Shipping) Group were 330 meters (almost a quarter-mile) long and 60 meters in beam, and had a capacity of about 300,000 deadweight tons. There are even larger tankers that carry 500,000 deadweight tons of crude oil, and have a length of 396 meters and a beam of 71 meters. **On land, some detection devices use gamma rays (high-energy x-rays) to peer inside a shipping container and create an x-ray-type image, but the size of a supertanker and the thickness of the steel (especially with the use of double hulls) make this technique unworkable.** Another possible means of detecting a nuclear weapon is neutron activation, in which a burst of neutrons is sent into the item to be examined, such as a shipping container; neutrons that strike uranium-235 (or other radioactive material) will cause some atoms to fission, releasing neutrons and gamma rays. Any neutron coming back as a result of neutron bombardment would be suspicious. **The gamma rays produced by the disintegration of each isotope have a unique set of energies, creating a “fingerprint” that permits identification of the isotope. However, neutrons sent into the oil and any produced by fissioning of uranium would be absorbed (forming deuterium or tritium) or scattered by the hydrogen atoms in crude oil, and the large volume of oil would attenuate any gamma rays produced, defeating this form of detection.** At the same time, designing a means to detonate a bomb inside a tanker could prove a technical challenge for terrorists. **A bomb in a tanker could devastate an oil port by the blast and by secondary fires in nearby refineries and oil storage tanks. A tanker bomb might be used against other maritime targets, such as the Panama Canal. And if a bomb in a shipping container could lead to the shutdown of container traffic, seriously damaging the world economy, a tanker bomb might by the same token lead to the suspension of crude oil shipments, with similar results.**

**Responses:** At this point, three years after the attacks of September 11, the components of the U.S. and global response have become clearer. **The response is often termed “layered defense,” reflecting the idea that terrorists would have to proceed through many steps to acquire a nuclear weapon and smuggle it into the United States, and that attempting to thwart them at each step has a higher likelihood of success than trying to block one step only.** Whether layered defense is an overarching strategy, as is the case in ballistic missile defense, or simply a name given to what would have happened anyway as many agencies with different capabilities contribute in the ways each is able to, or some of both, is another matter. **In any event, many programs have been established to deal with nuclear terrorism since 9/11, and others created well before then have acquired new urgency.**

**U.S. Border Security:** The final line of defense tries to keep terrorists from smuggling a nuclear weapon across U.S. borders. It involves border patrols, barriers, remote sensors, radiation monitors, Customs inspections, seaport security, and the like, generally within the purview of CBP. Yet as noted in “Weapon Delivery,” above, there are great difficulties in securing the many “points” through which people and goods may enter legally, and the thousands of miles of “lines,” thinly-guarded stretches of coasts and land borders across

which entry is illegal. These difficulties illustrate the importance of the other defensive layers noted earlier in this section and show why it would be unwise to rely solely on border security. Supporting Capabilities. **Technology, intelligence, and forensics cut across and support the foregoing steps to keep terrorists or rogue states from acquiring and delivering a nuclear weapon.**

**Nuclear Forensics:** The ability to glean information from nuclear weapon debris and other radioactive material lies at the intersection of technology and intelligence. During the Cold War, the United States obtained much information by analyzing fallout from Soviet nuclear weapon tests. For example, analysis confirmed that the Soviet Union had conducted its first atomic bomb test, and analysis of fallout from the first Soviet hydrogen bomb test revealed many details about that weapon's design. Even minute samples are of value. With the current moratorium on nuclear testing, forensic studies are applied to verifying the safety of U.S. nuclear warheads, detecting signs of nuclear proliferation, and thwarting illicit trafficking of nuclear materials. **In the event of a terrorist nuclear attack, forensics might be able to identify the nation that originated the fissile material or weapon, and determine whether terrorists had fabricated the weapon on their own or obtained it from a nation's stockpile.** This information would aid efforts to prevent further leakage. The ability to attribute a weapon or material to a nation might also deter a nation from providing such items to terrorists by holding the prospect of a military response. **Further, if a terrorist nuclear weapon were found, forensic analysis could contribute to an understanding of the weapon's design, which could help determine whether it could be moved and how best to disable it. Other issues that bear on nuclear terrorism include missile defense, export controls, and nuclear nonproliferation efforts more generally.** Many organizations and other groups are involved, such as the U.N., the International Atomic Energy Agency, and the Group of Eight.

**Options & Implications For U.S. Policy:** In combating nuclear terrorism, the standard for success for the United States is daunting — zero nuclear detonations, which may require stopping every terrorist or rogue state attempt to acquire and deliver a nuclear weapon — while a single nuclear detonation in the United States would constitute a terrorist success. Measured against that binary standard, it is impossible to determine the extent to which, or even if, the initiatives discussed above have increased U.S. security. Nonetheless, studies have shown many potential weaknesses in U.S. ability to thwart nuclear terrorism. The main response of policymakers has been to strengthen, consolidate, coordinate, or initiate a wide array of programs. A Government Accountability Office report, for example, notes a number of recommendations that it and congressionally chartered commissions have made for defending against catastrophic threats (Medalia, 2004).

FOREIGN  
RELATIONS

**Date:** March 11, 2006

**Source:** Council On Foreign Relations (CFR), Charles D. Ferguson

**Title/Headline:** *Preventing Catastrophic Nuclear Terrorism*

**Abstract:** *Forward By Richard Hass:* A nuclear attack by terrorists against the United States has the potential to make the terrorist attacks of September 11, 2001, look like a historical footnote. In addition to the immediate horrific devastation, such an attack could cost trillions of dollars in damages, potentially sparking a global economic depression. Although, during the 2004 presidential campaign, President George W. Bush and Democratic challenger Senator John F. Kerry agreed that terrorists armed with nuclear weapons worried them more than any other national security threat, the U.S. government has yet to elevate nuclear terrorism prevention to the highest priority. Despite several U.S. and international programs to secure nuclear weapons and the materials to make them, major gaps in policy remain. **This report makes clear what is needed to reduce the possibility of nuclear terrorism. It identifies where efforts have fallen short in securing and eliminating nuclear weapons and weapons-usable nuclear materials, and it offers realistic recommendations to plug these gaps in the U.S. and international response.** The result is a clear primer on a critical subject and a set of practical proposals that policymakers would be wise to consider carefully.

**The Threat:** The threat of a nuclear attack by terrorists has never been greater. Over the past two decades, terrorist violence and destructiveness have grown. As the September 11, 2001, attacks demonstrated, al-Qaeda and al-Qaeda-inspired terrorists desire to inflict mass casualties. Al-Qaeda and other terrorist organizations have expressed interest in and searched for unconventional means of attack, such as chemical, biological, radiological, and nuclear weapons. Of these weapons, only a nuclear detonation will guarantee immediate massive destruction. A nuclear explosion would immediately devastate the heart of a city and could kill hundreds of thousands of people. In the longer term, hundreds of thousands more could suffer from radiation sickness and cancer, and thousands of square miles of property would experience radioactive contamination requiring several years and billions of dollars to decontaminate. The broader economic costs of the attack could soar into the trillions of dollars, potentially threatening the national economy and even disrupting the global economy. **The probability of nuclear attack has increased because traditional deterrence—threatening assured destruction against a valued asset such as a national territory—does not work against the terrorist groups most likely to covet nuclear weapons.** Such groups are usually not tied to a particular geographic location. Moreover, these terrorist organizations are often guided by religious, quasi-religious, or cult leaders who align themselves with a supreme being rather than with a nation-state that needs protection. **To launch a nuclear attack, terrorists must first obtain a nuclear bomb. They could do this in three ways: by stealing it, buying it, or building it. All three pathways pose significant constraints to terrorists, but one cannot discount any of these possible routes to catastrophic nuclear terrorism.**

**Stealing An Intact Nuclear Weapon:** With about twenty-seven thousand nuclear weapons in the arsenals of eight nations (Britain, China, France, India, Israel, Pakistan, Russia, and the United States), terrorists appear to have a target-rich environment. All but about one thousand of these weapons reside in two countries: Russia and the United States. **The theft of a nuclear weapon is a staple of movies such as *The Peacemaker* and television shows such as *24*.** In practice, such thefts are difficult to carry out. Often considered

the “crown jewels” of a nuclear-armed nation’s security, nuclear weapons are usually rigorously guarded. But being difficult to steal does not mean impossible. In particular, transporting and deploying nuclear weapons outside of highly secure, central storage sites can increase susceptibility to theft. **In December 2004, the U.S. National Intelligence Council warned, “Russian authorities twice thwarted terrorist efforts to reconnoiter nuclear weapon storage sites in 2002” and that terrorists inside Russia also “showed a suspicious amount of interest in the transportation of nuclear munitions.” Even if a nuclear weapon is stolen, terrorists must find a way to activate it.** Security and arming devices on most nuclear weapons may block terrorists from using these weapons. For example, specialized security codes called permissive action links (PALs) are required to unlock U.S. nuclear weapons. These electronic locks allow only a limited number of tries to enter the correct code before the weapon disables itself. The more advanced nuclear weapon states of Britain, China, France, and Russia reportedly use similar security systems. Although most Russian nuclear weapons are believed to be equipped with PALs, an unknown number of older Russian tactical nuclear arms may not have this security system. Most of these weapons may have been dismantled or are scheduled for dismantlement, but some may still be deployed. It is unknown whether North Korea also may have a small nuclear arsenal containing, at most, eight weapons. Although the North Korean government said, in February 2005, that it has nuclear arms, it has not unambiguously demonstrated this capability. **India, Israel, and Pakistan use PALs, although the United States in recent years may have provided PAL assistance to Pakistan.** Safeing, arming, firing, and fusing (SAFF) procedures also can enhance the security of nuclear weapons. To make a SAFF-equipped weapon ready for detonation, it has to undergo a specific sequence of changes in altitude, acceleration, or other parameters. **Even if a terrorist group seized an intact nuclear weapon, the terrorists may not be able to use it unless they had access to codes and information about SAFF procedures.** Although one cannot rule out widespread collusion among insiders to provide information about SAFF procedures or PAL codes, the barriers against successful terrorist acquisition and detonation of nuclear weapons securely guarded in arsenals appear extremely difficult to surmount. **Nonetheless, serious concerns remain about the security of Pakistani nuclear weapons and Russian tactical nuclear weapons, especially those that are relatively portable, that may not possess integral security mechanisms such as PALs, or that are not in secure central storage. In sum, stealing a nuclear weapon appears to be a very unlikely pathway for terrorists to detonate a nuclear explosive.**

**Buying A Nuclear Weapon:** Terrorists might buy (or be given) a nuclear weapon by a nuclear state. However, both established nuclear powers and nuclear-armed “rogue” states such as North Korea are unlikely to cooperate. Leaders of these countries know that if they are caught transferring nuclear weapons to terrorists, their states would likely suffer devastating retaliation. Despite the harsh rhetoric of current Iranian political leaders, similar calculations would likely influence Iran, which is believed to be five to ten years away from acquiring the capability to make nuclear weapons. Of course, deterrence hinges on making a credible retaliatory threat and having credible evidence that the transfer of a nuclear weapon has occurred. **Concerning the credible threat, the United States clearly warned in the 2002 “National Strategy to Combat Weapons of Mass Destruction” that “it reserves the right to respond with overwhelming force—including through resort to all of our options—to the use of weapons of mass destruction (WMD) against the United States, our forces abroad, and friends and allies.”** Gathering credible “smoking gun” evidence, however, confronts substantial technical challenges. A nuclear explosion produces a complex mix of radioactive debris, which depends sensitively on the weapon’s design. **In recent years, the United States has undertaken a research program to analyze such evidence to identify a detonated weapon’s origin.** According to the U.S. Defense Threat Reduction Agency, the nuclear forensics and domestic nuclear event attribution program became operational last year and has made significant progress, but the United States continues to improve this program. Although the exact budget for this program is hard to cull from the U.S. government’s open budget, officials familiar with the program acknowledge that it is funded at relatively modest levels of a few tens of millions of dollars annually. More likely routes for terrorists to buy or be given a nuclear weapon involve corruption among nuclear custodians, black markets, or a coup that brings to power officials sympathetic to terrorist causes. **In these respects, Pakistan stands out as a vexing security concern. First, it has a relatively new nuclear command and control system. Second, al-Qaeda and Taliban forces have established a formidable presence in the region. Third, some elements of Pakistan’s Inter-Services Intelligence (ISI) agency sympathize with the Taliban, although the extent to which the ISI has access to Pakistan’s nuclear arsenal is unclear. Fourth, Pakistani President Pervez Musharraf has twice been the target of assassination attempts. Fifth, the most infamous nuclear black market originated in Pakistan. Dr. Abdul Qadeer Khan, a Pakistani metallurgist and the so-called father of Pakistan’s nuclear weapons program, ran a nuclear distribution network that sprawled across Europe, Africa, and Asia and supplied nuclear programs in Iran, Libya, and North Korea.** Although no evidence has emerged that Khan’s network sold nuclear materials or weapons to terrorists, his network did sell blueprints for a nuclear bomb to Libya. Conceivably, terrorists or criminals may have obtained or eventually could obtain this information. The Khan network also demonstrates that the Pakistani nuclear establishment is vulnerable to an insider threat.

**Building A Nuclear Weapon:** No terrorist organization currently has the ability to produce weapons-usable nuclear materials. Therefore, to build nuclear weapons, terrorists would have to acquire already made highly enriched uranium (HEU) or plutonium. **HEU does not exist in nature, and plutonium occurs naturally in only trace amounts.** Naturally occurring samples of uranium only contain a very small fraction (0.7 percent) of the type of uranium that readily fissions and releases the energy that can fuel nuclear reactors or nuclear weapons. This type is the isotope uranium-235. (Isotopes of the same chemical element have virtually identical chemical properties but distinctly different nuclear properties.) **To make a sample of uranium useful for fueling most commercial nuclear power plants, the concentration of uranium-235 is increased, or enriched, so that the amount of uranium-235 in the enriched product is 3 to 5 percent of the total amount.** This product is called low enriched uranium (LEU). The concentration of uranium-235 in LEU is too low to power a nuclear weapon. Further enrichment is required to produce weapons-usable uranium. **By definition, highly enriched uranium consists of 20 percent or more of uranium-235. Although HEU of any enrichment level, in principle, can power a nuclear weapon, the greater the enrichment level, the less HEU is needed to make a weapon because of the higher concentration of the fissile isotope uranium-235. Typically, nuclear weapons use uranium that is enriched to 90 percent or more in uranium-235. This material is termed weapons-grade uranium. Nonetheless, even 80 percent enriched uranium can fuel nuclear weapons, as was the case with the Hiroshima bomb.** The only significant technical hurdle to making the Hiroshima bomb was the industrial-scale effort needed to enrich the uranium. **At least one terrorist group is known to have tried to enrich uranium. It failed, largely because enrichment is an extremely challenging process, requiring the resources only available to large commercial enterprises or to**

**nation-states. Even some countries have failed to master uranium enrichment.** For example, despite making a concerted effort in the 1980s, Saddam Hussein's Iraq was unable to enrich enough uranium for a nuclear bomb. Iran has also. In 1993, Aum Shinrikyo tried to mine uranium in Australia. Some of Aum's scientists investigated the possibility of enriching uranium, but the technical challenges proved insurmountable and struggled with achieving this technological development. Lacking access to uranium enrichment facilities, terrorists would need to seize existing caches of HEU. Unfortunately, HEU stockpiles are plentiful, with about 1,850 metric tons available globally—enough fissile material to make tens of thousands of nuclear bombs. **The vast majority of HEU stockpiles are under military control. Russia and the United States possess an estimated 1,720 metric tons of HEU for weapons purposes and naval propulsion. Britain, China, and France hold tens of metric tons of HEU.** Pakistan and South Africa have HEU stockpiles that run upward of several hundred kilograms, enough to make dozens of crude nuclear weapons. Smaller amounts of HEU are contained in more than forty countries with civilian nuclear programs. **Still, many of the more than 120 research reactors and related facilities within these countries have enough HEU in each location to make a nuclear bomb.** The HEU stockpiles most vulnerable to theft are those located in Pakistan, Russia, and many of the countries with civilian reactor facilities. **Like enriching uranium, making plutonium is currently beyond the capability of terrorists without state-sponsorship.** Nuclear reactors to produce plutonium and reprocessing plants to extract plutonium from spent reactor fuel require the type of financial and industrial resources only available to states. **Therefore, in order to produce a nuclear weapon, terrorists would need to seize plutonium from existing stockpiles or receive aid from a state.** As with HEU, **plutonium exists in both military and civilian sectors.** Global military stockpiles contain more than 250 metric tons of plutonium—enough to make tens of thousands of nuclear bombs. **The United States and Russia possess more than 90 percent of this material, whereas Britain, China, France, India, Israel, North Korea, and Pakistan own the remainder.** The United States and Russia have declared approximately one hundred metric tons of plutonium as excess to defense needs, but they have yet to render this material into non-weapons-usable form. In addition, Britain has declared some 4.4 tons as excess to its defense needs. The United States, Russia, Britain, and France have stopped producing plutonium for weapons purposes. China may also have stopped military plutonium production, but it has never made an official announcement. **Barring pressure to halt production, India, Israel, North Korea, and Pakistan will likely continue creating plutonium for their weapons programs.** Civilian plutonium stockpiles also pose a risk for use in nuclear weapons. Although some experts continue to doubt the feasibility of employing reactor-grade plutonium in nuclear bombs, scientific authorities such as the U.S. Department of Energy and the U.S. National Academy of Sciences have stated that this material is weapons-usable. **More than a dozen countries hold more than 230 metric tons of plutonium that have been separated from spent nuclear fuel. In this separated form, plutonium is less secure than plutonium embedded in spent fuel. Because spent nuclear fuel tends to be highly radioactive, it provides a protective barrier to acquisition by terrorists or criminals who do not have access to special handling gear.** Globally, more than thirteen hundred metric tons of plutonium are contained in spent nuclear fuel. The rate of reprocessing this spent fuel to separate plutonium exceeds the rate of consumption of the plutonium as reactor fuel. Based on the latest unofficial estimate, the global stockpile of civilian plutonium in separated form is growing at the rate of ten metric tons per year. **This translates into hundreds of terrorist- or state-constructed nuclear bombs per year. Should terrorists obtain HEU or plutonium, they then confront the hurdle of constructing a bomb.** The Manhattan Project designed and built the two basic types of nuclear bombs: a gun-type device and an implosion-type device. Most of the intellectual effort went into developing the implosion-type bomb, which is much more technically challenging than a gun-type bomb. **The gun-type bomb simply shoots one lump of highly enriched uranium into another to start an explosive chain reaction. This type of nuclear weapon can only use HEU to produce a high-yield explosion. Because the Manhattan Project scientists were so confident that this bomb would work, they did not conduct a full-scale nuclear test.** The gun-type bomb was first used against Hiroshima. Although a gun-type bomb is relatively easy to construct, it requires fairly large amounts of HEU to explode. **Terrorists would need about fifty kilograms (110 pounds) of weapons-grade HEU to make a Hiroshima-yield bomb. By using special techniques, terrorists could try to reduce the fissile material requirements. Still, acquiring enough HEU remains the most significant barrier to building a gun-type device.** In contrast to a gun-type bomb, an implosion-type bomb can use either plutonium or HEU. This bomb rapidly implodes, or squeezes, the fissile material into a chain-reacting mass that then explodes. **Fortunately, substantial technical barriers hamper terrorist efforts to build an implosion device. For instance, machining and assembling the parts for an implosion device are more difficult than making and fitting together the components of a gun device. Moreover, triggering the implosion demands greater technical skills and specialized equipment than activating the assembly of a gun-type bomb.** However, an implosion-type bomb offers the advantage of requiring about half the HEU, approximately twenty-five kilograms (fifty-five pounds) of weapons-grade uranium, than that needed for a gun-type bomb. Also, compared to HEU, less plutonium, about four to ten kilograms (nine to twenty-two pounds), is needed to make an implosion bomb. Terrorists would be aided by the fact that they would not need to build weapons that would meet military requirements. Professional militaries demand well-tested weapons with reliable explosive yields. **Terrorists, in contrast, need a weapon that will produce any appreciable damaging yield. A crude HEU gun-type bomb has a high probability of producing a massively destructive explosion. Moreover, skilled terrorists could make this type of weapon without state assistance. The truly onerous barrier for nuclear terrorists is acquiring enough HEU.**

**Gaps In The International Response:** Success in preventing nuclear terrorism requires numerous actions across a wide array of fronts. A multilayered defense strategy provides a comprehensive and balanced approach to stopping nuclear terrorism. Such a strategy involves disrupting and destroying terrorist cells, blocking terrorists from the sources of nuclear weapons and weapons-usable materials, developing and deploying radiation detection equipment, and improving intelligence assessments of when and where terrorists will launch a nuclear attack. **Once terrorists acquire nuclear arms, however, stopping detonation of these weapons is exceedingly difficult. The radiation emitted by a nuclear weapon is hard to detect and easy to shield. In addition, pinpointing the time and location of a terrorist attack stretches the limits of intelligence assessments. Identifying and eradicating terrorist cells is also extremely challenging.** Although reducing the growth of terrorist groups is vitally important for the United States to have success in the wider “war on terrorism,” no matter how many terrorists there are, they cannot launch a nuclear attack without access to weapons-usable nuclear materials or intact nuclear weapons. Consequently, securing and eliminating vulnerable nuclear materials and weapons offer points of greatest leverage in preventing nuclear terrorism. **For these activities, much more national and international action is urgently needed to address the problems of Pakistan's highly enriched uranium and nuclear arsenal; Russia's highly enriched uranium; highly enriched uranium at more than one hundred civilian facilities in dozens of countries; and tactical nuclear**

weapons. Here, the focus is on how to block terrorists from acquiring these vulnerable nuclear materials and weapons. **Preventing nuclear terrorism is also closely connected to stopping the spread of nuclear weapons to other countries. By reducing the number of countries with nuclear weapons or weapons-usable nuclear materials, terrorists will have fewer places to buy or steal these critical components of nuclear terrorism.** The International Atomic Energy Agency (IAEA) is at the forefront of multilateral efforts to inspect nuclear facilities to try to detect diversion of weapons-usable nuclear materials. **Presently, 650 IAEA inspectors are responsible for inspecting nine hundred nuclear facilities in ninety-one countries. The annual budget of the IAEA is about \$120 million—comparable to the payroll of the Washington Redskins football team.**

**Pakistan's Highly Enriched Uranium Nuclear Arsenal:** The United States faces constraints in what security assistance it can offer Pakistan. As a signatory to the nuclear Nonproliferation Treaty (NPT), the United States is prohibited in helping a non-nuclear-weapon-state acquire nuclear explosives. Although Pakistan clearly has nuclear weapons, it is considered a non-nuclear-weapon-state under the terms of the NPT. U.S. government officials also feel constrained in how hard they can push Pakistan to improve its nuclear security and take steps to cap and eventually reduce its nuclear arsenal. **Pakistan has a great deal of pride about its nuclear arsenal and relies on its nuclear weapons to offset India's conventional military superiority. As a newly designated major non-NATO ally, Pakistan is instrumental in the Bush administration's "war on terrorism."** Although President Musharraf has generally supported the fight against terrorists, he has not hunted down terrorists as much as the United States would like because he does not want to provoke the wrath of extremists seeking to topple his government. He has also refused American access to A. Q. Khan, citing Pakistan's sovereign right to handle its own affairs. President Musharraf has repeatedly stated that Pakistan's nuclear weapons are secure. Two days after 9/11, he ordered nuclear weapon components relocated. **Later that year, he also worked to root out some extremist elements in the ISI, armed forces, and nuclear weapons programs by firing his intelligence chief and some other officers, detaining suspected retired nuclear weapon scientists, and dispersing the nuclear arsenal to at least six new secret locations.** President Musharraf insists that he does not want foreigners to set foot in Pakistan's nuclear installations. **Despite these security enhancements, the biggest impediment to reducing the threat of nuclear terrorism involving Pakistan is President Musharraf's expressed belief that terrorists cannot make nuclear weapons and that "the West is overly concerned" about this threat.** Musharraf's assumption is that terrorists would have to enrich their own uranium; in his public comments at least, he has ignored the possibility that terrorists could steal HEU weapon parts that Pakistan has already made and possesses. **President Musharraf also seems to not recognize that a weapon with little military value could nonetheless be invaluable to terrorists. A terrorist-constructed nuclear bomb would be "the size of that sofa," he told one interviewer, pointing to a couch about six feet long. He asked, "How do you carry that?" However, a six-foot-long improvised nuclear device could easily fit inside a forty-foot-long standard shipping container, probably the delivery vehicle of choice for many nuclear terrorists.**

**U.S. Security Assistance To Pakistan:** Although it has not been reported whether the U.S. government has briefed President Musharraf about the likelihood of terrorists making a crude nuclear weapon, the United States has quietly provided some unclassified nuclear security assistance to Pakistan through what is called the U.S. Liaison Committee. Few of the details of the program have been made public. Based on what is known, the United States may have helped Pakistan establish a personnel reliability program to ensure that security guards are trustworthy as well as supplied the nation with unclassified information about physical security practices and information about PAL-type security codes for nuclear warheads. The last type of assistance is highly controversial. **Some Pakistanis have expressed concern that the United States might take over control of the codes to prevent Pakistan from using its nuclear weapons. However, even if the Pakistani government has accepted this assistance, it would very likely demand absolute control over the codes.** Still, President Musharraf's opponents can use this concern against him to try to characterize him as a puppet of the United States. Providing PAL codes can also run afoul of the NPT's provision not to assist another state in acquiring nuclear explosives. Although a PAL can help prevent unauthorized use of a nuclear weapon, it could promote brinkmanship because Pakistan might feel more confident in deploying PAL-protected nuclear warheads in a crisis with India. **Pakistan's warheads are widely believed to be demated—that is, the HEU is removed from the rest of the weapon. Security analysts generally applaud this posture as safer than having the weapons already assembled for firing, and some analysts argue that nuclear security assistance to Pakistan should be made contingent on keeping the warheads demated. Demated warheads, however, may pose a greater threat than mated warheads. Short of terrorists enlisting insider assistance to teach them how to detonate a fully assembled nuclear weapon, they would have more confidence in exploding bombs they built themselves.** Another advantage for the terrorists is that presently almost all of Pakistan's nuclear weapons are powered by HEU. **By stealing the HEU separated from a demated warhead, terrorists would have the material they would need to build the simplest, improvised nuclear device. Little has been reported about what the United States is prepared to do if extremists take control of Pakistan.** During her confirmation hearing in January 2005, Secretary of State Condoleezza Rice said, "We have noted this problem and we are prepared to deal with it. I would prefer not in open session to talk about this particular issue." **What is known is that the United States has helped with President Musharraf's personal security. Reportedly, electronic devices that the United States had provided delayed the detonation of the bomb meant to assassinate President Musharraf on December 14, 2003.** In July 2002, the United States Agency for International Development (USAID) reestablished its mission to Pakistan. This USAID program concentrates on four areas: education, health, governance, and economic growth. **In December 2005, the Bush administration announced that "over the next five years" it will provide Pakistan with "more than \$3 billion in security, economic, and development assistance to enhance counterterrorism capacity and promote continued reform, including of the education system."**

**Tactical Nuclear Weapons:** Confusion surrounds the status and even the definition of tactical nuclear weapons, which are sometimes called nonstrategic nuclear weapons. This category of nuclear weapons is most clearly defined in the U.S.-Russia context in which strategic weapons that could readily strike the territories of the United States and Russia were subject to formal arms control treaties. In contrast, tactical nuclear weapons are usually short-range, covering less than five hundred kilometers (three hundred miles) and are generally lower yield compared to strategic nuclear weapons. **From the perspective of nuclear terrorism, tactical nuclear weapons possess some worrying characteristics. These weapons are typically intended for battlefield use and, thus, can be deployed in forward positions, which can be less secure than central storage. Tactical weapons are usually smaller and more portable than**

strategic weapons, making them more tempting targets for theft. Although tactical nuclear weapons are not currently subject to formal arms control agreements, President George H. W. Bush took a bold step in 1991 as the Soviet Union was collapsing and ordered the deactivation of thousands of American tactical nuclear weapons. Soviet President Mikhail Gorbachev soon followed with a similar step. In early 1992, President Bush ordered more U.S. nuclear forces deactivated, and Russian President Boris Yeltsin issued a similar order to Russian nuclear forces. These steps became known as the presidential nuclear initiatives. By issuing what are, in effect, gentlemen's agreements, the presidents were able to cut rapidly through bureaucratic red tape. However, in late 2004, thirteen years after the initiatives were ordered, the United States expressed concern that Russia has not fully lived up to its part of the bargain. In particular, the concerns are that Russia has not dismantled all of the weapons declared under the initiatives and that it still deploys many tactical nuclear weapons outside of secure central storage. **These concerns underscore that the largest remaining gap in the initiatives is the lack of transparency. The initiatives, as initially devised, did not provide for verification that the tactical nuclear weapons slated for destruction have been destroyed.**

**Recommendations: American Strategy To Prevent Catastrophic Nuclear Terrorism:** The United States is not alone in confronting the threat of catastrophic nuclear terrorism. As the world's sole superpower, the United States can and should exert leadership by taking unilateral decisions and initiatives, which, once launched, can serve as the basis for stronger multilateral work. Washington should also intensify initiatives to use bilateral relationships to tackle high priority nuclear security concerns involving Pakistan and Russia. The recommendations here target gaps in existing security programs and are focused on securing and eliminating vulnerable nuclear weapons and weapons-usable nuclear materials.

**Unilateral Initiatives:** To help dissuade transfers of nuclear weapons from "rogue" leaders to terrorist groups, the United States should clearly articulate a declaratory policy that it reserves the right to respond with the strongest measures including removal of those leaders from power. Washington should then urge other major powers to support this policy. President Bush would have to spend considerable political capital to garner widespread support. **His administration can build on the precedent it established in April 2004 when it won unanimous support in the UN Security Council for a resolution calling on countries to enact stronger controls to block terrorists from acquiring biological, chemical, or nuclear weapons.** To provide necessary technical credibility to the declaratory policy, the United States should at least double the resources devoted to its nuclear explosive attribution program. This expenditure is affordable and well worth the added insurance protection. At the time of writing, this program reportedly receives at most a few tens of millions of dollars annually. **The United States should announce an unambiguous policy that it supports delegitimizing the use of highly enriched uranium in the civilian sector. Washington should then encourage other governments to commit to this policy.** When deciding to issue this policy, the United States would have to weigh the tradeoff between closing off future use of HEU for civilian purposes and taking an important effort to shutting down a route to nuclear terrorism. Fortunately, continued investment, as the United States is already doing, in developing alternative non-weapons-usable fuels for civilian nuclear reactors can make choosing to phase out civilian HEU easier to accept. **As part of the political heavy lifting in carrying out this policy, the United States should enlist HEU suppliers to work toward prohibiting the export of HEU-fueled research and power reactors.** Any further exports should be contingent on the recipients pledging to convert their reactors to non-HEU use as quickly as is feasible. **To make good on this policy, the U.S. Congress should reenact and strengthen previous restrictions on exporting highly enriched uranium to isotope production reactors.**

**Multilateral Initiatives:** The United States should urgently work with other leading IAEA member states to determine exactly how much additional funding the cash-strapped IAEA needs. Confronted with numerous nuclear facilities worldwide that are in need of security enhancements, at a minimum, a doubling of the \$15.5 million that the IAEA has annually budgeted for its nuclear security fund is easily within the means of the United States and other major member states. This additional funding should have as few restrictions attached to it as possible. The member states should give the IAEA the authority it requires to expand its nuclear security assistance and inspection activities. **Furthermore, the United States should urge member states in need of this assistance to request it.** The United States, Russia, the IAEA, and their partners within the Global Threat Reduction Initiative should expand the scope of the GTRI to include all currently operating HEU-fueled civilian reactors. **The GTRI partners should determine which of the remaining HEU-fueled reactors really need to continue operating and which do not.** Operators of the latter group should be offered incentives to shut those reactors down. Such incentives could include sharing resources with reactors still in operation and offering early retirement or other means of employment for personnel at facilities slated for shut down. **For the remaining operating HEU-powered reactors, GTRI partners should determine the technical feasibility and financial costs of increasing the rate of reactor conversion. Moreover, the United States and Russia should speed up efforts to reach agreement with countries holding U.S.- and Russian-origin fresh and spent HEU fuel to repatriate these materials.** The United States has already envisioned spending about \$450 million in the coming years on the current GTRI program. Expanding GTRI to include all HEU-powered civilian reactors could increase costs by several tens of millions of dollars. Cost savings, however, could come about by using the targeted approach recommended here. That is, shutting down certain reactor facilities in the near term could cost less than converting, continuing to operate, and, in the long term, shutting down these facilities. **The United States, Russia, and the IAEA should determine what funding the Global Partnership Against the Spread of Weapons and Materials of Mass Destruction could provide.**

**U.S.-Pakistan Initiatives:** If the United States has not already done so, it should offer to brief President Musharraf and a broad spectrum of Pakistani leaders to convince them that certain terrorist groups can build crude, but devastating, nuclear weapons if these groups have access to enough highly enriched uranium. If President Musharraf and other Pakistani leaders can begin to take this threat seriously, Islamabad is far more likely to take further steps to improve nuclear security. It is not publicly known what nuclear security assistance the United States has offered and provided Pakistan. **If the United States has not already done so, it should offer security assistance that includes generic physical security procedures, unclassified military handbooks, portal control equipment, sophisticated vaults and access doors, and personnel reliability programs.** These types of assistance should be designed to not spur

nuclear testing, increase the likelihood of nuclear war in South Asia, harm relations with India or other countries, undermine the Pakistani government, or reveal the locations of nuclear weapons or weapons-usable nuclear materials. **As a neutral party, the IAEA may be able to offer some generic physical protection assistance, through its International Physical Protection Advisory Service, without stirring concerns about foreign powers wanting to take control of Pakistan's nuclear weapons. To receive this service, Pakistan must request it, which Islamabad has not done. As a major non-NATO ally, the United States should quietly press Pakistan to reach out for this assistance.** The physical protection assistance recommended here such as portal monitors and vaults would likely cost no more than about a few millions of dollars, whereas security handbooks, information about personnel reliability programs, and seminars on security procedures would cost considerably less (Ferguson, 2006).

**Source:** Foreign Policy (CFR), Peter D. Zimmerman, Jeffrey G. Lewis

**Title/Headline:** *The Bomb In The Backyard*

**Abstract:** Osama bin Laden has not yet succeeded in launching a nuclear attack. But it isn't because he can't. With enriched uranium, a handful of military supplies available on the Internet, and a small team of terrorists, he could assemble a nuclear bomb in a matter of months. Nearly 3,000 people were killed five years ago when terrorists plowed airplanes into New York's World Trade Center, the Pentagon, and a field in Pennsylvania. The terrorist attack was undoubtedly a terrible tragedy. But it could have been much worse. Eight years earlier, aides to Osama bin Laden met with Salah Abdel al-Mobruk, a Sudanese military officer and former government minister who offered to sell weapons-grade uranium to the terrorists for \$1.5 million. He proffered up a 3-foot-long cylinder. The al Qaeda representatives agreed to the purchase, because after all, as one of them later said, "It's easy to kill more people with uranium" (Zimmerman & Lewis, 2006).

**Date:** November 2, 2006

**Source:** World Net Daily

**Title/Headline:** *Al-Qaida Able To Build Nuke Weapon Inside U.S.*

**Abstract:** Terrorists could assemble a small group of fewer than 20 to construct a Hiroshima-size nuclear bomb, purchase the fissionable uranium needed and transport it to the U.S. city of their choice for less than \$10 million, says a new report published in the November-December issue of Foreign Policy. "The Bomb in the Backyard" was the result of the investigative work of Peter D. Zimmerman and Jeffrey G. Lewis. Zimmerman is professor of science and security in the Department of War Studies at King's College in London and previously served as chief scientist of the U.S. Senate Foreign Relations Committee and chief scientist of the U.S. Arms Control and Disarmament Agency. Lewis is executive director of the Managing the Atom Project at the Belfer Center for Science and International Affairs at the John F. Kennedy School of Government at Harvard. "To put it in strictly commercial terms, terrorists would likely find a nuclear attack cost effective," they write in the article. "The simple appeal of nuclear terrorism can be illustrated with a hypothetical situation. A failed nuclear detonation, one that produced only a few tens of tons in yield, could kill 10,000 people in just a few hours if the device exploded in a crowded financial center. Not only would 10,000 persons represent the upward limit of a conventional terrorist attack, but that figure would exceed the combined casualties in all of al-Qaida's attacks over the entire history of the organization." And that's the "worst-case" scenario for the terrorists, the authors point out. If "successful," the nuclear detonation would kill 10 times more people – 100,000. Without giving away any information about the assembling of such a device that cannot already be found easily on the Internet, Zimmerman and Lewis construct a scenario for building a nuclear bomb within the U.S. for a budget of less than \$10 million – finding it can be done with a small team of about 19, the same number of people involved in the Sept. 11 attacks. "It is certainly possible that a terrorist group might not want to risk detection within U.S. borders and would prefer to make the bomb overseas," they write. "But, for purposes of this hypothetical situation, we chose a scenario that would be far less uncertain for the terrorists by eliminating the risks of moving the bomb across a border." In fact, the backyard bomb project came in under budget – at \$5.433 million. The authors said the project – from start to finish – would take no more than a few months. "Once complete, the nuclear device itself is likely to be less than 9 feet long," said the report. "Although it would not fit easily in a sedan, it could be transported in a van or small panel truck with, say, a couple drivers and a couple more people to keep an eye on the device. The plotters could target any number of metropolitan areas and would be free to choose based entirely on their desire to travel unobtrusively and undetected, presumably across a large fraction of the United States." The authors warn that nuclear terrorism is still very much on the minds of al-Qaida, which began plans more than a decade ago for what it dubbed "American Hiroshima," a nuclear attack on the U.S. As recently as September, they say, al-Qaida put out a call urging nuclear scientists to join its war against the West. Also in September, the new al-Qaida field commander in Afghanistan called for Muslims to leave the U.S. – particularly Washington and New York – in anticipation of a major terror attack to rival Sept. 11, according to an interview by another Pakistani journalist. Abu Dawood told Hamid Mir, a reporter who has covered al-Qaida and met with Osama bin Laden, the attack is being coordinated by Adnan el-Shukrijumah and suggests it may involve some form of weapon of mass destruction smuggled across the Mexican border. "Our brothers are ready to attack inside America. We will breach their security again," he is quoted as saying. "There is no timeframe for our attack inside America; we can do it any time." As WND has previously reported, el-Shukrijumah is a trained nuclear technician and accomplished pilot who has been singled out by bin Laden and Ayman al-Zawahiri to serve as the field commander for the next terrorist attack on U.S. soil. The terrorist was last seen in Mexico, where, on Nov. 1, 2004, he allegedly hijacked a Piper PA Pawnee cropduster from Ejido Queretaro near Mexicali to transport a nuclear weapon and nuclear equipment into the U.S., according to Paul Williams, a former FBI consultant and author of "The Dunces of Doomsday." "He is an American and a friend of Muhammad Atta, who led 9/11 attacks five years ago," said Dawood. "We call him

'Jaffer al Tayyar' (Jafer the Pilot); he is very brave and intelligent. (President) Bush is aware that brother Adnan has smuggled deadly materials inside America from the Mexican border. Bush is silent about him, because he doesn't want to panic his people. Sheikh Osama bin Laden has completed his cycle of warnings. You know, he is man of his words, he is not a politician; he always does what he says. **If he said it many times that Americans will see new attacks, they will definitely see new attacks. He is a real mujahid. Americans will not win this war, which they have started against Muslims. Americans are the biggest supporters of the biggest terrorist in the world, which is Israel.**" Mir reportedly interviewed Dawood Sept. 12 at the tomb of Sultan Mehmud Ghaznawi on the outskirts of Kabul. Dawood and the al-Qaida leaders who accompanied him were clean-shaven and dressed as Western reporters. **The al-Qaida commander had contacted Mir by cell phone to arrange the meeting. El-Shukrijumah was born in Guyana Aug. 4, 1975 – the firstborn of Gulshair el-Shukrijumah, a 44-year-old radical Muslim cleric, and his 16-year-old wife. In 1985, Gulshair migrated to the United States, where he assumed duties as the imam of the Farouq Mosque in Brooklyn. The mosque, located at 554 Atlantic Avenue in Brooklyn, has served as a hive for terrorist activities. It has raised millions for the jihad and has served as a recruiting station for al-Qaida. Many of the planners of the 1993 attack on the World Trade Center, including blind Sheikh Omar Abdel Rahman, were prominent members of this notorious "house of worship."** In 1995, the Shukrijumah family relocated to Miramar, Fla., where Gulshair became the spiritual leader of the radical Masjid al-Hijah Mosque, and where Adnan became friends with Jose Padilla, who planned to detonate a radiological bomb in midtown Manhattan; Mandhai Jokhan, who was convicted of attempting to blow up nuclear power plants in southern Florida; and a group of other homegrown terrorists. Adnan Shukrijumah attended flight schools in Florida and Norman, Oklahoma, along with Mohammad Atta and the other 9/11 operatives, and he became a highly skilled commercial jet pilot, although he, like Atta and the other terrorists, never applied for a license with the Federal Aviation Commission. **In April 2001, Shukrijumah spent 10 days in Panama, where he reportedly met with al-Qaida officials to assist in the planning of 9/11. He also traveled to Trinidad and Guyana, where virulent al-Qaida cells have been established. The following month, he obtained an associate's degree in computer engineering from Broward Community College.** During this time, he managed to get passports from Guyana, Trinidad, Saudi Arabia, Canada and the United States, according to Williams. He also began to adopt a number of aliases, including Abu Arifi, Jafar al-Tayyar, Jaafar At Yayyar, Ja'far al-Tayar, and Mohammed Sher Mohammed Khan (the name that appeared on his official FBI file). He traveled to Saudi Arabia and Pakistan, where he met with Ramzi Binalshibh, Khalid Sheikh Mohammed, and other members of the al-Qaida high command. He also spent considerable time within al-Qaida camps in Afghanistan, where he received training in explosives and special operations. Following 9/11, el-Shukrijumah was reportedly singled out by bin Laden and al-Zawahiri to spearhead the next great attack on America. **One plan was for a nuclear attack that would take place simultaneously in seven U.S. cities, leaving millions dead and the richest and most powerful nation on earth in ashes. "Muslims should leave America," said Dawood. "We cannot stop our attack just because of the American Muslims; they must realize that American forces are killing innocent Muslims in Afghanistan and Iraq; we have the right to respond back, in the same manner, in the enemy's homeland. The American Muslims are like a human shield for our enemy; they must leave New York and Washington." "I am saying that Muslims must leave America, but we can attack America anytime," he said. "Our cycle of warnings has been completed, now we have fresh edicts from some prominent Muslim scholars to destroy our enemy, this is our defending of Jihad; the enemy has entered in our homes and we have the right to enter in their homes, they are killing us, we will kill them"** (World Net Daily, 2006).

INTERNATIONAL JOURNAL OF  
HEALTH GEOGRAPHICS

**Date:** February 27, 2007

**Source:** International Journal Of Health Geographics, William C. Bell, Cham E. Dallas

**Title/Headline:** *Vulnerability Of Populations And The Urban Health Care Systems To Nuclear Weapon Attack – Examples From Four American Cities*

**Abstract:** The threat posed by the use of weapons of mass destruction (WMD) within the United States has grown significantly in recent years, focusing attention on the medical and public health disaster capabilities of the nation in a large scale crisis. **While the hundreds of thousands or millions of casualties resulting from a nuclear weapon would, in and of itself, overwhelm our current medical response capabilities, the response dilemma is further exacerbated in that these resources themselves would be significantly at risk.** There are many limitations on the resources needed for mass casualty management, such as access to sufficient hospital beds including specialized beds for burn victims, respiration and supportive therapy, pharmaceutical intervention, and mass decontamination. **The effects of 20 kiloton and 550 kiloton nuclear detonations on high priority target cities are presented for New York City, Chicago, Washington D.C. and Atlanta.** Thermal, blast and radiation effects are described, and affected populations are calculated using 2000 block level census data. **Weapons of 100 Kts and up are primarily incendiary or radiation weapons, able to cause burns and start fires at distances greater than they can significantly damage buildings, and to poison populations through radiation injuries well downwind in the case of surface detonations.** With weapons below 100 Kts, blast effects tend to be stronger than primary thermal effects from surface bursts. From the point of view of medical casualty treatment and administrative response, there is an ominous pattern where these fatalities and casualties geographically fall in relation to the location of hospital and administrative facilities. **It is demonstrated that a staggering number of the main hospitals, trauma centers, and other medical assets are likely to be in the fatality plume, rendering them essentially inoperable in a crisis. Among the consequences of this outcome would be the probable loss of command-and-control, mass casualties that will have to be treated in an unorganized response by hospitals on the periphery, as well as other expected chaotic outcomes from inadequate administration in a crisis. Vigorous, creative, and accelerated training and coordination among the federal agencies tasked for WMD response, military resources, academic institutions, and local responders will be critical for large-scale WMD events involving mass casualties. The increasing likelihood of the use of weapons of mass destruction (WMD) on large civilian populations has been described in international government alerts, U.S. Congressional hearings, research studies, and numerous scientific publications.** Islamic terrorist attacks on New York and Washington, D.C. have accentuated the reality of this threat, though the magnitude of casualties with WMD would be many times greater in scale. **While we can**

continue to hope that large-scale mass casualties from WMD attacks will remain high consequence, low probability scenarios, it is mandatory that we invest the appropriate physical and human resources to deal with such a staggering prospect (Bell & Dallas, 2007).

**Source:** The Center For Arms Control And Non Proliferation, Lt. Gen. Robert Gard

**Title/Headline:** *Nuclear Terrorism Is A Likely Event*

**Abstract:** At a Senate hearing recently, Undersecretary of Energy for Intelligence and Analysis Charles Allen testified, "Al-Qaida wants a nuclear weapon to use." It is well-known that al-Qaida considers it a religious duty to acquire a nuclear weapon, and its spokesperson has claimed the right to kill 4 million Americans. During the 2004 presidential election, both candidates agreed that the greatest threat to U.S. security is nuclear weapons in the hands of terrorists. **It seems unlikely that terrorists could obtain a usable nuclear weapon from any of the nine countries that currently possess them, although there is some concern that a possible source could be the Pakistani stockpile, should that unstable country implode.** It is more likely that terrorists could obtain the key ingredient for making a nuclear bomb, plutonium (Pu) or highly enriched uranium (HEU). While producing a weapon with Pu is a relatively complex task, there is consensus in the scientific community that it would not be difficult for a terrorist group to produce an explosive device similar to the one used on Hiroshima, with as little as 50 pounds of HEU. **The International Panel on Fissile Materials estimated in its 2007 report that there are 1,400-2,000 tons of HEU, enough for some 56,000-80,000 nuclear weapons, spread around the world.** Much of the HEU is in Russia and the states of the former Soviet Union, known to have weak security regulations and widespread corruption. **In April 2006, Russian police arrested the foreman of a nuclear plant for attempting to sell about 50 pounds of HEU, enough for a weapon.** Of at least equal if not greater concern is what Princeton professor Frank von Hippel calls significant quantities of HEU in some 140 locations around the world in research and medical isotope production reactors and in associated fuel development and fabrication facilities, many with only minimum security. **Dr. Matthew Bunn of Harvard University has warned that these materials are in hundreds of buildings in dozens of countries; some sites have reliable safety measures, but many are secured only by a chain-link fence. It would be a relatively simple matter to smuggle the material into the United States, where it could be fashioned into a crude but deadly nuclear weapon in a garage with tools purchased in a hardware store. It is incredible that our government is failing to accord the highest priority to taking the actions necessary to prevent terrorists from carrying out their threat to detonate a nuclear weapon on the territory of the United States, which would forever change our way of life (Gard, 2008).**

**Date:** September 11, 2008

**Source:** RAND Corporation, Brian Michael Jenkins

**Title/Headline:** *A Nuclear 9/11?*

**Abstract:** Will terrorists go nuclear? It is a question that worried public officials and frightened citizens have been asking for decades. It is no less of a worry today, as we ponder the seventh anniversary of 9/11. Might Iran's nuclear weapons ambitions lead eventually to arming Hizbollah or Hamas with nuclear weapons? Might a financially desperate North Korea sell the wherewithal for nuclear weapons to terrorist buyers? **Might a political upheaval in always turbulent Pakistan put a nuclear weapon in the hands of extremists? Could there, ultimately, be a nuclear 9/11?** We have to take the long-shot possibility of nuclear terrorism seriously, but we must not allow ourselves to be terrorized by it. Nuclear terrorism and nuclear terror reside in different domains. Nuclear terrorism is about a serious threat-the possibility that terrorists might somehow obtain and detonate a nuclear weapon-while nuclear terror is about the anticipation of that event. Nuclear terrorism is about terrorists' capabilities, while nuclear terror is about imagination. Fear is not free. Fear can pave the way for circumventing established procedures for the collection of intelligence, for attempts to operate outside the courts, and perhaps for torture. **Distinguished scholars discuss the durability of the U.S. Constitution in the face of nuclear terrorism. Frightened populations are intolerant. Frightened people worry incessantly about subversion from within. They worry about substandard zeal. Frightened people look for visible displays to confirm unity of belief-lapel pin patriotism.** Fear creates its own orthodoxy. It demands unquestioning obedience to a determined order of apprehension. During the Cold War an all-out nuclear exchange would have meant planetary suicide. Today, we face one tyrant in North Korea with a handful of nuclear weapons, an aspirant in Iran enthralled by first-use fantasies, and a terrorist organization with an effective propaganda machine-dangerous, vexing, but not the end of the world, not the end of the nation, not the end of a single city. **Undoubtedly, a terrorist nuclear explosion of any size would have a huge psychological impact on America. But whether it would lead to social anarchy would depend heavily on the attitudes of the nation's citizens and the behavior and communications of its leadership. We may not be able to prevent an act of nuclear terrorism. But we can avoid destroying our democracy as a consequence of nuclear terrorism.** Whether or not we as citizens yield to nuclear terror is our decision (Jenkins, 2008).

**Source:** ABC News

**Title/Headline:** *Report: World at Risk of Bio, Nuke Attack.*

**Abstract:** It's 'More Likely Than Not' That a WMD Attack Will Occur by 2013, Panel Determines A biological or nuclear attack is likely to occur somewhere around the globe during the Obama administration or shortly thereafter, a new congressionally mandated report has warned. The report, titled "The World at Risk," starkly states, "The commission believes that unless the world community acts decisively and with great urgency, it is more likely than not that a weapon of mass destruction will be used in a terrorist attack somewhere in the world by the end of 2013." The ominous study by the Commission on the Prevention of WMD Proliferation and Terrorism and obtained by ABC News, will be released Wednesday. The biggest threat is a biological attack, which the report considers to be a greater possibility than a nuclear or radiological attack. "Terrorists are more likely to be able to obtain and use a biological weapon than a nuclear weapon. The commission believes that the U.S. government needs to move more aggressively to limit the proliferation of biological weapons and reduce the prospect of a bioterror attack," it says. "The acquisition of deadly pathogens, and their weaponization and dissemination in aerosol form, would entail fewer technical hurdles than the theft or production of weapons-grade uranium or plutonium and its assembly into an improvised nuclear device," the report argues. While terror groups lack the expertise to make biological weapons, the study warns that "terrorists are trying to upgrade their capabilities and could do so by recruiting skilled scientists." As a cautionary example, "The World at Risk" cites the 2001 anthrax attacks in the United States, which the FBI and Justice Department have maintained were conducted by the late Bruce Ivins, a bio-weapons researcher at Fort Detrick. The new report drew the same conclusions as a separate study released last month by the National Intelligence Council. That report, titled Global Trends 2025, predicted the threat from biological weapons would grow. "For those terrorist groups active in 2025, the diffusion of technologies and scientific knowledge will place some of the world's most dangerous capabilities within their reach. The globalization of biotechnology industries is spreading expertise and capabilities, and increasing the accessibility of biological pathogens suitable for disruptive attacks," it warns. The commission said that Pakistan posed a particular danger for a WMD attack because al Qaeda reportedly has a safe haven in Pakistan's wild tribal areas, the instability in the government and Pakistan's nuclear weapons stockpile. "Pakistan is an ally, but there is a grave danger it could also be an unwitting source of a terrorist attack on the United States -- possibly with weapons of mass destruction," it claims. The report notes that Pakistan's nuclear weapons stockpile consists of about 85 nuclear warheads and that China has recently agreed to build two nuclear power plants in Pakistan, which could help exacerbate a regional nuclear arms race with its nuclear armed neighbor India. "Though most U.S. and Pakistani officials say that these weapons and their components are safe from inside or outside theft, the risk that radical Islamists -- al Qaeda or Taliban -- may gain access to nuclear material is real." "America's margin of safety against a WMD attack is shrinking. But we also want to assure the people that there is ample and solid ground for hope about the future," the report states. It makes a series of 13 recommendations for the incoming administration, which includes conducting a comprehensive review of domestic stocks of deadly pathogens and tightening security at those biological labs and research facilities. While security has been known to be inadequate at bioresearch facilities overseas, especially in the former Soviet Union, the report makes mention of a recent GAO study that found that security at several of the United States' top biological laboratories containing the world's deadliest diseases and viruses was inadequate. **The report also recommends that the United States should bolster rapid response ability and pharmaceutical stocks to mitigate mass casualties and should advance bioforensic capabilities.** Other recommendations include for the United States to push internationally for countries to address the issue of biosecurity, enhance disease surveillance networks and push for the adherence of the Biological Weapons Convention, which countries are to review in 2011. **On the issue of nuclear security, the report recommends that the United States needs to strengthen the current nuclear nonproliferation treaties and seek a "restructuring" of the US-Russian relationship.** Concerning Iran and North Korea, the commission recommends that "As a top priority, the next administration must stop the Iranian and North Korean nuclear weapons programs. In the case of Iran, this requires the permanent cessation of all of Iran's nuclear weapons-related efforts. In the case of North Korea, this requires the complete abandonment and dismantlement of all nuclear weapons and existing nuclear programs." The study was conducted over six months, and included more than 250 interviews with government officials. Overseas site visits ranged from the U.S. national laboratories to Moscow. **The commission was to travel to Pakistan, but the trip was cut short after the September bombing of the Marriott hotel in Islamabad. The commission notes in the report that it came within hours of staying at the hotel** (ABC News, 2008).

**Title/Headline:** *Nuclear Terrorism: Assessing The Threat, Developing A Response*

**Abstract:** Over the past several years, the prospect of a terrorist group armed with a nuclear weapon has frequently been cited as a genuine and overriding threat to the security of the United States. Although the likelihood of a nuclear terrorist attack may be relatively low, the consequences of such an attack would obviously be enormous. There is, therefore, widespread agreement regarding the severity of this threat. Despite this consensus, a number of important questions remain open to debate: **How real is the risk that a terrorist group could acquire or construct a functional nuclear device, and how might it attempt to do so?** Which group poses the greatest threat in this regard, how has that threat changed over time, and is it currently growing or abating? **What existing and prospective measures will prove most effective in preventing terrorists from obtaining a nuclear weapon, stopping them from delivering and detonating a weapon if prevention fails, and responding both at home and abroad in the event that an attack succeeds?** The purpose of this report is to examine these critical issues.

**Sources Of The Nuclear Terror Threat:** There are two major dimensions of the nuclear terrorist threat: the “supply” side of nuclear proliferation and the “demand” side of violent Islamist extremism. **Over the past decade, longstanding concerns over proliferation have become increasingly acute in light of a number of worrisome developments, including the status of India and Pakistan as overt nuclear weapon states, North Korea’s test of a nuclear weapon, the international community’s failure to restrain Iran’s nuclear ambitions, and the fear that an Iranian nuclear weapons program could spark further proliferation throughout the Middle East. Ultimately, while existing nuclear arsenals and stockpiles of fissile material represent the most immediate concern, the spread of nuclear weapons and material has increased the probability that terrorists might be able to acquire or construct a nuclear device.** At the same time that nuclear proliferation has become a growing concern, terrorism has also been elevated from a secondary to a primary threat to US security because of the emergence of groups that have few inhibitions on inflicting mass casualties by means of chemical, biological, and even nuclear weapons. **Today, for example, the threat of nuclear terrorism is primarily associated with Osama bin Laden and his followers, who have not only pursued these weapons for some time, but have expressed their willingness to use them against their enemies.** Since the US invasion of Afghanistan in 2001, however, al Qaeda has lost a key sanctuary and much of its original senior leadership. **Does it still hope to acquire and use weapons of mass destruction? Is it capable of obtaining or building a nuclear weapon? The answer to the first question appears to be “yes.”** Publicly available information leaves little doubt that the group’s intentions remain unchanged. Nevertheless, al Qaeda appears to be much less capable of conducting a major attack against the United States, and especially a catastrophic attack using a nuclear weapon, than it was when it had a base of operations in Afghanistan. After the downfall of the Taliban regime, al Qaeda evolved into an increasingly decentralized organization. Moreover, as the influence and capabilities of its central leadership have waned, the source of the terrorist threat has shifted toward regional groups affiliated with **al Qaeda and homegrown extremists inspired by it, neither of which are likely to possess the knowledge, skills, resources, or discipline necessary to plan and successfully carry out a nuclear attack.** Unfortunately, numerous accounts suggest that **al Qaeda’s core leadership is regaining its strength, reasserting and even expanding control over its far-flung network of allies and sympathizers, and reestablishing its ability to organize and execute major attacks, developments that would not be possible without the sanctuary it has established in remote areas of Pakistan. To the extent that this sanctuary allows al Qaeda’s leadership to plan future operations, the likelihood that the group might be able to conduct a catastrophic attack at some point in the future appears to be increasing once again.** An analysis of the supply and demand sides of the nuclear terrorist threat suggests two major conclusions. First, limiting and preferably stopping any further proliferation of nuclear weapons and the technology to produce nuclear material is and will remain an important goal. At present, this goal hinges largely on Iran — if Tehran does pursue and develop nuclear weapons, this could be the catalyst for a wave of proliferation in the Middle East. Yet stopping Iran from becoming a nuclear weapon state, while certainly desirable, may not be feasible through diplomacy, economic sanctions, or military action. The United States must, therefore, work to develop a comprehensive strategy to prevent further proliferation in the region if and when Iran does become a full-fledged nuclear power. **Second, because there is a very strong probability that any credible plot to conduct a nuclear terrorist attack will originate with al Qaeda’s central leadership, a critical component of a broader strategy to prevent such an attack will involve measures directed at weakening al Qaeda’s leaders and eliminating — or at the very least restricting — their sanctuary in Pakistan.**

**Terrorist Acquisition Of Nuclear Weapons: How, & How Likely?:** If a terrorist group like al Qaeda was determined to “go nuclear,” how might it attempt to do so and what obstacles would it face? There are four main alternatives that prospective nuclear terrorists might pursue. **First, terrorists could attempt to manufacture the fissile material needed to fuel a nuclear weapon (either highly enriched uranium or plutonium) and then use that material to construct a nuclear device. Of all the scenarios, this is by far the most ambitious, most difficult, and least likely.** Producing fissile material is both the most crucial and the most challenging aspect of developing nuclear weapons, and is the step that has in the past prevented aspiring nuclear powers such as Libya and Iraq from becoming nuclear-weapon states. Thus, the knowledge, infrastructure, and finances needed to undertake this step with any realistic prospect of success very likely outstrip the resources that even a well-funded terrorist group might possess. **A second possibility is that a terrorist group might seek out a state sponsor, in particular a rogue nation that already possessed nuclear weapons and might provide the group with this capability.** While the direct transfer of a nuclear weapon would certainly be the easiest route from a terrorist group’s perspective, several factors suggest that it is also highly unlikely. First, nuclear weapons are an extraordinarily valuable commodity that any state would be reluctant to part with. Second, any state that deliberately provided a terrorist group with a nuclear weapon would run the risk of being discovered and suffering the consequences. **Third, it is also unlikely that a regime would willingly entrust a terrorist group with such a powerful weapon, since there would be no way to ensure that the group would carry out an attack against the intended target rather than another state or even the sponsoring regime itself. A third possibility is the theft of an intact nuclear weapon, although this would hardly be an easy task. Most nuclear weapons are heavily guarded, and, even if terrorists did manage to acquire a weapon, they would still have to overcome any security features that render a weapon inoperable without the proper arming codes. Despite these factors, fears of “loose” nuclear weapons persist and are warranted, especially in the cases of Russia and Pakistan. In Pakistan, ongoing political instability and popular unrest, as well as suspicions that members of Pakistan’s military, intelligence, and scientific establishments continue to sympathize with and perhaps even support violent Islamist groups, have exacerbated fears that Pakistan’s nuclear weapons may be vulnerable. Finally, there is the possibility that a group could purchase fissile material on the black market or steal it from a military or civilian facility and then use that material to construct an improvised nuclear device.** In recent years, analysts have increasingly come to view this scenario as the most plausible route for terrorists seeking nuclear weapons, for two main reasons. First, large stockpiles of fissile material can be found throughout the world in military as well as civilian facilities, some of which are inadequately monitored and protected. Second, building a crude nuclear device once a sufficient amount of this material has been obtained, although not an easy task, is certainly within the realm of possibility. **Here, the principal challenge for terrorists would involve the tradeoff between the quantity of fissile material required for a weapon and the type of weapon that could be built. That is to say, while a gun-type nuclear weapon would be relatively easy to build, it requires a significant amount of highly enriched uranium; conversely, far less uranium or a very small amount of plutonium would be needed to fuel an implosion weapon, but building this device would prove extremely difficult.** Nevertheless, this threat remains particularly salient.

**Developing A Response:** At the most basic level, a comprehensive strategy for addressing the threat of nuclear terrorism should be

structured around three core objectives: **preventing terrorists from acquiring nuclear weapons or fissile material; stopping terrorists from delivering a nuclear weapon to their intended target should prevention fail; and being prepared to respond as quickly and effectively as possible, both at home and abroad, in the event that terrorists succeed in detonating a nuclear weapon inside the United States.**

**Keeping Terrorists From The Bomb:** The first and most important way to avert a nuclear terrorist attack is to prevent terrorists from acquiring an intact weapon or from collecting a sufficient amount of fissile material to build a nuclear device. If terrorists do succeed in either of these endeavors, thwarting an attack will ultimately depend on locating any missing fissile material before a weapon can be assembled or intercepting a device before it can be delivered to the target and detonated. These are extremely challenging tasks that cannot be relied upon as a primary line of defense. **Achieving this objective requires adopting a multi-dimensional approach that significantly decreases the prospects that terrorists will succeed at each major stage in their plot — obtaining a nuclear weapon, transporting the weapon to the target, and enjoying the benefits they anticipate will follow if they conduct a nuclear attack.** Not only will such an approach increase the likelihood that prospective nuclear terrorists will fail in their efforts, it could as a result dissuade terrorists from seriously pursuing the nuclear option at all. There are three main areas that can contribute to dissuasion: delegitimizing the killing of civilians generally and the use of nuclear weapons specifically, reducing stockpiles of highly enriched uranium and plutonium and securing existing weapons and fissile material, and developing and deploying radiation monitors and other detection systems. **First, efforts must be made to foster the perception among terrorists that an act of nuclear terrorism will not help them to achieve their aims, but will instead prove counterproductive by causing sympathizers and potential supporters to turn away from them rather than rally to their side. If terrorists can be convinced that a successful catastrophic attack will ultimately backfire, they may grow reluctant to pursue this type of attack in favor of more “acceptable” forms of violence.** Al Qaeda, for example, has recently displayed some concern over the increasingly widespread criticism of its violent tactics, particularly the murder of Muslim civilians. The US government should therefore work through intermediaries to publicize as widely as possible al Qaeda’s acts of violence and their immediate and longer-term effects on those who have suffered from them. **It should also seek to support individuals and organizations throughout the Muslim world that not only eschew violence, but can publicly and credibly challenge al Qaeda by arguing that the large-scale killing of civilians and the use of nuclear weapons are immoral, religiously impermissible, and unlikely to help the situation of those whom al Qaeda claims to be fighting for.** Second, if terrorists cannot be persuaded to abandon the idea of nuclear terrorism, the next best thing would be to convince them that it is not a realistic option. Specifically, if a terrorist group concludes that it cannot acquire a nuclear weapon or enough fissile material to make one on its own, or that any attempt to do so would require enormous human and material resources and would still have only a very small chance of succeeding, it will likely devote most of those resources elsewhere. **Continuing and, where possible, accelerating and expanding efforts to eliminate or secure potentially vulnerable nuclear weapons and material can therefore thwart determined terrorists from obtaining these items and dissuade prospective nuclear terrorists from attempting to do so in the first place.** Moreover, as individual nations and international organizations work to secure loose weapons and material, a corresponding effort should also be made to publicize their successes and ensure that these actions are exploited for their dissuasive value. **Finally, detection systems can also play an important role in preventing a nuclear terrorist attack, not only by stopping a group from successfully transporting a nuclear weapon or material to its target, but also by dissuading terrorists from pursuing the nuclear option.** In concert with the other recommendations discussed above, the deployment of radiation monitors and other detection systems can increase the prospect that potential nuclear terrorists will judge the possibility of success as too low to merit the effort required. **It is important, however, to ensure that the presence of these systems influences terrorists’ calculations in the expected way — i.e., that they discourage terrorists from pursuing nuclear weapons and material as opposed to providing a roadmap for which routes, ports, or border crossings should be avoided.** In addition to “red teaming” how terrorists might attempt to sneak a weapon or fissile material into the United States, analyses should be undertaken to determine how to convince terrorists that they will be unable to circumvent existing defenses, which may depend as much on publicizing (and possibly exaggerating) existing capabilities as developing new ones.

**Stopping Terrorists From Delivering A Weapon:** Although preventing terrorists from acquiring nuclear weapons and material is the best, safest, and most feasible way to avoid a catastrophic attack, prudence demands that the US Government be as well prepared as possible to locate and intercept a terrorist group that obtains these items before it can deliver a weapon to its intended target. Two areas in particular are likely to play a crucial role in these efforts: human intelligence and Special Operations Forces. Given the inherent difficulty of detecting nuclear weapons and material, especially from any significant distance, locating and stopping terrorists who are in possession of these items may depend first and foremost on knowing where to look. **Yet terrorist groups are often reluctant to use electronic forms of communication that could be monitored, and al Qaeda is notoriously difficult to penetrate through the cultivation of human sources.** Therefore, resources might be better spent on the comparatively easier task of developing assets within the military and/or scientific establishments of nations that are the most probable sources of loose nuclear weapons and material, especially if individuals working in particularly high-risk facilities or more senior individuals who would be among the first to learn of any missing items can be identified in advance. **If terrorists obtain stolen nuclear material or a nuclear weapon and have been located by human intelligence sources or some other means, Special Operations Forces will likely be tasked with interdicting and securing these items.** Ideally, special operations personnel trained to render safe a nuclear device would be capable of responding quickly to a potential nuclear terrorist threat. In reality, however, the small number of personnel qualified for this mission, the high demand for those personnel in support of ongoing operations, the inherent uncertainty over where a nuclear terrorist threat might materialize, and the constraints imposed by geography all make the ideal response capability difficult to realize. **Despite these problems, a number of measures could be taken to enable qualified personnel to respond to a nuclear terrorist threat in relatively short order, for example training select allies and partners in render-safe procedures, prepositioning necessary equipment overseas at bases or operating sites centrally located to various known smuggling routes and/or terrorist sanctuaries, and forward-deploying a small, dedicated response team in Europe or Central Asia.**

**Responding To An Attack:** The aftermath of a terrorist attack would involve response efforts both at home and abroad. Response

efforts at home would primarily focus on consequence management — limiting the damage caused by an attack. Improving consequence management capabilities will require continued investment in a number of areas, for example training first responders, prepositioning stockpiles of medication to treat radiation sickness, ensuring that various federal as well as state agencies have clearly defined and well understood areas of responsibility in the event of an attack, developing public communication strategies that can quickly and effectively instruct citizens on how to respond to an attack, and improving capabilities for decontaminating large areas that have been exposed to radiation. **Although the government's immediate focus will be on mitigating the consequences of an attack, it will quickly shift its attention toward identifying those responsible and retaliating against the perpetrators.** As a first step, scientists would be tasked with analyzing the radioactive debris from a nuclear explosion in order to gain as much information as possible on the weapon and material used, in order to determine their origin — a field that has received increased attention and funding in recent years. **An effective nuclear attribution capability could also help to prevent an attack in the first place by ensuring that state sponsors would not be able to retain anonymity.** In fact, a number of analysts have advocated a strategy of deterring nuclear terrorism by threatening potential state sponsors with retaliation if they are identified as the source of a nuclear weapon or material used in an attack. **Nuclear attribution is an important capability that deserves the increased attention and funding it has received. The US Government should continue to invest in this area, and may even want to publicly exaggerate its capabilities to encourage the belief that state sponsors will not be able to remain anonymous.** At the same time, policymakers should also exercise caution when contemplating public declarations regarding who will be held responsible for an attack and what type of response will follow. **Ambiguous warnings that do not explicitly call for a military reprisal could be useful by reinforcing the notion that governments may be culpable for the actions of a terrorist group.** While declarations that overtly threaten a military reprisal will certainly capture a state's attention, these threats may not prove credible or particularly effective in the most important cases, and could even risk doing more harm than good. **Over the past several years, the prospect of a terrorist group armed with nuclear weapons has frequently been cited as a genuine and overriding threat to the security of the United States.** The Bush administration, for example, repeatedly argued that the nexus between terrorism and weapons of mass destruction (WMD), particularly nuclear weapons, represents one of the greatest dangers of the twenty-first century. Although the previous administration's efforts to prevent this threat from materializing were hardly immune from criticism, few argued that its underlying concerns were misplaced. **Critics were far more likely to argue that the administration devoted too little attention to this issue rather than too much, or that it focused its efforts in the wrong place by emphasizing the possibility of a rogue state transferring a nuclear weapon to a terrorist group as opposed to other, more plausible scenarios.** There is clearly widespread agreement that the possibility of a nuclear terrorist attack is and will likely remain one of the most significant threats facing the United States. Yet, a number of important questions remain open to debate: **How serious is the risk that a terrorist group could acquire or construct a functional nuclear device, and how might it attempt to do so? Which group poses the greatest threat in this regard, how has that threat changed over time, and is it currently growing or abating? What existing and prospective measures will prove most effective in preventing terrorists from obtaining a nuclear weapon, stopping them from delivering and detonating a weapon if prevention fails, and responding both at home and abroad in the event of an attack?** The purpose of this report is to examine these critical issues.

**An Emerging Consensus:** In September 2004, near the conclusion of an otherwise contentious political debate, President George W. Bush and Senator John Kerry displayed a brief moment of agreement in response to perhaps the most important question of the evening. When asked to name the single greatest threat to the security of the United States, both candidates unequivocally cited the proliferation of nuclear weapons and material, and the possibility that either might fall into the hands of terrorists who would not hesitate to use them. **Four years later this consensus appears to remain firmly intact, as the recent presidential election saw both major party candidates identify the nuclear terrorist threat as one of their chief concerns.** While delivering a foreign policy speech on the subject of nuclear weapons in May 2008, Senator John McCain called on the United States and Russia to “redouble our common efforts to reduce the risk that nuclear, chemical, or biological weapons may fall into the hands of terrorists or unfriendly governments.” Emphasizing the danger of nuclear terrorism in particular, McCain declared, **“No problem we face poses a greater threat to us and the world than nuclear proliferation. In a time when followers of a hateful and remorseless ideology are willing to destroy themselves to destroy us, the threat of suicide bombers with the means to wreak incomprehensible devastation. There is widespread agreement that the possibility of a nuclear terrorist attack is and will likely remain one of the most significant threats facing the United States.** Several weeks later, Senator Barack Obama delivered a major speech on national security issues. Joined by former Senator Sam Nunn, a co-sponsor of legislation in 1991 to secure nuclear weapons and material in the former Soviet Union, Obama called the prospect of nuclear terrorism “the gravest threat we face.” He went on to observe that today's most pressing dangers now revolve around the existence of unsecured nuclear material, the risk of a breakdown in the nuclear nonproliferation regime and, most of all, the possibility of “a rogue state or nuclear scientist transferring the world's deadliest weapons to the world's most dangerous people: terrorists who won't think twice about killing themselves and hundreds of thousands in Tel Aviv or Moscow, in London or New York.” For example, while serving as Director of the Office of Homeland Security in 2002, former Pennsylvania governor Tom Ridge was asked by reporters what scenario worried him most. He responded with a single word: “nuclear.” Thomas Kean and Lee Hamilton, respectively the Chair and Vice-Chair of the 9/11 Commission, have admitted to having “no greater fear than a terrorist who is inside the United States with nuclear weapons.” Upon reviewing al Qaeda's longstanding interest in and efforts to acquire weapons of mass destruction in his memoir, former Director of Central Intelligence George Tenet ominously concluded, **“One mushroom cloud would change history. My deepest fear is that this is exactly what they intend.”** In a 2005 survey of eighty-five national security experts conducted under the direction of Senator Richard Lugar, **more than 60 percent of the respondents believed that the chance of a nuclear attack somewhere in the world over the following decade stood between 10 and 50 percent. More remarkably, nearly 80 percent of those surveyed believed that if a nuclear attack did occur within this timeframe, it would most likely be the act of a terrorist group rather than that of a government.** Finally, Sam Nunn recently warned that “The risk of a nuclear weapon being used today . . . is growing and not receding.”

**Nuclear Terrorism: Hazard Or Hype?:** It is hardly surprising that the threat of nuclear terrorism has preoccupied many individuals both inside and outside of government, especially over the past several years. **Thankfully, despite the apparent willingness of some terrorist groups to use WMD, the likelihood that a terrorist cell could somehow obtain a nuclear weapon from an existing stockpile or acquire the fissile material needed to build one and then successfully construct an improvised nuclear device (IND) remains far**

smaller than the probability of an attack using conventional explosives. As the former Director of the Central Intelligence Agency (CIA), Michael Hayden, recently commented, “We are fortunate that those with the clearest intent to acquire and use weapons of mass destruction are also the least capable of developing them.” Nevertheless, the prospect of a nuclear weapon being detonated in an American city understandably evokes tremendous fear. Moreover, by demonstrating that some terrorist groups will go to extraordinary lengths to inflict mass casualties against their enemies, the 9/11 attacks radically altered how low-probability, high-consequence threats would be perceived in the future. As terrorism analyst Brian Michael Jenkins has observed, those attacks “redefined plausibility.” In their aftermath, “scenarios previously considered far-fetched suddenly became operative presumptions.” Yet the possibility of a nuclear terrorist attack is not only small compared to the likelihood of a conventional attack, it is also the least likely form of WMD terrorism. If attacks using other so-called weapons of mass destruction are more plausible than a nuclear terrorist attack, why focus on the comparatively unlikely threat of nuclear terrorism? Quite simply, the potential consequences of a nuclear terrorist attack are so devastating as to outweigh the very low probability of such an event. Nuclear weapons remain unique in their ability to kill and injure large numbers of people, damage and destroy infrastructure, and contaminate wide areas with radiation, to say nothing of the psychological effects that a nuclear explosion would have on the targeted population as well as the broader international political repercussions of a nuclear attack after more than half a century of non-use. As the Congressionally appointed Gilmore Commission noted in its initial report on threats to the US homeland, “the only certain way for terrorists to achieve bona fide mass destruction would be to use a nuclear weapon.” Although other forms of WMD terrorism merit concern, only biological weapons pose a danger comparable to nuclear weapons.<sup>20</sup> Because they are living organisms and reproduce once inside a host, biological agents can be extraordinarily lethal, even in very small doses.<sup>21</sup> According to a report from the now defunct Office of Technology Assessment (OTA), while “nuclear weapons remain the most massively destructive weapons that can be built . . . biological weapons efficiently delivered under the right condition against unprotected populations would, pound-for-pound, exceed the killing power of nuclear weapons.” Nuclear terrorism thus remains the most serious, although not the most likely, form of WMD terrorism. Moreover, while the probability of an attack is relatively low, the threat itself is unfortunately not ephemeral. Presently, the greatest source of concern with regard to terrorist use of unconventional weapons in general and nuclear weapons in particular stems from al Qaeda and its affiliates. Not only have Osama bin Laden and his followers sought these weapons for years, but conventional wisdom holds that they would be unlikely to show restraint if they acquired them. Although states can be deterred, a religiously-motivated, transnational terrorist organization like al Qaeda is far less likely to be discouraged from using WMD — including nuclear weapons — by the prospect of overwhelming retaliation. With no “return address” or fixed assets to hold at risk, a determination to inflict mass casualties against its enemies, and a readiness to use suicide operations in order to achieve its goals, traditional notions of deterrence that guided US strategy successfully during the Cold War would seem to offer a much lower chance of success in this case. It is important to note, however, that the prospect of a nuclear terrorist attack was a growing concern before al Qaeda was identified as the central threat to US security, and it is likely to remain a danger even after al Qaeda is discredited and defeated. As Rolf Mowatt-Larssen, former Director of the Department of Energy’s (DOE) Office of Intelligence and Counterintelligence, has argued: It would be a mistake . . . to view nuclear terrorism strictly through the prism of the threat posed by al-Qaeda today . . . the sober reality is that the threat posed by nuclear terrorism is much broader than the aspiration of any single terrorist group. We live in a world of escalating levels of asymmetric vulnerabilities. Increasing numbers of disaffected groups are turning to violence to achieve their goals . . . The extremes of 20 years ago are no longer extreme, and we must guard against any conventional thinking that places limits on the art of the possible for terrorist action. It is precisely the potential to surprise, along with the asymmetric impact of weapons of mass destruction that makes them appealing to the desperate designs of terrorists. In short, because it is rooted in a number of trends — several of which are discussed below — that are likely to persist for some time, it appears that the danger of nuclear terrorism, while small, will nonetheless remain an enduring feature of the security environment.

**Structure Of The Report:** The 9/11 attacks immediately elevated the possibility of nuclear terrorism from a serious but secondary concern to a principal one. While the heightened anxiety over this threat may be due in large part to the jarring effect of those attacks, the threat itself is rooted in and influenced by the core strategic challenges that define the current security environment, specifically the nexus of violent Islamist extremism (and possibly other sources of religiously inspired or apocalyptic terrorism) and nuclear proliferation, or what the 2002 *National Security Strategy* referred to as “the crossroads of radicalism and technology.”<sup>30</sup> Certain terrorist groups — particularly al Qaeda and its various affiliates — have sought and appear willing to use weapons of mass destruction, including nuclear weapons, in order to carry out catastrophic attacks against the United States, its allies, and possibly other nations. If more and more nations acquire the means to produce fissile material and especially if they develop nuclear weapons, the likelihood that a terrorist group like al Qaeda could fulfill its ambitions and obtain the means to carry out a catastrophic attack would increase markedly.

**The Proximate Threat: Al Qaeda’s Pursuit Of WMD:** Given the events of the past several years, it is hardly surprising that, at present, the threat of WMD terrorism in general and nuclear terrorism in particular comes primarily from Osama bin Laden and his followers, who have not only expressed a willingness to use WMD against their enemies, but who have also made repeated — although largely unsuccessful — efforts to acquire unconventional weapons. Al Qaeda’s pursuit of weapons of mass destruction has been well documented in recent years, as evidenced by a number of highly publicized incidents, including the purchase of a container believed to contain uranium (but which was in fact counterfeit) by a bin Laden representative in Sudan; bin Laden’s own reference to the acquisition of weapons of mass destruction as a “religious duty;” his success at prompting a well-known Saudi cleric to issue a fatwa (or religious opinion) sanctioning mass murder with WMD; the group’s claim to have purchased several so-called suitcase nuclear weapons from former Soviet scientists; intelligence reports over a period of several months in 2002 and 2003 indicating that al Qaeda was negotiating the purchase of three Russian nuclear weapons;<sup>59</sup> and a meeting that took place between bin Laden, Zawahiri, and two high ranking Pakistani nuclear scientists who “appear to have provided Al Qaeda a road map to building nuclear weapons.” Initially, the group’s interest in WMD appears to have been driven by the hope of deterring the United States from invading its sanctuary in Afghanistan by acquiring several nuclear weapons, smuggling them into the United States, and using them to retaliate in the event of an American attack. Over time this view changed, however, and the group began to consider

unconventional weapons as something that should be used in a first strike against its enemies. Bin Laden in particular was and perhaps remains focused primarily on acquiring nuclear weapons, which have apparently been the subject of his attention since at least 1992. Journalist Steve Coll describes how these weapons fit within bin Laden's worldview: **Since the late 1980s and certainly since 1991, bin Laden has seen the United States as the principal invader of the Muslim world because of its support for the Saudi Royal family, Israel and other Middle Eastern governments he labels apostate. In often tedious debates with comrades during the 1990s, he has argued that only by attacking distant America could al Qaeda hope to mortally wound the Middle East's frontline authoritarian governments.** His inspiration, repeatedly cited in his writings and interviews, is the American atomic bombing of Hiroshima and Nagasaki, which he says shocked Japan's fading imperial government into a surrender it might not otherwise have contemplated. **Bin Laden has said several times that he is seeking to acquire and use nuclear weapons not only because it is God's will, but because he wants to do to American foreign policy what the United States did to Japanese imperial surrender policy. By contrast, bin Laden's deputy, Ayman al-Zawahiri, has displayed a greater interest in fabricating chemical and biological weapons, which he has previously described as both easier to develop than nuclear weapons and equally lethal. Zawahiri personally oversaw al Qaeda's efforts in this area, including the development of laboratories in Afghanistan that were used to conduct experiments with nerve gas and weaponize anthrax.** Before the loss of its sanctuary as a result of Operation Enduring Freedom, al Qaeda not only had a program underway to develop chemical and biological agents, it was also investigating the option of pursuing nuclear weapons, although it appears that its efforts were relatively primitive. Documents discovered in Afghanistan following the Coalition invasion provide a glimpse into these efforts. **According to David Albright, these documents did not suggest that al Qaeda had acquired any fissile material, and showed that the group had attained only a very limited ability to construct a weapon itself. At the same time, however, the documents also indicated that "al Qaeda was intensifying its long-term goal to acquire nuclear weapons and would have likely succeeded, if it had remained powerful in Afghanistan for several more years."**

**Al Qaeda Today: Intentions & Capabilities:** Since the US invasion of Afghanistan, al Qaeda has lost a key sanctuary and much of its original senior leadership. Does it still hope to acquire and use weapons of mass destruction? Is it capable of obtaining or building a nuclear weapon? The answer to the former question appears to be "yes": publicly available information gives little doubt that the group's intentions remain unchanged. According to the unclassified key judgments of a July 2007 National Intelligence Estimate, **"al-Qa'ida will continue to try to acquire and employ chemical, biological, radiological, or nuclear material in attacks and would not hesitate to use them if it develops what it deems is sufficient capability."** Similarly, in March 2008 then-Director of National Intelligence J. Michael McConnell testified that while the US intelligence community still believed that an attack using conventional explosives was the most likely scenario, **"al-Qaida and other terrorist groups are attempting to acquire chemical, biological, radiological, and nuclear weapons and will continue to try to acquire and employ these weapons and material."** To cite one recent example of this continuing interest, in September 2006 Zarqawi's successor as the head of AQI, Abu Hamza al-Muhajir, released an audio recording soliciting help in developing unconventional weapons: **To people of distinguished skills and high levels of expertise of the sciences of chemistry, physics, management, electronics, media, and all other specializations that require depth of knowledge, and particularly the nuclear scientists and explosives engineers, we call on you to tell you that we are in need of you . . . . The battlefield will accommodate more room for independent and copycat terrorist operations."** Moreover, as significant elements of the core leadership have been hunted, captured, and killed, and as its control over global operations has waned as a result, the main source of danger appears to have shifted toward the independent and quasi-independent franchises as well as local extremists. **As a result of this shift, al Qaeda has paradoxically managed to become both more dangerous and less dangerous.** On the one hand, the declining influence of al Qaeda's central leadership has provided an opening for the various groups and individuals that comprise the broader movement to act more independently, take the initiative, and engage in more regular attacks. **In addition, al Qaeda arguably represents a more enduring threat today than it did before the 9/11 attacks and Operation Enduring Freedom in Afghanistan. Not only is an amorphous, decentralized movement less susceptible to disruption or decapitation than a top-heavy and rigidly hierarchical organization, but the evolution of al Qaeda into a source of inspiration and emulation suggests that the violent ideology it advocates will be perpetuated in some capacity for many years to come.** On the other hand, while the danger posed by various al Qaeda affiliates and homegrown extremists may have grown over the past several years, **the likelihood of a major attack against the US homeland and especially a catastrophic attack using WMD has in all probability declined.** This is because these groups and individuals are unlikely to possess the knowledge, skills, resources, or discipline necessary to plan and successfully carry out an operation of such magnitude. Put simply, **"Leaderless organizations can't mount spectacular operations which require years of planning and training."** Yet it would be premature to dismiss the possibility of such an attack in the future, as this trend already appears to be in the process of reversing itself. As Peter Bergen has recently argued, **"al-Qaeda continues to gather strength, both as a terrorist/insurgent organization . . . and as an ongoing model for violent Islamists around the globe."** The reason for its growing strength as an organization can be traced in large part to the support it retains in several parts of Pakistan and, most importantly, the sanctuary it has established in that country's Federally Administered Tribal Areas (FATA) — a largely autonomous region that borders Afghanistan and is nominally under the control of Islamabad but is not fully integrated into Pakistan's government or society. As a result of this development, the primary terrorist threat appears to be shifting yet again, only this time it is moving away from the local extremists and back toward al Qaeda's core leadership, which, according to numerous accounts, is regaining its influence, reasserting and even expanding control over its far-flung network of allies and sympathizers, and reestablishing its ability to organize and execute major attacks. **According to the 2007 NIE cited above, al Qaeda "has protected or regenerated key elements of its Homeland attack capability, including: a safehaven in Pakistan's Federally Administered Tribal Areas (FATA), operational lieutenants, and its top leadership."** In his March 2008 testimony, then-Director of National Intelligence McConnell reaffirmed these conclusions, noting that al Qaeda's sanctuary in the FATA "provides the organization many of the advantages it once derived from its base across the border in Afghanistan, albeit on a smaller and less secure scale." **As a direct consequence, the group "has been able to maintain a cadre of skilled lieutenants capable of directing the organization's operations around the globe."** Even more worrisome, however, is the fact that al Qaeda has apparently been able to reconstitute some of its research and development efforts involving unconventional weapons. **Of course, this does not mean that the group is on the verge of conducting an act of WMD terrorism, or that it is likely to acquire or construct a nuclear weapon in the near future. In fact, terrorists' knowledge of nuclear weapons and material appears to be quite rudimentary.** According to the

testimony of Charles Allen, then-Under Secretary for Intelligence and Analysis at the Department of **Homeland Security (DHS)**, documents available on the Internet indicate that terrorists do not have “a sophisticated or detailed understanding of nuclear principles and technologies,” although he qualified this assessment by noting that an actual nuclear capability “may not be advertised.” Perhaps most significantly, al Qaeda’s short-term prospects for developing WMD suffered a notable setback in July 2008, when Abu Khabab al-Masri — one of the group’s key lieutenants and the individual in charge of its reconstituted WMD program — was killed in a US airstrike. Nevertheless, what does seem increasingly clear is that al Qaeda not only retains the intent to conduct a catastrophic attack, but it is also in the processing of regaining capabilities that it had previously lost.

**Implications:** There are two key implications to be drawn from the discussion in this chapter. The first involves the supply side of the nuclear terrorist threat. Namely, limiting or preferably stopping any further proliferation of nuclear weapons material, the technology needed to produce this material, and especially nuclear weapons themselves, is an important goal, even if this only reduces the number of opportunities for terrorists to gain access to these items. As Thomas Schelling noted over twenty-five years ago, “there is at least one principle that I think is undeniable: the best way to keep [nuclear] weapons and weapons-material out of the hands of non-governmental entities is to keep them out of the hands of national governments.” More recently, Graham Allison has argued that halting the spread of enrichment and reprocessing technologies and preventing the emergence of additional nuclear-weapon states are key pillars of a broader strategy to prevent nuclear terrorism. Of course, both goals fall squarely into the category of “easier said than done.” Over the past several years the United States, several other nations, and even a private non-governmental organization have put forward proposals designed to guarantee the supply of nuclear fuel to nations with power reactors in the hope that this might alleviate their fear of supply disruptions and thus discourage them from developing indigenous fuel cycle capabilities. These proposals face a number of obstacles, however, and whether or not they can succeed remains an open question. **Precluding the further spread of nuclear weapons is even more pressing, and it may also be even more problematic.** At present, this goal hinges largely on Iran, which may or may not intend to develop these weapons. Yet stopping Iran from becoming a nuclear weapon state, while certainly desirable, may not be feasible through diplomacy and economic sanctions alone. **At the same time, a preventive military strike against Iran’s nuclear facilities could achieve little more than a temporary delay of its nuclear program due to the hardening of those facilities, the possibility of additional facilities in unknown locations, and Iran’s ability to stockpile and disperse key components and material in advance of an attack.** Regardless of how the United States and the rest of the international community address Iran’s nuclear aspirations in the coming months and years, ongoing debates over the value of diplomacy versus military force should not distract the United States from preparing for the worst over the long-term. As discussed above, one of the key dangers of an Iranian nuclear weapons program is the possibility that it could trigger further proliferation throughout the region, as states like Saudi Arabia, Egypt, Jordan, Turkey, Algeria and perhaps others might seek to develop or otherwise acquire a nuclear capability to bolster their security. In a region as volatile as the Middle East, this outcome has the potential to be extremely destabilizing in a number of different ways. Perhaps most importantly, it would increase the probability of a terrorist group eventually obtaining either a nuclear weapon or the material needed to build one; all else being equal, the more states that possess these items, the more likely it is that they will fall into the wrong hands. **Thus, if Iran does build a nuclear arsenal, and especially if it becomes increasingly aggressive behind its newfound military strength, the United States may have to dissuade surrounding nations from developing nuclear weapons or a nuclear “hedge” of their own.** Although some analysts paint this task as a relatively simple one, it could become quite complicated. To provide just one example, the US Government might determine that the most effective (or the only) way to halt further proliferation in the region is by publicly committing to retaliate against Iran for an attack on its neighbors, if, in return, the latter promise not to pursue nuclear weapons. Yet this decision would raise a host of difficult questions: Which nations would receive this extended deterrence commitment and which ones would be excluded? Would the United States commit to retaliating with conventional or nuclear weapons? Would the commitment apply to irregular and conventional attacks as well as nuclear attacks? Retaliation for an attack below the nuclear threshold may not be desirable, but could a commitment to respond only to a nuclear attack actually encourage lower-level forms of aggression? If Iran were to conduct a significant irregular attack, could the United States even prove its culpability? How could deterrent commitments be made credible in these circumstances? Would the United States need to deploy a substantial number of troops to threatened countries to serve as a “tripwire” as it did in Europe and Asia during the Cold War? If so, how might this affect US efforts to prosecute the war on terrorism or improve its standing in the region? **Given the complexity of these issues, an ad hoc or poorly conceived response could do more harm than good. Clearly, developing a comprehensive plan to prevent further proliferation in the region if Iran does indeed become a nuclear-armed state should not be put off until it already has a weapon in hand.** The second major implication addresses the demand side of the threat. Specifically, a critical component of a broader strategy to prevent a nuclear terrorist attack will involve measures directed at weakening al Qaeda’s leaders and eliminating — or at the very least restricting — their sanctuary in the FATA. **Because obtaining or building a nuclear device and delivering it to a target would be a difficult and expensive operation it is highly likely that any credible plot will originate with al Qaeda’s central leadership, whether its operatives attempt to carry out such an attack on their own or instead finance, organize, and coordinate the efforts of one or more affiliates.** By themselves, al Qaeda’s various franchises and especially local extremists would likely find an attack of this scale beyond their abilities. In fact, the group’s franchises might not even be tasked to help with such a large and important operation, beyond providing limited logistical support. According to Bruce Hoffman, “high value, ‘spectacular’ attacks are entrusted only to al Qaeda’s professional cadre: the most dedicated, committed, and absolutely reliable elements of the movement.” Therefore, to the extent that its sanctuary in the FATA has allowed al Qaeda’s leadership to regain its strength and plan future operations, the probability that the group might be able to conduct a catastrophic attack at some point in the future has correspondingly increased. Unfortunately, efforts to diminish al Qaeda’s presence in Pakistan so far have met with only limited success. On the positive side, the United States has increased its use of unmanned aerial vehicles (UAVs) to launch airstrikes, which have killed a number of prominent al Qaeda figures. Between 2002 and 2007, however, the United States provided nearly \$6 billion dollars of assistance to the Pakistani government to help it combat terrorist groups in the FATA. Yet during this period al Qaeda’s strength grew substantially. Moreover, within the US Government there has been a great deal of uncertainty and debate over a number of thorny issues, including: how much the United States can pressure Pakistan’s government to take action in the FATA without undermining its stability, provoking a backlash, or both; the extent to which the United States should rely on efforts to train,

advise, and equip indigenous forces such as Pakistan's paramilitary Frontier Corps, which can then combat local terrorist and insurgent groups largely on their own; whether increased emphasis should be placed on non-military solutions, in particular addressing the underlying political and socioeconomic ills that afflict this part of Pakistan; and whether or not to expand covert operations and the use of US Special Operations Forces (SOF) inside Pakistan to capture or eliminate key targets. While there are no easy answers to these dilemmas, developing a plan to eliminate or restrict al Qaeda's FATA sanctuary will be a crucial task for the new administration. In order to assess a threat, two critical elements must be considered: the potential consequences of that threat, and its likelihood. Although the consequences of a successful nuclear terrorist attack — the human toll in deaths and injuries, the direct economic costs stemming from damaged or destroyed infrastructure, and the psychological repercussions among the general population — may seem obvious, it is important to have a thorough understanding of these effects in order to truly appreciate the significance of the threat. Toward that end, this chapter provides a brief overview of one possible nuclear attack scenario, including the direct effects of the attack itself as well as the secondary effects that would likely materialize in the days, weeks, and months to follow. Because the effectiveness of nuclear weapons and the outcome of a nuclear exchange were frequently examined subjects during the Cold War, the direct effects of a detonation are fairly well understood. While the secondary effects are much more speculative and context dependent, the aftermath of the 9/11 attacks provides some indication of what might take place following a nuclear explosion, though the scale of such an attack would almost certainly be orders of magnitude greater than the attacks of September 2001.

**The Immediate Effects Of A Nuclear Detonation:** The precise effects of a nuclear terrorist attack would depend greatly on a number of variables, most importantly the yield of the weapon used, but also whether the attack took place in the heart of a major city or in a less densely populated area, whether the detonation took place during a busy workday when the population of most urban areas is highest, the extent to which buildings and other structures shield bystanders from blast and radiation effects, wind patterns that would influence the distribution of radioactive fallout, and several other factors. Nevertheless, a surface level nuclear explosion in a major urban area, even one with a relatively low yield, could result in tens or even hundreds of thousands of casualties, if not more. For example, in October 2001, only a few weeks after the 9/11 attacks, the US intelligence community received information from a foreign agent claiming that al Qaeda had acquired a 10-kiloton Russian nuclear weapon, which it was planning to smuggle into New York City. Thankfully, this report proved to be a false alarm; had it been accurate, the results could have been devastating. A nuclear explosion generates both immediate effects (principally thermal radiation, blast, and prompt ionizing radiation) and delayed effects (notably radioactive fallout), which together are responsible for most of the damage and casualties caused by nuclear weapons. At the moment of detonation, a 10-kiloton nuclear weapon would release a massive amount of thermal radiation, immediately producing temperatures in the tens of millions of degrees. This in turn would create a fireball of superheated gas and debris that would destroy everything for 200 meters in all directions. The intense light and heat radiating from the fireball would also ignite clothing as far away as 1,100 meters from the epicenter and cause second-degree burns to exposed skin out to 1,700 meters. In addition to the effects of thermal radiation, the explosion would generate an outwardly moving shockwave of overpressure (a sudden increase in air pressure) capable of crushing heavy objects, and extremely high velocity winds of several hundred miles per hour. This shockwave would impact objects within 500 meters of ground zero with a force equivalent to 15 pounds per square inch (psi), which could destroy steel reinforced concrete buildings; out to 1,000 meters, the blast-wave overpressure would measure at 5 psi, which is strong enough to destroy wood-frame buildings and homes. While thermal radiation and blast damage would cause much of the immediate destruction, the explosion would also release gamma rays and neutrons, delivering a prompt dose of ionizing radiation to bystanders over a wide area. Within 1,500 meters of the point of detonation, anyone who was not in some form of shelter when the detonation occurred would immediately receive a 500 rem<sup>97</sup> dose of radiation, which would prove lethal to half of those exposed within thirty days. Finally, a nuclear explosion would also lead to widespread and deadly contamination. While an air-burst (a nuclear detonation that occurs high enough above the surface that the fireball does not make contact with the ground) generates comparatively little radioactive debris, a surface-level explosion would cause a significant amount of material to be vaporized and carried up into the atmosphere, only to return to the ground and cover a large area in fallout. For a 10-kiloton explosion, an area of approximately 30 square kilometers would be covered with enough radioactive material that anyone who did not evacuate immediately or find adequate shelter would also receive a 500 rem dose of radiation within 48 hours. A recent assessment paints a less abstract, and far more chilling, portrait of a nuclear explosion of this magnitude in a major city: The downtown area, about one mile in radius, would be obliterated. Just outside the area leveled by blast, people wounded by flying debris, fires, and intense radiation would stand little chance of survival. Emergency workers would not get to them because of the intense radiation, and in any event, their burns and acute radiation exposure would require sophisticated and intensive medical care to offer any chance of survival. Further downwind from the detonation point, a plume of radioactive debris would spread. Its shape and size would depend on wind and rain conditions, but within one day, people within five to 10 square miles who did not find shelter or flee within hours would receive lethal radiation doses. One self-described "conservative" estimate suggests that if the October 2001 intelligence report had been correct and a 10-kiloton nuclear weapon had detonated at Grand Central Station in New York City during a typical workday, the explosion would have killed more than half a million people almost immediately, wounded several hundred thousand more, and inflicted significantly more than \$1 trillion in direct economic costs. Two government studies produced in 2003 and 2004 also examined the potential effects of a 10-kiloton nuclear detonation, this time in Washington, DC, and estimated the number of deaths at somewhere between 99,000 and 300,000, depending on factors such as the direction of wind and the success of evacuation efforts.

**Secondary Costs Of Consequences:** These figures are sobering, but they are hardly the only costs or consequences that would follow a nuclear terrorist attack. In the immediate aftermath of an attack, federal, state, and local emergency responders would very likely be overwhelmed by the demands placed upon them, which could include rescuing survivors from heavily damaged and contaminated areas, containing widespread fires that would break out as the result of thermal radiation igniting combustible material and blast damage to fuel sources such as gas lines and electrical circuits, and coordinating the evacuation of locations near the point of detonation. Meanwhile, any medical facilities spared by the explosion would be inundated with victims, and would have to be supported by military field hospitals. In the weeks and months to follow, economic costs would mount, as areas that were not destroyed by

the initial blast would have to be decontaminated. **Moreover, if ports and border entry points were closed for an extended period of time in an effort to prevent any additional weapons from entering the country, supply chains would be severely disrupted and the economic effects of the explosion would ripple throughout the nation and the globe.** This could in turn lead stock markets worldwide to plummet. In the wake of a nuclear explosion, both the government and the general public would also be preoccupied with the possibility that additional attacks might occur, much as they were in the aftermath of 9/11. Indeed, this fear might be quite justified; as Ashton Carter has argued, **“If one bomb goes off, there are likely to be more to follow.”** Given the difficulty of acquiring even a single intact nuclear weapon or the fissile material necessary to build one, this is not a foregone conclusion. What can almost certainly be expected, however, are multiple claims of responsibility and threats of future attacks. Unfortunately, even fictitious claims and false alarms can have significant, and extremely costly, effects. **While some threats might easily be dismissed as apocryphal, the grave consequences of ignoring these claims and being proven incorrect would require many and perhaps all of them to be investigated.** Doing so, however, would further tax government agencies already occupied with preventing subsequent attacks, determining who was responsible for the attack, and formulating a response both at home and abroad. Moreover, the heightened possibility of follow-on attacks also increases the likelihood that preemptive emergency measures such as evacuations would be taken in cities throughout the country, which would in turn require additional time, effort, and resources on the part of a severely overstretched government. To these concerns, one can also add the possible psychological, strategic, and political consequences of a nuclear explosion. **The very idea of a nuclear attack on American soil, along with the graphic images such an attack would produce, could lead to widespread panic and a tremendous loss of confidence in government, especially if response efforts were handled poorly.** The public reaction to an attack could also include emotional demands for retaliation that might be ill advised, given that a recurring goal for terrorists generally and al Qaeda and its affiliates in particular is to incite a reprisal, or even to spark a wider interstate war between their enemies. For example, one of the key goals bin Laden hoped to achieve with the 9/11 attacks was to provoke an American invasion of Afghanistan, which he calculated would be as protracted and draining for the United States as it had been for the Soviet Union two decades earlier. Another al Qaeda plot — one that was never carried out — envisioned recruiting pilots from the Saudi Royal Air Force to steal their own fighter jets and conduct a rogue attack against Israel, in the hope that this would instigate another Arab-Israeli war. **Should a nuclear terrorist attack ever occur, the perpetrators could have similar motives. Finally, there is also the possibility that a nuclear terrorist attack directed against the nation’s political leadership and institutions could paralyze the operation of government.** One of the most difficult problems encountered when assessing the threat of nuclear terrorism and determining how best to confront it is the inherent uncertainty that exists regarding the likelihood of a future attack. As discussed above, the consequences of a successful attack, although dependent on a number of factors, can be estimated with some level of confidence and would undoubtedly be profound. **Yet the probability of a nuclear terrorist attack actually taking place is impossible to predict.** While it is certainly much lower than almost any other form of attack, it is still greater than zero, but just how much greater is unknown. Moreover, even though the most likely culprits — the members of al Qaeda’s central leadership — can be identified in advance, and though it seems clear that they are gaining strength, this says nothing about how they or any other terrorist group might try to acquire (or fabricate) a nuclear weapon and what their prospects for success would be. Despite this considerable uncertainty, the remainder of this chapter attempts to provide a more detailed assessment of the threat in order to better understand how realistic it actually is. **If a terrorist group was determined to “go nuclear,” how might it attempt to do so and what obstacles would it face? Although it is possible to imagine any number of scenarios, some more plausible than others, there are four main alternatives that prospective nuclear terrorists might choose to pursue: manufacturing fissile material on their own for use in a nuclear weapon, finding a state sponsor that could provide a weapon or the material and expertise required to build one, stealing an intact nuclear weapon from a nation’s arsenal, and stealing or purchasing the necessary fissile material and then constructing an improvised nuclear device.** These pathways are described below from least to most likely. Some analysts have offered their predictions, however. For example, Graham Allison estimates that, **“on the current trend line, the chances of a nuclear terrorist attack in the next decade are greater than 50 percent.”** Allison, **“Apocalypse When?”** *The National Interest*, November/December 2007, p. 13. is only an assessment of relative probability — while some of these pathways may be more or less likely than others, this does not mean that any one pathway is either extremely likely or impossible.

**Background: Fissile Material & Nuclear Weapons:** Before discussing how terrorists might attempt to acquire nuclear weapons, it is necessary to provide a brief overview of (1) the primary fissile materials used to fuel these weapons, and (2) the basic principles behind first-generation weapons, which terrorists attempting to construct an improvised nuclear device would seek to replicated.

**Alternative 2: State Sponsorship:** A second possibility is that a terrorist group might seek out a state sponsor, in particular a rogue nation that already possessed nuclear weapons and might provide the group with this capability, presuming the two shared a common enemy. Indeed, this particular scenario has been cited frequently in recent years by policymakers and commentators, most notably during the months preceding Operation Iraqi Freedom in 2003, when Saddam Hussein’s presumed efforts to reconstitute Iraq’s nuclear weapons program and ties to various terrorist organizations were both central to the rationale for war. **Today, this scenario is once again receiving significant attention due to Iran’s ongoing nuclear program and its close and longstanding relationship with the terrorist group Hezbollah.** While the direct transfer of a nuclear weapon would certainly be the easiest route to the bomb from a terrorist’s perspective and is therefore a serious concern, several mutually reinforcing factors suggest that it is also highly unlikely. **First, nuclear weapons are obviously an extraordinarily valuable commodity which any state would be reluctant to part with. Not only do they bolster a nation’s military power and provide it with an enhanced deterrent, they also confer no small amount of prestige domestically and, in some corners, internationally.** Moreover, as noted above, developing an indigenous capability to safely produce reliable nuclear weapons requires an enormous investment of time, effort, and money. **The notion that a state — especially a relatively new nuclear weapon state with only a small arsenal — would willingly give away such an important asset is difficult to imagine, although not impossible.** Second, any state that deliberately provided a terrorist group with a nuclear weapon would run the risk of being discovered and suffering the consequences. In general, state sponsorship of terrorism occurs because it offers a relatively safe and inexpensive way to impose costs on an adversary: because terrorism generally causes less damage than conventional military attacks, and because sponsors can retain a degree of plausible deniability by claiming that terrorist groups operate independently, pressure can be

brought to bear on an adversary with a decreased risk of precipitating a full-scale war. In fact, sponsors are generally more conservative than their clients, who must often be restrained from taking overly aggressive actions that could provoke forceful and costly reprisals. **As a result, state sponsorship arguably makes it less likely that a terrorist group will use any type of WMD — if it were revealed (or even strongly suspected) that a state knowingly provided a terrorist group with a nuclear weapon, it would almost certainly suffer devastating retaliation.** Third, it is also unlikely that a regime would be confident enough in its relationship with a terrorist group to willingly entrust it with such a powerful weapon, even if that regime did not fear or did not expect retaliation. Because terrorist groups have interests that are often quite different from those of their sponsors, and because they also have been known to turn against their patrons, a sponsor could hardly be certain that the group would carry out an attack against the intended target rather than against another state or even the sponsoring regime itself. **Although the deliberate transfer of a nuclear weapon by a government may be unlikely, there are two other related possibilities that merit brief discussion.** First, a state might choose to assist a terrorist group in a more limited way, by providing the fissile material, weapon components, and/or scientific and engineering knowledge that would allow the group to construct a nuclear device on its own, in the belief that these actions would be more likely to go undetected than transferring an entire nuclear weapon. Second, members of government, military officers, or scientists in a nuclear weapon state who have access to these items could provide or sell them to a terrorist group without the direct sanction of the state's leadership, either out of ideological sympathy or simply for profit. **This possibility in particular has been the subject of considerable attention and concern in the wake of the AQ Kahn affair. On their face, both of these scenarios seem more plausible than the direct transfer of a weapon by a state's leadership.** At the same time, neither seems very likely, at least compared to the two other alternatives discussed below. For example, while the transfer of fissile material or weapon components might be more difficult to detect either before a weapon was used or even after an attack took place, the risk of detection and retaliation would still remain. **Any government that deliberately adopted this policy would therefore have to be extremely risk-acceptant. Moreover, that government would also have to be willing to share or part with extremely valuable commodities, and would still need to trust that its terrorist partner would ultimately use a weapon that it constructed in a way that conformed to the sponsor's interests.** In short, most of the constraints listed above would still apply, although perhaps not quite as strongly. Alternatively, the possibility that rogue elements within a state's government, military, or scientific establishment might transfer sensitive materials on their own is a more serious danger. **It is worth noting, however, that AQ Khan's sale of nuclear technology to other nations appears to have had at least the tacit consent of the Pakistani government. If this is true, it implies that the government could have stopped his activities earlier but chose not to, which in turn suggests that the danger of rogue actors within a state independently trafficking in nuclear weapons technology may not be as high as it has recently been portrayed.** While several factors suggest that the transfer of nuclear weapons, material, and/or expertise is unlikely, the proliferation of nuclear weapons and material to known state sponsors of terrorism is still a dangerous and destabilizing possibility. During the Cold War, for example, the relative strategic stability of mutually assured destruction — the knowledge that both the United States and the Soviet Union were capable of absorbing a nuclear first strike and retaliating in kind — was tempered by a dynamic referred to as the "stability instability paradox." **According to this perspective, a full-scale nuclear war would be so devastating for both sides that nuclear retaliation for anything short of a nuclear attack was not a credible proposition.** Therefore, the Soviet Union might be tempted to engage in lower-level forms of aggression — either a conventional war in Europe or proxy wars in the developing world — because it would not fear escalation to the nuclear level. **Despite major differences between the US-Soviet rivalry during the Cold War and today's strategic environment, the proliferation of nuclear weapons to states that sponsor terrorism could have the similar effect of encouraging aggression.** Specifically, rather than arm a terrorist group with a nuclear weapon, possession of these weapons might encourage a state to provide increased military and logistical support to terrorist or insurgent groups engaging in more traditional methods of attack such as bombings, raids, and assassinations, confident that its nuclear deterrent will prevent any significant retaliation by the targets of these attacks (an assumption that would clearly fail to apply if that support included providing a nuclear weapon or the material necessary to make one). Pakistan, for example, was encouraged by its own nuclear capability to begin arming insurgents in the disputed province of Kashmir as part of an effort to draw its Indian adversary into a costly irregular conflict. **The Pakistani government was willing to pursue this strategy in part because it calculated that India would refrain from engaging in a large-scale reprisal for fear that the conflict might escalate out of control.**

**Alternative 3: Stealing A Weapon:** If terrorists cannot manufacture their own fissile material or find a state that is both willing and able to provide them with an intact nuclear weapon, could they steal one instead? The fear of stolen nuclear weapons is not new. As the Cold War came to an end concerns emerged regarding the safety of the Soviet nuclear arsenal, which had been dispersed across the republics of the Soviet Union and the Warsaw Pact nations of Central and Eastern Europe. **Of particular concern were the tens of thousands of tactical nuclear weapons (including artillery shells, mines, gravity bombs, and warheads for air defense systems as well as ballistic and cruise missiles with ranges of less than 500 kilometers), many of which were forward-deployed outside of Russia's borders.** These fears were magnified in 1997, when former Russian National Security Adviser Alexander Lebed claimed that the Russian military could not account for over one hundred so-called "suitcase" nuclear weapons, although the existence of these weapons, let alone their status, has never been definitively confirmed. Today, the possibility of a nuclear weapon being stolen and falling into the hands of terrorists remains a serious concern. As the 2006 Quadrennial Defense Review (QDR) noted, "The prospect that a nuclear-capable state may lose control of some of its weapons to terrorists is one of the greatest dangers the United States and its allies face." Although the total number of nuclear weapons in the world has decreased by more than half since reaching a Cold War peak of approximately 65,000 warheads,<sup>137</sup> there are still more than 10,000 operational nuclear warheads in the inventories of the nine nuclear-weapon states, with another 15,000 warheads either held in reserve or scheduled to be dismantled by the United States and Russia. **Despite this large number of weapons, acquiring and then using one would hardly be an easy task. Not surprisingly, most nuclear weapons are heavily guarded. To steal one, a terrorist group would almost certainly require help from one or more individuals working at a weapons storage site or transfer point in order to quickly locate a weapon, bypass or disable alarm systems or other passive security measures, and avoid on-site security personnel. Absent this support, stealing a weapon would be all but impossible. As one report argues, "A terrorist organization planning to seize a nuclear weapon without insider assistance would need to invest in training and arming a force able to defeat all security measures protecting the weapons, including the intervention of guard and response teams. The task would be so daunting in most settings, unless security at the facility is**

sufficiently lax, as to appear more the stuff of fiction than a practicable approach for a terrorist organization.” Even if terrorists did manage to acquire a weapon, actually using it would pose a number of significant challenges. For example, most and in some cases all operational nuclear weapons held by the United States, Britain, France, and Russia are believed to be equipped with security measures called permissive action links (PALs), which would make it very difficult for unauthorized users to activate and detonate them. **PALs were first employed on some US nuclear weapons in the early 1960s, and consisted of relatively simple, five-digit locks on warhead containers. Modern PALs are integrated directly into the warheads themselves, require the input of dual six- or twelve-digit numeric codes (the “two man” rule), and may also include “limited try” features that disable the weapon if the incorrect code is entered too many times, sensors that can detect unauthorized entry attempts into the weapon or the PAL system and then render the entire device inoperable, and command codes that can be used to disable a weapon if its security is in jeopardy.** Modern weapons may also be equipped with environment sensing devices (ESDs) that prevent them from being armed until specific environmental conditions matching their intended delivery method — for example, changes in altitude or acceleration — are detected. **It might be possible for a terrorist group to overcome these security measures given enough time, especially if it obtained the assistance of experts, or if a weapon was equipped with older, less complex PALs. Nevertheless, if a weapon was stolen and a massive recovery effort was launched, the time needed to overcome any built-in security measures would increase the probability that the terrorist group would be discovered before it could transport the weapon to its intended target and detonate it.** Alternatively, a group could attempt to remove the fissile material from a stolen weapon and then use that material to construct its own improved nuclear device, a possibility that is discussed in greater detail below. Doing so would, however, risk setting off the weapon’s conventional explosives. Moreover, modern nuclear weapons may not have enough fissile material in their core to fuel a crude IND. These factors suggest that the possibility of terrorists stealing and then using an intact nuclear weapon, although real, is relatively small. **Nevertheless, fears of “loose” nuclear weapons persist, especially with regard to Russia and Pakistan. Russia, for example, remains a source of concern for a number of reasons. While efforts to help the Russian government reduce, consolidate, and secure its nuclear arsenal have been underway for more than a decade, the sheer size of that arsenal, incomplete accounting of Russian’s weapon stockpiles, and limited or problematic safety measures at its nuclear facilities have contributed to lingering questions over Moscow’s ability to safeguard its weapons, even with US assistance.** In addition, Russian nuclear weapons have a much shorter shelf life than US weapons, and must be remanufactured every eight to twelve years. This requires them to be transported, during which time they are more vulnerable to potential attackers. Finally, older Russian tactical nuclear weapons — some of which may still be deployed — are not believed to incorporate PALs or other modern safeguards. **These weapons remain a significant source of concern; as Secretary of Defense Robert Gates has recently remarked, “I have fairly high confidence that no strategic or modern tactical nuclear weapons have leaked [from Russia]. What worries me are the tens of thousands of old nuclear mines, nuclear artillery shells and so on, because the reality is the Russians themselves probably don’t have any idea how many of those they have or, potentially, where they are.”** While concerns over the status of Russia’s nuclear weapons date to the end of the Cold War, the security of Pakistan’s weapons quickly became a pressing issue for the United States Government in the aftermath of the 9/11 attacks and the subsequent revelation of bin Laden’s meeting with two Pakistani nuclear scientists. Both of these events led the United States to pressure then-President Pervez Musharraf to address potential vulnerabilities in his nation’s nuclear arsenal. **Since that time, ongoing political instability and popular unrest, the details of AQ Kahn’s proliferation network, multiple failed assassination attempts on Musharraf and the murder of former Prime Minister Benazir Bhutto, and lingering suspicions that members of the Pakistani Army and the Inter-Services Intelligence continue to sympathize with and perhaps even support violent Islamist groups have intensified fears that Pakistan’s nuclear weapons may not be safe.** The most worrisome developments, however, have been the growing influence of al Qaeda in Pakistan, its alliance with a resurgent Taliban and their joint efforts to destabilize the country, which have raised fears that the state could collapse. Not surprisingly, **Pakistani officials have repeatedly sought to reassure outsiders that its command-and-control arrangements prevent its weapons from being used without proper authorization, and that the security of its nuclear facilities is sufficiently robust. Nevertheless, the possibility of a terrorist group stealing a nuclear weapon with or perhaps even without insider assistance appears particularly acute in Pakistan given its continuing instability.** Several factors do suggest that Pakistan’s nuclear weapons remain secure, although the onset of a massive civil disturbance or full-scale internal conflict could obviously render the effectiveness of any security measures questionable. In recent years, the Pakistani government appears to have undertaken a number of important steps, including the implementation of a more rigorous personal reliability program — one targeted at rooting out religious extremists — for members of its nuclear program and the development of its own PALs, which were apparently absent from its nuclear weapons several years ago. **The United States has assisted in some of these efforts, spending nearly \$100 million to train and equip Pakistani security personnel and bolster physical security at nuclear facilities.** Perhaps most important, however, is that Pakistan reportedly keeps the fissile cores of its weapons separate from their non-nuclear detonators, which would make it extremely difficult for terrorists to steal an entire nuclear weapon. Ultimately, even in the wake of Benazir Bhutto’s assassination and the upheaval that followed, the US intelligence community concluded that **“the ongoing political uncertainty in Pakistan has not seriously threatened the military’s control of the nuclear arsenal, but vulnerabilities exist . . . we judge that the Army’s management of nuclear policy issues — to include physical security — has not been degraded by Pakistan’s political crisis.”**

**Alternative 4: Building An Improvised Nuclear Device:** Of the various pathways by which terrorists might attempt to acquire a nuclear weapon, including those discussed above, perhaps none has been the subject of as much attention and concern in recent years as the possibility of a group constructing its own improvised nuclear device, either entirely on its own or with the assistance of any experts who could be persuaded, bribed, or coerced to provide technical assistance. In fact, analysts have increasingly come to view this scenario not only as a plausible threat but also as the most feasible route for terrorists seeking nuclear weapons, for two main reasons: the large stockpiles of fissile material that can be found throughout the world in military as well as civilian facilities, some of which are inadequately monitored and protected; and the relative ease of building a crude nuclear device once a sufficient amount of this material has been obtained. As the report issued by the Baker-Cutler Task Force described the threat, **“In a worst-case scenario, a nuclear engineer graduate with a grapefruit-sized lump of HEU or an orange-sized lump of plutonium, together with material otherwise readily available in commercial markets, could fashion a nuclear device that would fit in a van like the one . . . parked in the World Trade Center in 1993.**

**Acquiring Fissile Material:** How much HEU or plutonium would a terrorist group have to accumulate if it was attempting to construct its own fission weapon, and where might it obtain this material? The amount needed would depend on several factors, including the isotopic composition of the HEU or plutonium, the presence or absence of weapon components such as a neutron reflector that could significantly reduce the quantity of fissile material that would be required, and most importantly the design of the weapon itself. As described above, a gun-type device assembles a supercritical mass relatively slowly, and therefore cannot use plutonium as its fuel; it requires HEU, which has a larger critical mass. Moreover, because it compresses the fissile material in its core, an implosion device using HEU would require significantly less material than a gun-type weapon. Based on these boundary conditions, as well as the likely technical sophistication of a terrorist group (or lack thereof), most estimates suggest that a crude, gun-type IND would require somewhere between 50 and 100 kilograms of weapon-grade HEU, while an implosion device would require on the order of 25 kilograms or less of weapon-grade HEU, or between five and eight kilograms of weapon-grade plutonium. These estimates could vary significantly, however, due to several factors. For example, if a terrorist group attempted to build a gun-type weapon and was somehow able to fashion a neutron reflector from beryllium, then the amount of material required could be reduced considerably, perhaps by as much as 50 percent. If, on the other hand, terrorists acquired HEU enriched to substantially less than 90 percent U-235, or reactor-grade plutonium that contained significantly less than 90 percent Pu-239, then the amount of material needed would increase, particularly in the case of HEU. Finally, in most cases the amount of fissile material that would have to be acquired would exceed the amount needed to build a weapon, perhaps by a significant margin, because processing the fuel into a pure metallic form and then casting and machining the HEU or plutonium into the appropriate shape (or shapes) would likely result in the loss of some material. Where could a terrorist group potentially gain access to a sufficient amount of fissile material? There are several areas of concern. One is the possibility that terrorists could make a black market purchase of material that had previously been stolen or diverted, perhaps from Russia's large stockpiles during the tumult of the 1990s. According to George Tenet, in 2002 President Bush asked Russian President Vladimir Putin whether all Russian nuclear material was accounted for. Putin responded that he could only account for this material during his tenure, implying that some material may have gone missing during Boris Yeltsin's presidency. In 2004, the US National Intelligence Council concluded that "undetected smuggling has occurred [in Russia], and we are concerned about the amount of material that could have been diverted or stolen in the last 13 years." The black market is, however, opaque by nature. The IAEA's Illicit Trafficking Database does contain 1,340 confirmed incidents "involving unauthorized acquisition (e.g., by theft), provision, possession, use, transfer, or disposal" of nuclear explosive and radioactive materials between 1993 and 2007, including 303 incidents of "unauthorized possession and related criminal activity," such as attempts to illicitly buy or sell these materials. Only eighteen of these incidents involved either HEU or plutonium, however, and in most cases the total quantity of material amounted to only a few dozen grams; none of the reported incidents involved more than three kilograms of HEU or plutonium. Although this is far less than what is required to build a nuclear weapon, the database is limited by the fact that it primarily includes incidents that were reported by nations that voluntarily participate in the program. There is also the possibility that the small amounts of material discovered were merely samples. Finally, the database can obviously include only those instances in which traffickers were actually caught by the authorities. Whether other, more successful transactions involving larger quantities of fissile material have occurred is unknown. Irrespective of what may or may not have found its way onto the black market in the past, there are still some 1,900 metric tons of HEU and separated plutonium in the world's fissile material stockpiles according to the most recent estimates. These materials can be found in different forms, but a terrorist group hoping to construct a nuclear weapon would certainly prefer to acquire HEU or plutonium in its metallic form, which could be used to fuel a weapon without additional chemical processing. Metallic fissile material would most likely be located in the weapons production, assembly, or disassembly facilities of a nuclear-weapon state, or at a reprocessing plant that produced weapon-grade plutonium for military use. Although ideal for terrorists, this material is also likely to be the most securely guarded and difficult to obtain; doing so would necessitate either significant insider assistance, a large and well-armed group to overwhelm a facility's on-site and backup security forces, or both. Of course, this does not mean that these facilities are completely secure. For example, the US Departments of Energy and Defense have worked for more than a decade to improve security at facilities in Russia and other former Soviet republics. There have even been concerns regarding the potential vulnerability of US nuclear facilities and the adequacy of their security measures. These concerns, along with costs associated with maintaining a high level of security at multiple facilities, have prompted the removal of fissile material from some of the national weapons laboratories and their subsequent consolidation at a smaller number of sites. Given the difficulties of acquiring metallic fissile material directly, a terrorist group could pursue other options. For example, separated plutonium might be found at civilian reprocessing facilities or mixed oxide (MOX) fuel fabrication plants, but this material would likely be in the form of an oxide powder. If a terrorist group managed to steal plutonium from either facility, or during transport from the former to the latter, there is a strong possibility that it would attempt to reduce the plutonium to its metallic form and alloy it with another metal to make it easier to work with; although plutonium oxide could be used directly in an implosion device, this would increase both the amount of material that was required and the probability that the weapon would fizzle, or achieve a lower than expected yield when detonated. producing a weapon, though the ability to do so "could certainly be within the reach of a dedicated technical team." In theory, terrorists could also pursue an even more difficult route — stealing spent power reactor fuel or fresh (unirradiated) MOX fuel, both of which would need to have their plutonium chemically extracted. While separating the plutonium could be done with appropriate equipment, neither scenario poses much of a danger. Nuclear fuel assemblies are not only quite large, they are also extremely radioactive — emitting enough radiation to give thieves a lethal dose almost immediately — and are therefore considered "self-protecting" for decades after they are removed from a reactor. Moreover, because plutonium comprises only 1 percent of spent nuclear fuel, approximately one metric ton would be needed to obtain a sufficient amount of plutonium for a weapon. In addition, while MOX fuel is not very radioactive, it also contains only a small portion of plutonium, and between 150 and 250 kilograms would therefore be required to obtain enough plutonium for a weapon. While the aforementioned routes to acquiring fissile material all present significant difficulties for terrorists, one of the greatest sources of concern at present involves civilian research reactors, many of which use HEU containing 90–93 percent U-235 as their fuel. According to recent estimates, there are approximately 140 such reactors operating in forty countries, which between them have more than 50 metric tons of HEU. A number of these facilities do not have enough HEU on site to build a weapon, meaning that terrorists might have to target multiple locations to obtain

enough material. Nevertheless, there are 128 facilities with at least 20 kilograms of HEU, which could be enough to construct an implosion device (although more than 20 kilograms would be required for a gun-type device). Despite the limited and dispersed quantities of HEU in civilian facilities, the danger posed by research reactors stems largely from the small size of their fuel elements in comparison to the large fuel rods and assemblies found in power reactors, and, most importantly, their weak security and high vulnerability in comparison to military facilities. For example, the Department of Energy's (DOE) National Nuclear Security Administration (NNSA) recently assisted in the transport of 341 pounds of irradiated HEU — in theory enough material for six nuclear weapons — from a research reactor in Budapest, Hungary, to a storage facility in Russia. When asked about the security at the research reactor site, an NNSA official noted, "they had a fence and a guard." If a terrorist group did manage to steal enough research reactor fuel to build a weapon, they would have to take the step of processing the fuel elements to separate the uranium from the aluminum that it is often alloyed with and then reduce it to a metallic form, but this would not be a particularly difficult task. As one assessment notes, "the chemical processing required is less sophisticated than some of the processing criminals routinely do in the illegal drug industry."

**Constructing A Weapon:** Presuming that terrorists did manage to acquire enough fissile material to fuel a weapon and were able to process it into metal and then cast and machine it into the appropriate size and shape, could they construct a functional IND? Unfortunately, there is widespread agreement that acquiring the fissile material is in fact more difficult than building a device, especially in the case of a gun-type weapon. Consequently, most assessments of this question conclude that a determined and well-funded terrorist group could, in a relatively short period of time and even without the assistance of scientists or engineers, build a crude nuclear weapon that would have a significant chance of producing a yield somewhere between one and possibly as many as 20 kilotons. Several factors suggest that the knowledge, skills, and technology required to build an improvised nuclear device are not necessarily beyond the reach of a well-funded terrorist group. For example, while blueprints for nuclear weapons are highly classified, and producing detailed specifications for a weapon would take no small amount of time and effort, the basic principles of nuclear weapons — particularly first generation gun-type and implosion designs — are no secret, and the equipment needed to produce them is over half a century old. According to one government assessment, "Although successfully designing a nuclear explosive device requires individuals with expertise in metallurgy, chemistry, physics, electronics, and explosives, the required technology dates back to the 1940s, and the basic concepts of nuclear bombs have been widely known for some time. Much of the relevant physics for a workable design is available in published sources." Moreover, as the State Department's most recent report on terrorism also notes, this information continues to be disseminated widely through the Internet and is only becoming more accessible, increasing the prospects that a terrorist group could successfully build an IND. In addition, despite having fewer resources than a state, a terrorist group seeking to construct a nuclear weapon would have a much more modest goal. Whereas a state would be interested in developing an arsenal of safe, reliable devices that were small and sturdy enough to be delivered by a plane or missile, a terrorist group would likely be willing to settle for something far easier to produce — a crude, inefficient weapon that would only need to fit into a cargo container or a small truck, and which might not achieve its intended yield but would nonetheless cause significant damage and tremendous fear, even if it failed to detonate as expected. For these reasons, a report by the Office of Technology Assessment concluded more than three decades ago that if a sufficient amount of fissile material was acquired, a small group of people, none of whom have ever had access to the classified literature, could possibly design and build a crude nuclear device. They would not necessarily require a great deal of technological equipment or have to undertake any experiments. Only modest machine-shop facilities that could be contracted for without arousing suspicion would be required . . . The group would have to include, at a minimum, a person capable of searching and understanding the technical literature in several fields and a jack-of-alltrades technician . . . The small non-national group described above would probably not be able to develop an accurate prediction of the yield of their device . . . However, there is a clear possibility that a clever and competent group could design and construct a device which would produce a significant nuclear yield. The difficulty of producing a nuclear weapon would, however, depend on the type of device that a terrorist group was attempting to construct. For example, if terrorists acquired either plutonium or an insufficient amount of HEU to fuel the simpler gun-type weapon, they would be forced to construct a more technically complex implosion device. In that case, designing and constructing a firing system capable of generating a uniform shockwave that will compress the fissile core without flattening it, testing the firing system with non-nuclear materials to determine whether or not it will achieve the necessary amount of compression and function effectively, acquiring the large amounts of chemical explosives that would be needed to conduct those tests, and developing a neutron initiator that could start the chain reaction at the appropriate moment would all pose significant challenges. The difficulties associated with building an implosion device would be even greater if a terrorist group acquired reactor-grade plutonium for a weapon. Not only would the higher neutron emission rate from plutonium isotopes other than Pu-239 make building the weapon more complex, but the increased heat and radioactivity would also make handling the material more difficult and could adversely affect the weapon's non-nuclear components. These challenges would not, however, be insurmountable for a determined and well-funded terrorist group, especially one that counted scientists and/or engineers among its members or was able to recruit outside support. According to one analysis, "An implosion-type bomb does not . . . require as extreme a level of sophistication as is sometimes imagined. Today, with the knowledge that it can be done and substantial unclassified literature on the underlying physics, materials properties, and explosives the challenge, though still significant, would be less than during the Manhattan Project." By comparison, if terrorists acquired an adequate amount of HEU to build a gun-type weapon, their task would be considerably easier; as Charles Ferguson, William Potter, and their coauthors note, "Because of the inherent simplicity of a gun-type device, designing and constructing it would be relatively straightforward." In fact, this design was not even tested before being used for the first time over Hiroshima in 1945, due in large part to the confidence its designers had that it would function properly. According to one recent estimate, a gun-type device could potentially be built in as little as two months, while an implosion device would take closer to a year to complete. Another, more detailed analysis concludes that constructing a gun-type device would take approximately one year, cost roughly two million dollars (not including the cost of acquiring HEU on the black market), and would produce a weapon that could fit inside a van or a small truck. The relative ease of building this type of device is a particular concern given the types of individuals that al Qaeda has managed to recruit in the past. According to Peter Bergen, "The terrorists who have succeeded in carrying out spectacular attacks against Western targets in the past have been college-educated, technically proficient men who are capable

of manufacturing and deploying chemical, radiological, and biological weapons. At some point they could also assemble a crude ‘gun-type’ nuclear. However, because of its high rate of spontaneous fission, an implosion weapon built with reactor-grade plutonium might not require a neutron generator, which would simplify building the device. Potter and device and detonate it in a European city.” In short, “Al Qaeda attracts the kind of highly educated men who one day might be able to pull off such an attack.”

**Summary:** The possibility that a terrorist group such as al Qaeda could one day obtain a nuclear weapon is real, and the extraordinary consequences of a nuclear terrorist attack — even one using a crude and inefficient improvised nuclear device — dictate that preventing this threat from ever materializing should be a priority for the United States Government. At the same time, it is important not to exaggerate the likelihood of an attack; any terrorist group that chose to pursue the nuclear option would confront a host of obstacles, regardless of which path it followed. For all intents and purposes, the prospect of terrorists manufacturing their own fissile material for use in a weapon can be discounted; this task has proven too difficult for a number of states, and the knowledge, resources, and infrastructure it would require far exceed what a terrorist group could accumulate, let alone in secret. The possibility of a terrorist group receiving a nuclear weapon from a state sponsor, while certainly greater than the possibility of a group creating its own HEU or plutonium, is also quite small. **Of course, there is always a chance that an irrational, malevolent, or extremely risk-acceptant government could provide a nuclear weapon to a terrorist client if it sought to attack the United States indirectly or had no other means of delivery. While this scenario cannot be ignored, neither should it be a focus of US efforts to prevent nuclear terrorism, especially if addressing this one comparatively remote possibility comes at the expense of addressing more plausible alternatives.** The prospect of a rogue element within a state’s military or its scientific community providing a nuclear weapon, fissile material, and/or expertise to a terrorist group is more conceivable. **A somewhat more likely scenario involves stealing an intact nuclear weapon — perhaps with insider assistance — from a state like Russia or Pakistan.** While the former has a large arsenal, parts of which may not be sufficiently well protected or accounted for and thus vulnerable to theft, the latter has a small and closely guarded arsenal, but one that could quickly become vulnerable if the country experiences widespread civil conflict or state failure. **Even in these cases, however, the presence of various safety measures on most weapons suggests that the prospect of a terrorist group acquiring an intact weapon that it could actually use is fairly low.** Finally, the most significant threat centers on the possibility of a group purchasing fissile material on the black market or stealing it from a military or civilian facility and then using it to construct an IND. Here, the principal challenge for terrorists is that while a gun-type weapon would be relatively easy to build, it requires a significant amount of HEU, perhaps more than could be stolen from a single research reactor — the most vulnerable potential target. At the same time, less HEU and a very small amount of plutonium would be needed to fuel an implosion weapon, but building this device would prove extremely difficult. **Nevertheless, the existence of inadequately secured fissile material, the possibility that terrorists could indeed build an implosion weapon, and the widespread consensus that building a gun-type device would not be an insurmountable challenge for a determined and well-funded terrorist group if it acquired enough HEU all make this threat particularly salient.** There is no uniform solution to the danger of nuclear terrorism. Rather, any strategy that attempts to address this threat should include a number of different elements, such as efforts to improve the security of existing nuclear weapons and material; diplomatic, economic, and perhaps even military policies directed at halting or at least limiting the further proliferation of nuclear weapons, fissile material, and the technology and infrastructure needed to produce the latter; **a counterterrorism campaign to weaken terrorist groups and disrupt their plans; the continued deployment of radiation sensors at domestic and international ports and border crossings to detect a smuggled weapon or nuclear-explosive material; intelligence-sharing measures such as the Proliferation Security Initiative; and many others.** At the most basic level, however, a comprehensive strategy should be structured around three core objectives:

- 1) Preventing terrorists from acquiring nuclear weapons or fissile material
- 2) Stopping terrorists from delivering a nuclear weapon to their intended target should prevention fail
- 3) Being prepared to respond as quickly and effectively as possible, both at home and abroad, in the event that terrorists succeed in detonating one or more nuclear weapons.

Attempting to develop a comprehensive strategy that encompasses all three objectives is a formidable task, one that goes beyond the scope of this report. **Nevertheless, the remainder of this chapter examines each of these objectives in greater detail and suggests options for achieving them. The primary focus, however, is on ensuring that terrorists do not obtain nuclear weapons or material, preferably by taking steps that will discourage them from pursuing these items in the first place.**

**Keeping Terrorists From The Bomb:** The first and most important way to prevent a nuclear terrorist attack is to make certain that terrorists do not acquire an intact weapon or a sufficient amount of fissile material to build one on their own. Once either of these steps has been achieved, thwarting an attack by a determined terrorist group will ultimately depend on locating any missing fissile material before a weapon can be assembled or intercepting a device before it can be delivered to the target and detonated, both of which are extremely challenging tasks that cannot be relied upon as a primary line of defense. **Achieving this objective requires adopting a multi-dimensional approach that significantly decreases the prospect that terrorists will succeed at each major stage in their plot — obtaining a nuclear weapon, transporting the weapon to their target, and enjoying the benefits they anticipate will result from a nuclear attack.** Not only will such an approach increase the likelihood that prospective nuclear terrorists will fail in their efforts (or decrease the possibility that they can succeed at an acceptable or feasible cost), it could also dissuade terrorists from seriously pursuing the nuclear option at all.

**Deterrence Versus Dissuasion:** It has become a widely accepted proposition that terrorist groups like al Qaeda cannot be deterred from conducting an attack — including an attack using nuclear weapons if they manage to acquire them — because their willingness to die for their cause, along with the relative anonymity that comes from having no clear “return address” that can be targeted in response to an attack, makes them immune to the prospect of retaliation. This view was expressed in the 2002 *National Security Strategy*, which noted, “Traditional concepts of deterrence will not work against a terrorist enemy whose avowed tactics are wanton destruction and the targeting of innocents; whose so-called soldiers seek martyrdom in death and whose most potent protection is

statelessness.” The implication often drawn from this assessment is that only proactive, offensive measures stand any real chance of preventing future terrorist attacks. **For example, while the 2006 *National Security Strategy* presented a more qualified criticism of deterrence than its precursor, it still maintained that the United States “can no longer simply rely on deterrence to keep the terrorists at bay or defensive measures to thwart them at the last moment. The fight must be taken to the enemy, to keep them on the run.”** Not surprisingly, efforts to capture and kill key terrorist operatives have arguably been the focus of the US Government’s efforts against al Qaeda and other violent groups since 9/11. Yet this approach has its limitations as well, which have been demonstrated over the past several years. As noted in Chapter 1, despite the relentless pressure that has succeeded in killing and capturing a number of mid- and upperlevel al Qaeda operatives, the group has proven quite adept at regenerating precisely these elements of its organizational structure. **Therefore, while measures to weaken al Qaeda will undoubtedly play a crucial role in averting future mass casualty attacks by removing key operatives and applying the continuous pressure that inhibits terrorists’ ability to plan, organize, and conduct large scale operations, these efforts may not be sufficient to prevent or disrupt a nuclear terrorist plot.** Yet offensive measures, while important, are not the only alternative (or complement) to traditional methods of deterrence. Despite the problems associated with deterring terrorists, it may be possible to dissuade them from devoting substantial time, effort, and resources toward obtaining nuclear weapons in the first place. **In other words, if steps can be taken to convince terrorists that they cannot purchase or steal nuclear weapons or material (or that the costs of doing so are too high and the difficulties are too great), that even if they do obtain these items it will be extremely difficult to smuggle them into the United States and deliver them to their target without being discovered, and that a successful attack will ultimately prove counterproductive to their underlying objectives, then they may choose to abandon their nuclear aspirations and turn their attention elsewhere.** The importance of dissuasion has already been recognized in a number of key strategic documents over the past several years. For example, the 2006 *National Security Strategy* notes that the United States will endeavor to “convince our adversaries that they cannot achieve their goals with WMD, and thus deter and dissuade them from attempting to use or even acquire these weapons in the first place.” **Can terrorist groups like al Qaeda be dissuaded from pursuing nuclear weapons? While it is impossible to say for certain, it appears to be a distinct possibility. Although al Qaeda undoubtedly would like to possess these weapons, it would be a mistake to assume that the group and its members will devote significant and scarce human and material resources to acquiring them if the prospects for doing so are extremely low, if the chances they can transport them undetected to their intended target are extremely small, or if they calculate that a nuclear attack may not in fact serve their larger strategic interests — a smaller possibility, but one that should not be discounted entirely.** Instead, most indicators suggest that despite its interest in nuclear weapons, the majority of al Qaeda’s time and resources have been devoted to supporting more plausible types of attacks, whether conventional explosives, hijacked commercial aircraft, or even other weapons of mass destruction. **For instance, as noted earlier in this report, bin Laden’s deputy Zawahiri emphasized the pursuit of chemical and biological weapons rather than nuclear weapons, in large part because he determined that they were easier to develop. This calculus appears to have prevailed among his cohorts.** In 2004, then-Undersecretary of State for Arms Control and International Security John Bolton noted that in terms of al Qaeda’s pursuit of WMD, “the overwhelming bulk of the evidence we have is that their efforts are focused on biological and chemical” weapons, because “the technology for bio and chem is comparatively so much easier than that’s where their efforts are concentrating. In addition, al Qaeda’s own ideological idiosyncrasies may actually facilitate dissuasion and help steer the group away from pursuing nuclear weapons as this option becomes increasingly infeasible. According to Brian Michael Jenkins, jihadists believe that God’s will is expressed in success and failure. To succeed is to have God’s support. Failure signals God’s disapproval . . . Catastrophic attacks with unconventional weapons remain jihadist ambitions, but determined fighters with conventional explosives remain the most reliable weapons. Multiple attacks increase death and destruction, but operations with too many moving parts risk failure. Jihadist planners continue to think big but execute conservatively. Therefore, measures that decrease the prospects for success at each stage of a nuclear terrorist plot will not only yield the direct benefits of thwarting terrorists that attempt to obtain nuclear weapons and material, possibly intercepting these items before they can be used, and reducing the benefits that accrue to the perpetrators of an attack, they may also decrease the probability that a terrorist group will devote significant time and effort toward the pursuit of nuclear weapons and material.

**The remainder of this section focuses on three specific areas that, individually and especially together, can contribute to dissuasion:**

- 1) Delegitimizing the killing of civilians generally and the use of nuclear weapons and other WMD specifically
- 2) Reducing stockpiles of HEU and plutonium and securing existing weapons and fissile material
- 3) Developing and deploying radiation monitors and other detection systems.

Before proceeding, however, it is necessary to mention an important qualification, namely, that successfully dissuading terrorists from pursuing nuclear weapons, while a major accomplishment, could have pernicious second-order consequences. **Just as the hardening of government and military facilities led terrorists to shift their focus to so-called “soft” targets that were much more vulnerable, if they also choose to abandon any serious efforts to acquire nuclear weapons and conduct a nuclear attack, they will almost certainly redirect those efforts and the human and material resources that supported them to other, more viable methods of attack, whether convention or unconventional. The United States could, therefore, become a victim of its own success. This point is symptomatic of a larger issue. To the extent that preventing nuclear terrorism is a focus for US foreign and defense policy and draws attention — and perhaps resources as well — away from addressing other aspects of the terrorist threat, the danger posed by more likely types of attacks may grow.** This concern is not new, as a number of prominent terrorism analysts have warned against an excessive focus on low-probability WMD scenarios that might inhibit the ability of the US Government to prepare for and defend against more realistic dangers.<sup>201</sup> If one believes that the prospect of a catastrophic attack is what truly makes terrorism an overriding threat, then this potential tradeoff may be acceptable, but there is no easy answer to this dilemma.

**Delegitimizing Nuclear Terrorism:** The 2006 *National Security Strategy* emphasized that “the War on Terror has been both a battle of arms and a battle of ideas . . . for it is ideas that can turn the disenchanted into murderers willing to kill innocent victims.” This theme — that the United States and violent Islamist extremist groups are locked in an ideological competition in which both sides are vying for the sympathy and support of the world’s Muslim population — has not only been echoed by a number of

experts, it has also been identified as one the most important components of a broader strategy against al Qaeda, its affiliates, and the individuals they inspire, especially in the long run. According to one analysis, "Cutting off the supply of recruits to this movement, eliminating its financial support networks, and preventing it from metastasizing into new regions will . . . require a campaign to undermine its ideological appeal." Yet the US Government's attempt to fight the "war of ideas" has frequently been singled out as one of the least effective elements of the war on terrorism. As one recent assessment notes, "By any measure, U.S. efforts at communicating with Muslim-majority nations since 9/11 have not been successful. They have lacked energy, focus, and an overarching strategy." In 2006, then-Secretary of Defense Donald Rumsfeld even admitted that the US government had earned poor marks in this area, and only deserved "a 'D' or a 'D plus' as a country as to how well we're doing in the battle of ideas that's taking place in the world today." Yet improving this situation is critical, because prevailing in the war of ideas can help to prevent future catastrophic terrorist attacks, including acts of nuclear terrorism. Specifically, one way to discourage terrorists from pursuing (or using) nuclear weapons is to take steps that delegitimize their actions in the eyes of their supporters as well as those they are attempting to impress and recruit to their cause. The central goal is to convince terrorists that certain actions — for example, an act of nuclear terrorism — will not help them achieve their aims, but will instead prove counter-productive by causing these audiences to turn away from them rather than rally to their side. If terrorists can be convinced that a successful catastrophic attack will ultimately backfire, they may grow reluctant to pursue this type of attack in favor of more "acceptable" forms of violence. Due in large part to the inherent difficulties of operationalizing traditional notions of deterrence against transnational terrorist groups, there is now a growing recognition that efforts along these lines can indeed play an important role in preventing future attacks. For example, President Bush's National Security Advisor, Stephen Hadley, acknowledged that "Many terrorists value the perception of popular or theological legitimacy for their actions. By encouraging debate about the moral legitimacy of using weapons of mass destruction, we can try to affect the strategic calculus of the terrorists." The fear of alienating existing or potential supporters is one factor that has prevented ideologically and politically motivated terrorists groups from undertaking mass casualty attacks and pursuing WMD in the past. Are al Qaeda and similar groups inhibited in this way, and if not, could they be encouraged to exercise selfrestraint? Although the conventional wisdom suggests that religiously motivated terrorists are unlikely to be affected by these kinds of calculations, the difference between "old" and "new" terrorists in this respect may not be quite as large as it seems. For example, one study notes that despite their commitment to violence generally, al Qaeda and its supporters disagree over the strategic value and religious permissibility of different forms of violence: "Even the most fanatic . . . debate the acceptability of collateral Muslim casualties. They argue about whether Shia Muslims are potential allies or apostates, and, if the latter, whether they are legitimate targets of violence. They wonder aloud whether tactics such as kidnapping or taking children hostage are counterproductive." Several developments in particular indicate that al Qaeda is indeed concerned about how it is perceived among the world's Muslim population, and does fear that certain acts might diminish its standing among this audience. One notable example is the central leadership's response to the actions taken by the Jordanian militant Abu Musab al-Zarqawi, who, before he was killed in a US airstrike in June 2006, was the head of AQI. Zarqawi's immediate strategy in Iraq was to isolate the United States by driving out non-US foreign forces and non-governmental organizations, and to precipitate a civil war between Iraq's Sunni and Shiite communities. His brutal methods included indiscriminately killing Shiite civilians with suicide car bombings that often left dozens dead, and murdering hostages and releasing graphic videos of their executions. This earned him a rebuke from bin Laden's chief lieutenant, Zawahiri. In a July 2005 letter, Zawahiri wrote that if al Qaeda and its allies hoped to drive the United States out of Iraq and establish an Islamic regime or the beginnings of a wider caliphate there, we will see that the strongest weapon which the mujahedeen enjoy is popular support from the Muslim masses in Iraq, and the surrounding Muslim countries. So, we must maintain this support as best we can, and we should strive to increase it the mujahed movement must avoid any action that the masses do not understand or approve. He then gently chastised Zarqawi for his brutality, noting, "the things which the feelings of the Muslim populace who love you and support you will never find palatable are the scenes of slaughtering the hostages." Ultimately, Zawahiri lectured "we are in a battle, and . . . more than half of that battle is taking place in the battlefield of the media . . . we are in a media battle in a race for the hearts and minds of our Umma [i.e., the wider Islamic community]." More recently, al Qaeda's popularity has declined in several parts of the world, a development that has been attributed to widespread disgust over the large number of Muslim civilians that have died in attacks conducted by the group and its affiliates in Iraq, North Africa, Pakistan, and elsewhere. It has also been forced to contend with public denunciations by several former supporters and fellow extremists, including Sayyid Imam al-Sharif (also known as Dr. Fadl), once a leading figure in Egyptian Islamic Jihad who has been described as the "ideological godfather" of al Qaeda for his role in articulating the doctrine of takfir (declaring fellow Muslims apostates) and providing the theological justification for killing civilians who did not support armed jihad against the apostate rulers of Middle Eastern nations such as Egypt. These developments appear to have been taken very seriously by al Qaeda's leadership. According to Ted Gistaro, the US National Intelligence Officer for transnational threats, even as al-Qaeda attempts to push its propaganda in the West, its support has suffered several setbacks among its key constituents. Al-Qaeda's brutal attacks against Muslim civilians are tarnishing its image among both mainstream and extremist Muslims. Al-Qaeda senior leaders in 2008 have devoted nearly half their airtime to defending the group's legitimacy. This defensive tone continues a trend observed since at least last summer and reflects concern over allegations by militant leaders and religious scholars that al-Qaeda and its affiliates have violated the Islamic laws of war, particularly in Iraq and North Africa. This preoccupation with public relations was demonstrated in April 2008, when Zawahiri issued a lengthy response to questions that had been posted on Internet forums, which he himself had solicited the previous December. A number of these questions dealt with the moral legitimacy of targeting civilians, and according to an analysis of his responses, Zawahiri "revealed deep-seated worries about the controversies created by al-Qa'ida's killing of innocents." These developments suggest that al Qaeda may not be so quick to pursue or use a nuclear weapon, given the amount of devastation this would cause, the number of civilians — including Muslims — who would die as a result of such an attack, and the possibility that both of these factors could trigger a significant backlash among its sympathizers and potential followers. As one report notes, "nuclear use does have the potential of provoking revulsion among the very communities that bin Laden is seeking to rally to his restored Muslim Caliphate." In fact, during the earliest debates among al Qaeda's leadership on the value of pursuing WMD, there were some members who cautioned that the use of these weapons would only diminish sympathy for the group's cause and the cause of Muslims generally. The US Government should therefore take steps to persuade al Qaeda that mass casualty and catastrophic attacks would hinder rather than advance its long-term interests. Already it appears that some positive steps have been taken, as the United States' strategy for winning the war of ideas seems to have shifted away from an

earlier focus on improving perceptions of the United States abroad and toward the more feasible goal of supporting and promoting elements within the Muslim world that offer a non-violent alternative to al Qaeda's brand of extremism. This shift was recently described by James Glassman, who was at the time the State Department's Undersecretary for Public Diplomacy and Public Affairs: **"the aim of the war of ideas is not to persuade foreign populations to adopt more favorable views of the United States and its policies . . . our main role is to support constructive alternatives to violent extremism. Our priority is not to promote our brand but to help destroy theirs."** In this vein, the US Government should work through intermediaries to publicize as widely as possible al Qaeda's acts of violence and their immediate and longer-term effects on civilians. **It should also seek to support individuals and organizations throughout the Muslim world — especially those that have at least some minimal level of grass roots support — that not only eschew violence, but that can publicly and credibly challenge al Qaeda by arguing that the killing of civilians and the use of WMD (including and especially nuclear weapons) are immoral, religiously impermissible, and unlikely to help the situation of those whom al Qaeda claims to be fighting for.** In addition, it is crucial that these efforts be effectively promoted and publicized; it is important to remember that the goal is not to affect a change of heart among al Qaeda's core members, but rather a change of strategy. By making it clear to them that their actions are alienating far more people than they are inspiring, they might become less likely to view a catastrophic attack as a strategically viable option.

**Securing Nuclear Weapons & Material:** Although the prospect of delegitimizing nuclear terrorism may be appealing, actually convincing terrorists that using a nuclear weapon will erode if not eliminate their base of support and prevent them from achieving their ultimate objectives may not be possible. **For example, the terrorists who are most likely to attempt a nuclear attack — the core members of al Qaeda — may also be the least susceptible to this message given their commitment to their cause as well as their apparent desire to conduct increasingly spectacular attacks. If terrorists cannot be persuaded to abandon the idea of nuclear terrorism, the next best thing is to convince them that it is not a realistic option. In other words, if a terrorist group concludes that it cannot acquire a nuclear weapon or enough fissile material to make one on its own, or that any attempt to do so would require enormous human and material resources and would still have only a very small chance of succeeding, it will likely devote most of those resources elsewhere.** Continuing and, where possible, accelerating and expanding efforts to eliminate or secure potentially vulnerable nuclear weapons and material can therefore thwart determined terrorists from obtaining these items and dissuade prospective nuclear terrorists from attempting to do so. **As one senior US official has observed, "If terrorists believe that it will be extremely risky, or impossible, to acquire [nuclear] weapons or materials, they may seek other avenues of attack."** Reducing stockpiles of nuclear weapons and material, while improving security for what remains, is generally regarded as the single most important measure that can be taken to prevent a nuclear terrorist attack. Because terrorists will probably not attempt to manufacture fissile material on their own, and because it is also highly unlikely that a nuclear-armed state would transfer a weapon to a nonstate actor, preventing these groups from illicitly obtaining either item is the logical focus for preventive efforts. **As Graham Allison has argued: The first goal in the plan to prevent nuclear terrorism must be to ensure that there is no place in the world where terrorists can acquire nuclear weapons or the materials from which such weapons can be made. To this end, every nuclear nation must be persuaded to lock down all weapons and fissile material to a new "gold standard" — and to do so on the fastest feasible timetable.** Material that cannot reasonably be secured to this standard, particularly at research reactors in developing and transitional countries, must be removed. In addition, improving the security of vulnerable nuclear weapons and material is not only prudent because it addresses the most likely routes by which terrorists might attempt to pursue a nuclear bomb, it is also the most feasible defense against the nuclear terrorist threat (in comparison, for instance, to relying primarily on detecting and interdicting nuclear weapons and material once they have been stolen and are in transit). **According to a report by the National Academies: Nuclear weapons and SNM [special nuclear material, i.e., HEU and plutonium] can most effectively be protected, controlled, and accounted for at their sources, which are relatively few in number compared with the many potential points of transit across national borders and are protected by state-run security infrastructures.** Therefore, the first line of homeland defense against nuclear and radiological terrorism is a robust system for protecting, controlling, and accounting for nuclear weapons and SNM at their sources.

**Deploying Detection Systems:** In the aftermath of the 9/11 attacks, fears of nuclear terrorism prompted the United States Government to undertake a broad deployment of radiation detectors in an effort to prevent a nuclear weapon (or the material needed to make one) from being smuggled into the country or into the heart of a major American city. Unlike efforts to secure nuclear weapons and material, however, the role of detection in preventing a nuclear terrorist attack has been and continues to be the subject of much debate. On the one hand, there are those who are extremely skeptical of any large-scale efforts to deploy detection systems due to a host of factors, including the immense length of US borders, the ability of clever terrorists to avoid entry points that are likely to be well defended, and perhaps most importantly the difficulties associated with the detection of fissile material. As two skeptics note, **"The physics of nuclear materials and nuclear weapons, the geography of the huge and complex American borders, and the economics of the global flow of people and goods conspire to make the terrorists' job easy and the defenders' job very difficult. Once stolen, the nuclear material for a bomb could be anywhere, and it is very difficult to detect, especially if shielding is used to limit radiation emissions."** On the other hand, there are those who view detection system as a crucial defensive measure against the threat of nuclear terrorism, with some advocating for significantly expanded government efforts not unlike the Manhattan or Apollo projects to research and develop new generations of detection systems capable of locating nuclear material with much greater accuracy and at far greater ranges than are currently feasible. Both sides make a valid point, although they overstate the limitations as well as the potential value of this approach. Detection systems can play an important role in preventing, deterring, and perhaps even dissuading a nuclear terrorist plot. Nevertheless, the inherent limitations of this line of defense suggest that further study is warranted before devoting significant increases in resources. Detecting nuclear weapons and material is a technically challenging task under most operating conditions. **In the 1950s, Robert Oppenheimer was asked in a closed Senate session whether a small group of men could smuggle nuclear weapons into New York and detonate them. "Of course it could be done," Oppenheimer replied, "and people could destroy New York."** He was then asked what instrument might be used to find weapons that had been hidden in a large city. "A screwdriver," he responded. **Although technology has obviously improved over the past half century, many of the fundamental difficulties remain. Three general methods exist to detect nuclear weapons and material: passive detection of the radiation emitted by nuclear material; active detection of dense**

objects within a package or container (for example through the use of x-rays or gamma radiography to discover hidden nuclear material or any shielding surrounding it); and active interrogation, which involves irradiating objects in order to induce fission reactions that will generate increased emissions of neutrons or gamma rays, which can then be detected. Passive detection of radiation is currently the principal method available for locating a smuggled nuclear device or fissile material. For a number of reasons, however, passive detection of plutonium and especially HEU is problematic. **Radioactive decay is the process by which an unstable isotope undergoes a spontaneous nuclear transmission via the emission of excess energy in the form of subatomic particles and electromagnetic waves, and is replaced by a different isotope or element. At the atomic level radioactive decay is a random process, but decay rates can be predicted for a large number of atoms.** Half-life is the time it takes for one half of a given quantity of similar atoms to decay. Generally, a short half-life indicates that an isotope is intensely radioactive for a relatively short period of time, while a long half-life indicates that an isotope is only weakly radioactive for a longer period of time. **Neither U-235 nor Pu-239 is especially radioactive, however. By comparison, isotopes that might be used in a dirty bomb are far more radioactive and would therefore be easier to detect.** Radiation monitors locate nuclear materials by detecting either neutrons generated primarily by spontaneous fission or gamma rays — the two primary observables that emanate from the decay of radioactive isotopes in fissile material. Both emissions have mean free paths of approximately a hundred meters in the air, meaning they cannot be detected by high-flying aircraft. The ability to detect HEU or plutonium within this range is also affected by distance from the material, the presence of naturally occurring and man-made background radiation, and the interaction between the two. Specifically, the signal emitted by a point source of either neutrons or gamma rays decreases inversely with the square of the distance from that source, while the level of background radiation remains constant. As a result, the greater the distance from nuclear weapons or materials, the more difficult it is to distinguish HEU or plutonium from background radiation. Given these inherent limitations and the state of existing passive detection technologies, lightweight portable detectors are only really useful within several meters of a strong point source, and large-area detectors may only be able to locate unshielded nuclear materials within a range of several dozen meters. **Although both HEU and plutonium are significantly more difficult to detect than other radiological materials, detecting the former is much more challenging than detecting the latter. Plutonium is a strong emitter of neutrons that cannot be easily shielded.** By contrast, HEU emits very few neutrons. Instead, its primary observable emission is a low energy gamma ray that can be shielded by as little as a few millimeters of lead. Detection of HEU or plutonium is also dependent on the precise nature of the material and, in the case of an actual nuclear weapon, the presence or absence of certain components. **For example, the neutrons generated by plutonium emanate primarily from the isotope Pu-240, which has a higher spontaneous fission rate than Pu-239. Reactor-grade plutonium, with its higher Pu-240 content, would therefore be easier to detect than weapon-grade plutonium.** In the case of HEU, uranium that had previously been used in a reactor would contain small quantities of the isotope U-232, which has decay products that emit strong and more easily detectable gamma rays. Both materials would also be significantly easier to detect in their oxide form. **A crude nuclear weapon may also contain a relatively large amount of fissile material and would therefore be easier to detect, although terrorists might attempt to smuggle HEU or plutonium in small amounts — especially if the material they acquired was not already in metallic form — and build the actual weapon once they were closer to their target.** Finally, if a nuclear weapon used depleted uranium (a byproduct of the enrichment process that is predominantly composed of U-238) as a tamper, this material would also emit a strong gamma ray that is difficult to shield. Despite these qualifications, passive detection of plutonium and HEU remains difficult. While hand-held detectors are useful only at extremely close ranges, larger radiation detectors are capable of detecting unshielded or lightly shielded plutonium devices in cargo containers, in moving vehicles, and in vehicles at portals. **There is a general consensus, however, that available radiation portal monitoring equipment — installed in the United States and around the world — would be unable to detect HEU or an HEU-based device if shielding was used.** Active detection through radiography is available and in use, but also has limits; according to one study, “Commercially available radiography has serious limitations . . . when searching for comparatively small quantities of SNM imbedded in containers of complex cargo.” There are, however, new technologies in development that may be able to more effectively image vehicles and cargo containers. Active interrogation, although not yet widely available, is potentially the most effective way to detect nuclear materials, particularly shielded HEU. Nevertheless, this method is controversial due to the potential health risks it could pose to those in its vicinity. **Although reliably detecting nuclear weapons and material poses a significant challenge, the organization in charge of coordinating these efforts — DHS’s Domestic Nuclear Detection Office (DNDO) — is moving forward with its plan to develop a global nuclear detection architecture, which has been described as “a multilayered detection framework of radiation detection equipment and interdiction activities to combat nuclear smuggling in foreign countries, at the U.S. border, and inside the United States.”**<sup>2</sup> This architecture encompasses programs run through DHS, DOE, and the State Department, and includes or will soon include the deployment of radiation monitors at border crossings and major ports overseas, the United States’ northern and southern borders, truck inspection stations within the country, and tool booths, bridges, and tunnels surrounding major US cities. **The central premise behind these programs is to create a layered defense that will increase the probability that smuggled nuclear weapons or material will be detected somewhere along the journey from their point of origin to their target. These efforts have not been free of controversy. Perhaps the most well-publicized difficulties have surrounded the government’s plans to purchase next-generation radiation detection systems, known as Advanced Spectroscopic Portal (ASP) monitors. These devices are intended to supplement or replace first-generation radiation portal monitors that are incapable of discriminating between radiation emitted by a benign source and emissions from threatening materials, which leads to an extremely high number of false alarms that must then be subjected to secondary inspections. ASP monitors, by contrast, have the ability to analyze the energy signature of gamma rays in order to identify their source, which should lead to fewer false alarms. Despite this additional capability, ASPs have experienced delays and significant cost increases. According to the Government Accountability Office, these units could cost between \$2 and \$4 billion over the next decade, depending on the number and type of ASP units that are ultimately procured.**<sup>249</sup> Moreover, these radiation monitors do not provide increased effectiveness over earlier units in detecting shielded HEU. Ultimately, detection can play an important role in preventing a nuclear terrorist attack, not only by stopping a group from successfully transporting a nuclear weapon or material to its target, but also by dissuading terrorists from pursuing the nuclear option. **In concert with the other measures discussed above, the deployment of radiation monitors and other detection systems can increase the likelihood that would-be nuclear terrorists will judge the possibility of success as too low to merit the effort required.** Vayl Oxford, the previous director of DNDO, is therefore correct to argue that terrorists can be discouraged from attempting an attack by complicating their ability to undertake certain operations, and that detection

systems can have this effect. Nevertheless, skeptics are also correct to note that even the best possible detection architecture will only provide a partial solution. Even if detection technologies improve considerably and are deployed widely, no defense will be perfect; terrorists capable of acquiring nuclear materials can — and almost certainly will — devote a corresponding level of effort to evading discovery, in particular by avoiding well defended routes and entry points. There are also questions as to whether R&D efforts are likely to produce major breakthroughs anytime in the near future, as opposed to evolutionary improvements in effectiveness or ease of use. Calls for a Manhattan or Apollo Project-like effort to develop new detection systems should therefore be received with caution, especially in terms of the resources devoted to this effort. As the continuing debates over the value of ASP monitors have demonstrated, it is essential that any new systems represent more than a marginal improvement over existing systems before they are procured in quantity. Finally, if the role of detection is partially — and perhaps even predominantly — to discourage prospective nuclear terrorists, then new technologies may only be one part of the answer. It is equally important to ensure that the presence of these systems influences terrorists' calculations in the expected way — i.e., that they discourage terrorists from pursuing nuclear weapons and material as opposed to providing a roadmap for which routes, ports, or border crossings should be avoided. In addition to “red teaming” how terrorist might attempt to sneak a weapon or fissile material into the United States, analyses should also be undertaken to determine how terrorists might be convinced that they will be unable to circumvent existing defenses, something which may depend as much on publicizing (and possibly exaggerating) existing capabilities as developing new ones.

**Preventing Terrorists From Delivering A Weapon:** Although preventing terrorists from acquiring nuclear weapons and material is the best, safest, and most feasible way to avoid a catastrophic attack, prudence dictates that the US government be as well prepared as possible to locate and intercept terrorists groups that obtain these items before they can deliver a weapon to their intended target. This section focuses on two areas in particular that are likely to play a crucial role in these efforts — human intelligence (HUMINT) and Special Operations Forces.

**Human Intelligence:** One of the keys to preventing future terrorist attacks is to learn as much as possible about where terrorists are hiding and what they may be planning. Because terrorists are the weaker party in a conflict, they rely heavily on secrecy and anonymity — if they can be found, they can be captured or killed. Obtaining accurate intelligence is therefore crucial. As one prominent analyst notes, “intelligence is the spearhead of counter-terrorism . . . With high-grade, high-quality intelligence — especially human intelligence — the threat of terrorism and extremism can be managed.” The US intelligence community must therefore continue (and if possible accelerate) the process of rebuilding and expanding its HUMINT capability, which was exposed after 9/11 as extremely limited. HUMINT has a particularly important role to play in averting any potential nuclear attack, for at least two reasons. First, given the inherent difficulty of detecting nuclear material, especially from any significant distance, locating and stopping terrorists who are in possession of these items may depend first and foremost on knowing where to look. Second, the terrorists most likely to be involved in a serious plot to conduct this type of attack — the members of al Qaeda’s senior leadership and their key operatives — are extremely difficult to penetrate through technical means, due in part to their reluctance to use electronic forms of communication. Yet HUMINT also has limitations in this regard: modern terrorists groups are notoriously difficult to penetrate through the cultivation of human sources because of their networked structure, closely knit cells, and high levels of operational security. This is particularly the case for prominent al Qaeda operatives. According to one former CIA intelligence officer, “They [members of al Qaeda hiding in Pakistan] have had a Darwinian education in what can give them away, and their tradecraft has improved as we have eliminated some of the less careful members of their organization. They’re hiding in a sea of people who are very xenophobic of outsiders, so it’s a very, very tough nut to crack. While attempts to penetrate al Qaeda’s leadership through all available means should of course continue, these constraints do suggest that, at least in terms of preventing a nuclear terrorist attack, some of the resources that support these efforts might be better spent on developing assets within the military and/or scientific establishments of nations that are the most likely sources of loose nuclear weapons and material, especially workers at high-risk facilities. Admittedly, this is an indirect way of uncovering a potential nuclear terror plot, and there is no guarantee that stolen or diverted items will be discovered in time to prevent an attack. Nevertheless, if a weapon or material is lost or stolen, it may be the only warning the United States receives, especially if a foreign government chooses not to communicate what has occurred. The sooner the US Government learns that a nuclear weapon or a significant quantity of fissile material has gone missing, the better the chances that these items will be located and recovered. If they are stolen from a facility in a foreign country, however, it is possible that the United States may not be informed right away, or perhaps even at all. A foreign government might be unwilling to admit to such a major lapse in security, or it may believe that it can successfully recover the missing items on its own. Alternatively, it may fear that if it does reveal what has occurred, but the weapon or material is later used in an attack, it could be a target for reprisal; despite being forthcoming, if the source nation of a weapon or material used in a nuclear terrorist attack became publicly known, the demands for retaliation might be overwhelming (or so the government responsible for the missing weapon or material might assume). While having intelligence sources that can indicate where and when sensitive items have gone missing may not be as desirable as learning of a plot before it gets underway, it may be one of the best and most realistic ways of stopping an attack before it is carried out. Moreover, there is the possibility that increased HUMINT in this area could in fact provide advance warning of a plot, if elements of a state’s military or members of its nuclear program intend to provide nuclear weapons, material, or expertise to a terrorist group, or to assist a group in the theft of a nuclear weapon or fissile material.

**Special Operations Forces:** For a number of reasons (including the need to confirm that any nuclear weapons are effectively disabled and any plutonium or HEU is secured, to avoid the dispersal of radioactive material and contamination of surrounding areas that could result from the use of stand-off weapons, and to ensure that operations in politically sensitive areas remain clandestine), Special Operations Forces will likely be tasked to conduct a WMD elimination mission if it is discovered that a terrorist group overseas has acquired or is constructing a nuclear device. Every effort should therefore be made to implement the 2006 QDR’s vision of SOF that have a “greater capacity to detect, locate, and render safe WMD,” and that can perform these tasks as rapidly as possible, given that potential targets may be extremely time-sensitive. How might these goals be achieved? Because details regarding the current and projected SOF capabilities and capacity for detecting, locating, and “rendering safe” WMD are classified, it is impossible to know what

measures are already in place or are scheduled to be implemented in the near future. **With these caveats in mind, this section briefly outlines several recommendations that could help increase capacity, decrease response time, and create redundancy for this critical mission both domestically and globally.** According to open sources, the only SOF units qualified to seize, disable and secure (render safe) a nuclear device belong to Joint Special Operations Command (JSOC), the subordinate command to Special Operations Command (SOCOM) that controls the US military's premier counterterrorism forces, including the Special Military Units (SMUs) Delta Force and Seal Team Six. Ideally, dedicated SMU personnel trained in the tactics, techniques, and procedures (TTPs) for the render-safe mission would be available to respond quickly to a nuclear terrorist threat overseas, and, if necessary, would also be positioned to rapidly assist the Federal Bureau of Investigation (FBI) in the event of a domestic nuclear terrorist incident within the United States. In reality, however, the small number of personnel assigned to SMUs and the even smaller number specifically trained to render safe a nuclear device, the extremely high demand for SMUs in support of the global war on terrorism and the wars in Afghanistan and Iraq, the inherent uncertainty over where a nuclear terrorist threat might materialize, and the constraints imposed by geography all make the ideal response capability difficult and perhaps impossible to realize. **Despite these problems, a number of measures should be considered to increase the probability that qualified personnel will be able to respond to a nuclear terrorist threat as quickly as possible.** When it comes to responding to a possible nuclear terrorist threat in the homeland, speed will be critical, whether terrorists are constructing a weapon or transporting one. Perhaps the most vital step is simply ensuring that when SMU personnel are in the United States for rest, recovery, and training, some (including personnel trained in render safe TTPs) are prepared to assist the FBI anywhere in the United States, and have the necessary equipment and transportation readily available. It may also be worthwhile to consider basing some SMU personnel in the western part of the country, which would allow them to respond to an emergency in that region more rapidly than if they were called on to deploy from their home bases on the east coast. **A model might be the NNSA's Search Response Teams, which are a part of its Nuclear Emergency Support Team (NEST) program and are based in both Nevada and Maryland.** The ability to respond to potential nuclear terrorist threats globally is obviously far more challenging, simply because a threat could in principle materialize anywhere. In some cases — for example, if the target is located in a denied area — a rapid reaction using SOF may not be possible, because SMU personnel will have to be accompanied by a significant number of additional forces, most likely Army Rangers, who would be charged with securing a contested site and providing perimeter security. In other scenarios, however, a rapid response will remain crucial.

**The problems this poses could be made somewhat more tractable through several measures, including but not limited to the following:**

**A) Training select allies and partners in render safe procedures if they do not already possess this capability. Should terrorists armed with a nuclear device be located in none of these nations, local forces would be able to respond far more rapidly; time permitting, they could also augment US forces once the latter arrived.** In addition, US forces might also be able to preposition necessary equipment in these countries for use in the event of a crisis, whether in the countries themselves or somewhere else in that region.

**B) Ensuring that forward deployed SMU personnel engaged in counterterrorism operations can be redirected as quickly as possible address a nuclear terrorist contingency. One measure that might increase their response time would be the additional prepositioning of necessary equipment at a number of bases or operating sites that are centrally located to various known smuggling routes and/or terrorist sanctuaries.**

If SMU personnel qualified to render safe a nuclear device do not operate together as a distinct unit but instead are dispersed among different sub-units operating globally, it is important to make certain that JSOC can quickly determine where all such personnel are located at all times, and has a record of which personnel have the best or most recent training in this area. **This, along with their geographic location, should determine who is called upon to respond to an emergency. Having a small number of dedicated SMU personnel trained in render safe procedures forward deployed, possibly somewhere in Europe or Central Asia, on a rotational basis.** These personnel could link up with other SMU personnel in a crisis, and would provide redundancy in the event that re-tasking other forces proved difficult. Because SMU personnel are such a valuable and scarce commodity, one way to justify this time spent on-call and not in the field would be to have these personnel help train ally and partner forces in order to increase their capability and capacity for the render safe mission. **Should intelligence indicate that a terrorist cell is in the process of moving an improvised nuclear device, it is possible that other forward-deployed SOF — for example, Army Special Forces "A-Teams" or Navy SEAL Teams — may be much closer than available SMU personnel.** If so, these units might be called up to interdict the In these cases, if a ground operation is still deemed necessary or preferable, it will be critical to have sufficient UAV assets to maintain persistent surveillance over the target until sufficient military forces can be mobilized and deployed.

**Responding To An Attack: If terrorists cannot be dissuaded from seeking nuclear weapons and material, if they somehow manage to steal, build, or otherwise obtain a nuclear device, and if efforts to stop them from delivering a weapon to their target fall short, the United States Government could face the worst-case scenario of a successful nuclear terrorist attack on an American city.** Preparing for this outcome may provide little comfort, but it can mitigate the effects of a nuclear explosion, prevent additional attacks, and even help to identify potential targets for retaliation. **In general, the aftermath of any terrorist attack involves response efforts both at home and abroad.** The principal goal of the former is consequence management —limiting the damage caused by an attack. **As discussed in Chapter 2, a nuclear terrorist attack would place an enormous burden on government at all levels, and an ineffective or poorly executed response could make a dire situation even worse.** Improving consequence management efforts will require continued investment in a number of areas, for example training first responders, in particular those located in or near major cities that are the most likely targets for an attack; prepositioning stockpiles of medication to treat radiation sickness; ensuring that various federal as well as state agencies have clearly defined and well understood areas of responsibility in the event of an attack; developing public communication strategies that can quickly and effectively instruct citizens near the site of the attack whether they should shelter in place or evacuate, which

directions they should travel in to avoid radioactive fallout, and which routes they should use; and improving capabilities for decontaminating large areas that have been exposed to radiation but can still be salvaged. **Although the government's immediate focus will be on mitigating the consequences of an attack, it will not be long before its attention shifts toward identifying those responsible and retaliating against the perpetrators. For obvious reasons, identification and retaliation may be difficult. Even if a terrorist group were to claim credit for an attack, locating them after the fact may not be possible, at least not right away.** Moreover, even if those directly responsible can be found, a nuclear terrorist attack would raise a number of additional questions: **Where did terrorists acquire a nuclear weapon or the fuel needed to build one? Did a foreign government deliberately provide the means to carry out such an attack? Was a government negligent in securing its nuclear arsenal or fissile material stockpiles?** As a first step toward answering these questions, scientists would be tasked with analyzing the radioactive debris from a nuclear explosion in order to gain as much information as possible about the weapon and material used — an area that has received increased attention and funding in recent years. **This type of forensic analysis could help to determine the efficiency of the device, which could in turn provide clues about its design, whether the bomb used HEU or plutonium, and the isotopic composition of the fissile material, which might indicate where the uranium had been mined and its level of enrichment (in the case of HEU), or how long it had been in a reactor and the length of time since it had been reprocessed (in the case of plutonium).** This type of analysis is likely to prove better at ruling out potential suspects than definitively confirming the source of a weapon or material, but combined with other information — for example, the operating histories of reactors that would indicate when their fuel was removed — it could prove extremely useful. **Where possible, debris from an explosion could also be compared to fissile material samples previously collected by individual countries or international organizations like the IAEA, which would allow for a more accurate and precise determination of a material's origins.** According to one expert, without this basis for comparison, a scientist conducting a forensic analysis would be “like someone with a DNA sample and no DNA bank.” **Because of this constraint, there have been several proposals for the development of an international data bank comprised of fissile material samples from as many nations as possible. One of the underlying goals of an effective nuclear attribution capability is not only to facilitate an appropriate reprisal in the aftermath of an attack, but also to prevent an attack in the first place.** Virtually every discussion of nuclear forensics suggests that as the United States improves its capabilities in this area, other states will be less likely to provide support to terrorists seeking nuclear weapons due to increased fear of identification and retaliation. **A number of analysts have also recommended that the United States publicly declare its right to retaliate against any state that is determined to be the source of a nuclear weapon or fissile material used in a terrorist attack, while others have gone even further and advocated an explicit commitment to military reprisal if a state deliberately provides nuclear weapons or material to terrorists or simply fails to properly secure these items, allowing them to fall into terrorists' hands. The logic behind this argument is that such a threat will not only deter the overt transfer of weapons or material from a state to a terrorist group, but will also compel states to improve the security of their most vulnerable nuclear facilities.** These suggestions have recently found their way into US policy. In the period preceding North Korea's nuclear test in October 2005, there were debates within the Bush administration over the merits of a declaratory policy holding states accountable for the transfer of nuclear weapons or material. **Skeptics argued that such a policy would not necessarily be credible, particularly because the United States did not possess samples of nuclear material from a number of nations (although it apparently did have access to samples from North Korea). Nevertheless, in response to the North Korean test, President Bush announced that “the transfer of a nuclear weapon or material by North Korea to states or non-state entities would be considered a grave threat to the United States, and we would hold North Korea fully accountable of the consequences of such action.”** Since then, both National Security Advisor Stephen Hadley and Secretary of Defense Robert Gates have generalized this sentiment, declaring that “the United States will hold any state, terrorist group or other nonstate actor or individual fully accountable for supporting or enabling terrorist efforts to obtain or use weapons of mass destruction — whether by facilitating, financing or providing expertise or safe haven for such efforts.” **There is little doubt that nuclear forensics could play a valuable role in the aftermath of a nuclear terrorist attack. A well developed and well publicized attribution capability might also induce caution in states that would otherwise contemplate providing assistance to aspiring nuclear terrorists. The US Government should therefore continue to invest in this area, and may even want to exaggerate its capabilities if necessary to foster the impression that state sponsors will not be able to remain anonymous.** At the same time, policymakers should also exercise caution when contemplating public declarations regarding who will be held responsible for an attack and what type of response will follow. Ambiguous warnings that do not explicitly call for a military reprisal could be somewhat useful by reinforcing the notion that governments may be culpable for the actions of a terrorist group if they assist that group or turn a blind eye as it prepares to attack. **Yet these messages should not be expected to contribute very much to deterrence or compliance; in all likelihood, statements such as those President Bush and other administration officials have already made do little more than tell potential sponsors or facilitators what they can undoubtedly figure out for themselves — if it is discovered or strongly suspected that they assisted terrorists in acquiring WMD, and especially nuclear weapons, they will suffer some type of response, whether diplomatic, economic, or possibly military.** Alternatively, while declarations that overtly threaten a military reprisal will certainly capture a state's attention, these threats are unlikely to prove credible or particularly effective in the most important cases, and could even risk doing more harm than good. **To be successful, a nation issuing a retaliatory threat — especially a threat to use force — must articulate that threat clearly, have sufficient capabilities to carry out its reprisal, and demonstrate a clear willingness to do so if the target fails to comply with its warnings.** Unfortunately, all three conditions pose problems for the United States in this instance. **First, any threat will have loopholes that the accused state might attempt to exploit. For example, what if that state did increase the security of its nuclear facilities after the United States issued its threat, but claimed that the weapon or fissile material used in a terrorist attack was actually stolen before these improvements were undertaken or completed? Would it still be possible to carry out an attack under these circumstances? Second, it is not clear that the United States does in fact have the technical capability to determine the origin of a detonated nuclear weapon, or that it can convincingly demonstrate such a capability.** If this is the case, it may not be possible to convince states that their guilt can be established. Third and perhaps most importantly, while US threats might be effective in some cases, the credibility of those threats will likely be weakest against two of the most likely sources of loose nuclear weapons and material — Pakistan and Russia. **In either case, it is highly questionable whether the United States would in fact be willing to undertake a significant military reprisal; while a military attack against Pakistan's government or its nuclear sites could further destabilize the country, pushing it toward state failure and/or civil war, an attack on Russia could precipitate a direct nuclear exchange.** Knowing this, both countries may simply dismiss the threat of an

attack. Even if the threat to use military force is issued and does appear credible, it still may not motivate states to improve the security of their nuclear facilities. Nations like Russia and Pakistan have already been targeted by terrorists, and any missing weapons or material originating in these states could very well be used against them. Once bought or stolen, terrorists would have to choose between transporting these items to the United States or perhaps Western Europe, depending on their preferred target, while trying to avoid not only regular detection measures but also the large-scale recovery efforts that would likely be mounted when the stolen items were found missing. Under these circumstances, the culprits might very well opt to attack the state of origin, even if that was not their first choice. Both the Russian and Pakistani governments are certainly aware of the danger they face given the recent history of terrorist attacks in both countries, although they may not yet take it seriously enough. If the prospect of suffering a nuclear terrorist attack does not motivate them to improve security at vulnerable facilities, it seems unlikely that a threat from the US will. The United States should, therefore, make a sustained effort to convince these countries not only that the threat of nuclear terrorism is real, but also that they themselves are as likely and perhaps even more likely than the United State to be the target of a nuclear terrorist attack. Moreover, as discussed in earlier in this chapter, fear of a military reprisal could have the unintended and unfortunate effect of discouraging a state from seeking international assistance to help secure missing nuclear weapons or material; rather than admit its negligence, a state might attempt to recover these items on its own, which could decrease the likelihood that they will be found. Nuclear weapons are unique in their ability to kill and injure massive numbers of people, damage and destroy infrastructure, create widespread panic, and perhaps influence the policies and even the international position of a nation that has been attacked. Moreover, terrorist groups like al Qaeda and its various affiliates have demonstrated a serious and longstanding interest in acquiring these weapons, along with a willingness to use them against their enemies. For these underlying reasons, there is little doubt that the possibility of a nuclear terrorist attack, while thankfully small, represents one of the most significant threats to the security of the United States. Addressing this threat must therefore be a priority for the new administration. Although this threat is real and must be taken seriously, it is extremely difficult to judge accurately. For example, nuclear proliferation over the past decade has arguably increased the likelihood that a terrorist group could obtain a nuclear weapon or the fissile material needed to build one, especially from a chronically unstable nation such as Pakistan, and further proliferation will almost certainly make this situation considerably worse. Yet the number of states that are currently developing nuclear fuel cycle capabilities and nuclear weapons programs has remained quite small, and the nightmarish future in which an increasingly large number of states possess these capabilities is by no means certain. At the same time, al Qaeda — in particular the group's senior leaders and their core lieutenants, who pose the greatest threat of conducting a nuclear attack in the near-to-medium term — is clearly weaker than it was before losing its sanctuary in Afghanistan, and is therefore less capable of planning, financing, and executing a catastrophic attack on the US homeland. Yet the group has also established a new sanctuary in Pakistan and appears to be regaining its strength, meaning the prospect of such an attack is probably increasing, even if it remains smaller than it was in 2001. Finally, any terrorist group seeking nuclear weapons would face enormous hurdles: manufacturing fissile material is nearly impossible for a nonstate actor; finding a state sponsor that would be willing to part with a nuclear weapon or material is highly unlikely; stealing an intact nuclear weapon would also be extremely difficult, as would bypassing the safety measure that most weapons possess; and constructing and IND would require a group to obtain the large amount of HEU needed to build a gun-type device or, if it acquired either plutonium or a small quantity of HEU, to have the skills and components needed to build a complicated implosion device. Nevertheless, the existence of inadequately secured nuclear weapons and material, and the relative ease of building a gun-type device, represent a significant threat. In short, there are both major causes for concern as well as reasons for cautious optimism. As described in the preceding chapters, decreasing the likelihood that terrorist will obtain nuclear weapons can be achieved by pursuing several goals: halting further nuclear proliferation, in particular by developing a comprehensive plan to discourage Iran's neighbors from pursuing nuclear capabilities if and when Tehran acquires nuclear weapons; eliminating or at the very least restricting al Qaeda's sanctuary in Pakistan's FATA region; and taking steps to decrease the prospects that terrorists will succeed at each major stage in their plot, which may also dissuade them from seriously pursuing the nuclear option at all. In addition, by improving its HUMINT, SOF, and nuclear attribution capabilities, the United States can increase its ability to intercept stolen nuclear material before it is smuggled into the country and to its target, and can, if the worst occurs, improve the odds of determining who is responsible for an attack (Montgomery, 2008).

**Title/Headline:** *Apocalypse When?*

**Abstract:** The Heritage Foundation recently convened a meeting of experts to discuss "Weapons of Mass Destruction and America's Communities," the various ways our terrorist enemies might attack us and our allies in the future, and what might be done to stop them. You can imagine what a merry gathering this was. The most obvious concern: the spread of nuclear weapons. Within the group, there was consensus that if Iran, the world's leading sponsor of terrorism, is not prevented from acquiring nukes, the result will be a nuclear proliferation "cascade." Before long, so many countries would have so many nuclear devices that the chances of terrorist groups getting their hands on at least a few would increase exponentially. A scenario perhaps even more frightening: Terrorists using biological weapons, setting off epidemics of smallpox, Ebola virus, or other hemorrhagic fevers; a crop duster spreading ten pounds of anthrax causing more deaths than in World War II; genetically engineered pathogens - for example, a super-contagious form of HIV. A bio attack would be much easier to carry off than a nuclear attack; biological weapons can be manufactured in hidden laboratories and spread by unarmed and innocent-looking individuals. We also discussed radiological dispersal devices (RDD), more commonly known as "dirty bombs." Such weapons are fairly simple to construct: radioactive materials - e.g. radium, radon, thorium - are wrapped around a core of conventional explosives. Though an RDD would not carry the lethality of a nuclear or

biological weapon, its psychological and economic impact could be substantial. How else might terrorists advance toward their goal, succinctly articulated by Iranian president Mahmoud Ahmadinejad as "a world without America"? Adm. Mike McConnell, until February of this year the director of National Intelligence - America's top spy - recently told Steve Kroft of *60 Minutes* that he was increasingly concerned about cyber warfare, the use of computers and the Internet as weapons. **"If I were an attacker and I wanted to do strategic damage to the United States . . . I probably would sack electric power"** throughout as much of the country as possible, he said. McConnell worries also about the possibility that a cyber attacker could destroy the electronic processes and records that keep track of money and its movements, thereby setting off an economic collapse. In the same report, Jim Lewis, director of the Center for Strategic and International Studies, told Kroft: **"In 2007 we probably had our electronic Pearl Harbor. It was an espionage Pearl Harbor. Some unknown foreign power, and honestly, we don't know who it is, broke into the Department of Defense, to the Department of State, the Department of Commerce, probably the Department of Energy, probably NASA."** Another way to destroy the electric grid as well as everything computerized: an Electromagnetic Pulse Attack. In 2001 the U.S. government established a commission to "assess the threat to the United States" from an EMP attack. The commission reported to Congress that if a nuclear warhead were to be detonated at high altitude over the American mainland the blast would produce a shockwave so powerful that it would "cripple military and civilian communications, power, transportation, water, food, and other infrastructure." **Before long, millions of Americans would, as the *Wall Street Journal* flatly phrased it, "die of starvation or want of medical care."** The CIA has translated Iranian military journals in which EMP attacks against the U.S. are explicitly discussed. Among the experts attending this conference, all agreed that the use of such terrorist weapons is a more serious and imminent threat than is "global warming." Yet no summits are being organized to decide how the U.S. and other targeted nations can best defend themselves. I would argue also - as I did at the Heritage meeting - that defensive measures alone, while necessary, are not enough. Instead, we must recognize that we are engaged in a great global conflict, one that is no less serious because it is unconventional and asymmetrical. Outreach, engagement, and exercises in "conflict resolution" are useful when the U.S. has a dispute with Mexico or when the Netherlands disagrees with Luxembourg. But this approach makes no sense when dealing with self-proclaimed jihadis eager to use 21st-century weapons to achieve 7th-century goals. Iran's ruling mullahs have been killing Americans for decades - for example, in Beirut, Iraq, and most recently in Afghanistan. **They write "Death to America!" on their missiles. It would be both foolhardy and irresponsible to let such extremists acquire nuclear weapons in the hope that somehow, when their capabilities match their intentions, they will suddenly decide they would prefer our respect rather than our destruction.** If we are to prevent our enemies from doing the kind of damage they intend, we must stay on offense. We need to keep our enemies nervous, under pressure, and on the run. We'll need to go after the bad guys in their training camps, laboratories, and safe houses - wherever those may be. We'll need to force them to continually look over their shoulders and worry that they may be killed or captured - and being captured should not mean they are rewarded with a global stage to spout their propaganda at American taxpayer expense. **We need to choose: Do we intend to advance or retreat, hunt or be hunted - win or lose? There is no fortress we can construct, no balance of power and terror we can achieve, no gesture or concession that will make us inoffensive to our enemies.** When the barbarians are at the gate, you need to do more than lock up - and we haven't even done that yet. George Orwell articulated a fundamental rule of national security: **"People sleep peaceably in their beds at night only because rough men stand ready to do violence on their behalf."** Most of the West is now led by people who believe that rule may have once applied but no longer. If that doesn't keep you awake at night, nothing will (Foundation For Defense Of Democracies, 2009).

**Title/Headline:** *Eliminating Nuclear Threats: A Practical Agenda for Global Policymakers*

**Abstract:** Pakistan has a nuclear arsenal, also officially non-transparent, estimated at approximately 60 weapons. They can be delivered to target by ballistic missiles and by U.S., French and Chinese-manufactured fighter aircraft. Pakistan has two types of SRBMs (400–450 km range), and one type of MRBM (2,000 km). Another type of MRBM is in the testing stage, while a third is being developed. All of these systems are ground-mobile. A ground-based cruise missile, apparently similar to a Chinese model, is undergoing testing and will be developed in both air-based and sea-based versions. The latter is to be deployed on diesel submarines built locally under French supervision. **It is assumed that Pakistan's missile program was developed with the active cooperation at various times of North Korea and China.** Following initial disclosures in 2003 and intense international investigation, including by the IAEA, the former head of Pakistan's enrichment program, A.Q. Khan, confessed in 2004 to having been at the centre of a clandestine international network transferring technology and information to Iran between 1989 and 1991, to North Korea and Libya between 1991 and 1997, and additional technology to North Korea up until 2000. Centrifuge components were apparently manufactured in Malaysia with the aid of South Asian and German middlemen, using a Dubai computer company as a false front. The Khan investigation also revealed how many European companies were defying export restrictions and aiding the Khan network as well as the production of the Pakistani bomb. Dutch companies exported thousands of centrifuge components to Pakistan as early as 1976, and a German company exported facilities for the production of tritium. As disconcerting as these black market revelations were, even more so has been the absence of accountability and exemplary action since, which has not helped in setting an example to potential violators: domestic political pressures inhibited any harsh punishment of Khan himself in Pakistan, most of his foreign accomplices remain free, and there are still gaps in the international framework of export controls. **There is a significant and continuing fear internationally of nuclear terrorism – shared by the public and decision-makers alike. The UN Secretary-General has labeled nuclear terrorism "one of the most serious threats of our time". U.S. President Obama has been equally blunt: "There is no graver danger to global security than the threat of nuclear terrorism, and no more immediate task for the international community than to address that threat." That fear is justified. There are terrorist actors in existence – as the whole world has known since Al Qaeda's orchestration of 9/11 – who would, if they could, cause massive and indiscriminate havoc in almost any one of the world's major cities. And there is every reason to**

fear that they can match that intent with capability. There is quite a high risk that they could produce a “dirty bomb”, combining conventional explosives with radioactive material, to devastating psychological effect. The risk is very much smaller that they could produce a far more physically destructive nuclear explosion, given the scale of the technical and logistical problems that would have to be overcome. But it is not negligible. And the possibility of cyber attacks on nuclear command and control centers is growing ever more significant. **Possible terrorist actors might either be acting independently of state backing, or have state sponsors.** Since 1995, there have been several cases that confirm the danger that either group of actors can have access to – and no scruples about using – devices or substances with the potential for mass killings. The Aum Shinrikyo attacks in Tokyo in 1995 and the unsolved anthrax attacks in the United States in 2001 were the first two. Another was the poisoning of Alexander Litvinenko in London in 2006 with Polonium-210, which reminded the world that individuals can obtain a key **material for detonating nuclear weapons and smuggle it undetected through the airports of countries on high alert against terrorist threats.** In the case of a nuclear weapon, it would require a large, well organized and well funded group to build, let alone buy, such a weapon, maintain security at all stages, and successfully transport it to the intended site for detonation. **It is now known that Al Qaeda some years ago attempted to obtain enriched uranium, and that senior members of the group had at least one meeting with two Pakistani nuclear experts.** The apparently dispersed and diffuse nature of its current organization and funding, after being under siege for most of the last decade, make the central organization, such as it is, a less likely candidate now than in the past for such a role. But it has offshoots and imitators in many countries. **The danger posed by any such group would be much enhanced by state backing, whether for nuclear materials or know-how, or simply for the necessary funding.** The number of states likely to give deliberate support of this kind would be very small. Even regimes with a long history of, if not irrationality, at least playing by different rules to everyone else, would be unlikely to lend such assistance without first making an assessment of the likely consequences should they be identified – including the possibility of nuclear retaliation (the chances of which would be significantly higher if those states were already nuclear-armed themselves). A more substantial concern is that states with weak or fragile institutions, multiple internal power centers, and imperfect arrangements for securing weapons and dangerous materials, might end up providing such support even in the absence of any explicit government intent or direction to do so. It is harder to make a judgment about the military nuclear stockpiles of the nuclear-armed states outside the NPT. Most probably they are quite safe in India and Israel, **but some doubts exist about the situation in Pakistan.** As for civilian nuclear materials, their safety differs greatly from state to state, the most secure being non-nuclear-armed states of NATO and the EU, and Japan. Access to know-how is clearly no less indispensable than the ability to acquire the necessary material. There have clearly been those willing to **trade in nuclear knowledge, such as the A.Q. Khan network in Pakistan** and the associated Swiss Tinner family. Given the enormous range of variables involved, **it is virtually impossible to make any reliable estimate of how likely it is that a terrorist group may acquire and use a nuclear weapon,** or even a much more readily put together and delivered radiological one, or the timeframe in which this might happen. The most pessimistic, and often cited, estimates have been those by Harvard’s Graham Allison, who has been arguing since the mid-1990s that **a major terrorist nuclear incident is more likely than not, or at least significantly likely, within a foreseeable short time frame, “by end of the decade” or “within the next ten years”** as the case may be. He is supported by many influential and knowledgeable figures like the former head of the Los Alamos National Laboratory, Siegfried Hecker, who says that “the general consensus of nuclear weapons experts is that **terrorists would face significant but not insurmountable challenges to build a primitive but devastating nuclear device and that it would most likely be delivered to the intended target by truck, boat, or light airplane.**” Cass Sunstein, who notes that if there is a yearly probability of one in 100,000 that terrorists could launch a nuclear or massive biological attack, the risk would cumulate to one in 10,000 over ten years and to one in 5,000 over twenty, suggesting that these odds are “not the most comforting.” Michael Levi, that **“It has often been said that defense against terrorism must succeed every time, but that terrorists must succeed only once.** This is true from plot to plot, but within each plot, the logic is reversed. Terrorists must succeed at every stage, but the defense needs to succeed only once.” The military challenge in such cases would be to **locate the terrorist threat with enough precision and certainty to justify attacks on it.** If intelligence were not perfect and a nuclear strike conducted on a wrong target, the backlash would be enormous; and even if high-confidence intelligence did exist, then it is difficult to imagine that non-nuclear means could not be utilized for the target in question. **To conduct nuclear strikes on another state, even one demonstrably complicit in a terrorist attack,** would raise exceptionally difficult political, strategic and moral issues. The problem of “loose nukes” – **securing weapons and material that, by virtue of the way in which it is manufactured, transported or stored, may be vulnerable to apprehension by terrorist groups** – requires a variety of solutions. Many of the general non-proliferation measures discussed elsewhere in this report are squarely relevant in this respect, including the Nuclear Suppliers Group and Proliferation Security Initiative (Section 10), the proposed Fissile Material Cut-off Treaty (Section 12), and the development of proliferation-resistant technology (Section 14). To the extent, also, that some classes of **small nuclear weapons might be capable of misuse by terrorist groups if they could ever get their hands on them,** the implementation of the disarmament strategy discussed in other sections of this report would be another important contributor to nuclear security. **Terrorist groups exist with the intent, and capacity, to create massive nuclear destruction.** With manageable technology long in the public domain, and black market sourcing, a **Hiroshima-sized nuclear device could possibly be detonated from a truck or small boat inside any major city.** A “dirty bomb”, combining conventional explosives with radioactive materials like medical isotopes, would be a much easier option: while not generating anything like the casualties of a fission or fusion bomb, it would have a psychological impact at least equal to 9/11. **Effectively countering terrorism of any kind involves a complex mix of nationally and internationally coordinated protection and policing strategies (most immediately important in dealing with the threat of nuclear terrorism),** and also political, peacebuilding and psychological strategies (necessary to address the underlying causes of terrorist behavior) (ICNND, 2010).

## **Title/Headline: Nuclear Terrorism Tutorial**

**Abstract:** According to the Nuclear Threat Initiative (NTI), **the possibility that terrorists might acquire and use nuclear weapons is an urgent and potentially catastrophic challenge to global security.** The NTI has made its concerns regarding nuclear terrorism clear and open to the public. For the sake of brevity, only the most important and relevant information is listed. NTI: In the final years of the 20th century and in the early years of the 21st, international terrorist organizations have repeatedly demonstrated their willingness to kill large numbers of innocent civilians to achieve their objectives. **They have also made efforts to gain access to WMD, including nuclear weapons,** by contacting nuclear weapon scientists and casing nuclear facilities. **However, one cannot exclude the possibility that terrorists might obtain an operational thermonuclear weapon,** with a yield well in excess of 100 kt, from the nuclear arsenal of a state possessing thermonuclear or boosted fission weapons. It is extremely unlikely that terrorists would be able to build them without active assistance from a nuclear capable state. It is widely believed that TNW are a particularly attractive target for terrorists because they are generally smaller and more portable than warheads for strategic delivery vehicles and might be more vulnerable to theft. There are two basic paths that terrorists might pursue. **The first route involves the acquisition of an intact nuclear weapon from the arsenal of an existing nuclear weapon state.** The second path entails the acquisition of fissile material and the fabrication of a crude, improvised nuclear explosive device. For this reason, a terrorist organization can acquire a nuclear explosive only (1) **by obtaining an intact nuclear weapon from a national stockpile** or (2) by obtaining fissile material from stocks that were produced in highly advanced industrial facilities and then making the fissile material into a nuclear explosive (NTI, 2010)

### **Terrorists Might Seek To Acquire Nuclear Weapons Or Nuclear Materials By A Number Of Means:**

- Such nuclear commodities might be provided directly by a sympathetic national government, but this carries risks since the government would lose control over these extremely important assets and might place itself at risk if its involvement in a nuclear terror act were subsequently discovered.
- **A senior official operating independently from his government or a lower ranking insider, for financial or ideological reasons, might secretly divert a nuclear weapon or fissile material to a terrorist organization** or assist the organization in the theft of such items.
- **A terrorist organization might seize a poorly protected nuclear weapon or fissile material by stealth or force or illicit purchase on the black market.**

Each of these options would involve formidable challenges and serious risks for the terrorist group. Each would also require a great deal of money and organizational and technical resources, which would be beyond the means of all but a few known terrorist organizations. Nevertheless, because the consequences of **a nuclear detonation by a terrorist group would be so catastrophic, the possibility that terrorists might acquire nuclear weapons must be given the most serious and urgent attention.**

**Vulnerability Of Nuclear Weapons:** Many experts believe the large stockpile of Russian TNW and the much smaller arsenal of **Pakistan nuclear arms are at particular risk**, albeit for very different reasons. Pakistan's small nuclear arsenal, perhaps numbering up to 60 weapons, poses very different security problems. They pertain not only to political instability, but to the continuing pressure within **Pakistan and the surrounding region of Islamic militant terrorist groups and the sympathy for such groups by segments of the Pakistani military, nuclear, and intelligence establishment.** These concerns have been accentuated by news of the clandestine sales of Pakistani nuclear technology-including designs for nuclear weapons by A.Q. Khan and uncertainties about the loyalty of personnel in the Pakistani nuclear command structure. Two senior Pakistani nuclear scientists met with Osama bin Laden in 2000 and 2001. In 2007 and 2008, terrorists carried out attacks near three of Pakistan's nuclear facilities, including a multiple suicide bombing at the Pakistan Ordnance Factory in Wah. **One of the most frightening scenarios regarding nuclear weapons security involves a "failed state."** If the government of a country such as North Korea or Pakistan collapsed because of war, a coup d'état, or other disaster, the resulting **chaos might create conditions in which terrorists could more easily obtain a nuclear weapon. Many experts believe that the most likely way for terrorists to acquire a nuclear explosive would be to obtain HEU and use this material to make a crude nuclear bomb, known more formally as an improvised nuclear device (IND).** According to the 9/11 Commission Report, a trained nuclear engineer with an amount of fissile material about the size of a grapefruit or a large orange, together with commercially available material, could build an IND that would fit in a van or SUV. Such a bomb would level much of Lower Manhattan. Although an IND generally is associated with the simplest design for a nuclear explosive, it could be more sophisticated if the terrorist organization had access to individuals with expertise in nuclear engineering, nuclear physics, electronics, metallurgy, chemical processing, and explosives (probably the equivalent of an advanced degree in each of these disciplines but not necessarily actual weapons design or manufacturing experience, though such experience would be helpful). Assembling such a team would in itself be a significant challenge, and small and poorly-funded terrorist groups are not likely to have access to all these skills. A large, well-funded organization, however, might be able to recruit individuals with the required capabilities. **A number of terrorist groups, including some affiliated with al-Qaeda, are known to recruit scientists, engineers, and other specialists with the skills needed to improvise nuclear, chemical, or biological weapons.**

**Why Would Terrorists Use Nuclear Weapons?:** The greatest danger to the public, however, emerges from the increased potential for terrorists to pursue terrorism with nuclear explosives. The assistance that **Pakistani nuclear scientists reportedly offered to Al Qaeda is an important case in point**, as such assistance could provide the terrorists with the technical skills needed to construct a nuclear weapon or IND with stolen or illegally purchased nuclear materials. This point was reiterated by a U.S. government official from DOE's Global Threat Reduction Initiative who said that HEU fuel at research reactors is **the "most attractive material" for theft by terrorists and is often at "the most vulnerable facilities."** HEU is "much easier for terrorists to use" than plutonium, according to the official. Although little definitive information is available about the operational security of Pakistan's relatively small nuclear arsenal, many analysts

worry that political instability, the presence within the country of Islamic militant groups, and the **uncertain loyalties of senior officials in the nuclear chain of command increase the risk that Pakistan's nuclear arms could fall into the hands of terrorists**. Although Pakistan has declared publicly that its nuclear arsenal is secure, it is apparently ready to accept U.S. support for enhancing security over its nuclear armory. However, it is important to acknowledge **a growing Pakistani fear that the United States has plans to seize or take control of its nuclear weapons**. According to the NTI, **Protecting nuclear weapons and fissile materials "at the source" is the most effective and certain means for preventing nuclear terrorism**. But even if a nuclear weapon or fissile material were diverted or seized, opportunities would remain to thwart their actual use.

- If terrorists relied on middlemen to acquire nuclear contraband, for example, it might be possible to disrupt the illicit nuclear trafficking network before the goods were transferred to the terrorist organization.
- Terrorists might require a long time to ready a weapon or IND for use and to transport it to their desired target. They would also require a team of experts and specialized equipment and components subject to international controls, the acquisition of which might be blocked.
- **If the loss of a nuclear weapon or fissile material were detected, authorities in the country that owned the weapon or material would launch a massive hunt to find and regain control over it**, receiving assistance from other states, as appropriate.
- **Border security in the owning country, in potential target countries, and in transit states would be greatly intensified, as would collaboration among the intelligence, law enforcement, and militaries of all countries concerned.**

From 1987 until 2003, **Dr. A.Q. Khan, the father of the Pakistani uranium enrichment program, directed an international nuclear smuggling operation** that provided gas centrifuge enrichment technology and equipment to Iran, Libya, and North Korea. **The Khan network also marketed nuclear weapon design information to Libya and possibly to other states**. The network was eventually broken up as the result of intelligence and law enforcement efforts, the details of which have yet to be disclosed. One major operation was the October 2003 seizure of cargo on a vessel named the *BBC China*, which carried a cargo of fissile material production equipment for Libya. It is not known if the Khan network sought to sell its nuclear wares to non-state actors. One cannot rule out that possibility or the prospect that remnants of the **Khan network or other nuclear trafficking operations might in the future seek to market sensitive nuclear commodities to terrorist organizations**.

**Title/Headline:** *A Failure to Imagine the Worst: The First Step Toward Preventing A Nuclear 9/11 Is Believing It Could Happen.*

**Abstract:** In his first speech to the U.N. Security Council, U.S. President Barack Obama challenged members to think about the impact of a single nuclear bomb. He said: **"Just one nuclear weapon exploded in a city -- be it New York or Moscow, Tokyo or Beijing, London or Paris -- could kill hundreds of thousands of people."** The consequences, he noted, would **"destabilize our security, our economies, and our very way of life."** Before the Sept. 11, 2001, assault on the World Trade Center and Pentagon, who could have imagined that terrorists would mount an attack on the American homeland that would kill more citizens than Japan did at Pearl Harbor? As then-Secretary of State Condoleezza Rice testified to the 9/11 Commission: **"No one could have imagined them taking a plane, slamming it into the Pentagon ... into the World Trade Center, using planes as missiles."** For most Americans, the idea of international terrorists conducting a successful attack on their homeland, killing thousands of citizens, was not just unlikely. It was inconceivable. As is now evident, assertions about what is "imaginable" or "conceivable," however, are propositions about our minds, not about what is objectively possible. Prior to 9/11, how unlikely was a megaterrorist attack on the American homeland? **In the previous decade, al Qaeda attacks on the World Trade Center in 1993, U.S. embassies in Kenya and Tanzania in 1998, and the USS Cole in 2000 had together killed almost 250 and injured nearly 6,000. Moreover, the organization was actively training thousands of recruits in camps in Afghanistan for future terrorist operations.** Thinking about risks we face today, we should reflect on the major conclusion of the bipartisan 9/11 Commission established to investigate that catastrophe. The U.S. national security establishment's principal failure prior to Sept. 11, 2001, was, the commission found, a "failure of imagination." **Summarized in a single sentence, the question now is: Are we at risk of an equivalent failure to imagine a nuclear 9/11? After the recent attempted terrorist attack on Northwest Airlines Flight 253, this question is more urgent than ever.** The thought that terrorists could successfully explode a nuclear bomb in an American city killing hundreds of thousands of people seems incomprehensible. This essential incredulity is rooted in three deeply ingrained presumptions. **First, no one could seriously intend to kill hundreds of thousands of people in a single attack. Second, only states are capable of mass destruction; nonstate actors would be unable to build or use nuclear weapons. Third, terrorists would not be able to deliver a nuclear bomb to an American city. In a nutshell, these presumptions lead to the conclusion: inconceivable. Why then does Obama call nuclear terrorism "the single most important national security threat that we face" and "a threat that rises above all others in urgency?"** Why the unanimity among those who have shouldered responsibility for U.S. national security in recent years that this is a grave and present danger? In former CIA Director George Tenet's assessment, "the main threat is the nuclear one. I am convinced that this is where [Osama bin Laden] and his operatives desperately want to go." When asked recently what keeps him awake at night, Secretary of Defense Robert Gates answered: **"It's the thought of a terrorist ending up with a weapon of mass destruction, especially nuclear."** Leaders who have reached this conclusion about the genuine urgency of the nuclear terrorist threat are not unaware of their skeptics' presumptions. Rather, they have examined the evidence, much of which has been painstakingly compiled here by Rolf Mowatt-Larssen, former head of the CIA's terrorism and weapons-of-mass-destruction efforts, and much of which

remains classified. Specifically, who is seriously motivated to kill hundreds of thousands of Americans? **Osama bin Laden, who has declared his intention to kill "4 million Americans -- including 2 million children."** The deeply held belief that even if they wanted to, "men in caves can't do this" was then Pakistani President Pervez Musharraf's view when Tenet flew to Islamabad to see him after 9/11. As Tenet (assisted by Mowatt-Larssen) took him step by step through the evidence, he discovered that indeed they could. **Terrorists' opportunities to bring a bomb into the United States follow the same trails along which 275 tons of drugs and 3 million people crossed U.S. borders illegally last year.** In 2007, Congress established a successor to the 9/11 Commission to focus on terrorism using weapons of mass destruction. This bipartisan Commission on the Prevention of WMD Proliferation and Terrorism issued its report to Congress and the Obama administration in December 2008. **In the commission's unanimous judgment: "it is more likely than not that a weapon of mass destruction will be used in a terrorist attack somewhere in the world by the end of 2013."** Faced with the possibility of an American Hiroshima, many Americans are paralyzed by a combination of denial and fatalism. Either it hasn't happened, so it's not going to happen; or, if it is going to happen, there's nothing we can do to stop it. Both propositions are wrong. **The countdown to a nuclear 9/11 can be stopped, but only by realistic recognition of the threat, a clear agenda for action, and relentless determination to pursue it** (Allison, 2010).

**Date:** Summer 2010

**Source:** The Jewish Policy Center, Chuck Freilich

**Title/Headline:** *Armageddon And The Threat of Nuclear Terrorism*

**Abstract:** President Obama recently convened a global summit on the threat of nuclear terrorism, an issue that he considers to be the greatest danger currently facing the U.S. and the international community. Israeli Defense Minister Ehud Barak similarly believes that the gravest threat is not posed by rogue states, such as Iran, even if it acquires nuclear weapons, but rather "...a nuclear weapon reach[ing] a terrorist group, which will not hesitate to use it immediately. They will send it in a container with a GPS to a leading port in the U.S., Europe, or Israel." Unlike traditional terrorism, nuclear terrorism would pose a potentially catastrophic threat to states across the world. Even a bomb considered to be relatively small would have devastating consequences, with estimates ranging from tens to hundreds of thousands of dead. **Although Israel would survive such a strike as a state, the consequences would be devastating – and this scenario is based on the optimistic assumption that terrorists would detonate only one nuclear bomb.** Should nuclear terrorists strike the U.S., the consequences while not existential, would nevertheless be extreme. **Nuclear terrorism poses a unique threat not only because of the magnitude of the destruction, but because those most likely to perpetrate an attack may be fundamentally nihilistic and therefore undeterrable** – prepared to pay any cost in loss of life in pursuit of their objectives. As millennial movements for whom the crippling and even destruction of the U.S. and Israel are sacred missions, **a nuclear terrorist attack where even a devastating response is assumed may be a worthy means of ushering in a messianic era.** There are several reasons why nuclear terrorism, whether against the U.S. or Israel, could serve strategic objectives and benefit those states and groups contemplating such actions. First, there is the actual use of nuclear weapons with the designed goal of dealing their victim a devastating blow. **However, nuclear possession may also be used as a deterrent against an attack from the U.S. or Israel in order to counter their overwhelming military superiority.** In this way, nuclear terrorism would provide an umbrella enabling the state or group to conduct lower level hostilities with the assumption that they would be spared the threat of massive retaliation. Possessing nuclear weapons would also allow the group or country to exercise decisive influence over U.S. and Israeli decision-making in times of crisis. It could prove to be a deciding factor on fundamental policy issues as the two countries could be held hostage by the very threat of a nuclear terrorist attack. **It also would serve to weaken the resilience of American and Israeli society as a result of the need to live under the shadow of nuclear terrorism.** In turn, it would severely undermine public confidence in either government's ability to provide a safe environment in which to live. **A nuclear terrorist attack against either the United States or Israel could be carried out by sea, air, and land-based operations.** Israel, however, faces the additional threat of rocket attacks, such as those already in Hezbollah's possession that could be fitted with nuclear warheads. Though unsuited for ordinary military purposes, these rockets could be effective weapons of terror. **The United States and Israel have two policy options—prevention and deterrence—that they can pursue in countering the threat.**

**Prevention:** Prevention is the first measure in the bilateral tool-kit, including heightened intelligence, interdiction cooperation, and a variety of related offensive and defensive measures. **Nevertheless, the difficulties the United States has encountered in tracking down bin Laden and other al-Qaeda operatives, as well as the trouble Israel faces in detecting short-range rockets in Lebanon and Gaza, are indicative of the challenges posed by the detection of a terrorist nuclear weapon.** Once detected, the problem of eliminating the threat before it could be detonated would remain critical and difficult.

**Deterrence:** It is typically assumed that deterrence is ineffective against nuclear terrorism, due both to the nihilistic nature of the assumed perpetrators and the absence of a return address. However, this is not always the case. While the biggest question mark is al-Qaeda, Hezbollah and Hamas have both proven themselves deterrable over the years. Though certainly extremist, their commitment to their domestic audiences vies with and at times overrides their commitment to Israel's destruction. This in no way detracts from the extreme severity of the threat that would be posed by their acquisition of a nuclear capability – such as the ability to terrorize Israel's population, conduct large-scale terror attacks with relative impunity, or attempt to dictate terms – but their deterrability does place the threat in an appropriate context. Similarly, while a precise assessment of Iran's cost-benefit analysis is unknowable, **Tehran does appear to be a rational player and thus deterrable.** Although Iran would presumably be willing to suffer severe consequences in pursuit of Israel's

destruction, Iranian leaders will, of course, take into account that Israel is widely considered by the international community to be a nuclear power and if so, that its actions could lead to a devastating exchange for both. Iran would also have to factor in the possibility of an American response, even if Tehran solely directs its actions against Israel. **Al-Qaeda and its acolytes, on the other hand, are assumed not to be deterrable – and for good reason.** Such Islamic extremists view all non-Muslims – and even Muslims that don't adhere to their strict reading of Islam – as infidels, or *kufar*, who must be killed for the sake of Allah. **Indeed, al-Qaeda and its followers have proven their willingness, if not desire, to murder and die in order to obtain their ultimate goal of creating an Islamic Caliphate. For this reason, nuclear capabilities in the hands of al-Qaeda would pose an unacceptable danger.** As such, unless virtually irrefutable and immediate evidence exists to the contrary, **Israel and the United States should adopt a declared retaliatory policy that holds Iran and/or al-Qaeda responsible for a nuclear attack regardless of the perpetrator's identity.** The allies should clarify that its response will be unlimited and include not just their leaders and their families, but major population centers and all sites of value for the Muslim world, including those of major symbolic importance. **Potential perpetrators of nuclear terrorism must be convinced that the U.S. and Israel will both retaliate in a devastating fashion.** For Israel, this means a "shoot first, no questions asked" policy, which holds accountable those clearly responsible for the attack (if any) as well as those reasonably suspected of involvement. There will be no room for diplomacy and Israel and the United States must respond with all means at their disposal. As a global power, the U.S. may not be able to adopt such a "no questions asked" policy and nuclear forensics will be crucial. Nevertheless, **American determination to act decisively to prevent a nuclear terrorist threat and to retaliate devastatingly against those found responsible, must be beyond question.** U.S. declaratory policy on the nuclear terror threat to Israel would not need to be substantially different from its posture on the issue of nuclear terrorism generally and its commitments to Israel's security, but could be further expanded to specifically include nuclear terrorism. **While the list of those who might wish to carry out nuclear terrorism against either the U.S. or Israel is not long, it is also not as short as one might hope.** It includes al-Qaeda and affiliated jihadi organizations, Hezbollah, Hamas, Iran, and potentially. **The United States and Israel must take into account that a nuclear terrorist threat could emerge in the foreseeable future, and act accordingly to minimize that threat using prevention and deterrence.** Indeed, the potential costs of nuclear terrorism are appallingly high (Freilich, 2010).

**Title/Headline:** *Securing The Bomb: Securing All Nuclear Materials In Four Years*

**Abstract: Executive Summary:** As President Barack Obama has said, the danger that terrorists could get and use a nuclear bomb remains “the most immediate and extreme threat to global security.” Incidents around the world make clear that urgent action is needed to improve security for nuclear stockpiles around the world and to keep nuclear weapons and the materials needed to make them out of terrorist hands. **That is the purpose of both the global effort to secure all nuclear weapons and weapons-usable nuclear material within four years that President Obama has initiated, and the nuclear security summit he is hosting in Washington on 12-13 April 2010. Although the Obama administration has made progress toward this goal, much more needs to be done.** Today, the world is not yet on track to succeed in achieving effective security for all stockpiles of nuclear weapons and weapons-usable nuclear materials within four years. **To meet that objective, the nuclear security summit must be only the first step in a broader campaign to shift the global nuclear security effort onto a faster and broader trajectory.**

#### **The Threat Of Nuclear Terrorism: Several Facts Frame The Danger:**

- **Al Qaeda is seeking nuclear weapons and has repeatedly attempted to acquire the materials and expertise needed to make them.**
- **Numerous studies by the U.S. and other governments have concluded that it is plausible that a sophisticated terrorist group could make a crude nuclear bomb if it got enough of the needed nuclear materials.**
- **There have been over 18 documented cases of theft or loss of plutonium or highly enriched uranium (HEU), the essential ingredients of nuclear weapons. Peace activists have broken into a Belgian base where U.S. nuclear weapons are reportedly stored; two teams of armed men attacked a site in South Africa where hundreds of kilograms of HEU are stored; and Russian officials have confirmed that terrorist teams have carried out reconnaissance at Russian nuclear weapon storage facilities.**
- **The immense length of national borders, the huge scale of legitimate traffic, the myriad potential pathways across these borders, and the small size and weak radiation signal of the materials needed to make a nuclear bomb make nuclear smuggling extraordinarily difficult to stop.**

**No one knows the real likelihood of nuclear terrorism. But the consequences of a terrorist nuclear blast would be so catastrophic that even a small chance is enough to justify urgent action to reduce the risk. The heart of a major city could be reduced to a smoldering radioactive ruin, leaving tens to hundreds of thousands of people dead. Devastating economic consequences would reverberate worldwide. America and the world would be changed forever. Making plutonium or HEU is well beyond the plausible capabilities of terrorist groups. Hence, if all the world's stockpiles of these materials can be secured from falling into terrorist hands, nuclear terrorism can be prevented. Improved nuclear security is the single point on the terrorist pathway to the bomb where government policies can do the most to reduce the danger. After a nuclear weapon or the material needed to make one has been stolen, every later step on the terrorist pathway is easier for terrorists to take and harder for governments to stop.**

**Nuclear Security Today:** Today, nuclear weapons or the separated plutonium or HEU needed to make them exist in hundreds of buildings and bunkers in dozens of countries. Each country where such stockpiles exist is responsible for securing them, and the specific approaches, procedures, and rules for securing and accounting for nuclear stockpiles vary widely. **There are no binding global rules that specify how much security these stockpiles should have. In many countries, nuclear security today is substantially better than it was in the mid-1990s, as a result of national efforts and international cooperative programs.** Security and accounting systems for all but a few dozen of the hundreds of buildings and bunkers in Russia and the Eurasian states have been substantially improved through cooperative efforts. Some 17 countries have eliminated all of the weapons-usable nuclear material on their soil. **These successes represent, in a real sense, bombs that will never go off—and demonstrate the progress that can be achieved through cooperation. But serious risks remain, as evidenced by recent incidents at nuclear sites and ongoing cases of theft or loss of weapons-usable nuclear material.** Upgraded security systems will not last forever unless states provide the resources to sustain them and write and enforce rules that require sites and transporters to maintain effective security and accounting systems. Strong security cultures—in which all relevant staff take security seriously, every day—are also an essential component of effective nuclear security.

**Based on unclassified information on the quantity and quality of nuclear stockpiles around the world, the security levels in place, and the adversary threats these security systems must protect against, it appears that the highest risks of nuclear theft today are in:**

- **Pakistan, where a small and heavily guarded nuclear stockpile faces immense threats, both from insiders who may be corrupt or sympathetic to terrorists and from large-scale attacks by outsiders;**
- Russia, which has the world's largest nuclear stockpiles in the world's largest number of buildings and bunkers; security measures that have improved dramatically but still include important vulnerabilities (and need to be sustained for the long haul); and substantial threats, particularly from insiders, given the endemic corruption in Russia; and
- HEU-fueled research reactors, which usually (though not always) use only modest stocks of HEU, in forms that would require some chemical processing before they could be used in a bomb, but which often have only the most minimal security measures in place—in some cases little more than a night watchman and a chain-link fence.

While these are the highest-risk categories, the risks elsewhere are very real as well. **Transport of nuclear weapons and materials is a particular concern, as it is the part of the nuclear material life-cycle most vulnerable to violent, forcible theft, since it is impossible to protect the material with thick walls and many minutes of delay when it is on the road.** Reprocessing plutonium from spent fuel and recycling it as new fuel requires intensive security measures and creates risks that are not present when the plutonium remains in massive, intensely radioactive spent fuel assemblies that would be very difficult to steal. Nuclear security issues exist not only in developing and transition countries but in wealthy countries as well, some of which have no armed guards at nuclear facilities, or only protect these facilities against very modest threats. **In the end, virtually every country where these materials exist—including the United States—has more to do to ensure that these stocks are effectively protected against the kinds of threats that terrorists and criminals have shown they can pose.** President Obama, building on programs launched by his predecessors, has taken a number of steps to accelerate nuclear security improvements, including launching the four-year nuclear security effort, hosting the nuclear security summit, creating new U.S. government positions to coordinate these programs, and requesting a significant increase in the budget for nuclear security improvement programs in fiscal year (FY) 2011 (though not, unfortunately, in FY 2010).

#### **Recent Progress Includes:**

- During FY2009, security and accounting upgrades were completed at 29 additional weapons-usable nuclear material buildings in Russia, bringing the total for such buildings upgraded in Russia and the Eurasian states to 210, only 19 short of the target of 229 buildings to be completed through FY2012.
- **Since President Obama launched the four-year nuclear security effort four countries have eliminated all the weapons-usable nuclear material on their soil, with U.S. help. To date, the United States has helped remove all the HEU from more than 47 facilities in countries around the world.**
- Discussions about eliminating all HEU in several of the developing or transition non-nuclear-weapon states with the largest HEU stocks are well advanced.
- **Cooperation to improve nuclear security is continuing in Pakistan, though the specifics are classified;** the United States and Russia have greatly broadened their exchanges of best practices, efforts to strengthen security culture, and cooperation to ensure effective nuclear security will be sustained for the long haul; and detailed dialogue with China on improving nuclear security and accounting is continuing.

**The nuclear security summit has elevated the issue of nuclear security to a far higher political level. If the summit succeeds, it will help build a new sense of urgency among the participants about taking action to prevent nuclear terrorism.** Products of the summit are expected to include a communiqué from the assembled leaders, a more detailed expert-level work plan, and commitments to nuclear security actions that individual participating countries are likely to make. The success of the summit will be measured by whether it leads to real change in the pace and scope of nuclear security improvements on the ground in the months that follow. **Despite this progress, the world is not yet on track to succeed in achieving effective security for all stockpiles of nuclear weapons and weapons-usable nuclear. Dramatic progress, though major issues remain.** Planned U.S.-sponsored security upgrades for both warhead sites and nuclear material buildings almost complete, though some warhead sites and material buildings not covered. Inadequate Russian investment to ensure sustainability, though signs of improvement. Questions on security culture. Poorly paid and trained conscript guards for nuclear material. Substantial threats from widespread insider corruption and theft, while material accounting and control measures remain weak in some cases. Substantial outsider threats as well, though suppressed by counterinsurgency in Chechnya. Major need for consolidation, as Russia still has the world's largest numbers of nuclear weapons sites and weapons-usable nuclear materials buildings, including the world's largest HEU-fueled research reactors. **Pakistan has a small, heavily guarded nuclear stockpile. Substantial security improvements have been**

made in recent years, in part with U.S. help, but the specifics of this cooperation are classified. Immense threats in Pakistan from nuclear insiders with extremist sympathies, al Qaeda or Taliban outsider attacks, and a weak state. India also has a small nuclear stockpile, and reports that it requires its stocks to be protected against a range of outsider and insider threats, but has so far rejected nuclear security cooperation with the United States. China has a somewhat larger nuclear stockpile, believed to be protected by substantial guard forces. A broad U.S.-Chinese nuclear security dialogue is underway, and China appears to have modernized security and accounting measures at some sites, but little evidence that China has yet required such measures in its regulations. In North Korea, a very small nuclear stockpile and a garrison state probably limit the risks of nuclear theft. Important progress in recent years, but some issues remain. U.S.-funded security upgrades completed at nearly all facilities with weapons-usable material in the Eurasian states outside of Russia, and in Eastern Europe. Belarus, Ukraine, Kazakhstan, and South Africa have particularly dangerous nuclear material: upgrades completed in Ukraine (though sustainability is an issue); upgrades nearing completion after a several-year delay in Belarus; South Africa (whose facility suffered a penetration of the outer perimeter by armed men in November 2007) is discussing cooperation on nuclear security. Upgrades completed for nearly all HEU-fueled research reactors that previously did not meet IAEA recommendations, but some upgrades would not be enough to defend against demonstrated terrorist and criminal capabilities. Significant progress in recent years, as several countries have strengthened nuclear security rules since 9/11. The United States has ongoing dialogues with key countries on nuclear security, but does not sponsor security upgrades in wealthy countries. Nuclear security requirements in some countries remain insufficient to protect against demonstrated terrorist or criminal threats. Additional efforts needed to consolidate both HEU and separated plutonium in fewer locations. Substantial progress in recent years, though issues remain. DOE has drastically strengthened its requirements for protecting both nuclear weapons and materials (especially from outsider attack) since 9/11. NRC has also increased its security requirements, though they remain less stringent than DOE requirements, and NRC regulated research reactors fueled with HEU remain exempt from most NRC security requirements. Major progress in converting NRC-regulated reactors to low-enriched fuel, and in implementing voluntary security upgrades going beyond regulatory requirements at these sites. Recent incidents suggest an ongoing issue with security culture.

**Next Steps To Secure Nuclear Material In Four Years:** The goal of the four-year nuclear security effort that President Obama has called for and that the UN Security Council has endorsed in Resolution 1887 should be to ensure that all stocks of nuclear weapons, plutonium, and HEU worldwide are effectively and lastingly protected. All means that any nuclear material that could be used to make a nuclear bomb should be included, whether it is in a military or a civilian stockpile. It means the effort must ensure security not just for materials in developing or transition countries such as Russia, Pakistan, or South Africa, but also in wealthy countries such as Belgium and Japan—and the United States. Effectively is a matter of risk—another way of stating the goal is that at the end of four years, all nuclear stocks should have a low risk of being stolen. That means they have to be reliably protected against the most plausible kinds of adversary capabilities (both outsider and insider) that they might face. In a world with terrorists with global reach, all nuclear weapons and weapons-usable nuclear materials should at least be protected against theft by a well-placed insider; a modest group of well-armed and well-trained outsiders, capable of operating as more than one team; or both together, and against a range of tactics such adversaries might use, from frontal assault to deception to covert infiltration. Countries facing more capable adversaries, such as Pakistan, should put even more stringent security measures in place. Lastingly means that countries have put in place the resources to sustain effective security and accounting measures for the long haul, and the regulations requiring operators to do so. As with any government program, it will be essential to develop measures and indicators that provide a realistic assessment of the progress being made. Such measures might include, for example, the fraction of the total world number of sites with nuclear weapons or weapons-usable nuclear materials where all of those stocks have been eliminated, and the fraction that have demonstrated that their security systems are performing effectively, and could protect against a broad range of outsider and insider threats. It would certainly not be possible for U.S.-funded upgrades to be negotiated and implemented for all relevant sites around the world in four years. Instead, the effort must combine U.S.-funded upgrades and material removals (or those funded by other donor states) with security improvements and material removals key countries carry out themselves, once they become convinced of the urgency of action. The administration must develop a clear set of metrics to be used in assessing progress in the four-year nuclear security effort—metrics that assess not just where equipment has been installed but what fraction of the sites where nuclear weapons and weapons-usable nuclear materials exist have effective nuclear security measures in place. With the right leadership, sufficient resources, a comprehensive, prioritized plan, and a partnership-based approach, it is quite plausible that at the end of the four-year effort, the number of countries where weapons-usable nuclear material exists could be cut in half or more; the number of sites could have been cut by 20-30 percent; and that all the countries where nuclear weapons or weapons-usable nuclear material still exists could put in place effectively enforced rules requiring all of their dangerous nuclear stocks to be protected against a robust set of outsider and insider threats. Such progress would dramatically reduce the danger that nuclear terrorism poses to global security. Nevertheless, it is clear that continued work to improve nuclear security—particularly the important but difficult specifics of accurate control and accounting of nuclear materials being processed in bulk—will still be needed after the end of the four-year nuclear security effort. Achieving these objectives will require several steps beyond those already being taken. Build the sense of urgency and commitment worldwide. The fundamental key to the success of the four-year nuclear security effort is to convince political leaders and nuclear managers around the world that nuclear terrorism is a real and urgent threat to their countries' security, worthy of a substantial investment of their time and money. If these programs succeed in building that sense of urgency, these officials and managers will take the needed actions to prevent nuclear terrorism; without that sense of urgency, they will not. The United States and other countries should take several steps to build the needed sense of urgency and commitment, including: (a) joint threat briefings at upcoming summits and high-level meetings with key countries, where experts from both the United States and the country concerned would outline the very real possibility that terrorists could get nuclear material and make a nuclear bomb; (b) intelligence agency discussions, in which U.S. intelligence agencies would seek to convince their foreign counterparts—who are often their government's main source for assessments of national security threats—that the nuclear terrorism threat is a real one that must be addressed urgently; (c) an "Armageddon Test," in which intelligence agents would attempt to penetrate nuclear smuggling networks and acquire sufficient nuclear material for a bomb, providing a realistic assessment of how difficult it is to do so; (d) nuclear terrorism exercises with policymakers from key states, which can sometimes reach officials emotionally

in a way that briefings and policy memos cannot; (e) **fast-paced nuclear security reviews, in which leaders of key states would pick teams of security experts they trust to conduct fast-paced reviews of nuclear security in their countries (with U.S. advice and technical assistance if desired), assessing whether facilities are adequately protected against a set of clearly defined threats (as the United States did after 9/11, revealing a wide range of vulnerabilities);** (f) realistic testing of nuclear security performance, in which the United States could help countries conduct realistic tests of their nuclear security systems' ability to defeat realistic insider or outsider threats; and (g) shared databases of threats and incidents, including unclassified information on actual security incidents (both at nuclear sites and at non-nuclear guarded facilities) that offer lessons for policymakers and facility managers to consider in deciding on nuclear security levels and particular threats to defend against. **Broaden consolidation and security upgrade efforts Today, U.S.-funded cooperative nuclear security upgrade efforts are focusing primarily on the former Soviet Union, South Asia, and a few HEU-fueled research reactors elsewhere.** (Nuclear security cooperation with China has so far focused on dialogue and exchanges of best practices, not on U.S.-funded upgrades.) U.S.-funded consolidation programs focus primarily on converting HEU-fueled reactors and removing Soviet-supplied HEU and a fraction of U.S.-supplied HEU. To secure all nuclear stockpiles in four years, both security upgrades and consolidation efforts must be broadened. **The United States and other donor countries should plan to carry out security upgrades that are more extensive than those now planned, at more facilities, in more countries. These should include not only installing equipment, but also increasing each country's capacity and commitments to implement effective nuclear security on their own—through training, exchanges of best practices, improvements in regulation and enforcement, sustainability support programs, work on security culture, and more.** This effort should include the regional nuclear security "centers of excellence" that President Obama and some European countries have proposed, which could provide central locations for training, demonstrating modern equipment, exchange of best practices, and the like. Consolidation efforts should be expanded to include reducing the number of sites where nuclear weapons exist (particularly in Russia); limiting the accumulation of stockpiles of separated plutonium, and the number of places where plutonium is processed, stored, and used; and removing HEU from a far broader set of the sites where it now exists, with the goal of eliminating the HEU from the most vulnerable sites during the four-year effort, and eliminating all civil HEU within roughly a decade. **The United States and other donor countries should offer additional incentives, structured to the needs of each facility, to convince facilities to agree to convert to fuels that cannot be used in a nuclear bomb, or to shut down, and to give up their HEU or separated plutonium.** The United States and other donor states should offer something in the range of \$10,000 per kilogram for modest stocks of excess HEU from any country willing to get rid of it and to agree not to make or buy more. Get the rules and incentives right. **Effectively enforced national rules for nuclear security and effective global nuclear security rules are both key elements of the effort to secure nuclear stockpiles around the world. As most nuclear managers only invest in expensive security measures when the government tells them they have to, effective regulation is essential to effective and lasting security.** Hence, President Obama and other leaders seeking to improve nuclear security should greatly increase the focus on ensuring that countries around the world put in place and enforce effective nuclear security and accounting regulations, giving all facilities strong incentives to ensure those stockpiles are effectively secured. **Regulators in each country must have the authority, independence, expertise, and resources needed to do their jobs effectively—and countries must ensure that operators have the resources needed to follow the rules.** These rules should include requirements for realistic testing of the performance of nuclear security systems against intelligent and creative insider and outsider adversaries. Nuclear security is only as strong as its weakest link. Hence, it is also important to seek effective global nuclear security rules that will help ensure that each country where stockpiles of nuclear weapons and weapons-usable materials exist puts effective national rules and procedures in place. **Unfortunately, because of complacency about the threat, concerns over national sovereignty, and differing national approaches, past efforts to negotiate global treaties specifying how secure nuclear weapons or weapons-usable materials should be have not succeeded, and such a treaty-negotiation approach is not likely to succeed in the future.** (There is a Convention on Physical Protection and a 2005 amendment to it that provide useful guidelines, but set no specific requirements for how secure weapons-usable nuclear material should be.) **The most promising approach to forging international standards is to make use of UN Security Council Resolution 1540, which already legally requires all countries to provide "appropriate effective" security and accounting for any nuclear stockpiles they may have. The United States should work with other states pursuing improved nuclear security to build a political-level consensus around what essential elements need to be in place for nuclear security systems to be considered "appropriate" and "effective," and then work with other donor states to help (and to pressure) countries around the world to put those essential elements in place.** The approach should be based on ensuring that all states provide protection against a plausible set of outsider and insider threats, while leaving flexibility for each country to pursue its own approach to accomplishing that objective. **At the same time, the United States should certainly continue to work to get states to ratify the physical protection convention and its 2005 amendment and to strengthen the IAEA's nuclear security guides and recommendations. Incentives are as important as rules.** Given the strong incentives to save money and time by cutting corners on nuclear security, states, agencies, facilities, managers, and staff must be given strong incentives to focus on achieving high nuclear security performance. **If the effort to build a sense of urgency around the world about the threat of nuclear terrorism succeeds, the desire to address real threats will provide the most important incentive. President Obama should also make clear to countries around the world that cooperating to ensure effective security for nuclear stockpiles and take other steps to prevent nuclear terrorism is essential to good relations with the United States, just as compliance with arms control and nonproliferation agreements has been for many years.** At the same time, the United States should seek to ensure that each country with dangerous nuclear stockpiles establishes financial and other rewards for strong nuclear security performance (comparable, for example, to the bonus payments contractors managing DOE facilities can earn for high performance), and for those who identify nuclear security problems and propose practical solutions. The U.S. government should take the position that only facilities that can demonstrate that they maintain highly effective security will be eligible for U.S. government-funded contracts for cooperative R&D and related efforts, and should seek to convince other governments to do likewise. **Ultimately, effective security and accounting for weapons-usable nuclear material should become part of the "price of admission" for doing business in the international nuclear market. Take a partnership-based approach. To succeed, a global nuclear security improvement effort must be based not just on donor-recipient relationships but on real partnerships, which integrate ideas and resources from countries where upgrades are taking place in ways that also serve their national interests.** For countries like India and Pakistan, for example, it is politically untenable to accept U.S. assistance that is portrayed as necessary because they are unable to adequately control their nuclear stockpiles on their own. **But joining with the major nuclear states in jointly addressing a global problem may be politically**

appealing. U.S.-Russian relations are still rocky despite President Obama's efforts to "reset" them, making a real nuclear security partnership with Russia difficult to achieve, but no less essential; shared U.S.-Russian interests in keeping nuclear material out of terrorist hands remain. Such partnerships will have to be based on creative approaches that make it possible to cooperate in upgrading nuclear security without demanding that countries compromise their legitimate nuclear secrets. **Specific approaches should be crafted to accommodate each national culture, secrecy system, and set of circumstances. As a central element of this partnership based approach, the Global Initiative to Combat Nuclear Terrorism should be reinvigorated, with a focus on building the international sense of urgency and commitment to action to reduce the risk of nuclear terrorism, and on meeting the four-year nuclear security objective.** Broaden best practices exchanges and security culture efforts. Opportunities for nuclear security operators to hear about and learn from the best security practices used in other facilities around the world—as offered, for example, by the new World Institute for Nuclear Security—can be powerful motivators for improvement. **Targeted efforts to improve nuclear security culture, so that guards are no longer falling asleep on the job or turning off intrusion detectors, are also critical. As Gen. Eugene Habiger, former commander of U.S. strategic nuclear forces and former security "czar" at the U.S. Department of Energy once put it, "good security is 20 percent equipment and 80 percent culture."**

President Obama and other leaders seeking to improve nuclear security should work with all countries where nuclear weapons and weapons-usable nuclear materials exist—as well as countries with major nuclear facilities that might be subject to sabotage—to exchange best practices and strengthen nuclear security culture. **The ultimate goal should be to ensure that every facility and transporter handling nuclear weapons and weapons-usable nuclear material participates in programs to exchange best practices, and has a targeted program in place to continually assess and strengthen its nuclear security culture.** Create mechanisms to follow up and to build confidence in progress Mechanisms to follow up on commitments made and to build confidence that they are being implemented—and that states are maintaining effective nuclear security systems—will be essential if the commitments of the nuclear security summit are to have a real and lasting impact.

**First:** Each participating state should designate one or a small number of key officials to be responsible for implementing their states' efforts, and groups of these officials should meet regularly in the months and years after the summit to review progress and assess next steps. If initial approaches are not working, or particular cooperating countries identify gaps that need to be filled or unexpected problems that need to be solved, these officials should have the authority to modify the cooperative nuclear security efforts.

**Second:** It is important to build an international understanding of the work to be done. Through intelligence programs such as the Nuclear Materials Information Program, the United States is developing a more comprehensive classified understanding of the state of nuclear security around world. But a common understanding of the state of nuclear security around the world is needed, to provide a baseline against which to judge progress of the four-year nuclear security effort. **While many of the specifics of nuclear security arrangements in different countries will inevitably remain shrouded in secrecy, the United States and other countries working to achieve the four-year nuclear security objective should seek to convince countries of the importance of sharing as much information as they can about how many sites with nuclear stockpiles exist in each country, what security measures are in place (at least in general descriptive terms), and the like.**

**Third:** Countries should work together to develop means, within the confines of necessary secrecy, to build international confidence that states are taking the steps they have committed to and putting effective nuclear security measures in place. International visits such as those that take place under U.S. nuclear supply agreements, IAEA-led peer reviews, and international cooperation on nuclear security upgrades are all effective mechanisms for expanding transparency to build confidence that effective nuclear security measures are in place, or are being put in place. **But additional approaches will be needed for sites that are unlikely to welcome international visitors in the near future—from U.S. and Russian nuclear warhead assembly plants to nuclear sites in Pakistan and Israel. For example, countries might have their adversary teams who test nuclear security systems train together (to increase their understanding of the kinds of tests each participating country conducts)—and then report to each other, at least in general terms, the results of nuclear security tests.** The United States, for example, already openly publishes data on what percentage of DOE facilities have received high ratings in DOE security inspections—and uses that percentage as a measure of the effectiveness of ongoing steps to improve security. In the immediate term, until such measures can be agreed, states should do more to provide general descriptions of their nuclear security approaches, photographs of installed equipment, and related data that could be made public and help build confidence that effective nuclear security measures are being taken without providing data that could help terrorists and criminals plan their attacks. **Build a multi-layered defense nuclear security systems will never be perfect—and some nuclear material may already have been stolen and never recovered. Hence, a multilayered effort to block the terrorist pathway to the bomb is needed, with nuclear security as the first and most important layer.** The United States and other countries seeking to reduce this risk should expand police and intelligence cooperation focused on identifying and countering terrorist groups with nuclear ambitions and seeking to interdict nuclear smuggling. They should work to ensure that countries around the world have criminal laws in place imposing heavy penalties for any participation in efforts to steal or smuggle nuclear material or any assistance to nuclear terrorists—and that states have units of their national police trained and equipped to deal with such cases. They should create new tip lines and reward programs to encourage participants in such conspiracies to blow the whistle. **While the likelihood that hostile states would consciously decide to transfer nuclear weapons or the materials needed to make them to terrorists is already low, the United States and its international partners should seek to lower it further, in particular by putting together international packages of carrots and sticks large enough and credible enough to convince North Korea and Iran that it is in their national interests to verifiably abandon their pursuit of nuclear weapons—and by making crystal clear the consequences that any state found to have intentionally transferred such items to terrorists would face.** Provide the needed leadership, planning, and resources Achieving effective security for all the world's stockpiles of nuclear weapons and weapons-usable nuclear materials poses an extraordinarily difficult challenge. Sustained high-level leadership will be needed to overcome a maze of obstacles posed by complacency about the threat, secrecy, political disputes, sovereignty concerns, and bureaucratic obstacles. Intense engagement from presidents and prime ministers in the months and years following the nuclear security summit will be needed, not just

occasional statements of support. **Leaders will have to be willing to change outdated rules, overrule officials standing in the way of nuclear security cooperation, invest additional funds in nuclear security, and more.**

**First:** President Obama, building on the structure he has put in place, should give the National Security Council clear direction and authority to take the needed actions to move this agenda forward, and to keep this effort on the front burner at the White House every day. **The staff focused on this topic need to wake up every morning thinking “what can we do today to prevent a nuclear terrorist attack?”** President Obama should also encourage Russia and other key countries to put similar top-level structures in place, so that it is clear which officials other countries should talk to about nuclear security and nuclear terrorism.

**Second:** President Obama should direct the NSC staff to further develop a comprehensive, prioritized plan for preventing nuclear terrorism, integrating steps from implementing nuclear security upgrades to expanding intelligence cooperation focused on the nuclear terrorist threat to building the sense of urgency around the world. This plan will have to be continuously modified as circumstances change.

**Third:** President Obama and the Congress should work together to provide sufficient resources to ensure that steps that could significantly reduce nuclear terrorism risks are not slowed by lack of money. Achieving the four-year nuclear security objective will require doing more, faster, than in the past, which will inevitably require an increase in budgets. Yet nuclear security is eminently affordable: the sums spent on cooperative threat reduction each year are a tiny fraction of the budgets of the Departments of Defense, Energy, and State. **As part of providing sufficient resources, the leaders at the 2010 G8 summit should agree to extend the Global Partnership Against the Spread of Weapons and Materials of Mass Destruction for another ten years, with a continuing flow of funds, and target it on helping states around the world provide effective nuclear security and meet their other obligations under UNSCR 1540.** In addition, the United States and other countries should expand their efforts to strengthen the IAEA’s nuclear security efforts, increasing their budgets and shifting them to the regular budget rather than relying almost exclusively on voluntary contributions.

**Fourth:** President Obama should take action to ensure that his administration has the information and analysis it needs to support effective policymaking, including (a) directing U.S. intelligence agencies to place high priority on all aspects of the nuclear terrorism problem, from assessing and penetrating terrorist conspiracies and nuclear smuggling networks to assessing nuclear security measures around the world; and (b) working with Congress to fund non-government institutions to provide independent analysis and suggestions that can help strengthen these programs.

**Fifth:** President Obama should work to put the United States’ own house in order, continuing the effort to convert U.S. HEU-fueled research reactors to use low-enriched uranium (LEU) fuel that cannot be used in a nuclear bomb, going farther in consolidating U.S. stockpiles, and working to strengthen security at U.S. HEU-fueled research reactors (which are exempted from many of the most important U.S. nuclear security rules). Convincing foreign countries to reduce and consolidate nuclear stockpiles, to put stringent nuclear security measures in place, or to convert their research reactors will be far more difficult if the United States is not doing the same at home. **The obstacles to accelerated and expanded progress are real and difficult. But with sustained high-level leadership, a sensible strategy, partnership-based approaches, adequate resources, and good information, they can be overcome. The actions President Obama has already taken open new opportunities. Now is the time to seize them. President Obama still has an enormous opportunity and an obligation, to reduce the danger of nuclear terrorism to a fraction of its current level during his first term in office (Bunn, 2010).**

**Title/Headline:** *Nuclear Terror Geopolitics Research Program Inaugurated*

**Abstract:** Nuclear Terror Geopolitics Research is undertaking a multiclient study of procedures and plans that an independent business or non-governmental organization (NOG) should take in advance to survive a nuclear terror threat. The program identifies potential nuclear terror targets and the most vulnerable real estate in those areas. It also takes into account effects of Electromagnetic Pulse (EMP) and fallout radiation. The study focuses on independent assessment of business assets such as headquarters, manufacturing, warehousing, communications, and transportation facilities. **It points out specific issues associated with nuclear terror such as Electromagnetic Pulse (EMP) and fallout radiation. The study provides advice how to determine in advance the vulnerability of a business to a nuclear terror attack. It is impossible to predict when and where such an attack may occur, but current politics and technology combine to create a climate increasingly conducive to nuclear terror blackmail.** Yet there are few provisions to protect businesses, non-governmental organizations (NGOs) or populations at large from the effects of such disasters. **Continuity of Government (COG) programs at federal, state and even local levels do exist. Secret shelter areas and evacuation procedures are designed to take care of selected leaders and bureaucrats, but average businessmen, city dwellers, suburbanites, and country folk are not included.** There are numerous emergency survival programs designed to come into play when hurricanes, tornadoes, floods, or earthquakes take place. Most of such events and their paths are predictable. **Nuclear terror is a man-made disaster. It is unpredictable, and besides destruction of infrastructure, it also brings electromagnetic pulse (EMP) and radiation issues into play. These would eliminate communications and incapacitate any products based on microchips such as cell phones, radios, TVs, autos, and all computers.** Deadly radiation could contaminate huge areas of countryside and productive agricultural land for a long time. Imposition of martial law may limit all forms of transportation. **Nuclear Terror Geopolitics Research is a new program of 21st Century Research designed to determine the potential for nuclear terror blackmail attacks targeted at the United States (Szuprowicz, 2010).**

**Title/Headline:** *Al Qaeda Weapons of Mass Destruction Threat: Hype or Reality?*

Graham Allison

**Foreword:** *By Graham Allison:* How serious is the threat of weapons of mass destruction (WMD) terrorism? When asked, “**What is the single most serious threat to American national security?**” President George W. Bush answered: **nuclear terrorism**. On this issue, President Obama agrees with his predecessor. In his words, “**The single most important national security threat we face is nuclear weapons falling into the hands of terrorists.**” The only Secretary of Defense to have served under both Republican and Democratic presidents, Secretary Robert Gates, was asked recently, “What keeps you awake at night?” He responded: “**It’s the thought of a terrorist ending up with a weapon of mass destruction, especially nuclear.**” Skeptics, however, abound. They say that WMD terrorism is far beyond the capability, and even the intent of terrorist groups such as al Qaeda. Some claim that the likelihood of a non-state actor acquiring such weapons is virtually zero. The individual in the U.S. intelligence community who is widely recognized as the leading analyst of WMD terrorism is Rolf Mowatt-Larssen. After more than three decades in public service in CIA operations, and most recently Director of Intelligence and Counterintelligence at the U.S. Department of Energy, he retired in January 2009. **Mowatt-Larssen has now compiled a comprehensive chronology that addresses the skeptics head-on, by presenting, in unclassified form, al Qaeda’s roughly 15-year quest to acquire WMD.** By assembling the best publically- available evidence in an authoritative, readable account, he offers a must-read advance in our understanding of the threat. This record provides an essential grounding for serious thought about how to combat a defining threat of the 21st Century. This chronology teaches us four important lessons. First, al Qaeda’s top leadership has demonstrated a sustained commitment to buy, steal or construct WMD. In 1998, Osama bin Laden declared that “acquiring WMD for the defense of Muslims is a religious duty.” In December 2001, bin Laden’s Deputy Ayman Zawahiri stated, “**If you have \$30 million, go to the black market in the central Asia, contact any disgruntled Soviet scientist and a lot of dozens of smart briefcase bombs are available.**” A few months later, al Qaeda announced its goal to “kill four million Americans.” Second, al Qaeda was prepared to expend significant resources to cultivate a WMD capability even during the planning phases of 9/11. **In the years leading up to September 2001, we see that bin Laden’s organization never lost its focus on WMD, even while coordinating the 9/11 attacks, orchestrating the simultaneous bombings of the U.S. embassies in Tanzania and Kenya in 1998, and successfully striking the U.S. warship (USS Cole) in 2000.** Third, a clear hallmark of al Qaeda’s WMD approach is to pursue parallel paths to procure these deadly materials. Multiple nodes of the network were assigned to different tasks of the overall WMD effort, acting and reporting independently, ensuring that failure in one cell did not jeopardize the entire operation. **By taking into account possible operational set-backs and intelligence breaches, al Qaeda has displayed deliberate, shrewd planning to acquire WMD.** Fourth, al Qaeda has taken part in joint development of WMD with other terrorist groups. This collaboration between the most senior members of separate organizations demonstrates that interest in and motivation to possess WMD are not limited to a single group. Notably, this chronology is merely a snapshot of al Qaeda’s long-term hunt for the world’s most destructive weapons. Due to the sensitive nature of the subject, understandably much has been omitted. **The bottom line, however, is clear: al Qaeda and its network of affiliates have been determined to acquire WMD.** President Obama recently said that al Qaeda remains the greatest threat to the United States. In his words, “**If an organization like al Qaeda got a weapon of mass destruction on its hands—a nuclear or a chemical or a biological weapon—and they used it in a city, whether it’s in Shanghai or New York, just a few individuals could potentially kill tens of thousands of people, maybe hundreds of thousands.**” Organizing a coherent strategy to prevent this nightmare from occurring begins with a clear recognition that WMD terrorism is a real and imminent threat.

Rolf Mowatt-Larssen

**Abstract: Preface:** Rolf Mowatt-Larssen spent more than two dozen years in intelligence, both in the CIA and U.S. Department of Energy. After the Sept. 11 terrorist attacks, he led the U.S. government’s efforts to determine whether al Qaeda had WMD capabilities and to prevent a nuclear terrorist attack on the United States. Mowatt-Larssen, now a senior fellow at Harvard Kennedy School’s Belfer Center for Science and International Affairs, has put together a detailed timeline illustrating terrorists’ efforts to acquire WMD. **Several terrorist groups have actively sought weapons of mass destruction (WMD) of one kind or another.** In particular, the Japanese cult group Aum Shinrikyo, al Qaeda and its associates -- notably the Egyptian Islamic Jihad, Jemaah Islamiya and Lashkar al Tayyib -- figure most prominently among the groups that have manifested some degree of intent, experimentation, and programmatic efforts to acquire nuclear, biological and chemical weapons. To date, however, **al Qaeda is the only group known to be pursuing a long-term, persistent and systematic approach to developing weapons to be used in mass casualty attacks.** Osama bin Ladin’s assertion in 1998 that it was his Islamic duty to acquire weapons of mass destruction ensured that the fulfillment of this intent would become a top priority

for his lieutenants in the ensuing years. In an effort to explain his thinking to his followers, and to help guide their efforts, the al Qaeda leader has offered a number of statements that provide a need and rationale for using weapons of mass destruction as a means of achieving the group's concrete and ambitious goals. **Most recently, he promised in a 2007 video release to "escalate the killing and fighting against you (Americans)" -- on grounds of destroying an international conspiracy to control the world -- adding, "The capitalist system seeks to turn the entire world into a fiefdom of the major corporations under the label of globalization in order to protect democracy."** These statements should not be interpreted as empty rhetoric and idle threats: Osama bin Ladin has signaled a specific purpose for using WMD in al Qaeda's quest to destroy the global status quo, and to create conditions more conducive to the overthrow of apostate regimes throughout the Islamic world. **His argument is essentially that even weapons of mass destruction -- which are outlawed under Islam -- are a justifiable means of countering US hegemony.** Osama bin Ladin's morality-based argument on the nature of the struggle between militant Islamists and the US-led coalition of secular forces focuses the group's planning on the acquisition of strategic weapons that can be used in mass casualty attacks, rather than on the production of tactical, more readily available weapons such as "dirty bombs," chemical agents, crude toxins and poisons. In this light, it is not surprising that the group's top WMD priority has been to acquire nuclear and strategic biological weapons. Considering the potential that such weapons hold in fulfilling **al Qaeda's aspirations, their WMD procurement efforts have been managed at the most senior levels, under rules of strict compartmentalization from lower levels of the organization, and with central control over possible targets and timing of prospective attacks.** In this sense, their approach has been "Muhammed Atta-like" -- similar to the modus operandi Khaled Sheikh Mohammed employed in making preparations for the 9/11 attacks -- as opposed to resembling the signature characterizing most terrorist attacks to which the world has become accustomed. **Al Qaeda's patient, decade-long effort to steal or construct an improvised nuclear device (IND) flows from their perception of the benefits of producing the image of a mushroom cloud rising over a US city, just as the 9/11 attacks have altered the course of history.** This lofty aim helps explain why al Qaeda has consistently sought a bomb capable of producing a nuclear yield, as opposed to settling for the more expedient and realistic course of devising a "dirty bomb," or a radiological dispersal device. **Another 9/11-scale operational plot managed by the al Qaeda core leadership was the development of anthrax for use in a mass casualty attack in the United States. The sophisticated anthrax project was run personally by al Qaeda deputy chief Ayman Zawahiri, in parallel to the group's efforts to acquire a nuclear capability; anthrax was probably meant to serve as another means to achieve the same effect as using a nuclear bomb,** given doubts that a nuclear option could be successfully procured. Notably, al Qaeda's efforts to acquire a nuclear and biological weapons capability were concentrated in the years preceding September 11, 2001. Based on the timing and nature of their WMD-related activity in the 1990's, **al Qaeda probably anticipated using these means of mass destruction against targets in the US homeland in the intensified campaign they knew would follow the 9/11 attack. There is no indication that the fundamental objectives that lie behind their WMD intent have changed over time.** On the other hand, the pursuit of crude toxins and poisons appears to have been of little interest to the al Qaeda leadership, even though the production of such weapons is easier and thus might seem more attractive for potential use in attacks. Although experimentation and training in crude chemical agents and pathogens was standard fare in al Qaeda's camps in Afghanistan before 9/11, their use in attacks appears to have been left to the initiative of individual cells and planners outside the direct supervision of the al Qaeda core leadership. **Prominent examples of small-scale chemical- and biological- related activity include Midhat al-Mursi's (aka Abu Khabab) basic training for operatives in the al Qaeda camps in Afghanistan before 9/11; the Abu Musab al Zarqawi network's plotting to use ricin and cyanide in multiple attacks planned in Europe in late 2002-early 2003; and a Bahraini terrorist cell's plot to use a crude cyanide gas device called the "mobtaker" (an Arabic word roughly meaning "invention") in an attack on the New York City subway in the same time frame.** In each of these cases, the evidence suggests that the al Qaeda senior leadership was not directly involved or apparently even aware of attack preparations until late stages of planning. Moreover, there is no evidence that the al Qaeda leadership regarded the use of crude toxins and poisons as being suitable for conducting what would amount to pin prick attacks on the United States; on the contrary, **Zawahiri canceled the planned attack on the New York City subway for "something better," suggesting that a relatively easy attack utilizing tactical weapons would not achieve the goals the al Qaeda leadership had set for themselves.** So, why hasn't a terrorist WMD attack happened since 9/11? There are many plausible explanations for why the world has not experienced an al Qaeda attack using chemical, biological, radiological or nuclear weapons, but it would be foolish to discount the possibility that such an event will occur in the future. **To date, al Qaeda's WMD programs may have been disrupted. This is in fact one likely explanation, given a sustained and ferocious counterterrorist response to 9/11 that largely destroyed al Qaeda as the organization that existed before the fateful attack on the US.** If so, terrorists must continue to be disrupted and denied a safe haven to reestablish the ability to launch a major strike on the US homeland, or elsewhere in the world. Or perhaps, **al Qaeda operational planners have failed to acquire the kind of weapons they seek, because they are unwilling to settle for anything other than a large scale attack in the US.** It would surely be hard for al Qaeda to lower the bar they set on 9/11: what would constitute a worthy follow-up to 9/11, on their terms? What would they achieve through another attack? There are few weapons that would meet their expectations in this regard. **It is extremely difficult to acquire a functioning nuclear bomb, or to steal enough weapons usable material to build a bomb. And as al Qaeda probably learned in trying to weaponize anthrax, biological pathogens may seem simple enough to produce, but such weapons are not easy to bottle up and control.** To complicate matters further, an attack on the scale of 9/11 is more difficult to accomplish in an environment of heightened security and vigilance in the US. But if Osama bin Ladin and his lieutenants had been interested in employing crude chemical, biological and radiological materials in small scale attacks, there is little doubt they could have done so by now. **However, events have shown that the al Qaeda leadership does not choose weapons based on how easy they are to acquire and use, be they conventional or unconventional weapons. They choose them based on the best means of destroying the specific targets that they have in mind.** Al Qaeda's reasoning thus runs counter to analytic convention that equates the ease of acquisition of chemical, biological or radiological weapons with an increasing likelihood of terrorist use -- i.e., a terrorist attack employing crude weapons is therefore more likely than an attack using a nuclear or large scale biological weapon. In fact, it is the opposite: **If perpetrating a large- scale attack serves as al Qaeda's motivation for possessing WMD, not deterrence value, then the greatest threat is posed by the most effective and simple means of mass destruction, whether these means consist of nuclear, biological, or other forms of asymmetric weapons.** An examination of the 9/11 attack sheds light on al Qaeda's reasoning behind the selection of specific weapons, and how that may apply to the role WMD plays in their thinking. Al Qaeda opted to pursue a highly complex and artfully choreographed plot to strike multiple targets requiring the simultaneous hijacking of several 747 jumbo passenger aircraft, because using airplanes as weapons offered the best means of attacking the targets they intended to destroy.

If conventional wisdom on assessing WMD terrorism threats had been applied to considering the likelihood of the 9/11 plot, analysts may well have concluded it never would have happened; at the time, it was simply hard to believe any terrorist group could pull off such an elaborate plot utilizing novel, unpredictable weapons that were so difficult to acquire. Yet, WMD terrorism skeptics abound, and for understandable reasons. There is widespread suspicion in America and abroad that WMD terrorism is another phony threat being hyped for political purposes, and to stoke fears among the public. It is difficult to debunk this allegation, given the US government's lack of credibility in the case of Iraqi WMD. That said, WMD terrorism is not Iraqi WMD. The case that the WMD terrorism threat is real bears no association with the Iraqi intelligence failure whatsoever, in terms of the reliability of the sources of intelligence, the quality of the information that has been collected, and the weight of the evidence that lies at the heart of our understanding of the threat. **If anything, the biases in WMD terrorism analysis tilt towards treating the absence of information as an absence of threat; this could become a vulnerability in the defenses, considering the very real possibility that there may be a terrorist plot in motion that has not been found.** On the other side of the spectrum, even for the most ardent believers in the threat posed by WMD terrorism, it must be acknowledged that much of the rhetoric expressed by the top levels of the group might be just that: mere saber rattling in an increasingly desperate bid to remain relevant, to frighten their enemies, and to rally their followers with promises of powerful weapons that will reverse their losses on the battlefield. **It is also possible that al Qaeda may be engaging in a classic deception ruse, hoping to misdirect their foe with fears of mass destruction, in order to preserve the element of surprise for the fulfillment of their true intentions.** There may be kernels of truth in each of these reasons as to why the world has not yet witnessed a terrorist WMD attack, which is at least a mild surprise, considering all that has come to pass since 2001. However, for purposes of making a clear-headed assessment of the threat, it may be useful to separate al Qaeda's WMD activity into two streams, one consisting of the strategic programs managed under the direct supervision and management of the al Qaeda core leadership, and the other consisting of tactical chemical, biological and radiological weapons development that was decentralized and pursued autonomously in various locations around the world as part of the "global jihad." On this basis, a more precise determination can be made on the actual threat posed by al Qaeda, and other groups in each of these cases. Fortunately, there is a body of historical information that provides a useful starting point for such an inquiry. Hopefully, an examination of WMD-associated information that is pertinent, but no longer sensitive, can help bridge the gaps in perceptions between the diehard believers and skeptics as to the true nature of the problem and the threat it may pose, not just in an al Qaeda context today, but in the future as WMD terrorism takes on new forms involving new actors. **In June 2003, the US government issued a warning that there was a high probability of an al Qaeda WMD attack sometime in the next two years.** This report represented a high water mark in concerns related to al Qaeda's WMD planning going back to the founding of the group. Why didn't an attack happen in the next two years? Was the threat hyped for political purposes? Was the intelligence assessment wrong? Or, was the threat neutralized? **Some perspective into why the report was issued can be gleaned by examining some of the evidence that was available to US and international policymakers by the summer of 2003 concerning roughly fifteen years of al Qaeda's efforts to acquire weapons of mass destruction.** Presenting this chronology will hopefully allow the reader to develop a better feel for the threat posed by al Qaeda's interest in WMD at that time, and use it as a basis to help determine whether the WMD terrorism threat is real (Mowatt-Larssen, 2010).

**Date:** April 14, 2010

**Source:** Infowars, The Alex Jones Show

**Title/Headline:** Infowars Podcast

**Abstract:** Gerald Celente of the Trends Research Institute appeared on The Alex Jones Show where he discussed the following geopolitical scenario in depth:

**Alex Jones:** How will they get their great war? How will they engineer it? How will they sell it? Will they let terrorists in with a nuke, or will they stage the nuke attack?

**Gerald Celente:** There really may be a terror strike, hah, legitimately, coming out of **Pakistan. This should be the major news.** Every day, virtually, they're sending predator drones in and killing scores of innocent people. I believe the number is well over a 1000 now in the last year. **This is as old as the Old Testament; it's an eye for an eye.** You have the greatest refugee crisis going on in Pakistan since Rwanda and they are escalating that war even more. And of course, the CIA is behind sending these drones in. Since when was the CIA supposed to be in the battle like this? I thought they were only there to collect intelligence. So we are really looking at something Alex where we have well over 200,000 Pakistani's in this country. **They are watching their families get murdered. You think they are gonna be angry? They are going to say when terrorists strike they hate our freedom and liberty.** How about they hate your foreign policy and they hate you for killing innocent people. Look what happened in Pakistan yesterday; they strafed a passenger bus. There is plenty of hatred out there. False-flag or real, we are forecasting in 2010 a 9/11 magnitude terror strike. **With the foreign policy going in the direction it's going in, of course there is going to be major reprisals against the United States.** Anybody that thinks differently is out of their mind. **You can't invade other countries, occupy them, kill hundreds of thousands of people and not want**

people to get even with you. How they do it; whether it's nuclear, a biological attack, whether it's a, whatever it might be, in a stadium, in a shopping mall, it's going to happen (Infowars, 2010).

**Date:** Winter, 2010

**Source:** Trends Research Institute, Vol. XVIII, No.1

**Title/Headline:** *Terrorism 2010*

**Abstract:** According to Gerald Celente, the world's top trends forecaster, there will be terror in 2010. "While we can't predict precise dates or the magnitude of **terror attacks, we can be fairly certain they are on the way. Years of war in Afghanistan and Iraq – and now Pakistan – have intensified anti-American sentiment and increased the number of individuals seeking revenge. NATO allies contributing troops to the wars will also be targeted**" (Celente, 2010).

**Conclusion:** The authors of these papers have a dilemma in that the public won't buy that some guys in a cave developed a nuclear weapon, and therefore have decided to set up Pakistan as the scapegoat for nuclear terror. The narrative will likely be: Nuclear attack at the Super Bowl, Osama bin Laden is blamed initially, but upon the 2<sup>nd</sup> nuclear attack on Washington D.C., Obama retaliates against Pakistan with nukes for supplying Osama with the nuclear weapons. In the midst of the chaos, a bio terror attack will transpire in the Chicago area and America will be in World War III before she knows it. After the war, America will be tried in an international court for war crimes, and there it will be found that the nukes were not from Pakistan, but from the U.S. Military.

## WHAT TO DO IF A NUCLEAR DISASTER IS IMMINENT!

---

**This guide is for families preparing for imminent terrorist or strategic nuclear attacks with expected blast destruction followed by widespread radioactive fallout downwind.**

IF ONLY A 'Dirty Bomb' Attack (Not the vastly more devastating nuclear weapon blasts with fallout discussed below.) - You can expect localized and downwind contamination from the explosion and dispersed radioactive materials. If you are near enough to see or hear any local bomb blast, assume that it includes radiological or chemical agents. You should move away from the blast area as quickly as possible. If the wind is blowing toward you from the direction of the blast, travel in a direction that is crosswise or perpendicular to the wind as you move away from the blast area. If possible cover your face with a dust mask or cloth to avoid inhaling potentially radioactive dust. Upon reaching a safe location, remove your outer clothing outside and shower as soon as possible. Refer to local news sources for additional instructions about sheltering or evacuation. The government is better prepared to direct and assist the public in a 'dirty bomb' incident, unlike an actual nuclear weapon attack discussed below.

**In a national crisis of imminent nuclear weapon attacks, read all the way through this guide first, THEN TAKE EFFECTIVE PROTECTIVE ACTION, BEFORE THEY STRIKE, WITH CONFIDENCE... FAST!**

### #1 - STAY OR GO?

You must **decide FIRST if you need to prepare where you are, or attempt evacuation.** The nature of the threat, your prior preparations, and your confidence in your sources of information should direct your decision. If you know already you will be preparing to stay at your own home or, at least, the immediate local area, go now to #2 below.

If you are considering evacuation, your decision requires very high confidence that it is worth the risk. You do not want to get stuck between your current location and your hoped for destination, as there will probably be no easy getting back. If you fail to get to your destination, you may be exposed without shelter, in a dangerous situation with little effective law enforcement, perhaps among panicked hordes of refugees. Whatever supplies you have may be limited then to what you can carry on foot. IF you are in a big city or near a military target, AND you have relatives or friends in the country that you know are awaiting you, AND the roads between you and them are clear, AND the authorities are not yet restricting traffic, AND you have the means and fuel, evacuation may be a viable option for a limited time. DO NOT attempt evacuation if all of the above is not clearly known, or if the situation is deteriorating too quickly to assure the complete trip. You do not want to get stuck and/or become a refugee being herded along with panicked masses. **If evacuation is truly a viable option, do not wait - GO NOW!** Do so with as many of the supplies listed in #7 as possible. Better to be two days too early in arriving than two hours too late and getting snagged mid-way, potentially exposing your family to a worse fate than having stayed where you were. Because of the very real danger of getting caught in an evacuation stampede that stalls, almost all families will be better off making the best of it wherever they currently are.

### #2 - WHAT YOU NEED TO DO FIRST

Because time is of the essence, you need to first **delegate and assign to different adult family members specific tasks** so they can all be accomplished at the same time. Your first priorities to assure your family survival are Shelter, Water, and Food/Supplies. While some are working on the water storage and shelter at home, others need to be acquiring, as much as possible, the food and supplies.

### #3 - FOOD/SUPPLIES

Because much of the food and supplies listed at #7 of this guide may quickly become unavailable, **you need to assign someone NOW to immediately go to the stores with that list!** Get cash from the bank and ATM's first, if it can be done quickly, but try and use credit cards at the stores, if at all possible, to preserve your cash.

#### #4 - WATER

With one or more adults now heading to the stores with the list at #7, **those remaining need to begin storing water IMMEDIATELY!** Lack of clean water will devastate your family much more quickly and more severely than any lack of food. Without clean water for both drinking and continued good sanitary practices in food preparation and for bathroom excursions (which could be much less sanitary than normal), debilitating sickness could rampage through your family with little hope of prompt medical attention. That is a likely but, avoidable, disaster, ONLY IF you have enough water.

**Every possible container needs to be filled with water RIGHT NOW!** It will be very hard to have stored too much water. When the electricity/pumps go down or everybody in your community is doing the same thing, thus dropping the water pressure, what you've got is all you might be getting for a very long time. Empty pop bottles (1-3 liter) are ideal for water storage, also filling up the bathtub and washing machine. (Remember, later you'll have some in your hot water tank.) If you have any kiddie pools or old water beds, pull them out and fill them up, too. (Water from a water bed should be used only for bathing or cleaning, not for drinking as it may contain traces of algacide and/or fungicides.) Anything and everything that'll hold water needs to be filled up quickly RIGHT NOW!!

One of the shopping items listed at #7 is new metal garbage cans and liner bags which you'll also use for storing water. If you can't get any more new cans, you could clean out an existing garbage can and scrub it throughout with bleach, then put in a new garbage bag liner and fill it with water. Even sturdy boxes could be used with bag liners. (Use two liners if they are very thin/flimsy.) Choose well where you fill up garbage cans with water because they won't easily be moved once full and many of them together could be too heavy for some upper floor locations. Ideally, they need to be very near where your shelter will be constructed and can actually add to its shielding properties, as you'll see below. **BE ASSURED, YOU CANNOT STORE AND HAVE TOO MUCH WATER! Do not hesitate, fill up every possible container, RIGHT NOW!**

#### #5 - SHELTER

The principles of radiation protection are simple - with many options and resources families can use to prepare or improvise a very effective shelter. You must throw off any self-defeating *myths of nuclear un-survivability* that may needlessly paralyze and panic and then seal the fate of less informed families.

Radioactive fallout is the particulate matter (dust) produced by a nuclear explosion and carried high up into the air by the mushroom cloud. It drifts on the wind and most of it settles back to earth downwind of the explosion. The heaviest, most dangerous, and most noticeable fallout, will 'fall out' first closer to ground zero. It may begin arriving minutes after an explosion. The smaller and lighter dust-like particles will typically be arriving hours later, as they drift much farther downwind, often for hundreds of miles. Once it arrives, whether visible or not, all that will fall will have done so usually in under an hour, then blow around everywhere just like dust does on the ground and roofs. However, rain can concentrate the fallout into localized 'hot spots' of much more intense radiation with no visible indication.

This radioactive fallout 'dust' is dangerous because it is emitting penetrating radiation energy (similar to x-ray's). This radiation (not the fallout dust) can go right through walls, roofs and protective clothing. Even if you manage not to inhale or ingest the dust, and keep it off your skin, hair, and clothes, and even if none gets inside your house, the radiation penetrating your home is still extremely dangerous, and can injure or kill you inside.

Radioactive fallout from a nuclear explosion, though very dangerous initially, loses its intensity quickly because it is giving off so much energy. For example, fallout emitting gamma ray radiation at a rate over 500 R/hr (fatal with one hour of exposure) shortly after an explosion, weakens to only 1/10th as strong 7 hours later. Two days later, it's only 1/100th as strong, or as deadly, as it was initially.

**That is really very good news, because our families can readily survive it IF we get them into a proper shelter to safely wait it out as it becomes less dangerous with every passing hour.**

What stops radiation, and thus shields your family, is simply putting mass between them and the radiation source. Like police body armor stopping bullets, mass stops (absorbs) radiation. The thicker and heavier the mass, the more radiation it stops, and the more effective it is with every inch more you add to your fallout shelter. The thickness in inches needed to cut the radiation down to only 1/10th of its initial intensity for different common materials is: Steel 3.3", concrete 11", earth 16", water 24", wood 38". The thickness required to stop 99% of the radiation is: 5" of steel, 16" of solid brick or hollow concrete blocks filled with mortar or sand, 2 feet of packed earth or 3 feet if loose, 3 feet of water. (BTW, lead is nothing special, same as anything else pound for pound.) You may not have enough steel available, but anything you do have will have mass and can be used to add to your shielding - it just takes more thickness of lighter wood, for example, than heavier earth, to absorb and stop the same amount of radiation. Increasing the distance between your family inside and the radiation outside also reduces the radiation intensity.

The goals of your family fallout shelter are:

- To maximize the distance away from the fallout 'dusting' outside on the ground and roof
- To place sufficient mass between your family and the fallout to absorb the deadly radiation
- To make the shelter tolerable to stay in while the radiation subsides with every passing hour

While a fallout shelter can be built anywhere, you should see what your best options are at home or nearby. Many structures already provide significant shielding or partial shielding that can be enhanced for adequate protection. **If you do not have a basement available, you can still use the techniques shown below in any above ground structure, you'll just need more mass to achieve the same level of shielding.** You may consider using other solid structures nearby, especially those with below ground spaces, such as commercial buildings, schools, churches, below ground parking garages, large and long culverts, tunnels, etc.. Some of these may require permissions and/or the acquiring of additional materials to minimize any fallout drifting or blowing into them, if open ended. Buildings with a half-dozen or more floors, where there is not a concern of blast damage, may provide good radiation protection in the center of the middle floors. This is because of both the distance and the shielding the multiple floors provide from the fallout on the ground and roof.

Bottom Line: choose a structure nearby with both the greatest mass and distance already in place between the outside, where the fallout would settle, and the shelter inside.

If you have a basement in your home, or at a nearby relatives' or friends' house that you can use, your best option is probably to fortify and use it, unless you have ready access to a better/deeper structure nearby.

For an expedient last-minute basement shelter, push a heavy table that you can get under into the corner that has the soil highest on the outside. The ground level outside ideally needs to be above the top of the table shelter inside. If no heavy table is available, you can take internal doors off their hinges and lay them on supports to create your 'table'. Then pile any available mass atop and around the other two open sides such as books, wood, cordwood, bricks, sandbags, heavy appliances, full file cabinets, full water containers, your food stocks, even boxes and pillow cases full of anything heavy, like earth. Everything you can pile up and around it has mass that will help absorb and stop more radiation from penetrating inside - the heavier the better. However, be sure to reinforce your table and supports so you do not overload it and risk collapse.

Leave a small crawl-through entrance and more mass there that can be easily pulled in after you, but with a gap at the top to allow exhaust air out. Have another gap of 4-6" square low at the other end for incoming fresh air. Make bigger if crowded and/or hotter climate. A small piece of cardboard can help fan fresh air in if the natural rising warmer air convection current needs an assist moving the air along. This incoming air won't need to be filtered if the basement has been reasonably sealed up, however any windows or other openings will require some solid mass coverage to assure they stay sealed and to provide additional shielding protection for the basement. More details on this in the next (#6) section.

With more time, materials, and carpentry or masonry skills, you could even construct a more formal fallout shelter, such as the FEMA lean-to on the right, but you will need to assure structural integrity is achieved and adequate mass is utilized.

An effective fallout shelter constructed in a basement may reduce your radiation exposure 100-200+ fold. Thus, if the initial radiation intensity outside was 500 R/hr (fatal in one hour), the basement shelter occupants might only experience 5 R/hr or even less, which is survivable, as the radiation intensity will be decreasing with every passing hour.

Adding mass on the floor above your chosen basement corner, and outside against the walls opposite your shelter, will also increase your shielding protection. Every inch thicker adds up to more effective life-saving radiation shielding.

As cramped as that table space fallout shelter might seem, the vital shielding provided by simply moving some mass into place could be the difference between exposure to a lethal dose of radiation and the survival of your family.

The majority of people requiring any sheltering at all will be many miles downwind, and they will not need to stay sheltered for weeks on end. In fact, most people will only need to stay sheltered full-time for a few days before they can start coming out briefly to attend to quick essential chores. Later, they can begin spending ever more time out of the shelter daily, only coming back in to sleep. As miserable as it might seem now, you and your family can easily endure that, especially compared to the alternative.

**It's really not so difficult to build an effective family fallout shelter, not to get it completed... RIGHT NOW!**

## #6 - ESSENTIAL DETAILS

If you've accomplished the above; securing your supplies, stored water, and built your family fallout shelter, CONGRATULATIONS! You have now succeeded in improving the odds of survival for your family 100-fold, or more! Now, you need to expand your knowledge and fine-tune the tactics that will make the most of your family survival strategy.

- **Government information and guidance** is a vital resource in your response to a nuclear crisis, but for many reasons it may be late, incomplete, misleading or simply in error. While evacuation might be prudent for individuals who act quickly in response to a threat, governments will be slow to call for mass evacuations because of their potential for panic and gridlock. As the recent government calls for duct tape and plastic sheeting led to sold-out stores, anxiety, and derision from the press, there will be great reluctance to issue similar alarms. If you want to assure that you have adequate food and supplies for your family you must act **BEFORE** the panic without first waiting for government instructions that may never come or as urgently as warranted. **You alone are ultimately responsible for your family.**
- **Filtering the air coming into your basement shelter won't be required.** Air does not become radioactive, and if your basement is reasonably snug, there won't be any wind blowing through it to carry the radioactive fallout dust inside. Simply sealing any basement windows and other openings prevents significant fallout from getting inside. To improve both the radiation shielding inside the basement, and to protect the windows from being broken and letting fallout blow in later, you should cover them all with wood, and then with earth, sandbags or solid masonry blocks, etc. on the outside and inside too, if possible. If the basement air gets seriously stale later on, you could re-open a door into the upper floors of the still closed house, or secure a common furnace air filter over an outside air opening leading into your basement.

- **Regarding fallout contamination,** any food or water stored in sealed containers, that can later have any fallout dust brushed or rinsed off the outside of the container, will then be safe to use. As long as the fallout dust does not get inside the container, then whatever radiation penetrated the food/water container from the outside does not harm the contents. If you suspect that your clothes have fallout on them, remove your outer clothing before you come inside and leave them outside. A cheap plastic hooded rain poncho that can be easily rinsed off or left outside is very effective. Have water and baby shampoo near the entrance to wash and thoroughly rinse any exposed skin and hair. Exposure to fallout radiation does not make you radioactive, but you need to assure that you don't bring any inside. If any are stricken with radiation sickness, typically nausea, it is when mild 100% recoverable and cannot be passed on to others. Before fallout arrives, you might also try to cover up items you want to protect outside for easier rinsing off of the fallout dust later when it's safe to come out and do so. For instance, if you have a vegetable gardening spot or cordwood for heating, you might try covering much of it with plastic or tarp and weighting them down.
- **If without sufficient time to acquire radiological instruments of your own,** like survey meters, Geiger counters and dosimeters, **you'll need to be extra sure that your portable radios function properly from inside your shelter** and that you have plenty of fresh batteries stocked for them. Without radiological instruments, listening for official guidance about the radiation threat levels in your particular area will be the only way you'll know when it's becoming safe to venture out. It might also be the only way you'll know when you first need to take your initial maximum protective action. When not in use, they should not be attached to any outside antenna or even have their own antenna extended. And, they should be wrapped in any non-conducting insulation, like layers of paper or bubble wrap plastic and then stored in a metal container or wrapped in aluminum foil to minimize the potential of EMP ruining the electronics. Having backup radios would be very prudent. With extra radios, you can have one always tuned to the closest likely target city and, if it suddenly goes off the air, that could be your first indication of an attack.
- **If close to a target,** your first indication of a nuclear detonation may be with its characteristic blinding bright flash. The first effects you may have to deal with before radioactive fallout arrives, depending on your proximity to it, are blast and thermal energy. Promptly employing the old "Duck & Cover" strategy will save many from avoidable flying debris injuries and minimize thermal burns. Those very close will soon experience tornado strength winds and should quickly dive behind or under any solid object, away from or below windows. Even in the open, laying flat, reduces by eight fold the odds of being hit by any debris. A very large 500 kiloton blast, 2.2 miles away, will arrive about 8 seconds after the detonation flash with a very strong three second wind blast. That delay is even greater further away. That is a lot of time to duck & cover IF alert and you should stay down for 2 minutes. If not near any target 'ground zero' you will only, like the vast majority, have to deal with the fallout later.
- **When fallout is first anticipated,** but has not yet arrived, anyone not already sheltered should begin using their N95 particulate respirator masks and hooded rain ponchos. Everyone should begin taking Potassium Iodide (KI) or Potassium Iodate (KIO3) tablets for thyroid protection against cancer causing radioactive iodine, a major product of nuclear weapons explosions. If no tablets available, you can topically (on the skin) apply an iodine solution, like tincture of iodine or Betadine, for a similar protective effect. (WARNING: Iodine solutions are NEVER to be ingested or swallowed.) For adults, paint 8 ml of a 2 percent tincture of Iodine on the abdomen or forearm each day, ideally at least 2 hours prior to possible exposure. For children 3 to 18, but under 150 pounds, only half that amount painted on daily, or 4 ml. For children under 3 but older than a month, half again, or 2 ml. For newborns to 1 month old, half it again, or just 1 ml. (One measuring teaspoon is about 5 ml, if you don't have a medicine dropper graduated in ml.) If your iodine is stronger than 2%, reduce the dosage accordingly. Absorption through the skin is not as reliable a dosing method as using the tablets, but tests show that it will still be very effective for most. Do not use if allergic to iodine. If at all possible, inquire of your doctor NOW if there is any reason why anybody in your household should not use KI or KIO3 tablets, or iodine solutions on their skin, in a future nuclear emergency, just to be sure.

- When you know that the **time to take protective action is approaching**, turn off all the utilities into the house, check that everything is sealed up and locked down, and head for the shelter. You should also check that you have near your shelter additional tools, crow bars, and car jacks for digging out later, if required, and fire extinguishers handy, too. Also, any building supplies, tools, sheet plastic, staple guns, etc. for sealing any holes from damage. Your basement should already be very well sealed against fallout drifting inside. Now, you'll need to seal around the last door you use to enter with duct tape all around the edges, especially if it's a direct to the outside door.
- **You don't need to risk fire**, burns, and asphyxiation trying to cook anything in the cramped shelter space, if you have pre-positioned in your shelter enough canned goods, can opener, and other non-perishable foods, that are ready-to-eat without preparation. More food, along with water, can be located right outside your crawl space entrance that you can pull in quickly as needed when safe to do so.
- **For lighting needs** within the shelter have some small LED flashlights or LED head-lamps to stretch your battery life. Try not to have to use candles if at all possible. Bring in some books for yourself and games for the children. Throw in a small/thin mattress, some cushions, blankets, pillows, etc.
- **Toilet use** will be via a portable camp toilet or a 5 gallon bucket with a seat borrowed from one of the house bathrooms, if you did not purchase a separate one. Garbage bag liners, preferably sized for it, should always be used and a full-size and bag lined garbage can should be positioned very close outside the shelter entrance for depositing these in when it is safe to do so quickly. Hanging a sheet or blanket will help provide a little privacy as shelter occupants 'take their turn'. The toilet needs to have its new 'deposits' sealed up tight with the plastic liner after each use and hand sanitizer towelettes nearby. Use a very secure top on the bucket and position it near the wall with the outgoing upper air vent.
- **Pets, and what to do about them**, is a tough call if you fail to make provisions for them. Letting pets run free is not a humane option, both for their potential to die a miserable death from radiation exposure outside and/or to be a danger to others, especially with dogs running in the inevitable packs of multitudes of others abandoned. Preparing for them is ideal, if truly realistic and not a drain on limited resources, while 'putting them down' might eventually become a painful, but necessary reality if the disruption of food supplies becomes very long term.
- Boiling or bleach water treatments will be used for **cleaning your stored water** later for drinking. (This is for killing bacteria, not for radiation contamination, which is never a concern for any stored and covered water containers or even sealed food.) Tap water recently put into clean containers won't likely need to be purified before using. To purify questionable water, bring it to a rolling boil and keep it there for 10 minutes at least. If you don't have the fuel to boil it, you can kill the bacteria by mixing in a good quality household bleach at the rate of 10 drops per gallon, and letting it sit for at least 1/2 an hour. The bleach should be at least 5.25% pure, like Clorox, but be sure it has no additives such as soap or fragrance. You can later get rid of the flat taste from boiling, or some of the chlorine taste when using bleach, by pouring it from one container to another several times.
- **There's much more that can be learned** to better understand what you are up against and to acquire to help your family survive and to better endure all of this. While time allows, and if the Internet is still up & running, task someone with getting and printing out this additional information and see the Civil Defense films below them.

• BOTTOM LINE:

When the TV or radio program switches abruptly to an terse announcement saying: *"We Interrupt This Program For This Special Bulletin!"*, and your kids look up to you with questioning wide-eyes and eager for assurances, know then that you are confidently ready for them with your own Action Plan ready to go! That's what this is all about... our children!

---

This guide was purposely designed with the sober realization that the overwhelming majority of our fellow Americans would not be compelled to read such a guide until a nuclear crisis was imminent and, unfortunately, their preparation options and time to prepare then would be very limited. [www.ki4u.com](http://www.ki4u.com) and other survival equipment suppliers will again be quickly sold-out, as all were after 9/11. This guide then will be the best/only help that we can offer. If you are fortunate enough to be exploring your family preparation needs and options before such a future national crisis, there is much more that you can and should do now to insure that they are even better prepared.

*"A prudent man foresees the difficulties ahead and prepares for them;  
the simpleton goes blindly on and suffers the consequences." - Proverbs 22:3*

---

## **#7 - LIST OF SUPPLIES TO ACQUIRE LOCALLY**

If stores are still at all stocked, and safe to go to, try to buy as many of the following items as possible... IMMEDIATELY! There are no quantities listed here on the food items below as family size varies and because, as the emergency and panic widens, many items will become quickly sold-out or quantities restricted and you'll need to try to get more of what does remain on the shelves. At a minimum you should be looking at two weeks of provisions, but much better to be aiming for two months or more. The reality is, if/when we are attacked, it will be a very long time before anything is ever 'normal' again, especially at any grocery stores. Hurricane victims can attest to the prolonged misery and disruptions from even a localized disaster, even with the rest of the country still able to help out. Nobody can begin to imagine how bad the suffering will be, and for how long, if nuclear weapons have gone off... and in multiple locations!

The half-dozen top listed and UNDERLINED food items below are primarily for use while in the shelter. They are mostly ready-to-eat that requires no cooking or preparation, just a can opener at the most. (The iodine solution is included here because of its importance for its thyroid-blocking topical use detailed above, but it's NEVER to be ingested or swallowed.) The other foods listed below there are better cost/nutrition staples for later use during the extended recovery period. Then follows general non-food supplies, tools and equipment.

Go Acquire It All Now QUICKLY!

It's much better to risk being a little early when securing your families essential food and supplies, rather than a few hours too late...

Canned goods (pasta, soups, chili, vegetables, fruit, tuna, meats, beans, peanut butter, etc.)

Ready-to-eat foods (pop-tarts, raisins, cheese, granola/energy/protein bars, snack-paks, etc.)

Some perishable foods (breads and fruits like bananas, apples, oranges, grapes, etc.)

Assorted drink mix flavorings (with no cold drinks, just plain water, kids will appreciate it!)

Plenty of potent Multi-Vitamins, Vit C, Pepto Bismol, etc.

Iodine solution, like Betadine (16 ounces)- NOT TO BE INGESTED OR SWALLOWED!

Largest bags of rice, beans, flour, potatoes, pasta, quick oats and other grains

Multiple big boxes of dried milk (Could include/use some inside shelter, too.)

Multiple big boxes of pancake and biscuit mix & syrup

Large bag of sugar and jar of honey

Large 2 gallons or more of cooking oil

Baking powder & soda & yeast & spice assortment pack

Bottled water (especially if home supplies not secured yet)

Paper or plastic plates/bowls/cups/utensils and paper towels

Quality manual can opener, 2 if you don't already have one at home

Kitchen matches and disposable lighters

New metal garbage cans and liner bags (water storage & waste storage)

5 gallon bucket and smaller garbage bags sized for it (toilet)

Toilet seat for the bucket (or use one from inside the house)

Toilet paper and, if needed, sanitary napkins, diapers, etc.

Baby wipes (saves water for personal hygiene use)

Flashlights (ideally LED) and more than one portable radio

Plenty more batteries, at least three sets, for each of the above

Bleach (5.25%, without fragrance or soap additives)

Alcohol and Hydrogen Peroxide and hand sanitizers

Aspirin/Tylenol/Motrin, Pepto Bismol, etc.

Prescription drugs filled, and as much extra as possible

First aid kits

Fire extinguishers

Plenty of inexpensive N95 particulate respirator masks

Plenty of cheap plastic hooded rain ponchos for everyone

Water filters and all other camping type supplies, such as portable camp toilet,

cook stove and fuel, ammo, etc., if any sporting goods stocks still available.

And, of course, rolls of plastic sheeting, duct tape, staple guns, staples, etc.

---

Everyone is invited to copy, post, print, and distribute this 'WHAT TO DO IF A NUCLEAR DISASTER IS IMMINENT!' guide anywhere, as long as they do so without charging anything for it. It must be reproduced in entirety, including this notice, and not be altered or edited. To contact the author with comments and suggestions, e-mail: Shane Connor at [webmaster@ki4u.com](mailto:webmaster@ki4u.com). This guide will be continually 'fine-tuned' so, before distributing it, download it fresh from <http://www.ki4u.com/guide.htm> or to print out, use this PDF version here <http://www.ki4u.com/guide.pdf>

Last Update: August 5th, 2009

# Some Final Thoughts...

As mentioned above, this guide was written assuming it would not be read by the majority of its intended audience until a nuclear crisis is already fully upon us -- when remaining time and resources to prepare will be extremely limited, maybe with only hours remaining before 'the music stops'.

For that reason, the food, equipment and supplies listed above has been restricted to only the most common and typically available from local resources.

If you are fortunate enough to be reading this well before a nuclear threat (or other major disaster) occurs or appears imminent, there's a great deal more that you can and should do beyond the scope of this brief guide.

Surviving the initial threats of a nuclear 'event' and radioactive fallout is relatively easy with the proper knowledge and even the most modest of preparations, as we've detailed above.

The ongoing bigger challenge, though, will be the one brought on by the extensive and much longer-lasting disruptions of services after you survive the nuclear event and emerge safely once the fallout threat has diminished.

You might go many months with little or no new food supplies, along with disruptions of water, sewer, gas, electric, and telephone services, little or no gasoline, and severely limited medical and banking services, law enforcement and fire protection.

With more time to research, make plans, and order supplies, families are well advised to acquire more in-depth training, reference books, longer-term food and water stocks, fuel, medical supplies, personal security, communication equipment, radiation monitoring instruments, camping equipment, supplies and tools. Many informative web sites and suppliers make available all of the above, including military MRE's ready-to-eat meals, dehydrated and freeze-dried foods, as well as buckets of beans, rice, and grains. They also offer solar cookers, water purifiers and barrels, camp and compost toilets, comprehensive medical kits and manuals, shortwave and local two-way radios, perimeter alarms, alternative energy and heating systems, fuel preservatives, long-term packaged seeds, gardening tools, canning equipment, etc. Survivalblog.com has many of the best advertising there.

If all of this preparation seems daunting, here's one strategy to make it a little less overwhelming: Think in two's. First, acquire all the equipment and supplies your family would need to survive for two weeks if totally cut off from stores and utility and municipal services. It might help to consider all you would need during an extended camping trip in any season. Then, once you've accomplished that, expand your preparations and supplies to meet the goal of surviving at home for two months with no utilities or services. After that, continue adding provisions for two more additional months, with the eventual goal of gathering enough supplies so that your family can survive under these distressed conditions for a year or more.

A year might seem like overkill, but you'll no doubt discover that in any disruptive event, numerous friends, neighbors, and relatives will be in need and you will want to help them if you can. Of course, ideally, they should also be preparing their own families for surviving coming disasters, so sharing this information with them might help get them started. Also, for your own family's security, you always want to try to surround yourself with a buffer of like-minded people who are also doing the right things to prepare so they will become helpful allies instead of only a drain on your limited resources. Reality is, they could possibly even become an outright threat for your family retaining enough supplies for the full duration if difficult circumstances were to drag on and became ever more desperate.

Some are e-mailing the link to this guide, or printing up extra copies of the pdf version of this guide and mailing it out, with a quick note; *"Hope you never need this information, but just-in-case, keep it handy."* Few recipients find that low-key approach offensive or alarmist, and many have reported back to us that they were very grateful. Others have printed up extra copies for church members or for school or work and still others with the intent to anonymously distribute them to all their neighbors surrounding them if/when a nuclear crisis looms. Point is, you want everybody you care about, and those near and around you, to be preparing, it's both better for them and your families security. Also, everyone that does prepare will be one less family then later standing in line for hours (or days) ahead of others who failed to, awaiting a hoped for arrival of a FEMA handout of food or water. Being prepared makes a ton of sense and will one day soon be seen by all, many painfully, perhaps even fatally, as clearly obvious and self-evident.

If you're trying to convince yourself or a spouse to make the investment in prep equipment and supplies, also keep in mind this fact: Many of the supplies save money because buying in bulk and stocking up now is less expensive than buying smaller quantities later, especially as inflation ramps up. Further, if nothing bad ever happens, you can eventually eat the food and use most of the supplies, like toilet paper, fuel, etc., so they won't go to waste.

They will also be useful in many disasters besides nuclear events. For example:

Job loss -- Having two to four months of food at home would certainly relieve much of the stress of losing your job and being without an income while looking for another.

Pandemic -- We could someday see a pandemic unleashed that would require families to self-quarantine themselves at home for many weeks to avoid catching the disease. Having these supplies and having made these preparations would make that extremely difficult time more endurable.

Natural disasters, economic dislocations, civil disruptions -- Your family could ride out any number, or cascading combination, of these events in much better shape if you are sufficiently prepared.

Being prepared and stocking up makes sense on numerous levels, especially during this age when costs for many essentials, such as food, fuel, and ammunition, will surely only continue to increase. Stocking up now both saves money today and may well save your family tomorrow.

### **How People Act in Times of Trouble**

When tough times come, you'll likely discover that people today, overall, are not as resilient as they were in times past. For many of us, our grandparents generation included a higher percentage of self-reliant rural folks who both 'made do' on less while growing and raising their own food. Today, most people are far removed from the land and the routine of being responsible for supplying their own food; many even have a dangerous government-dependent mentality of entitlement. Fact is, the morality that both sustained and restrained previous generations during tough times is not as widely embraced in this present population. As a result, many people will more quickly rationalize theft, robbery, looting, and rioting when they fear hunger and deprivation. Crime is already a problem today--even with nobody being hungry, and with law enforcement in place. Crime, then, could explode when hunger threatens and law enforcement deteriorates concurrently. It is therefore prudent for anyone making serious preparations to also include plans for maintaining their own security if law enforcement is either unavailable or cannot keep pace with the demands of an overwhelming crime wave. If you do not own or use guns, I would strongly urge you to re-evaluate your personal security. If you find it lacking, acquire some guns and ammunition immediately, and get some safety and practical tactical training in their use. Ask the clerks at your local gun store for advice on defensive arms and to point you to local resources for that essential training.

For those who already have weapons, be sure they are effective models and calibers for self-defense, and that you have stocked plenty of ammunition and high-capacity magazines if needed. Weapons and ammo will quickly disappear, or they will become prohibitively expensive or restricted, once the essential need is more widely recognized.

### **Financial Concerns**

Once you are well on your way to acquiring your family's preparation tools, equipment, and supplies, consider acquiring extra items to help others and to use as future barter goods. You might be able to trade extra water filters, garden seeds, survival books, cooking fuel, batteries, antibiotics, and ammo for other needed products or services. Some people are even converting a modest percentage of their traditional paper investments into some gold and/or silver coins for trading purposes, as well as for prudent wealth diversification. Having wealth in forms other than solely paper dollars, plastic credit cards, or a 401k account might make the critical difference in one day being able to buy gas or get your gravely ill child to the front of a mile-long line to see the only overworked doctor or dentist or pharmacist in town. It'll sure beat only waving around your last investment or bank statement then.

### **A Final Word**

To better avoid unhealthy and overwhelming angst trying to prepare for all future dislocations and disruptions, keep in mind, too, that each step is like acquiring medical insurance. We all hope and pray we won't need that insurance, but if we ever do, our families won't find us then lacking in providing for their basic safety and welfare.

Once you've started making these preparations, strive to stay balanced. Thank God that you have begun, try to awaken others, and begin to confidently relax in your new alert status. You'll then be able to more fully enjoy life with your family knowing that you're firmly on the road to better being able to handle just about any event that might occur in this quickly changing world.

***"A prudent man foresees the difficulties ahead and prepares for them;  
the simpleton goes blindly on and suffers the consequences." - Proverbs 22:3***

## **The Nuclear Bible: Nuclear Terror Target # 1: The Super Bowl (February 6, 2011)**

**Intro:** The NFL Super Bowl is the biggest game, the biggest LIVE TV event, and the biggest party in America. It therefore should come as no surprise that it would also be the biggest nuclear terror target in the world. While it is hard to predict anything in life, let alone a nuclear attack, the Super Bowl appears to have been designed for just this type of occasion. During the last couple of years, the rhetoric and the formalities surrounding the big game tend to hint that something bad is going to happen.

**Date:** November 5, 2010

**Source:** Wikipedia

**Title/Headline:** *NFL Super Bowl*

**Abstract:** The Super Bowl is the championship game of the National Football League (since 1967), the premier association of professional American football. In most years, the **Super Bowl is the most-watched American television broadcast. Since 2002, the Super Bowl has been a National Special Security Event.** (Wikipedia, 2010).

**Date:** November 5, 2010

**Source:** Wikipedia

**Title/Headline:** *National Special Security Event*

**Abstract:** The National Special Security Event (NSSE) “Is an event deemed by the United States Department of Homeland Security (DHS) **to be an attractive target for terrorists, due to the event's visibility or political connection.** An NSSE designation puts the United States Secret Service in charge of event security, the Federal Bureau of Investigation in charge of law enforcement activity, and the Federal Emergency Management Agency in charge of recovery management (Wikipedia, 2010).

**Date:** 2010

**Source:** United States Secret Service

**Title/Headline:** *National Special Security Events*

**Abstract:** When an event is designated by the Secretary of Homeland Security as a National Special Security Event (NSSE), **the Secret Service assumes its mandated role as the lead agency for the design and implementation of the operational security plan.** The Secret Service has developed a core strategy to carry out its security operations, which relies heavily on its established partnerships with law enforcement and public safety officials at the local, state and federal levels (Secret Service, 2010).

## **The Nuclear Bible: The Super Bowl's History of Terror**

**Date:** May, 2002

**Source:** U.S. House of Representatives, Jim Saxton

**Title/Headline:** *Economic Perspectives Of Terrorism Insurance*

**Abstract:** An “unspecified number” of National Football League teams currently have no terrorism insurance. Teams that have been reported to not have terrorism insurance include the New York Giants, **Dallas Cowboys**, Chicago Bears, Washington Redskins, and Baltimore Ravens (Saxton, 2002).

**Date:** January 30, 2006

**Source:** World Net Daily

**Title/Headline:** *Super Bowl Sunday: Terror Chatter High*

**Abstract:** There is a high likelihood of a major terrorist attack next Sunday, say international terror analysts and intelligence sources. There is increased "chatter" in the terrorist world about a major new attack in the West – a sign often leading to an impending strike; The date Feb. 5 has been specifically referenced in some of this chatter; The date is significant to Osama ; **Much of the western world will be watching television that day;** The release of al-Qaida videotapes seems to provide clues about the dates of future attacks and, in this scenario, Feb. 5 becomes the most likely near-term terror strike date. Terror attacks seem to follow the release of al-Qaida about 30 days. Some intelligence analysts are noting the significance of the release of videos recently by both Osama bin Laden and Ayman al-Zawahiri. Zawahiri released his last video Jan. 6, making Feb. 5 the most likely target date, according to past attacks. Some analysts suggest the release of communiqués by both al-Zawahiri and **bin Laden might be the precursor to a mega-attack – something even rivaling Sept. 11 in scope and devastation.** That, suggests some analysts, makes Feb. 5 a likely target date. Interestingly, it is also a significant date to bin Laden. Feb. 5, 1989, was the day the last Soviet troops withdrew from Kabul, Afghanistan, signaling their defeat at the hand of the mujahedeen. Kabul was the capital of Osama's adopted country and was a major win for him and Islam. Significantly, perhaps, in bin Laden's audio release he referenced the U.S. withdrawing from Iraq and Afghanistan. **It also happens to be Super Bowl Sunday, when the eyes of the entire world will be watching America.** Authorities in Detroit, where the Super Bowl will be played, are certainly taking the threat of terrorism seriously. **According to the FBI and Detroit police, the game will be the focal point of one of the largest security operations in U.S. history, guarding against any threats to Super Bowl XL and aided by more than 50 federal, state and local law enforcement agencies. Including private security guards, there will be about 10,000 security personnel on duty, more than for any other one-day event in U.S. history. Radiation detectors will be stationed near the stadium. SWAT teams, bomb removal and other specialized law enforcement officials will be on hand. Despite the recent taped messages, authorities say there are "no credible threats against the Super Bowl"** (World Net Daily, 2006).

**Date:** January 29, 2007

**Source:** National Terror Alert, U.S. Department of Homeland Security (DHS)

**Title/Headline:** *Threat Level Raised For Super Bowl*

**Abstract:** The National Football League has boosted the law enforcement budget and heightened the security threat level for Super Bowl 41 because of terrorism fears. The Super Bowl has been raised to a level one national security event, putting it on par in terms of manpower and resources with the US President's State of the Union speech and the 2002 Salt Lake City Olympics. **"We consider the Super Bowl so high profile that we see it as attractive to terrorists,"** said Milt Ahlerich, NFL vice-president of security. The last Super Bowl to be given a level one security designation was the 2002 New Orleans Super Bowl held three months after the September 11, 2001, terrorist attacks upon New York and Washington (DHS, 2007).

**Title/Headline:** *Super Bowl Security Described As Unprecedented*

**Abstract:** Security for Super Bowl XLII, to be played at the University of Phoenix Stadium Feb. 3, is being described as "unprecedented," and will include both covert and overt measures like ATF bomb-sniffing dogs trained to ferret out liquid explosives. Although there is no specific terror threat, security officials are concerned due to the high visibility of the game and the propensity of al Qaeda to strike such targets. But the federal government's terrorism threat assessment of the upcoming game between the New England Patriots and New York Giants outlines concerns about stolen official law enforcement credentials, uniforms, weapons, and other equipment that could be used to "infiltrate" the stadium complex to carry out an attack. "High-profile" events like this, which the Arizona Counterterrorism Information Center said is expected to draw over half-a-million visitors, "make [them] a desirable target for domestic or international terrorists," the Department of Homeland Security (DHS) threat assessment says. While the assessment makes clear that the Intelligence Community "has not identified a credible terrorist threat to Super Bowl XLII and its related events," one of the three "key findings" of the nine-page threat assessment, a copy of which was obtained by HSToday.us, is that "the threats of greatest concern" during events like this "include individuals impersonating law enforcement and other security personnel and insiders to facilitate attacks." "Numerous thefts of government and law enforcement property that could be used to facilitate unauthorized entry have been reported in Arizona," the assessment points out. "Since October 2004 the Arizona Counterterrorism Information Center has received more than 300 reports of thefts from fire, first responder, military, and police personnel, including from those in the Phoenix area" (DHS, 2008).

**Title/Headline:** *Super Bowl Deemed A Target In Federal Threat Assessment*

**Abstract:** The upcoming Super Bowl game will be a desirable target for terrorists, according to a threat assessment by federal security officials, which outlines several scenarios of possible attacks and security precautions for the Feb. 3 event. "Among the threats of greatest concern to high-profile events like the Super Bowl are the placement of explosive devices in heavily trafficked areas in and around the event site, to include individuals impersonating law enforcement and other security or service personnel and insiders to facilitate attacks," the threat assessment said. "Al Qaeda and other Islamic terrorists may view sporting events as acceptable targets: the al Qaeda Training Manual specifically lists '... blasting and destroying the places of amusement, immorality, and sin ... and

attacking vital economic centers' as a required mission of the al Qaeda military organization," the assessment said. **"The Super Bowl's stature as a major media event probably increases its attractiveness to homegrown terrorists, whether acting alone or as part of a group, who understand the economic as well as symbolic importance of the game and surrounding activities to many in the homeland,"** the report said. FBI spokesman Richard Kolko said threat assessments are prepared for every major national security event as a "useful method of sharing information among federal and state law enforcement officers." **"We have no significant threats at this point, but certainly an event of this size is a viable target and any threat will be taken seriously,"** he said. "It is important to remember that terrorists are trained to 'blend in' and assimilate to their surroundings," the center said (Hudson, 2008).

**Title/Headline:** *No Credible Terror Threats Seen For Super Bowl*

**Abstract:** A U.S. intelligence report says there is no credible threat of terrorist attacks at the Feb. 1 Super Bowl, but police said that visitors should still expect the type of heavy security typical of every Super Bowl since the Sept. 11, 2001, terrorist attacks. While no specific threat was identified, a joint FBI and Homeland Security intelligence assessment obtained by The Associated Press cautions that Raymond James Stadium, the Super Bowl site, does not have the typical security features of permanently secure buildings, such as jails or military bases. However, the report noted, **"the visible presence of hundreds of well-equipped security officers, standoff barriers and other security measures likely will serve as deterrents to attack."** Tampa police spokeswoman Laura McElroy said Raymond James Stadium is as secure as any other NFL venue and noted that local law enforcement is accustomed to securing the stadium and keeping large crowds safe. **"On Super Bowl Sunday, the safest place in the country will be inside Raymond James Stadium or inside the security footprint of the Super Bowl,"** McElroy said. She said local officials have been working with the Department of Homeland Security and other agencies on the security plan for the past two years. **A litany of state and federal agencies are assisting local law enforcement, but McElroy declined to provide numbers of officers involved or other specifics of the plan for security reasons.** A spokeswoman for the Super Bowl Host Committee referred all security questions to McElroy. A similar security report typically has been issued for the event in recent years. The federal report, dated Tuesday, said **officials are also concerned that terrorists or criminals could impersonate government or military officials because some Florida law enforcement badges and uniforms were stolen in 2008.** The report says there is no credible information about impersonation plots. **The report referred to a large number of credentials, uniforms sets and other law enforcement equipment that went missing last year from the Hillsborough County Sheriff's Office, which patrols unincorporated areas around Tampa.** The Super Bowl is one of the biggest television events of the year, and more than 100 million people in 232 countries are expected to watch, the assessment said. **Because of the high profile nature of the event, intelligence officials say they cannot discount the potential for a terrorist attack.** Terrorists are expected to continue to see stadiums and arenas as potential targets, according to a March 2008 intelligence assessment. **"Al-Qaida could meet its objectives of mass casualties, economic damage, and psychological impact with an attack against a stadium or arena during an event in the United States,"** the 2008 assessment said. The Federal Aviation Administration plans to issue a temporary flight restriction in the area around the Tampa stadium on Feb 1. The threat assessment says the regional bus system will not provide public transit to the stadium on game day. In addition, **the Bureau of Alcohol, Tobacco, Firearms and Explosives is providing advanced training for local Florida bomb-sniffing dogs in preparation for the event.** **The Super Bowl threat assessment is based on information from local law enforcement, the FBI, Homeland Security Department, National Counterterrorism Center, United States Northern Command, National Geospatial-Intelligence Agency and the Florida state intelligence fusion center** (NBC Sports, 2009).

**Title/Headline:** *NFL Exempt From Terrorism Lawsuits*

**Abstract:** **The National Football League and dozens of other companies and organizations have won exemption from lawsuits under a post-9/11 law that prohibits them from being sued if terrorists attack a site they are protecting.** The law, called the SAFETY Act (Support Anti-terrorism by Fostering Effective Technologies), aims to help security providers by guaranteeing they will not pay any claims that terror victims might file after an attack. The law was created in 2002 in response to multibillion-dollar lawsuits filed after the 9/11 attacks that left companies afraid they would be sued if security equipment failed to stop terrorists. **The protection extends only to companies' services or equipment that the Homeland Security Department has approved as being effective in anti-terrorism.** Among those with top-tier protection is the NFL, which in December received liability exemption against future claims stemming from an attack at any of the nation's football stadiums. The law requires a court to dismiss lawsuits against companies whose products have Homeland Security's highest reliability rating. The NFL got the protection after the government approved the league's nine-page stadium-security guidelines. The benefit to the NFL is "fairly obvious," said NFL security chief Milt Ahlerich. **"An attack from a terrorist organization could put us out of business."** League guidelines, developed shortly after 9/11, include digital security cameras in stadiums, quick searches on entering spectators and barriers that keep cars and trucks 100 feet from a stadium (Frank, 2009).

**Date:** January 31, 2010

**Source:** ABC News, Associated Press, Robert Fendrich

**Title/Headline:** *Xmas Bomb Attempt Prods Super Bowl Security Change*

**Abstract:** Dozens of federal agencies, including the FBI and the Bureau of Alcohol, Tobacco, Firearms and Explosives, local police and two private security firms were handling security for the Super Bowl, and that Al Qaeda training manual lists **"blasting and destroying**

the places of amusement, immorality, and sin" as one of the terrorist group's missions. That assessment also says a jihadist message board carried a posting in 2006 with information about how to **conduct an attack on a sporting event** using more than one suicide bomber, inside the venue and near exits. The FBI and Miami-Dade Police Department are running separate centers to collect and disseminate intelligence, but that **might not uncover a person acting alone** — the kind of threat that most worries the FBI's Gillies and James Loftus, interim director of the Miami-Dade Police Department. "I'm not an alarmist, but **we worry about the lone guy** with the rifle. That's where our attention is," Loftus said. "That's the guy who is not e-mailing, who is not networking." Loftus said another concern is someone **who might try to use a false police or firefighter uniform to gain unauthorized access** (Fendrich, 2010).

**Source:** CTV Globemedia, Associated Press, Curt Anderson

**Title/Headline:** *F-16s, Bomb Dogs Among Security Measurers At The Super Bowl*

**Abstract:** Security operation protecting the Super Bowl consisted of Air Force F-16s patrolling the skies above Miami on game day to a buffer zone extending at least 100 meters out from the stadium. "We collect intelligence from all over the world and then we disseminate it, so that everyone knows what's going on," said William Maddalena, a top Miami FBI official in charge of special events. "We'll have daily briefings to put out the latest information we have." But all that intelligence-gathering may not uncover **a single person acting alone who wants to attack or disrupt the game** or surrounding events. James Loftus, interim director of the Miami-Dade Police Department, said that's what keeps Super Bowl security planners awake at night. **"The biggest problem that we have is the lone wolf. They operate by themselves. They operate in seclusion. They don't discuss their plans or potential threats to anyone else,"** John Gillies, special agent in charge of the FBI's Miami field office, said in an interview (Anderson, 2010).

**Date:** February 2, 2010

**Source:** CBS News, Associated Press

**Title/Headline:** *Bomb Dogs, Robots Ready For Super Bowl*

**Abstract:** Several dozen bomb-sniffing dogs, robots that defuse explosives and police bomb squads are being deployed to protect the Super Bowl. The federal Bureau of Alcohol, Tobacco, Firearms and Explosives showed reporters how the dogs can detect even minute amounts of bomb compounds. Four dogs easily found a small amount of residue hidden in a closed car trunk. **Miami ATF chief Hugo Barrera says the dogs can smell 19,000 different bomb components.** The ATF puts them through a 16-week training course before they're ready for duty. **Some of the ATF dogs deployed for the Super Bowl are veterans of the Iraq and Afghanistan wars.** Dogs from the Miami-Dade Police Department and Broward Sheriff's Office also are on duty for Sunday's game. After touring a rain-soaked Sun Life Stadium on Monday, U.S. Homeland Security Secretary Janet Napolitano said that preparations are in place to thwart any terrorist threat or safety problem at the Super Bowl. **"We are doing everything we can think of in preparation to make sure it is a great event,"** Napolitano told reporters. "I'm here today to see the operation myself. I thought it was important to get down here." Milt Ahlerich, the NFL's vice president for security, said **Napolitano's tour of the stadium in nearby Miami Gardens was the first time a Homeland Security secretary had visited a Super Bowl site before game day.** About 1,000 federal, state and local law enforcement and security personnel are working Sunday's game and events leading up to it, said James Loftus, director of the Miami-Dade Police Department. **Even though the FBI reports no credible threat against the Super Bowl, al Qaeda and other terror groups have frequently expressed interest in attacking a major U.S. sporting event.** "Rest assured, we're going to look out for you," Loftus said of what fans attending the game can expect. **"We do this stuff week in and week out, and we're good at it."** The nerve center for security is the FBI-run Joint Operations Center, which includes representatives from 64 agencies at all levels of government, said John Gillies, agent in charge of the FBI's Miami field office. He said preparations have included intensive training and tabletop exercises involving various threat scenarios. "There's security that the public will see, and there's security the public will not see," Gillies said. Fans themselves can also play a role by reporting any suspicious activity or unattended bags, Ahlerich said. **And Napolitano said there will be a number flashed on screens at the stadium where fans can send a text message if they see anything amiss** (CBS News, 2010).

**Date:** February 3, 2010

**Source:** The Freedom Medium

**Title/Headline:** *Security Will Be High At The 2010 Super Bowl*

**Abstract:** If I were attending Super Bowl XLIV, I'd feel security measures the NFL has taken, in spite of a nerve-racking statement from someone who, thank goodness, has no affiliation with the NFL, yet pretends to know something about security. I think that NFL vice-president of security Milt Ahlerich, will do a fine job. Ahlerich had this to say: **"There won't be any problems,"** Ahlerich said. "This security plan is very robust and very well coordinated. We have a lot of confidence in how it is organized and how well it will be executed." What scares the hell out of me is this statement: **"We're looking forward to a great and safe Super Bowl 44."** **"We're grateful for the remarkable cooperation we've seen up and down the line. We're doing everything we can in preparation to make sure it's a great event."** That statement was made by Department of Homeland Security head Janet Napolitano. The same Janet Napolitano who, when a jihadist set his ass on fire trying to blow up an airplane on Christmas day, said **"the system worked."** Football fans can, however, breathe a sigh of relief, knowing that Napolitano is not in charge of overseeing security measures at the world's

**biggest one-day sporting event.** Because if Napolitano paid as much attention to potential security threats as she did to President Obama's State Of The Union address, this is what we'd see (The Freedom Medium, 2010).

**Title/Headline:** *Microsoft, Partners Pitch In On Super Bowl Security*

**Abstract:** A collaboration platform combines SharePoint, mapping software, and analysis capabilities to let law-enforcement agencies in Miami share information in real time. **The system, called Project Dolphin, will let officials collect information from different law-enforcement agencies, including the Miami-Dade Police Department, during Sunday's event and share and analyze that information in real time. Project Dolphin combines tools from Microsoft, ESRI, GuideSTAR Technologies, and Analyst International Corp (AIC).** The system comprises Fusion Core Solution, developed by Microsoft and ESRI, which uses Microsoft's SharePoint Server with ESRI's ArcGIS 9.3.1 server and GuideSTAR's investigative and intelligence analysis tool, GS/1. **Different public-safety organizations will be keeping track of security at Super Bowl XLIV, and the data they collect is stored in their own systems. Fusion Core brings that information together into one system, enabling authorized personnel to exchange documents, information, and alerts securely.** Authorities can view information geospatially using ESRI's visualization and mapping technology, while other software enables analysis of the information gathered. Miami-Dade Police, the eighth largest law-enforcement agency in the U.S., will be using the Project Dolphin software with its own IT system, which is already quite sophisticated, Microsoft said (Montalbano, 2010).

**Date:** February 6, 2010

**Source:** The Examiner, Jim Kouri

**Title/Headline:** *Super Bowl Security Enhanced By FBI, ATF K-9 Units*

**Abstract:** Not everyone participating in this year's Super Bowl is a football player. **The Bureau of Alcohol, Tobacco Firearms and Explosives (ATF) and the Federal Bureau of Investigation have fielded their best players to help prepare for a safe and secure Super Bowl XLIV.** These pros include ATF K-9 explosives detection teams that have been deployed to Miami from around the country. The K-9 teams are working side-by-side with other federal, state and local law-enforcement officers to keep the football teams and fans safe throughout this event. The Federal Bureau of Investigation is continuing its preparation for the Super Bowl. **"Our tactical teams have been training throughout the year for different scenarios -- active shooter, bombs, and other hazards related to chemical, biological, radiological, or nuclear threats,"** said John Gillies, the FBI special agent in charge. **"We have hundreds of agents and professional staff prepared to respond.** For example, we have SWAT, Evidence Response Teams, and hostage negotiators to name a few. Many have traveled from other FBI offices across the country," he said. **"The K-9 teams that are here in Miami for the Super Bowl are the best of the best,"** said Hugo Barrera, Special Agent in Charge of the ATF Miami Field Division. **"Like the football teams that will be playing in the Super Bowl, these handlers and their K-9 partners have been training and preparing all year for this event,"** Barrera further stated. "We are proud to say that the only thing the fans have to worry about is whether their team wins or loses." One of the teams working in Miami is ATF Special Agent Canine Handler L.A. Bykowsky and her new partner "Darel", a 16-month-old yellow Labrador retriever. SACH Bykowsky and K-9 Darel are based in South Florida and recently returned from Virginia, having successfully completed four months of training at ATF's Explosives Detection Canine Handler School. **They will assist at this year's Super Bowl to help locate any type of explosive, which may be in close proximity to the stadium or any other venue relating to the big game.** ATF has used its explosives detecting canines at other special events including the Republican and Democratic National Conventions, the Presidential Inauguration, the G-8, the World Series, NASCAR, the 2002 Salt Lake City Olympics **and of course, the Super Bowls** (Kouri, 2010).

**Title/Headline:** *2010 Connecticut Power Plant Explosion*

**Abstract:** The 2010 Connecticut power plant explosion occurred at the Kleen Energy Systems power station in Middletown, Connecticut, United States at 11:17 am EST on February 7, 2010. Preliminary reports attributed the cause of the explosion to a test of the plant's energy systems. The plant had been under construction from February 2008, and was scheduled to start supplying energy in June 2010. **Although initial reports estimated up to 250 people had been injured in the blast, the number of injuries was later established to be 27.** While police first reported that two workers had died, they later retracted that statement, citing a misinterpretation. The office of the mayor of Middletown later released a statement saying that 5 people had died in the explosion. The Federal

**Bureau of Investigation (FBI) said it was not investigating the incident as a terrorist attack, and that there was no evidence to suggest that it was. The blast at the 620-megawatt, Siemens combined cycle gas- and oil- fired power plant occurred at 11:17 am, and was reported at 11:25 am EST.** The plant's manager, Gordon Holk, said that contractors and other workers from O & G Industries, Ducci Electrical, and Keystone Mechanical Electrical were at the site when the blast occurred. A neighbor of the plant said that there was natural gas stored there, which was later said to be related to the explosion. Flames were reported to have been coming from a gas pipe until the gas was shut off. **The explosion occurred at the rear of the largest building at the site (the turbine hall building), which was destroyed.** Another witness from Portland, Connecticut said that the main building had been leveled. **Some residents reported "earthquake-like tremors" from at least 10 miles (16 km) away, although the blast proved not to be seismically detectable. Another resident of the area felt that it was more like a sonic boom. According to authorities, neither terrorism or an intentional crime was the cause of the explosion, though criminal negligence was being investigated.** The local fire marshal said the explosion was the result of an attempted purging of natural gas from a pipeline as a test, a procedure known as a blow-down, and according to a state official who had been briefed on the incident, the explosion had been sparked by a "flame device," possibly a propane heater. The president of the Connecticut AFL-CIO, however, disagreed with this explanation, saying it was more likely that an inadvertent spark had caused the explosion, rather than an open flame. **Middletown deputy fire marshal Al Santostefano later said that there had been fewer than 50 people injured, as some of the workers had made it out alive, and that there were no signs of life in the ruins of the plant. At least 12 of the injured were treated at local hospitals.** Emergency personnel and almost 20 ambulances were at the scene shortly after the blast occurred, using helicopters to transport victims while search-and-rescue crews with dogs scoured the rubble. Middlesex Hospital in Middletown said it was receiving patients from the blast. At least one victim was also taken to Hartford Hospital. By 1:30pm local time, at least 100 firefighters were at the scene and the fire had been extinguished. **Connecticut governor M. Jodi Rell was being briefed by authorities and opened the state's emergency management center, and she later traveled to the scene of the explosion.** Connecticut State Police said they were sending detectives to investigate the explosion. **Rescue officials at the plant turned away reporters because hazardous material leakage was possible.** Nearby hospitals and surrounding states also offered to aid in the rescue process. **The Joint Terrorism Task Force also arrived at the site of the explosion but were only there to monitor, as local and state officials were handling the investigation. The federal Chemical Safety Board deployed a seven person team to the site, which was expected to be on the scene by Monday, February 8, but was later prohibited from entering the site.** The mayor of Middletown said the plant will ultimately be rebuilt, a statement that was confirmed by a Kleen Energy official, who said that construction would resume once the investigation into the incident was completed. **The investigation into the incident started the day after the explosion, and was conducted by agencies at the local, state and federal levels.** It was expected to focus on whether human error or insufficient safety protocols were at fault. In particular, according to the local fire marshal, the investigation was to look at whether electricity was cut off from the area, whether workers had been evacuated before the purging of the gas line, and whether ignition sources were present. Several days before the explosion, the Chemical Safety Board had approved new recommendations on gas line purging in the United States following an explosion at a food manufacturing plant in North Carolina in 2009 that killed four people. **Despite the Board's interest in the case, a spokesman said on February 9 that their team of investigators was being denied entrance to the site of the explosion, on the grounds that the area was a crime scene** (Wikipedia, 2010).

**The Connecticut explosion may have been a beta test to see how many people began to follow a pre-Super Bowl disaster story which occurred in U.S. Vice President Joe Biden's back yard. Come February 6, 2011, we can expect something similar in nature leading up to the Super Bowl. As stated in the Wikipedia article, the event was grossly overhyped and hundreds of bodies ended up being only 27.**

**Date:** February 7, 2010

**Source:** Wikipedia

**Title/Headline:** *Super Bowl XLII*

**Abstract:** The game was televised live in the United States on CBS, capping the network's 50th season of NFL coverage (1956–93; 1998–present). This was the 17th Super Bowl telecast for CBS, the largest total among the "big four" US television networks. CBS had also broadcast the previous Super Bowl held in South Florida (XLI). Play-by-play announcer Jim Nantz and color commentator Phil Simms were in the broadcast booth, with Steve Tasker and Solomon Wilcotts serving as sideline reporters. The game was preceded by *The Super Bowl Today*, a four-hour pregame show that was hosted by James Brown and started at 2 pm US EST. A kickoff show for the game aired from 6 pm US EST to 6:28 pm US EST. **With an average US audience of 106.5 million viewers, this was the most-watched Super Bowl ever as well as the most-watched program of any kind in American television history, beating the 27-year-long record previously held by the final episode of *M\*A\*S\*H*, "Goodbye, Farewell and Amen", watched by 105.97 million viewers.**<sup>[14]</sup> An estimated 153.4 million total viewers watched all or part of the game.<sup>[15]</sup> The game drew a national Nielsen rating of 45.0 with a 68 share, the highest for a Super Bowl since Super Bowl XXX in 1996 (46.0/68). The telecast drew a 56.3 rating in New Orleans and a 54.2 rating in Indianapolis, first and fourth respectively among local markets (Wikipedia, 2010).

## The Nuclear Bible: Super Bowl XLV (February 6, 2011)

George W. Bush & Cowboys Owner Jerry Jones

**Intro:** The State motto of Texas is “*Everything Is Bigger In Texas*”, and should a nuclear detonation occur in “BIG D”, it would somehow fit perfectly in a sick and sadistic way. Ironically, Arlington, Texas, is only 226 miles from Barksdale Air force Base in Louisiana, the site where 6 nukes disappeared under the Bush and Cheney regime in 2007. A nuclear assassination of Dallas and the Cowboys would be a deathblow to an American Cowboy legacy which is rooted in the culture and fabric of America.

**Date:** November 5, 2010

**Source:** Wikipedia

**Title/Headline:** *Super Bowl XLV*

**Abstract:** Super Bowl XLV will be the 45th annual edition of the Super Bowl in American football, and the 41st annual championship game of the modern-era National Football League (NFL). The game, to be played on February 6, 2011, will pit the champions of the AFC and the NFC, and will be held at Cowboys Stadium in Arlington, Texas. **This will be the first time that the Super Bowl will be held in the Dallas–Fort Worth–Arlington area and the third time it will be held in Texas (Houston was the host city to Super Bowls VIII and XXXVIII).** The game will be televised nationally by Fox. Starting with Super Bowl XLV, the template of all Super Bowl logos will virtually remain the same. **The only differences from year to year will be the stadium backdrop and the Roman numerals for the game as well as colors of the area. For Super Bowl XLV, Cowboys Stadium is featured and "XLV" signifying the forty-fifth Super Bowl game.** Therefore, Super Bowl XLVI's logo is expected to feature Lucas Oil Stadium (Wikipedia, 2010).

**Source:** The Dallas Morning News, Michael A. Lindemberger

**Title/Headline:** *Worker Dies At Dallas Cowboys Stadium Site*

**Abstract:** Just days after three workers were injured in a crane accident at the new Dallas Cowboys stadium, an electrician was electrocuted there Saturday while performing tests on some of its wiring. Timothy Mackinnon, 45, of Arlington was standing on a ladder when he touched a high-voltage line in the ceiling of the stadium's concourse level, said Neal Strasser, a battalion chief with the Arlington Fire Department. Mr. Mackinnon, a journeyman electrician, was knocked off his feet but became wedged between the ladder and the stadium wall, where he hung until a co-worker spotted him and carried him to the ground, Chief Strasser said. **"When we arrived, one of his co-workers was already performing CPR", Chief Strasser said. "We took over and began performing advanced life-saving efforts. They performed CPR on him all the way to Arlington Memorial Hospital." The Tarrant County medical examiner's Web site confirmed Mr. Mackinnon's death Saturday afternoon. He was pronounced dead at the hospital at noon. Officials said the accident occurred around 11 a.m.** The Fire Department received a call by 11:05 a.m. and arrived within five minutes. The Cowboys issued a statement Saturday from the stadium's general contractor, Manhattan Construction, that said it and JMEG Electric, the subcontractor for whom Mr. Mackinnon worked, are cooperating with investigations by police and the Occupational Safety and Health Administration. Chief Strasser said construction continued at the stadium after the electrocution. **"They were still working as we were walking out," Chief Strasser said. "The workers were visibly upset."** The stadium site has already been under scrutiny, following a crane accident on Thursday afternoon. That day, a crane connector "failed," prompting cables and other parts to fall. **Three workers leapt off a nearby crane to avoid being hit and were injured in the 10- to 12-foot fall. All three were taken to area hospitals, though two have been released.** The third, Wesley Harlow, remains in Baylor University Medical Center at Dallas. Hospital spokeswoman Susan Hall said Saturday evening that he is in serious condition. More than 170 injuries – mostly minor – have occurred at the stadium site, where about 1,400 workers are engaged each day. **Two other high-profile accidents have happened during construction of the \$1.1 billion**

stadium, which is scheduled to open for the Cowboys' 2009 season. A construction worker was injured in August when crane cables struck him in the back while on an upper deck of the new stadium. In January 2007, another worker fell 20 feet from scaffolding onto the field (Lindenberger, 2008).

**967 Days before Super Bowl XLV, Timothy Mackinnon died at Cowboy Stadium. Was it an accident? A human sacrifice? Or, was the electrician responsible for wiring a nuke under the stadium?**

**Date:** December 2008

**Source:** The Public Sphere, Derek Charles Catsam

**Title/Headline:** *Stadiums And Terrorism*

**Abstract:** The public's right to know or the public's right to be safe? Preserve civil liberties at all costs or err on the side of caution? These questions, honestly asked, are at the heart of debates over how best to preserve both our safety and our liberties in an age of terrorism and violence. Some time ago, an ideal test case for these questions played out here in Texas, where the Dallas Cowboys tried to fight requests (that entered the legal system and fast became demands) for public release of the plans for their new \$650 million stadium in Arlington. **Their rationale? Both security and business concerns. The problem? At least \$325 million, and likely a lot more, is coming out of taxpayer pockets, and the city used eminent domain to force homeowners to sell their property to make way for the new stadium.** Whoever has their name on the lease, the stadium is in many ways public property and should be considered only nominally the Cowboys' property. **The Cowboys and their advocates argued that both proprietary business interests and security concerns should have allowed them to keep the information secret.** Yet, for the public, the Cowboys sacrificed their proprietary business claims as soon as they stuffed their snouts in the public trough. **The Cowboys' claim so reeked of arrogance that it almost overwhelmed all of the other arguments about security. It is increasingly common for professional sports teams to suckle at the public teat and then turn around and pretend that they owe that same public nothing because they are fundamentally engaged in private enterprise.** Billionaire owners want to have the public pay for their opulent facilities, in which the former will charge exorbitant prices for tickets and concessions. The public is slowly learning, just like the poor guy who stands in line at halftime to spend \$60 for a gelatinous pile of food and drinks, that there is no such thing as a free lunch. Or a half-billion dollar stadium. **Stadiums on game day or concert night are among the most vulnerable targets for terrorist attacks.** But the other claims, those tied to security, are less temporal and thus gave pause. After all, we now know the plans for the stadium, but security will be an enduring concern. **I've argued for years, even before 9/11 and the occasional recent news of potential attacks at football games (always revealed to have been a hoax, but such hoaxes still remain all too credible), that stadiums on game day or concert night are among the most vulnerable targets for terrorist attacks:** tens of thousands of people in a celebratory mood, unwary and focused on something else; screaming crowds; loud public address announcers; amps at rock shows; lots of drunk people; showy but largely perfunctory security. Providing diagrams and blueprints to terrorists, whether Islamist or of the home grown variety (Many in the U.S. seem to have forgotten about the Eric Rudolph, Ku Klux Klan, Tim McVeigh, Unabomber, Charles Whitman types), does appear shortsighted at first blush. The public does not have the right to know everything. **Then again, someone with malicious forethought can take plenty of time to plan an attack upon an open stadium.** Providing diagrams that, once a stadium opens, will be available anyway hardly seems like a serious breach of either public safety or security. **The danger will not come from terrorists simply knowing a stadium's layout, however essential that might be to a planned attack, but rather from terrorists who are able to identify and exploit weaknesses and security flaws.** In terms of odds, I would surmise that an attack at a big game will more likely come from someone wielding a gun than someone wielding a half-empty bottle of water. **Texans take football seriously. They take travel seriously. They take terrorism seriously.** But there is a difference between serious and foolish. The Cowboys finally released the plans to the enormous new stadium, as was inevitable. Thus far, nothing bad has happened to Jerry Jones' gleaming jewel. **And if terrorists ever do attack the new stadium, the blame will fall on our scattershot, improvised, shoddy policies and lack of foresight because we were preparing for the last attack rather than the next one.** Derek Charles Catsam is an associate professor at the University of Texas of the Permian Basin. He has been a fellow with the Foundation for the Defense of Democracies, a Washington-DC- based anti-terrorism organization (Catsam, 2008).

**Title/Headline:** *Police Prep For Stadium Security Alert*

**Abstract:** Arlington - North Texas visitor, Mamie Dorris stood outside the new Cowboys Stadium in Arlington snapping pictures. **She didn't know federal officials had issued a terrorist security alert for stadiums. "That is very unnerving", says Dorris. Dorris knows the horror of a terror attack.** She survived the 9/11 attack on the pentagon, after a plane piloted by al-Qaida terrorists crashed directly into her office. She says no threat can be taken lightly. **"I think anytime there is a threat on our grounds, it needs to be taken seriously".** Police say they are taking notice of several security alerts issued by the FBI and Homeland Security. **Officials say terrorists may attempt to use homemade backpack bombs, car bombs or even airplanes to attack crowded, public places. Arlington police say they received the alerts and are taking that into consideration to insure the safety of fans during upcoming Cowboys games at the new stadium.** Already on game days, all bags are searched. Authorities use bomb-sniffing dogs to inspect vehicles parked close to the stadium. Security experts say they aren't surprised by the stadium alerts. **"Anytime you have a large venue event that you have a lot of people then it will be attractive to terrorists",** says Former FBI Special Agent in Charge, Danny Defenbaugh. The former federal agent says since 9/11 busy public places, like stadiums have been on the terror radar. Defenbaugh says proper training for event staff members is important to protect against the threat of attack. **"They need to be suspicious and look for unusual behavior",** says Defenbaugh. **A few months ago, Arlington Police and several other agencies conducted a massive training exercise at the new stadium, to test out their preparedness for a real emergency.** Dorris says that everyone should learn to be on alert at all times and report anything suspicious. She says she is living proof that an attack can happen to anyone. **"I was just fortunate it wasn't my time"** (Tongish, 2009).

**Title/Headline:** Cowboys Stadium Security Heeding FBI Alert

**Abstract:** Counter-terrorism officials have issued security bulletins about possible terrorist attacks on sports stadiums, entertainment complexes, and hotels throughout the United States. The FBI and Homeland Security Department sent out two bulletins, with no specific details. However, Arlington police say they're taking the warning seriously. Neither police nor stadium officials will give specifics to any changes or improvements being added for this Monday night's game between the Dallas Cowboys and the Carolina Panthers. **Some security experts say there can be a disadvantage to securing a brand new stadium. Former Dallas FBI agent Danny Defenbaugh says both employees and security officers are still learning the 'ins and outs' of the new Cowboys facility.** "You can look at the analogy of the old Texas Stadium; where the engineers knew if a stone was out of place in the boiler room," said Defenbaugh. **"But here [at the new stadium], it's a learning experience for everyone. I think that's one reason why they had the crisis management exercise six to eight months ago; so they could have that familiarity."** When asked about the federal warnings Arlington police issued the following statement: **"The Arlington Police Department has been made aware of the alert and understands that no specific venues or geographic regions have been targeted. But we are still taking the information seriously and it is being considered as we prepare for our next football game at Cowboys Stadium on Monday"** (Gormley, 2009).

**Title/Headline:** *Arlington Officials On Watch After Federal Terror Alert But Say City, Attractions Are Prepared*

**Abstract:** A vague terrorism warning about threats to stadiums, hotels and tourist attractions has caught the attention of Arlington officials. **The city has a large theme park and two major sports stadiums – including the new home of the Dallas Cowboys.** Arlington police said they are paying attention to the potential threat, which hasn't mentioned any specific locations, but they have not significantly changed their security precautions. **"We're prepared for most everything that could happen at the [Cowboys] stadium,"** said Tiara Ellis Richard, an Arlington police spokeswoman. That \$1.15 billion stadium is the highest-profile venue in the city and the site of next week's Monday Night Football game. Federal officials sent bulletins to police Monday urging local authorities to be particularly vigilant. **Those came after arrests in New York and Colorado connected to an alleged terrorism plot. Richard said alerts that don't cite specific threats do serve a purpose.** They could act as a reminder, she said, for agencies to review their security plans and pay more attention to this issue. **"It might make you a little more aware, a little more heightened and more vigilant,"** Richard said. At Cowboys Stadium, which opened in June, Richard said, police have not gotten lax about security. **Police have created security plans for concerts and games as well as special events such as the 2010 NBA All-Star Game and the 2011 Super Bowl.** Brett Daniels, a spokesman for the Cowboys, said the team does not discuss security matters and would not even confirm whether he was aware of the alert. Texas Rangers spokesman John Blake said team executives have heard about the potential threat and have talked to police and league officials. He said there have been no changes to their security procedures. **"We're monitoring this with Major League Baseball, and we're taking this seriously,"** Blake said. Sharon Parker, a spokeswoman for Six Flags Over Texas, said the park has "stringent security" in place, but she would not say whether there had been any changes because of this threat (Mosier, 2009).

**Title/Headline:** *NFL Unveils New Super Bowl Logo, With National And Regional Looks*

**Abstract:** The Vince Lombardi trophy will be a permanent fixture on Super Bowl logos from now on. **The trophy itself will receive a new regional look, depending on where the game is played.** The changes were announced Thursday when the NFL unveiled the new logo in conjunction with the North Texas Super Bowl host committee. **At next year's Super Bowl in Arlington, Texas, the logo also will display a silver depiction of Cowboys Stadium. The NFL said it created a national logo -- without the stadium -- and a regional one with it.** Though the trophy will remain on future logos, the stadiums will change with each host (NFL, 2010).

**Date:** February 6, 2010

**Source:** Star-Telegram, Ray Buck

**Title/Headline:** *Super Bowl 45 At Cowboys Stadium Is One Year Out*

**Abstract:** Drum roll. Super Bowl XLV is officially one year out. North Texas will become the 13th region to host a Super Bowl when the game is played Feb. 6, 2011, at Cowboys Stadium in Arlington. Today's Colts-Saints SB XLIV, by comparison, marks the 10th time the Super Bowl has been held in South Florida. It will be played at Sun Life Stadium, home of the Miami Dolphins. The North Texas Super Bowl Host Committee has had a lot of catching up to do. Led by president Bill Lively and chairman Roger Staubach, the host committee is either on schedule or ahead of schedule in most aspects of preparation and lagging in none, according to Lively. **"We're not behind on anything that I'm concerned about,"** said Lively, then adding, **"I might be behind tomorrow but I feel good about where we're at right now."** Lively's administrative background with SMU and the Dallas Center for the Performing Arts certainly helps him grasp the enormity of an upstart Super Bowl project. Perhaps nothing on his résumé helps him more than his longtime avocation as "mountain climber." In 1999, Lively climbed Africa's Mount Kilimanjaro, which is the highest free-standing mountain in the world at 19,340 feet. "I've been climbing mountains for more than 50 years," said Lively, now 66. **"I've climbed the Grand Tetons in Wyoming and many of Colorado's 14,000-foot peaks. I started out with my father when I was 12 or 13."** So, how much has this helped him to get ready for Super Bowl XLV? **"Well, you know, it is a mountain,"** Lively replied. **"But you can see the summit."** The two most dreaded words for any mountain climber, he explained, are "false summit," i.e., climbing and climbing, you think you've finally reached the top only to get there and find "there's another top." But the first Sunday in February has never been out of anyone's sight. "We can see it: Feb. 6, 2011," Lively said. **"We know exactly when it's going to happen and we know how to get there. It's not rocket science, although it isn't unlike a mini-version of what a nation goes through to host an Olympics. You have to prepare infrastructure, venues, politics and a financial base. And in our case, we're doing all that for the first time."** The matter of money North Texas Super Bowl coffers recently hit the \$17 million mark. That's just over the halfway mark, because the May 2007 winning bid came with a promise that a record \$30 million would be raised. **The host committee's ambitious fundraising and sponsorship efforts have included 11 donors at the \$1 million level -- also a Super Bowl record.** The previous record of two \$1 million sponsors was achieved for Super Bowl XL in Detroit four years ago. **"We are confirmed now right at \$17 million in underwriting,"** said Lively, "which is a little behind where I wanted to be -- but not by much. Given the economy, I'm OK with that." SLANT 45, designed to promote student participation/service learning in the community, has become the pace car for the race to Feb. 6, 2011. **"The education program is fully underwritten, and it becomes operative right now, and that's good,"** said Lively, obviously pleased to check something off his to-do list. SLANT 45 is chaired by Daryl "Moose" Johnston, Pro Bowl fullback on the Cowboys' Super Bowl teams of the '90s. Lively continued: **"We have 18 standing committees active and serving right now, involving over 200 volunteers.** That's good. We have the staff, the mechanism, the repository to collect information in place and ready to go. It's still a little too soon to activate [volunteer work] ...but that will change soon." **Keep in mind, SB XLV is a regional event, meaning that the Big Four Mayors of Fort Worth, Dallas, Arlington and Irving are all heavily involved with their cities.** The AFC team is scheduled to stay at the Omni Fort Worth, while the popular "Taste of the NFL" will be held Super Bowl eve at the Fort Worth Convention Center. The NFC team will stay at the Omni Mandalay in Irving's Las Colinas. The game will be in Arlington.

**Staubach & Aikman:** Just the two most decorated quarterbacks in Cowboys history are heavily involved in Super Bowl XLV. Aikman, the team's only three-time Super Bowl winning QB, recently was elected vice chairman of the North Texas Super Bowl Host Committee. A major dose of "street cred" was added to an already star-studded cast of former Cowboys who frequently appear on behalf of the host committee, including the likes of Emmitt Smith, Tony Dorsett, Rayfield Wright, Drew Pearson, Preston Pearson, Michael Irvin, Bob Lilly, Randy White, Jay Novacek and Johnston. Before an NFL city or region can think about winning a Super Bowl bid, it must have that "face" on its presentation to make it legit. **For North Texas, that face belongs to Staubach, former Heisman Trophy winner, decorated Naval cadet and Vietnam War veteran, two-time Super Bowl quarterback and Pro Football Hall of Famer.** "People ask me all the time how is it to work with Roger -- well, he's the real thing. He's absolutely essential," said Lively, who often works alongside Staubach at SB XLV speaking engagements. Staubach frequently delights his audience with old Cowboys references and a dry sense of humor. **"Roger is exactly what you'd hope he would be,"** Lively said of the local icon. **"His status and leadership have validated the importance of our organization."**

**Four-Corner Power Trip:** Mayors Mike Moncrief (Fort Worth), Tom Leppert (Dallas), Bob Cluck (Arlington) and Herbert Gears (Irving) are in South Florida for Super Bowl XLIV today. They've been joined by Arlington Police Chief Theron Bowman, host committee board members such as Michael Morris (Transportation/North Central Texas) and Jeff Fegan (DFW Airport), a couple of dozen host committee staff members, as well the all-important, \$1 million sponsors of Super Bowl XLV. **"These people have paid a premium for this opportunity. It's part of their benefits package,"** Lively said of the group that enjoyed what Lively called "behind-the-scenes experiences that only Roger can get them." This marked the third on-site Super Bowl "study" for Lively and the host committee since winning the SB XLV bid over Indianapolis and Arizona almost three years ago. Compared to previous Super Bowl excursions to Tampa and Arizona, Lively explained, "those two trips were for research purposes; this one [has been] a sponsorship-fulfillment trip." Think "rewards trip" to South Beach, now you get the idea. Still, the North Texas contingent has been able to observe how South Florida went about handling transportation, security, entertainment, events and parties. **It's all part of the climb. "Actually,"** said Lively, **"I've always climbed mountains as a hobby -- not trying to be dangerous or thrill-seeking. It really has been for the beauty of the mountain."** He hopes he can stand on the summit of Super Bowl XLV a year from now, and say the same thing (Buck, 2010).

**Source:** Bob Bartlett

**Title/Headline:** *Texas-Sized Super Bowl Terror Target?*

**Abstract:** Terror has become a backyard issue for North Texans. Mass murder occurred at Fort Hood and a would-be terrorist was recently arrested for an alleged downtown Dallas plot. Both incidents have people wondering: what's next? One possible target: next year's Super Bowl in Arlington. Stadium security is starting from the sky with no fly-zones and security sweeps for anyone attending the game. An estimated 1,500 private aircraft will touch down for the Super Bowl. They'll be carrying titans of industry on corporate jets as well as wealthy fans from around the world. No matter who they are, if they don't get to the airports near stadium by 4 p.m. on Super Bowl Sunday, they'll be locked out of the skies. The FAA's enforcing a no fly zone until midnight, within a 10 mile radius of the stadium. **It's also restricting flights up to 30 miles away.** Everyone from dignitaries to assistants will have to go through a security screening to get back on their planes. On the ground, representatives of major area law enforcement agencies will be in undisclosed locations ready to direct any response needed with massive manpower. **"Every officer in North Texas will somehow be connected to the Super Bowl on game day,"** noted Arlington Police Chief Theron Bowman. Cities will direct their own security, but they'll also take direction from the Executive Public Safety Committee made up of police chiefs from Arlington, Dallas, Irving, and Fort Worth, along with the FBI Chief Bowman addressed North Texans sensitive to possible threats after enduring both the Fort Hood killings and the recent alleged terrorist plot against a downtown building. **"I can assure you although while we are aware of what's going on we are working diligently to ensure this is the absolutely safest place it can possibly be,"** said Bowman. "We don't worry about those scenarios here." Chief Bowman tells us metroplex police chiefs have been planning the security of the Super Bowl since the bid was first announced (Bartlett, 2010).

**Date:** November 5, 2010

**Source:** Slant 45 ([www.slant45.org](http://www.slant45.org))

**Title:** *Slant 45: Q & A*

**Abstract:**

**Question:** What is SLANT 45?

**Answer:** SLANT 45 will be one of the largest communitywide service-learning programs for children in U.S. history and the largest in NFL history. **Starting in early 2010, an estimated 20,000 elementary age students will log a combined 45,000 hours of service in more than 100 communities that will forever change the face of the region.**

**Question:** How did the program get its name?

**Answer:** SLANT 45 stands for Service Learning Adventures in North Texas, and 45 represents Super Bowl XLV, the first Super Bowl in North Texas history. Coincidentally, "slant" is also a football play.

**Question:** Who is leading the program?

**Answer:** Former Dallas Cowboy Daryl Johnston is the chair of the SLANT 45 Action Team, and **President George W. Bush and Mrs. Laura Bush are the honorary chairs.** Johnston works closely with Big Thought and a volunteer Action Team made up of everyone from senior business executives to faculty and staff from respected educational institutions (Slant 45).

**Date:** January 27, 2011

**Source:** NFL, Associated Press

**Title/Headline:** *NFL Expects Record Crowd For Super Bowl XLV In Texas*

**Abstract:** The NFL is expecting a record crowd for the first Super Bowl at \$1.3 billion Cowboys Stadium. League spokesman Brian McCarthy said Thursday an estimated total of 105,000 spectators will attend the Feb. 6 game in the suburban Dallas-Fort Worth area stadium. McCarthy said about 95,000 fans will be in the seats and suites inside the stadium, along with about 5,000 media members and staff. Approximately 5,000 people also paid \$200 apiece to be in an area outside the stadium watching on big-screen TVs. The record of 103,985 was set in the 1980 Super Bowl at the Rose Bowl in Pasadena, Calif., when the Pittsburgh Steelers beat the Los Angeles Rams. This time, the Steelers are playing the Green Bay Packers. A record could exceed the population of Green Bay, which is about 104,000 (NFL, 2011).

**Conclusion:** It appears that a human sacrifice of 20,000 young children may be offered up to the gods on February 6, 2011, by Bush & Co. Mysterious deaths, stadium secrets, and plenty of warnings, make Arlington, (Dallas), Texas, the last place you want to be on February 6, 2011. The only question is, when the 2 minute warning goes off, which celebrities, players, politicians, and NFL personal will leave the stadium? Bets are, plenty of folks in the know will “try to beat traffic”, and get the hell out, despite the predictably close score of the most watched TV event ever! Should the Super Bowl be attacked on a grand scale, it would terrorize hundreds of millions of people and the world would be forever changed.

## The Nuclear Bible: Nuclear Terror Target # 2: The Olympics

**Intro:** The 2012 Olympics in London, England, have already received much hype about a potential nuclear terrorist attack. London was one of 7 cities nuked in the *Telegraph's* infamous "Blackjack, a fantasy of global nuclear terror. Please See Chapter 21: *Nuclear Blackjack* for more information. With all nations of the world present, a LIVE nuke attack during the Olympics' Opening Ceremonies would make for a terrorist's wet dream. Interestingly, Brazil who hosts the World Cup in 2014, also hosts the 2016 Olympics. The Globalists like options, and Brazil might be a nuclear one.

## The Nuclear Bible: The Olympics' History of Terror

**Date:** September 5-6, 1972

**Source:** Wikipedia

**Location:** Munich, Germany

**Alleged Terrorist(s):** Black September

**Offense(s):** Mass-Murder, Massacre, Hostage Taking

**Incident Name:** 1972 Munich Olympics Massacre

**Abstract:** The Munich massacre is an informal name for events that occurred during the 1972 Summer Olympics in Munich, Southern Germany, when **members of the Israeli Olympic team were taken hostage and eventually murdered by the terrorist group Black September**. Members of Black September contended that Yasser Arafat's Fatah organization secretly endorsed the operation. Fatah, however, disputed the accusation. Black September called the operation "Ikrit and Biram". By the end of the ordeal, the **terrorists had killed 11 Israeli athletes and coaches and 1 West German police officer**. Five of the eight members of Black September were killed by police officers during a failed rescue attempt. The three surviving terrorists were captured, but later released by West Germany following the hijacking by Black September of a Lufthansa airliner. Israel responded to the massacre with Operation Spring of Youth and Operation Wrath of God, as well as a series of airstrikes and killings of those suspected of planning the kidnappings (Wikipedia, 2010).

**Date:** July 27, 1996  
**Source:** Wikipedia  
**Location:** Atlanta, Georgia, USA  
**Alleged Terrorist(s):** Eric Robert Rudolph  
**Offense(s):** Pipe Bombing  
**Incident Name:** *Centennial Olympic Park Bombing*

**Abstract:** The Centennial Olympic Park bombing was a terrorist bombing on July 27, 1996 in Atlanta, Georgia, United States during the 1996 Summer Olympics, the first of four committed by Eric Robert Rudolph. **Two people died, and 111 were injured.** Centennial Olympic Park was designed as the "town square" of the Olympics, and thousands of spectators had gathered for a late concert by the band Jack Mack and the Heart Attack. Sometime after midnight, **Rudolph planted a green U.S. military ALICE pack (field pack) containing three pipe bombs surrounded by nails underneath a bench near the base of a concert sound tower.** He then left the area. The pack had a directed charge and could have done more damage but it was tipped over at some point. **It was the largest pipe bomb in U.S. history, weighing in excess of 40 pounds.** It used a steel plate as a directional device. Investigators were later to tie the Sandy Springs and Otherside bombs together with this first device because **all were propelled by nitroglycerin dynamite, used an alarm clock and Rubbermaid containers, and contained steel plates.** Security guard Richard Jewell discovered the bag and alerted Georgia Bureau of Investigation officers; 9 minutes later, Rudolph called 911 to deliver a warning. Jewell and other security guards began clearing the immediate area so that a bomb squad could investigate the suspicious package. At 1:20 AM, the bomb exploded. An Albany, Georgia woman, Alice Hawthorne, was killed by a nail that struck her in the head. The bomb wounded 111 others. Turkish cameraman Melih Uzunyol died from a heart attack he suffered while running to cover the blast (Wikipedia, 2010).

**Date:** April 6, 2008  
**Source:** BBC  
**Location:** Beijing, China  
**Alleged Terrorist(s):** Xinjiang Separatists  
**Offense(s):** Plot to kidnap people and bomb Beijing during Olympics  
**Incident Name:** *2008 Olympic Terror Plot*

**Date:** April 6, 2008  
**Source:** BBC  
**Title/Headline:** *China 'Fails Olympic Terror Plot'*

**Abstract:** China says it has cracked a terror plot to kidnap athletes, journalists and tourists at August's Beijing Olympics. The security ministry said 35 arrests had been made in recent weeks and explosives seized in the north-western Xinjiang province. It said 10 others were held when police smashed another plot based in Xinjiang back in January to disrupt the Games. The province is home to many Muslim Uighurs, some of whom want independence in the region they call East Turkestan. **Uighur activists have accused the Chinese authorities of fabricating terror plots to crack down on the people of the region and prevent them airing legitimate grievances.** Thursday's development was announced by a Ministry of Public Security spokesman at a news conference. Wu Heping was quoted by AFP news agency as saying: **"The violent terrorist group plotted to kidnap foreign journalists, tourists and athletes during the Beijing Olympics."** Mr Wu said two terror rings had been smashed by the authorities and that militants had planned to launch attacks to disrupt the Olympics from next month. In recent weeks, he said, **police had seized nearly 10kg (22lb) of explosives and "jihadist" literature during raids in Xinjiang's capital, Urumqi.** He said the militants had sought volunteers to carry out suicide bombings in Urumqi and other Chinese cities. Mr Wu also provided more details on another alleged plot, which the authorities said they had smashed last month. **He said those militants had planned to attack hotels and government offices in Beijing, Shanghai and other cities. Poisonings and remote-control bombings were planned and 13 practice explosions had already been carried out,** he said (BBC, 2008).

**Date:** March 31, 2010  
**Source:** Daily Mail, Tom Cain  
**Title/Headline:** *Olympic Armageddon: How Terrorists Could Send Nuclear Bomb Up The Thames To Target London 2012 Games*

**Abstract:** In less than an hour, the London Olympics of 2012 would get under way at a ceremony presided over by Her Majesty the Queen and attended by political leaders from around the world. **More than a billion people would be watching live on TV.** The Olympic Stadium was now, officially, the top terrorist target on earth. The meeting room contained representatives from MI6 and MI5 the Special Forces, the Metropolitan Police's SO15 Counter-Terrorism Unit and a slew of Government departments. They were way past the point of making preparations. Every possible eventuality had been considered and its dangers analysed. CCTV cameras, backed by facial recognition systems, were tracking the crowds travelling to the Olympic Stadium and gathering in its stands. Teams of sniffer dogs had gone over every square millimetre of the Olympic site, looking for explosives. In the skies above London, police spotter drones were tracking any suspicious movements of traffic. Helicopters fitted with radiation sensors had swept the city from the air, seeking out the gamma rays that would signal the presence of a nuclear device. Everything had been thought of. And yet there could still be nasty surprises. Such as the alert they had just received from GCHQ, the Government's surveillance centre in Cheltenham. It stated there had been a sudden spike in communications traffic between known activists in the Islamic fundamentalist movement. One email in particular had caught the attention of a GCHQ supercomputer. Sent from an iPhone belonging to a regular worshipper at one of London's most radical mosques, it read: **'Have collected those old 90s records. Taking them to the party now.'** It seemed perfectly innocent, but for **two digits and two letters, placed consecutively: 9-0-s-r.** Together they formed the chemical symbol for a substance called **strontium-90.** And that was enough to silence the room. 'Wonderful,' sighed a senior MI6 officer with heavy irony. 'A dirty bomb. Just what we need.' Though no one

in Westminster knew it, about 50 kg of strontium-90 was sitting at that moment less than five miles from the Olympic Stadium. It had come from the frozen wasteland of Russia's Arctic coast. There, it had been used to power one of a string of unmanned lighthouses erected by the former Soviet government, then forgotten in the chaos of the post-Communist years. **Retrieved by a Russian mafia gang, the strontium was sold on to Al Qaeda operatives fighting alongside Islamic rebels in Chechnya.** They placed it in a lead casket, which rendered the strontium's radioactivity undetectable, and transported it to the UK in a container marked Agricultural Equipment. Now the strontium had come to rest in an anonymous unit on an industrial estate in Walthamstow, East London. But it would not be at rest for much longer. The Prime Minister had sent his deputy director of communications to the Home Office meeting, the director himself having bagged a Royal Box seat at the Olympics opening ceremony. 'Dirty bomb' was not a phrase the spin doctor wanted to see on tomorrow's front pages. 'What are we talking about here?' he asked. 'Is this some kind of nuke?' An official from the Ministry of Defence, whose speciality was threat assessment, was the first to speak. 'Not exactly. A dirty bomb contains nuclear material, but it doesn't use it to generate the actual explosion. The blast comes from conventional explosives, like a regular bomb. So it's much, much less powerful than even the smallest atom bomb.' 'Well that's a relief.' 'Ah, not exactly. **You see, the blast from the explosives smashes into the nuclear material, such as this strontium-90, and blasts it into highly toxic dust, which is spread by the force of the blast and then carried on the wind. Anyone breathing that air inhales the toxic dust.**' The spin doctor grimaced at the thought of talking away that disaster. 'How dangerous is this toxic dust? What kind of casualties are we talking?' 'It's a matter of quantity. People close to the blast, who are exposed to high doses of radioactive material will die. In less severe cases, exposure will cause serious, but survivable, sickness. 'For most people, however, who breathe a very diluted amount of the material, a mile or two from the bomb site, it would be no better or worse than, say, smoking a few packets of cigarettes.' 'Well, that's good, isn't it?' asked the spinner, desperate for a positive angle. 'Not entirely,' the bureaucrat replied. 'For one thing, **a large, high-explosive bomb in the Olympic Stadium, could easily cause thousands of casualties. And with 80,000 people crammed into a confined space, even those who escape the blast will inevitably breathe in a great deal of heavily radioactive air. 'In total, I would expect many times the number of deaths the Americans suffered on 9/11.** The same would apply, of course, if the bomb were to go off at any of the other Olympic celebrations tonight.' Giant screens had been erected in Britain's major cities to broadcast the opening ceremony. Each would attract tens of thousands of revellers. Just down the road from the meeting, Trafalgar Square was already crammed with people. 'My God!' the spin-doctor gasped. 'And the whole thing'll be live on TV. The Olympics will be over before they'd begun. Britain's reputation in the world would be...' 'Devastated,' nodded the MI6 officer. **'This would give Al Qaeda the greatest propaganda triumph in its history. And it would be our greatest humiliation.'** 'There's something else,' said the man from the Ministry of Defence. **'The dust eventually settles on the ground and on buildings as fallout, which, in strontium's case, would continue to emit radiation for around 30 years.** So it has to be cleaned up, which is not an easy process. 'In fact, it may be simpler to knock down any affected buildings, remove contaminated earth and rebuild from scratch.' 'So the Olympic site...' 'Would be a write-off, as would any city centre hit by a dirty bomb. A decade after 9/11, the Ground Zero site was still a gigantic hole in the ground. A dirty bomb in central London would be even more devastating. **Politically, financially, psychologically, this would be a wound from which the country might never recover.'** 'So where the hell is this strontium then?' the spin doctor demanded. And this time, no one had an answer. **Rafik Anwar was the son of a Pakistani industrialist and an upper-class Englishwoman.** Educated at Harrow and Oxford, Anwar appeared to devote himself now to the playboy life that his money, charm and looks so well suited. He bedded high society's prettiest girls. He gave witty quotes to delighted gossip columnists. And in his most private moments, with none but his God to observe him, Anwar waited for the day when he would tear their world apart. That day had now come. In the drab, shed-like surroundings of the industrial unit, **Anwar had watched as an Al Qaeda explosives expert wired the deadly strontium-90 to a 200 kg charge of C4 plastic explosive, packed on a wooden pallet. When the job was done, the expert sent a coded message on his i-Phone via a series of apparently innocent contacts to the team's controllers in Pakistan,** confirming that the operation was on schedule. Had any of the bombers known that the message had been intercepted, they would have been untroubled. It was too late to stop them now. The completed bomb was loaded into a dusty white Transit van. Anwar and two other men got on board, then drove away through the streets of East London, out past Walthamstow Marshes towards the Springfield marina on the River Lee Navigation. The river flows to the Thames. And it passes right by the Olympic Stadium on the way. Three months previously, Anwar had bought a berth at the marina and used it to moor his pride and joy, a £1.1m XSR48 superboat, capable of doing 100mph. The pallet was loaded aboard. The van drove away. Then Rafik Anwar took the controls of his boat, left the mooring and **set off for the Olympic Stadium and his own glorious martyrdom.** The security forces had not been idle. While telecoms experts worked on determining the location from which the 90sr message had been sent, military commanders had doubled the number of bomb-disposal teams on-site at the Olympic Stadium. MI5 agents were hustling all their informants and sources of information, trying to find any scraps of data that might provide a clue as to who was planning what and when. Meanwhile, the dignitaries were starting to arrive at the Olympic Stadium. Thirty-seven minutes before the ceremony was due to begin, the email was traced to the industrial estate where the bomb had been assembled. Within ten minutes, armed police had arrived there, closely followed by MI5 and Special Forces personnel. It took a further three minutes to uncover the unit used to house the strontium. Footage from the nearest CCTV cameras was swiftly examined, the Transit was identified and its route to the marina tracked. Rafik Anwar's face was caught on video footage and recognised by an MI5 officer, not because he was on any list of suspects, but because she recognised him from an article in Tatler magazine. By chance, the article had described Anwar's magnificent speedboat. So now they knew how he planned to deliver his attack. Whether there was any time to do anything about it was another matter. The 2012 Olympics were eight minutes away from starting and the Royal Box was all but full when security personnel reached the marina where Anwar's boat had been moored. But the berth was empty. The boat had gone. The Olympic Stadium stands on an island surrounded by rivers and canals. One of them is the River Lee Navigation, which runs along one side of the stadium. It is possible to go by river and canal all the way from the Olympic site to Birmingham. This would make the stadium extremely vulnerable to waterborne attack, were it not for the many locks that govern the flow of water and boats. Shut down the locks and you shut down the water traffic. On the day of the opening ceremony, there wasn't a working lock within several miles of the stadium. That explained the choice of the Springfield marina. It was as far from the stadium as one could travel without passing through a lock. Rafik Anwar was, therefore, able to shift at motorway speeds down open water towards the Olympic site in his XSR48. And with him was coming a radioactive dirty bomb. Anwar's boat was rocketing past Hackney Marshes when a Metropolitan Police patrol helicopter picked it up. The pilot swooped towards the river, hovering 20ft above the water. He switched on the chopper's powerful searchlight, beaming it straight at Anwar's face, hoping to dazzle him. Then the pilot spoke through a loudspeaker: 'This is the Metropolitan Police. Stop immediately or we will shoot. I repeat: stop or we will shoot.' The boat kept coming. The helicopter swung

through 90 degrees, so that it was side-on to the boat. The sliding door of the cabin opened and two police marksmen opened fire with Heckler and Koch MP-5 submachine guns. From the riverbank, a four-man SAS squad added to the hailstorm of hot lead. The windscreen in front of Rafik Anwar disintegrated. The cockpit erupted around him as one bullet after another smashed into it. He rocked backwards in his seat as he was hit in the shoulder. Another round grazed the side of his body. But he ignored the pain and forced himself to grip the controls even tighter. He was almost there. The stadium was just a couple of hundred metres ahead. In a matter of seconds he would be alongside it. The guns kept firing. A round smashed into Anwar's chest, ripping into his heart. Another struck him in the lungs. He slumped forward over the controls. But Rafik Anwar died with a smile on his face. **It was too late to stop him now.** The quad bike carrying an ammunition technical officer, one of the Army's elite bomb disposal men, had been racing along the path that ran parallel to the water, following the boat, which had come to rest with its sleek, pointed nose resting against the riverbank. The ATO skidded to a halt, jumped off the bike, raced to the bank and leapt onto the boat. He wore no protective suit. There was no point. When you're working next to a bomb, it doesn't matter how much armour you've got on. If it goes, you go. There were two minutes to go till the ceremony began. There was no hope of evacuating the stadium and, anyway, the spectators would be safer in it than out in the open. The ATO found the massive bomb in the passenger cabin in the bows of the boat, forward from the shattered cockpit where Rafik Anwar lay. There was a timer atop the mass of C4 and strontium-90. It struck the ATO that even if the bomb did not go off, he was so close to the radioactive material that it might just kill him anyway. The clock showed 48 seconds till detonation. From the stadium there came the sound of a massive roar as the lights over the athletics field dimmed. The show was about to begin. The ATO ignored everything as he examined the wires and circuit boards in front of him.

**Thirty seconds. He couldn't fix it in time. Twenty seconds... 15... 10...**

The hell with it, the ATO simply cut every wire he could see. He waited for the detonation of a booby trap. He watched the clock count down to zero. And nothing happened. The bomb remained silent and inert. The Olympic Stadium was safe. In that room in Queen Anne's Gate, the people who had been following the drama on screens linked to video-phones slumped in exhausted relief and exchanged wan smiles of congratulation. **They had no idea that less than 200m away another Transit van, driven from a different industrial estate, was making its way towards Trafalgar Square and its celebrating crowds. And in the back of that van was another pallet loaded with C4 explosives. And a second consignment of strontium-90** (Cain, 2010).

**Conclusion:** As the aforementioned article states, terrorists are very excited about the 2012 summer Olympics in London. The year will be 2012, and the Globalists might just try to make the "End of the World" scenarios that Hollywood has been pimping about December 21, 2012, come true.

## The Nuclear Bible: Nuclear Terror Target # 3: The World Cup

**Intro:** Being the largest Nation in South America, Brazil is a rising star who will host the World Cup (2014) and the Summer Olympics (2016) during the next four years. A nuclear detonation would be the end of Brazil's dominance in South America, and would potentially destroy the entire South American economy for decades. Brazil, who recently signed a nuclear agreement with Iran and Turkey, is the largest and most powerful economic force in South America. It is possible that the Globalists see Brazil as a threat and may try to invade South America to "hunt down Al Qaeda", should a nuclear terror event occur in 2014 and/or 2016.

**Nuclear Target # 3: The World Cup**

**Agency:** FIFA (Fédération Internationale de Football Association)

**World Cup Dates:** 2014, 2018, 2022

**2010 World Cup:** The 2010 FIFA World Cup was played in South Africa on July 11, 2010 (7/11). Aside from the U.S., most other countries put the day first rather than the month, thus resulting in the numerical switch to 11/7. Should a massive terror event occur at the World Cup on the same date, the 7/11 convenience store with 38,000 locations globally would serve as a constant reminder of Nuclear Terror, similarly like 9/11 was to all Americans who dialed 911 (Emergency Phone Number for Police, Fire, & Medical). Ironically, on the day of the World Cup Final, twin suicide bombs were detonated in Uganda during the game.

| <u>Event:</u>  | <u>Country:</u> | <u>Date:</u>             |
|----------------|-----------------|--------------------------|
| 2014 World Cup | Brazil          | June 11 – July 11, 2014? |
| 2018 World Cup | Russia          | 2018                     |

**Title/Headline:** German Official Says World Cup Terror Attack Narrowly Avoided

**Abstract:** German security authorities were proud of having pulled off a safe and successful 2006 Soccer World Cup. **Now a German security official has revealed that a major attack on the tournament may have been averted -- but the suspect got away.** Ever since the 2006 World Cup came to an end, Germany has been basking in the glow of having pulled off a wildly successful tournament. **But according to Bavaria's interior minister, it almost ended in explosive failure.** Joachim Herrmann, of the conservative Christian Social Union, told German television news channel N-TV that police foiled a terror attack planned to be carried out in Munich on the first day of the World Cup in June 2006. He said that the public was deliberately not informed of the possible threat at the time to prevent panic. According to the station, a spokesman for the Bavarian Interior Ministry said that police began intensive observations of a lone man thought to be "associated with Islamist extremism" who was noticed acting suspiciously near Munich's Allianz Arena soccer stadium. In the course of the surveillance, according to the spokesman, the suspect left Germany, perhaps as a result of growing suspicious that he was being watched. The spokesman did not reveal the man's nationality or current place of residence. **The man was thought to be a member of a group that had cased the arena prior to the games,** according to the *Süddeutsche Zeitung*. Herrmann made the comments in the US, where he is holding a round of meetings this week with the FBI, the CIA, the US State Department, the Pentagon and the Department of Homeland Security to discuss security issues, exchange information about suspected terrorists and strengthen terror-prevention ties between the countries. Herrmann delivered a speech to the German Marshall Fund Foundation Thursday in Washington, D.C., in which he warned of the "danger of attacks from home-grown networks" and the "formation of parallel societies in large cities and urban areas." "We can't just ignore the fact," Herrmann said, "that there is drastic distance between some Muslims and our system of values" (Spiegel News, 2008).

**Title/Headline:** *Terror Attack On 2006 World Cup Was Averted'*

**Abstract:** Berlin, March 29 (DPA) **German security forces had scotched possible terrorist plans to attack the Munich stadium on the occasion of the opening game of the 2006 football World Cup, Bavarian Interior Minister Joachim Herrmann has claimed. "People were observed who were quite clearly monitoring the stadium with the possible intention of carrying out an attack,"** Herrmann told national commercial news broadcaster n-tv, acknowledging the incident for the first time. One person regarded as a potential security threat had been deported, he said. News of the possible threat had been kept from the public "because we did not want to spread unnecessary fear", Herrmann said. Germany beat Costa Rica 4-2 in the June 19, 2006, opening game of the tournament that passed off without incident and was seen as a major public relations success for Germany (Thaindian News, 2008).

**Title/Headline:** *Iraq Says It Uncovered Al Qaeda Plot On World Cup*

**Abstract:** **A senior Al Qaeda militant suspected of planning an attack targeting the soccer World Cup in South Africa next month has been detained,** an Iraqi official says. Maj. Gen. Qassim al-Moussawi, a spokesman for Baghdad security services, says the militant was an officer in the Saudi army. **Abdullah Azam Saleh al-Qahtani is suspected of planning a "terrorist act" in South Africa during the World Cup beginning June 11,** al-Moussawi said at a press conference on Monday. He added that al-Qahtani entered Iraq in 2004 and is suspected in several attacks in the capital and elsewhere in the country. Al-Moussawi said the 30-year-old Saudi national, who was in charge of "security" for the terror network in Baghdad, was in contact with Al Qaeda number two Ayman al-Zawahiri to "organize the plan," AFP reported. In Johannesburg, meanwhile, **South African police were reportedly investigating the alleged terror plot at the month-long tournament, the world's biggest sporting event which starts on June 11.** The World Cup is expected to attract more than 370,000 foreign fans. "The South African police are still working on getting confirmation," Nonkululeko Mbatha, spokeswoman for the national police chief, told AFP. Despite the killing last month of Al Qaeda in Iraq's two top figures in a U.S.-assisted military operation, attacks blamed on the group have continued (Fox News, 2010).

**Title/Headline:** *Al-Qaeda Number Two Plotting World Cup Terrorist Attack*

**Abstract:** **Osama bin Laden's closest al-Qaeda lieutenant has been plotting a terrorist attack on the World Cup, Iraqi police said. According to investigators, Ayman al-Zawahiri, bin Laden's number two, was conspiring with an al-Qaeda operative who was arrested in Baghdad two weeks ago.** The operative, named as Abdullah Azzam Saleh Misfar al-Qahtani and said to be a former Saudi army colonel who had travelled to Iraq and become security chief for al-Qaeda's local branch, has been accused of organising suicide bombings in two cities south of Baghdad. Major General Qassim Atta, head of security in Baghdad, said he was also believed to have made contact with al-Zawahiri, the man generally regarded as al-Qaeda's second-highest leader after bin Laden. "He participated in the planning of a terrorist act in South Africa during the World Cup," Maj Gen Atta said. **"He was in contact with the terrorist Ayman al-Zawahiri to organise the plan hatched by al-Qaeda."** Maj Gen Atta gave no details of what the plot was or how far it had been developed. **But last month a jihadist website published a statement in which al-Qaeda in the Islamic Maghreb, the North African branch, suggested an attack might be made on England's opening game, against the United States.** The bulk of South Africa's police work in advance of the World Cup, starting next month, has been aimed at controlling high rates of violent crime. Precautions have been laid against terrorist attacks, but police said they were still investigating the latest claims. **"The South African police are still working on getting confirmation,"** Nonkululeko Mbatha, a spokeswoman, said (Spencer, 2010).

**Title/Headline:** *US State Department Issues South Africa Alert*

**Abstract:** **The U.S. State Department has issued a travel alert to U.S citizens living in South Africa or traveling there for the World Cup. "There is a heightened risk that extremist groups will conduct terrorist acts within South Africa in the near future,"** the department said in an alert Thursday. **"While a number of terrorist threats against the World Cup in South Africa have appeared in the media in recent weeks and months, the U.S. government has no information on any specific, credible threat of attack that any individual or group is planning to coincide with the tournament."** The State Department said it would make any information public on "a specific and credible threat." U.S. citizens were advised to keep car doors and windows locked while driving and not to leave valuables in plain view or to wear expensive jewelry. **The alert said public transportation is "poorly developed" and advised using rental cars or private transport instead. And when stopping at intersections at night or in isolated areas, it suggested leaving room for a**

"quick exit." The State Department says its alerts are "about short-term conditions" in a country "that pose imminent risks to the security of U.S. citizens." **Its warnings are "to describe long-term, protracted conditions that make a country dangerous or unstable"** (ABC News, 2010).

**Title/Headline:** *South Africa Refutes World Cup Terror Report*

**Abstract:** South Africa's National Joint Operational and Intelligence Structure (Natjoints) on Sunday refuted media reports about a terror threat to next month's the 2010 FIFA World Cup in South Africa. The move came after the Sunday Times in Johannesburg, the biggest Sunday newspaper in South Africa, carried an extensive story on the subject as their main item. It quoted experts as saying South Africa is vulnerable to some form of terrorist attack during the June 11 to July 11 tournament. However, South Africa's Natjoints said in a statement to the South African Press Association (SAPA) **"The security forces can firmly state that there is no known specific terror threat against the 2010 FIFA World Cup."** It "strongly disputed" the Sunday Times's claim that South Africa had drawn up a watch-list of 40 terror suspects. The newspaper said it had received two separate accounts of "at least one arrest linked to World Cup threats." **The Sunday Times also said that "operational militant training camps" were set up in several provinces.** In response Natjoints said that the newspaper report was riddled with inaccuracies and most comments were from anonymous sources. **"Although the Natjoints is not prepared to discuss intelligence matters for obvious reasons, we can categorically deny the existence of a 'watch-list of 40 terror suspects' or the arrest of any person directly targeting the World Cup.** Natjoints also disputed the existence of operational militant training camps in several provinces in South Africa. Earlier the Sunday Times had quoted among others, Frank van Rooyen, senior researcher at the South African Institute of International Affairs. **"We are definitely vulnerable to suicide bombers and car bombs. All the signs are there that al-Qaeda is planning one of these attacks on the World Cup," said Van Rooyen, who is also a former South African naval officer** (Xinhau News, 2010).

**Title/Headline:** *Pakistan Terror Suspect Held In Zimbabwe*

**Abstract:** A Pakistani suspect in the 2008 Mumbai attacks has been arrested in Zimbabwe as he tried to cross into World Cup host South Africa, police and state media say. Imran Muhammad, 33, was arrested at the Beitbridge border post along with another Pakistani national, the state-run Herald newspaper reported, saying Muhammad was wanted for the Mumbai attacks. **"Indications were that... Muhammad (is) wanted in Pakistan (as he) was allegedly involved in the terror attacks that rocked Mumbai, India in November 2008,"** the daily said. Police spokesman Wayne Bvudzijena said the two were arrested on June 20 after they were found using fake Kenyan passports. **"Investigations are still being carried out through Interpol to see who these people are," he told AFP. "We will have to get information from the Pakistani authorities to see what they have on these two."** According to unnamed sources quoted by the Herald, Muhammad was normally based in the Chilean capital Santiago. The daily said Muhammad and 39-year-old Chaudry Parvez Ahmed flew from Saudi Arabia to Tanzania, before connecting to Zimbabwe by road. Bvudzijena would not comment on why the two were travelling to

South Africa. "This is part of our investigations. We will only be able to know why they wanted to travel to South Africa once our investigations are completed," he said (The Sydney Morning Herald, 2010).

**Title/Headline:** *Two Pak Men Charged With Using Forged Travel Documents In Zim*

**Abstract:** Two Pakistani men, one of whom was initially thought to be linked to the Mumbai terror attack, have been charged in a Zimbabwe court with using forged travel documents to enter South Africa. The two Pakistani men, who were arrested at a border post in Zimbabwe while trying to cross into South Africa illegally were produced in court yesterday and charged with breaching immigration laws. The arrest had raised an alarm over the possibility of terror groups trying to target the FIFA World Cup in South Africa. The state media had initially linked one of the two arrested men to the Mumbai terror attack, but police is yet to verify any such links. Imran Muhammad (33) and Warraich Chaudhry Pervez Ahmed (39) were arrested while trying to cross into South Africa at Beitbridge Border Post last month. The two appeared in court and were charged with contravening sections of the Immigration Act, Zimbabwe Herald reported. The two men were found to be in possession of fake travel documents by immigration officials at the border check post while trying to enter the country on June 20. The paper said they were found in possession of forged Tanzanian Emergency Travel Documents whose names did not tally with those on their Pakistani passports. They have been remanded in custody to July 22 because a Pakistani interpreter is needed for the proceedings as the two men are not conversant in English. The prosecutor told the court that the two men were being charged under the Immigration Act, "after they failed to present themselves to an immigration officer and possession of travel documents to which they were not entitled" (ZEE News, 2010).

**Title/Headline:** *Jihad VS. The World Cup? Not If Bin Laden Has His Say*

**Abstract:** Last month an extremist Islamic organization in Somalia arrested two men watching a World Cup game between Argentina and Nigeria. The two were put to death. The organization, that draws its ideas from al-Qaida leader Osama bin Laden, arrested ten others who were watching games and later released them with a warning: "World Cup games are a waste of time and money, they are immoral and un-Islamic. We warn Somali youth not to watch the games." However, if bin Laden, from his hiding place somewhere in Afghanistan or Pakistan was to hear of the murderous attack, he would undoubtedly be dismayed. The reason? The leader of Al Qaida - whose conservative Islamic worldview outlaws music, women's education, gambling, alcohol, homosexuality and beard shaving - is a huge fan of soccer, and his favorite position is striker. But bin Laden is not the only Muslim extremist that submits to the game of soccer - there are those that claim that he favorite club is London's Arsenal - he is only one of many Jihadists that love the world's most popular sport. "It's on the whole their favorite thing after jihad," American-French anthropologist Scott Atran, who investigated the connection between terror organizations and soccer, told Newsweek (Haaretz, 2010).

**Title/Headline:** Ugandan Toll In World Cup Bombings Rises To 74

**Abstract:** An al-Qaida-linked Somali militant group suspected in twin bombings in Uganda's capital that hit crowds watching the World Cup final endorsed the attacks Monday but stopped short of claiming responsibility, while the death toll rose to 74. The blasts came two days after a commander with the Somali group, al-Shabab, called for militants to attack sites in Uganda and Burundi, two nations that contribute troops to the African Union peacekeeping force in Somalia. **The attacks on two soft targets filled with civilians also raise concerns about the capabilities and motives of al-Shabab, which the U.S. State Department has declared a terrorist organization.** If confirmed that the group carried out the attacks, it would be the first time al-Shabab has struck outside Somalia. Sheik Yusuf Sheik Issa, an al-Shabab commander, told The Associated Press that he was happy with the attacks in Uganda but refused to confirm or deny that al-Shabab was responsible. "Uganda is one of our enemies. Whatever makes them cry, makes us happy. May Allah's anger be upon those who are against us," Sheik said. Kampala's police chief, Kale Kaihura, said he believed al-Shabab could be responsible. One of the targets was an Ethiopian restaurant - a nation despised by the al-Shabab militants. **The attacks appeared to represent a dangerous step forward by al-Shabab,** analysts said, and could mean that other East African countries working to support the Somali government will face attacks. **"Al-Shabab has used suicide bombers in the past and shown no concern about civilian casualties in its attacks,"** said David Shinn, a former U.S. ambassador to Ethiopia and a professor at George Washington University. **"Some elements of al-Shabab have also prohibited the showing of television, including the World Cup, in Somalia."** At a wrap-up news briefing Monday in South Africa, FIFA President Sepp Blatter denounced the violence against fans watching the game. **"Can you link it to the World Cup? I don't know... Whatever happened, linked or not linked, it is something that we all should condemn,"** he said. Al-Shabab, which wants to overthrow Somalia's weak, U.N.-backed government, is known to have links with al-Qaida. **Al-Shabab also counts militant veterans from the Iraq, Afghanistan and Pakistan conflicts among its ranks. Their fighters also include young men recruited from the Somali communities in the United States.** Ethiopia, which fought two wars with Somalia, is a longtime enemy of al-Shabab and other Somali militants who accuse their neighbor of meddling in Somali affairs. Ethiopia had troops in Somalia between December 2006 and January 2009 to back Somalia's fragile government against the Islamic insurgency. In addition to Uganda's troops in Mogadishu, Uganda also hosts Somali soldiers trained in U.S. and European-backed programs. **Officials said the Sunday attacks will not affect the African Union summit being held in Uganda from July 19-27. Many African leaders are expected to attend** (Delany & Straziuso, 2010).

**Title/Headline:** Could 2010 World Cup Final Be The Most Watched Event In History?

**Abstract:** The World Cup final has always been one of the most watched events on the planet with viewers from New York to Nepal tuning in to see soccer's elite in action. But now football's world governing body FIFA hopes Sunday's final between the Netherlands and Spain will prove to be the most watched event of all-time, after early research suggests the 2010 edition hosted by South Africa has garnered the biggest television audience yet. **"We don't want to speculate in numbers but we're hoping this will be the biggest [event] ever,"** Niclas Ericson, FIFA's director of television, said in a press conference from Soccer City Stadium, the final's venue. **"We think it will be bigger than the 2006 World Cup final which had an audience somewhere in the region of around 700 million,"** he added. **The record to beat is that set by the opening ceremony of the Beijing Olympic Games, when in 2008 a global audience of one billion** watched at least some part of the extravaganza unfolding in the Chinese capital. Kevin Alavy, a director of Futures Sport + Entertainment, a global sport research and evaluation consultancy, told CNN that sport had an attraction few other events could match. **"The most watched events in history, by some margin, are the opening ceremony of the Olympics Games and the World Cup final. Historical events, like the inauguration of Barack Obama or the funeral of Princess Diana for example may be important from a cultural and historical perspective, but they simply don't have the same scale of television audiences that mass sport events can generate,"** he said. Alavy added that for any record attempt the Chinese market was now crucial. "Historically the World Cup final always drew more figures than anything else, however, when the Olympics took place in... the most populous nation in the world the viewing figures went through the roof. **"Our research found that there was a global audience of 593 million people who watched the opening ceremony live, while 320 million watched the World Cup final in Germany in 2006,"** Alavy said. However, Ericson said the international reach of the World Cup had grown significantly since 2006. **"I think this is the first time we have managed to place the rights in every single television territory -- right from the small Pacific islands, to small countries in Asia and Africa -- we have covered everywhere. "The kick off time has maximized the viewership in America and in Africa. In market share we have seen big increases in major territories, therefore we feel confident in saying that we'll have much higher figures than those for Germany. On**

top of the audience growth in television markets Ericson added there were hundreds of thousands who had watched at public viewing venues or on other platforms that had not been counted, factors that needed to be taken into account (Wyatt, 2010).

**Title/Headline:** *Blatter Expects Winter Switch For 2022 World Cup In Qatar*

**Abstract:** IFA president Sepp Blatter expects the 2022 World Cup in Qatar to be held in the winter to avoid the searing heat in the region in the summer. Qatar won the right to host football's global showpiece last month despite temperatures in the Gulf emirate reaching 40 degrees Celsius in June and July when the tournament is traditionally staged. **Blatter went on record Friday to say that a switch to winter would make more sense, citing health concerns for players. "I expect it to be in the winter because when you play football you must protect the main people, the players,"** he told gathered reporters in the Qatari capital Doha ahead of the Asian Cup, which starts later Friday. **We will take it up at our executive committee meeting in March,"** he added. **German legend Franz Beckenbauer, a FIFA executive committee member, first raised the prospect of a winter World Cup in January and Michel Platini, the president of UEFA, the European governing body, is also believed to support the idea.** But it would have serious implications for the major domestic leagues in Europe which would be in full swing during this period. Qatar's bid promised to provide air-conditioned stadiums and training grounds to combat the intense heat, but doubts have been raised this would fully address the issue, particularly for supporters. Blatter said Qatar organizers would have to approach FIFA about any change of dates. **"If they have any wishes on whether they want to change the basic conditions prevailing at the bidding process, then they have to make this demand of the FIFA Executive Committee,"** he said. "The Executive Committee is free to change anything," he added. **"If there really is a will to change dates then we have enough time to do it because we still have 11 years to go."** **Blatter has defended the decisions to award the 2018 and 2022 World Cups to Russia and Qatar, saying football had to break into new territories** (CNN, 2011).

**Conclusion:** The summer to winter World Cup switch guarantees far more viewers, for more people will be inside and less people are on summer vacation. This switch makes it far more likely that this event will be exploited for nuclear terrorism. Obviously, this move has political ramifications, for if the heat was a concern, a massive stadium dome could be built with state of the art air conditioning. Although the Super Bowl is the most watched TV event in America, the World Cup is the most watched event in the World making it a prime target. The collective outrage from a nuclear detonation at the World Cup would be so great that countries would simultaneously cower to the demands of the likely new World Government, thus making it a very likely target in the future.

## **The Nuclear Bible: Nuclear Terror TV & Programming**

**Intro:** The amount of premeditated nuclear terror programming on TV and in the movies over the last 60 years is absolutely staggering. Hollywood appears obsessed with nuclear and post-apocalyptic storyline, which begs the question: Why?

**Title:** *24*

**Distributor:** 20<sup>th</sup> Century Fox Television

**Abstract:** *24* is an American serial action/drama television series broadcast on FOX and syndicated worldwide. **24 premiered November 6, 2001, roughly three weeks after the 9/11 terror attacks.** The story of 24 is presented in the semblance of real time. Each season depicts a 24-hour period in the life of Jack Bauer, who works with the United States government as it fights fictitious terrorist threats to the United States. Bauer is often in the field for the Los Angeles Counter Terrorist Unit (CTU) as it tries to safeguard the nation from terrorist threats. Season 2 was solely based on Jack's attempt to **stop a nuclear bomb from detonating in Los Angeles**, and assists President **David Palmer, an African-American, and an obvious Barack Obama protégé in the national crisis.** Later in the series during season 6, Jack is released after being detained in a Chinese prison for twenty months, and is determined to **stop terrorists who plot to set off suitcase nuclear devices in the United States** (Wikipedia, 2010).

**Creator:** Nick Waters

**Writer(s):** Michael Nobori

**Distributor(s):** 20<sup>th</sup>

**Abstract:** *The Event* is an American political thriller and science fiction television series created by Nick Wauters for NBC. The show centers on three plots: Sean Walker, a computer programmer, whose girlfriend is kidnapped; President Elias Martinez, who must deal with detainees at Mount Inostranka; and the detainees themselves and their non-terrestrial origin. The network announced on May 7, 2010 that the show would be picked up as a series. **The series premiered on September 20, 2010. The show was picked up for a full season order of 22 episodes by NBC on October 18, 2010** (Wikipedia, 2010).

**Although “The Event” has not aired an episode regarding nuclear terror or war, the first image below as well as the apparent mushroom cloud in the reflection in the eyes of the woman on the right is a possible clue of things to come.**

**Conclusion:** In order to sell nuclear terror, the public has to think that it is a real possibility. With countless nuclear detonations on TV and in the movies, Hollywood is complicit in the nuclear terror plot, whether they know it or not.

## The Nuclear Bible: Nuclear Terror Video Games

**Intro:** Since 1980, video games have featured nuclear weapons and explosions in many shapes, sizes, and forms in almost a 100 video and computer games. This sustained barrage of apocalyptic images over the last 30 years and its subsequent psychological damage to the minds of millions of children and young adults is simply staggering. Even more frightening is that players in some of the games actually choose to use nuclear weapons on their enemies as well as their own people! Developing the rational for the use of Nuclear Weapons of Mass Destruction at a young age is anti-human and a shame, not to mention the blatant nuclear apocalypse propaganda and mind seeding at play. All the information in this chapter was taken and liberally edited directly from the two sources listed below. This amalgamation of nuclear video games does not purport to be infallible or inclusive, and does not necessarily represent all games with nuclear weapons, scenarios, or contexts.

**Publisher(s):** US Gold

**Abstract:** Players takes part in a satirical and cartoonish nuclear battle between five world powers (Wikipedia, 2010).

**Date:** 1991  
**Source:** XBOX 360  
**Title:** *Civilization*  
**Developer(s):** MicroProse  
**Publisher(s):** MicroProse, Koe

**Abstract:** Features nuclear weapons as a possible area of research in their extensive "tech trees." A player must construct their own version of the Manhattan Project to unlock the construction of nuclear weapons. Afterward, all players with sufficient technology can build nuclear weapons. In all versions of Civilization the use of nuclear weapons destroys all units in the area that was attacked, pollutes the surrounding area, and contributes to global warming. A nuclear attack on or near a city decreases the population of the city rather than annihilating it (XBOX 360, 2010).

**Source:** Wikipedia

**Title:** *DEFCON*

**Developer(s):** Introversion Software

**Publisher(s):** Valve Software, Introversion Software, Ambrosia Software, Pinnacle Software, Encore

**Abstract:** The explosions aren't down and dirty in DEFCON, but they're about as chilling as you can get. Inspired, of course, by the famous nuclear war scenarios in the movie Wargames, **DEFCON shows you just how the world could end, with its major cities wiped out within minutes.** So, yes, now you too can finally play out the Turkish Heavy scenario (XBOX 360, 2010). The players are in charge of

one of six world territories in a situation which inevitably deteriorates to global thermonuclear war. **With the sense that nuclear war is being commanded by distant generals in deep underground bunkers using abstract images, the game gives an unsettling impression of how popular culture imagined nuclear war would look to the people responsible for starting it. Because "Everybody Dies", DEFCON is extremely difficult to win, as all sides will inevitably suffer nuclear attack. In the game's terminology, the victor is the player who 'loses the least' (Wikipedia, 2010).**

As evidenced in the following articles, the Military Industrial Complex, who has funded and profited immensely from the nuclear saturation of video games, seems ready and quite willing to assert blame on Al Qaeda and its alleged associated when it's politically beneficial.

**Date:** May 30, 2008  
**Source:** Fox News  
**Title/Headline:** *Watchdog Mistakenly Reports Video Game Image Is Terrorist Nuclear Simulation*

**Abstract:** An image on two Islamic extremist Web sites depicting Washington, D.C., after a nuclear attack was not created by radicals but swiped from a computer game, the U.K.'s Telegraph reported. The terrorist-monitoring SITE Intelligence Group on Thursday reported that terrorists had created the image, which shows a large gash in the Capitol and the surrounding area in ruins, as part of dialogue on the ability to launch nuclear assaults on the United States and Britain, the Telegraph reported. The image appeared on the al-Ekhlass and al-Hesbah Web sites in video titled "Nuclear Jihad: The Ultimate Terror." The groups are believed to have ties to Al Qaeda. It did not take long to realize the image actually is from a scene in "Fallout 3," dubbed by its U.S. makers as "America's first choice in post-nuclear simulation." According to its Web site, SITE reports on the day-to-day happenings of terrorists as gleaned from Internet postings. "Studying the primary source propaganda, training manuals and chatter of terrorists offers insight into terrorists and their activities that cannot be obtained anywhere else (Fox News, 2008).

**Date:** May 30, 2008  
**Source:** The Register, Dan Goodin  
**Title/Headline:** *Daily Mail Cites Video Game As Proof Of Terrorist Doomsday Plot*

**Abstract:** Fear-mongering hacks at *The Daily Mail* have been caught mistaking footage from a popular video game series as proof of al-Qaeda's "terrifying vision" for a nuclear attack on Washington. The paper splashed a gory image showing the utter destruction that would result from the plot by terrorists to carry out a nuclear attack. In the foreground are the charred ruins of the Capitol in a city that is utterly devoid of people, cars or any other sign of life. "This computer generated image posted on terror forums depict what would happen if a nuclear attack took place in Washington D.C.," the paper reported breathlessly. "So far that is only a dream ... or, as this picture suggests, a nightmare," reporter Barry Wigmore blathered on. Turns out the image was lifted from *Fallout 3*, the latest installment of a role-playing game made by Bethesda Software. Marketers describe the game, as "America's First Choice in Post Nuclear Simulation". Players are left to roam America's ravaged streets in the year 2277, 200 years after nuclear bombs destroyed the nation's capital. A *Telegraph* report claims *Daily Mail* hacks were hoodwinked after the SITE Intelligence Group, which monitors terrorist websites, posted the image first, along with claims it had been posted to forums where terrorists were discussing the feasibility of nuclear strikes on the US and Britain (Goodin, 2008).

**Abstract:** Player can use nuclear weapons as free falling bombs, air to surface missiles, air to air missiles, and air to air rockets (Wikipedia, 2010).

**Date:** February 25, 2009

**Title:** *Killzone 2*

**Developer(s):** Guerilla Games

**Publisher(s):** Sony Computer Entertainment

**Abstract:** The Helghast were formidable enough with their glowing eyes and body armor, but once they acquired nukes, the threat to the ISA became much more magnified. As close as Sev and his squad came to crushing the threat of Emperor Visari, they couldn't stop his plan of fully enraging the Helghan empire's war machine to slaughter ISA troops. Threatening your enemies with nukes takes guts, but using them on your own people? That's certifiably insane – and ballsy (XBOX 360, 2010).

**Date:** April, 2009

**Title:** *Strike Fighters 2: Vietnam*

**Developer(s):** Third Wire Productions

**Publisher(s):** Tsuyoshi Kawahito

**Abstract:** Player can use nuclear weapons as free falling bombs, air to surface missiles, air to air missiles, and air to air rockets.

**Date:** June, 2009

**Title:** *Strike Fighters 2: Europe*

**Developer(s):** Third Wire Productions

**Publisher(s):** Third Wire Productions

**Abstract:** Player can use nuclear weapons as free falling bombs, air to surface missiles, air to air missiles, and air to air rockets

**Date:** October 27, 2009

**Title:** *Ratchet & Clank Future: A Crack In Time*

**Developer(s):** Insomniac Games

**Publisher(s):** Sony Computer Entertainment

**Abstract:** The game features a tactical nuclear missile launcher that the player can find (or upgrade to) and use (Wikipedia, 2010).

**Date:** November, 2009

**Title:** *Strike Fighters 2: Israel*

**Developer(s):** Third Wire Productions

**Publisher(s):** Third Wire Productions

**Abstract:** Player can use nuclear weapons as free falling bombs, air to surface missiles, air to air missiles, and air to air rockets (Wikipedia, 2010).

**Date:** November 5, 2009  
**Title:** *Call Of Duty: Modern Warfare 2*  
**Developer(s):** Infinity Award  
**Publisher(s):** Activision

**Abstract:** The nuclear explosion in Modern Warfare 2 is shocking, but it's the immediate aftermath that's unexpected and terrifying. This was easily one of the biggest narrative shocks in recent years (XBOX 360, 2010). Captain Price launches a nuclear missile out of a nuclear submarine - however, instead of attacking land, he detonates it in the stratosphere, destroying the International Space Station and creating an electro-magnetic pulse [EMP] throughout the eastern seaboard of the United States. Also, in multiplayer, a person that has received 25 kills (or 24 with the second tier perk hardline) without dying can call in a tactical nuke to end the game (Wikipedia, 2010). **Notice the U.S. Capitol Building bombed out in the background.**

**Date:** December 3, 2009  
**Title:** *Ace Combat Xi: Skies Of Incursion*  
**Developer(s):** Namco (Project Aces)  
**Publisher(s):** Namco Bandai

**Abstract:** Features nuclear strikes (Wikipedia, 2010)

**Date:** August 26, 2010  
**Title:** *Ace Combat: Joint Assault*  
**Developer(s):** Namco (Project Aces)  
**Publisher(s):** Namco Bandai

**Abstract:** Features nuclear strikes (Wikipedia, 2010).

**Date:** TBA  
**Title:** *Fallout 4*  
**Developer:** Bethesda Game Studios  
**Publisher:** Bethesda Softworks

**Abstract:** *Fallout 4* is a future game planned to be created and published by Bethesda Softworks after *Fallout 3* (2008). Initially, in 2004, Bethesda licensed from Interplay the rights to create and publish three *Fallout* games. However, in 2007 Bethesda purchased the entire franchise, and Interplay licensed back from Bethesda the rights to a *Fallout* MMORPG (Wikipedia, 2010).

## The Nuclear Bible: Nuclear Terror Card Games

**Date:** November 5, 2010  
**Source:** Wikipedia  
**Title/Headline:** *Illuminati Game*

**Abstract:** *Illuminati* is a standalone card game made by Steve Jackson Games (SJG), inspired by *The Illuminatus! Trilogy* by Robert Anton Wilson and Robert Shea. The game has ominous secret societies competing with each other to control the world through sinister means, including legal, illegal, and even mystical. It was designed as a "tongue-in-cheek rather than serious" take on conspiracy theories. It contains groups named similarly to real world organizations, such as the Society for Creative Anachronism. It can be played by two to eight players. Depending on the number of players, a game can take between one and six hours (Wikipedia, 2010).

**Terrorist Nuke:** Maybe there is a reason the World Trade Center site is called Ground Zero? Although the Pentagon was not destroyed on 9/11, it is likely it could be simultaneously attacked along with the Super Bowl, thus giving the perception, as on 9/11, that the military is also being attacked.

**Texas:** Super Bowl (XLV) is in Arlington (Dallas), Texas, USA on February 6, 2011

**Combined Disasters:** Should a nuclear terror attack occur, a biological attack, an assassination attempt of Obama, or a massive hurricane/flood/tornado/fire/tsunami (HAARP caused) will likely follow. On 9/11 and the subsequent aftermath, there were roughly 7 combined disasters”:

- 1) WTC #1 Attack & Demolition (Ney York, New York, USA)
- 2) WTC #2 Attack & Demolition (Ney York, New York, USA)
- 3) WTC #7 Demolition (Ney York, New York, USA)
- 4) Pentagon Attack (Washington D. C., USA)
- 5) Flight 93 Hijacking & Crash (Shanksville, Pennsylvania, USA)
- 6) D.C. Sniper Attacks (Washington D. C., USA)
- 7) Anthrax Attacks (Multiple locations throughout America).

(Clock appears to be at 11:11 and the 2012 Olympic Games are in London, England).

(1995) (2010)

**Date:** May 29, 2010

**Source:** Dimensional Bliss

**Title/Headline:** *Illuminati Card Game Shows The BP Oil Spill Was Planned*

**Abstract:** Oil spill card of Illuminati Card Game proves that – The entire oil spill incident was planned to bring down America. Likewise another card, issued well before 9-11, showed the twin towers being taken down is one of the most shocking of all, especially in light of the fact that this game first hit the specialty stores in 1995! How in the world did Steve Jackson know that the Twin Towers of the World Trade Center were going to be attacked? In fact, this card accurately depicted the World Trade Center attack in great detail. This card accurately depicts several facts of 9/11 — on cards created all the way back in 1995! The picture accurately depicts: **That one tower was going to be struck first; this picture accurately depicts the moments between the first tower strike and the second. The card accurately depicts that the place of impact is some distance from the top of the twin towers. The plane hit in this approximate area of the first tower.** How in the world could Steve Jackson know this fact? The card accurately depicts the Illuminati leadership by showing on the building to the extreme left of the card the Illuminist pyramid with an all-seeing eye in the middle. The caption at the top properly identifies the perpetrators of the attack as “terrorists”. **However, what does the caption to this card mean? It says, “Terrorist Nuke”. Now, what could this possibly mean? The Twin Towers were not destroyed by a terrorist nuclear device, or were they? In Bali Blast, the scientific data suggested that the hotel was taken down by a micro-nuclear device of about 0.10 kilotons . One can only ask: was a micro-nuclear device used at the base of the Twin Towers as well? That kind of small, but nuclear, explosion would account for the sudden manner the reinforced concrete and steel shell simply crumbled into dust as it fell.** That kind of nuclear explosion would also explain the tremendous heat that stayed at “Ground Zero” for several months after 9/11. As we head into the planned “terrorist attacks” and attendant panics, we have to remain cognizant that a micro-nuke device might be the real culprit in some of these attacks

**Pentagon:** Unless one had advanced knowledge of the Illuminati Plan, there is no way on earth that they would have been able to create pictures in 1995 that accurately depict the unfolding events of 9/11! The Pentagon is shown on fire; we know that a plane allegedly flew into a section of the Pentagon and nearly burned that section completely. However, the rest of the Pentagon was undamaged to the point where its functions continued unimpeded. Isn't this the situation depicted here? This card shows a fire burning mightily in the center courtyard of the Pentagon, but the rest of the building looks undamaged enough so that normal activities could continue unimpeded! **Thus, these two cards literally depict both of the strikes of 9/11: against the Twin Towers first and then against the Pentagon. This kind of accuracy 6 years before the attacks is possible only if one knows the Illuminati Plan very thoroughly.** What other types of disasters might the Illuminati have planned for us? In the card game we find the following: Tidal wave, Oregon disaster (type not stated), earthquake, hurricane, volcano, combined disasters, and meteor strike, just to name a few. Are you ready? (Dimensional Bliss, 2010).

**Conclusion:** The foreshadowing of nuclear terror in video games and card games is rather blatant, and is clearly an attempt to unconsciously submit our minds to the nuclear terror reality. Aside from the programming of our children, the fact that these games promote the use of nuclear weapons by the player on other players or societies within the game is a crime in itself. It is no wonder that Western society is the most violent on Earth, and it all starts with innocent games that kids usually get for Christmas.

## The Nuclear Bible: The Numerology of “26” & “11” (Date of Super Bowl XLV)

**Intro:** Understanding the numbers 26 & 11 goes a long way into understanding which days to stay home and avoid public places, and who is responsible for the worst the tragedies that humanity has ever experienced. The 2011 Super Bowl date of February 6, 2011, just happen to include both numbers. Interestingly, Road 2611 just happens to be in Texas where Super Bowl XLV will be played!

**Source:** Wikipedia

**Title/Headline:** Farm To Market Road

**Abstract:** Farm to Market Road 2611 begins where FM 2004 ends at State Highway 36 near Jones Creek. The road follows a western path, crossing the San Bernard River and passing the Churchill Bridge Community. The highway intersects FM 2918, an access highway to the River's End Community and the San Bernard Wildlife Refuge. Making a sharp north, then west curve, FM 2611 continues its western path 10 miles (16 km) south of Sweeny, entering Matagorda County and the Cedar Lake Community. The road comes to its end at the intersection of FM 457, connecting Sargent to Bay City (Wikipedia, 2010).

**26 & 11: Scutum Constellation:** Messier object M11, a magnitude 7.0 open cluster in the constellation Scutum, also known as the Wild Duck Cluster. Scutum contains several open clusters, as well as a globular cluster and a planetary nebula. The two best known deep sky objects in Scutum are M11 (NGC 6705), the Wild Duck Cluster, a dense open cluster, and M26, another open cluster also known as NGC 6694. The globular cluster NGC 6712 and the planetary nebula IC 1295 can be found in the eastern part of the constellation, only 24 arcminutes apart (Wikipedia, 2010).

## The Nuclear Bible: The Number “26”

**26:** The number 26 may be the most sacred number in the World, for it is the name of the God of Israel, “YHWH”. Countless deeds have been done in the name of 26, and most of them are accounted for in this chapter.

The # 26 is the Geometric number of the name of the God of Israel:

**YHWH=26 & 26=YHWH**

**26<sup>th</sup> Generation:** According to Jewish chronology, God gave the Torah in the 26th generation since Creation. Notice the “11” or two towers on either side of the Torah

**26 Sheaves:** 26 sheaves flank the earth on the UN flag. Notice the (2) horns, the bull’s-eye, and the pyramid at the base

**26 Cantons:** The number of Cantons (states) of Switzerland

**Bankers Holiday (Boxing Day):** December 26, 2010

**26/93:** February 26, 1993, First World Trade Center Terror Attack

**26/08:** November 26, 2008, Mumbai Terror Attacks

## **The Nuclear Bible: “26” In Religion**

- It is the number of generation from David to Christ according to the evangelist Luke and also the number of generations between Moses and Adam.
- The genealogy of Sem comprises twenty-six descendants
- In the Psalms, the God of Israel promises to the nations the iron rods and in chapter XXVI of the Leviticus, an avalanche of curse is pronounced against his people among which "a sky of iron"
- The atomic number of iron is 26
- Jesus was 26 years old when died his adoptive father Joseph, according to visions of Mary Agreda
- According to the Talmud, the Torah would have been revealed to Israel to the 26th generation of the history of the world, that is to say starting from Adam.
- It is Moses who, to the 26th generation of the world, receives the Torah transmitted by God.
- Numerical value of the name of God in Hebrew formed of the Hebraic letters yod, he, waw and he, YHWH,  $10+5+6+5=26$ . This name of 4 letters giving 26 is found in the 4th chapter of the Genesis with its 26 verses, beginning with Adam and ending by the name of God
- By using as correspondence table A=1, B=2, ..., Z=26, we find that the name of God in English, GOD, gives 26
- The number 26 is used only once in the Bible
- The Gospel of Luke uses on the whole 26 different numbers, which are numbers 1 to 3, 5 to 12, 15, 18, 30, 40, 50, 60, 72, 80, 84, 99, 100, 500, 5000, 10000 and 20000
- **The number 18 is used 26 times in the Bible.**
- The word "Beloved", representing the Lord, appears 26 times in the Song of Songs. The words prescription and baptism are used 26 times in the Bible.
- The word "merciful" is used 26 times in the NRSV

**Religios Symbolism:** According to R. Allendy, "It associates the idea of the cosmic differentiation, 20, with that of providence or the Karma, 6, and with that to the liberation of the nirvana,  $2 + 6 = 8$ ". It would represent also the individual initiative in the fight against the sin.

**Atomic # 26:** The Atomic number of Iron

**NGC 26:** The New General Catalogue object NGC 26, a Spiral Galaxy in the Constellation Pegasus

**26 Space-Time Dimensions:** The number of space-time dimensions in Bosonic String Theory

ABCDE  
FGHIK  
LMNOP  
QRSTU  
VWXYZ

**26 Letters:** The number of letters in the English and Interlingua alphabets, if capital letters are not distinguished from lowercase letters. The 26<sup>th</sup> letter in the alphabet is “Z”. “Z” has always been synonymous with Zionism.

**The Nuclear Bible: “26” In America**

**26<sup>th</sup> U.S. President:** Teddy Roosevelt (In 1901, President William McKinley was assassinated; and Roosevelt became President at the age of 42, taking office at the youngest age of any U.S. President in history)

**26<sup>th</sup> U.S. State: Michigan:** According to the 2000 U.S. Census, the city with the largest percentage of Arab Americans is Dearborn, Michigan (southwestern suburb of Detroit) at nearly 30%).

**Interstate 26:** Route 26 in America

**26.2 Mile Marathon:** The number of miles in a marathon rounded down (26 miles and 385 yards)

**26 TV Episodes:** Often the number of episodes in a television program each year; this allows one new show per week for half the year, and one rerun per week for the rest of the year.

**26 Years Old:** The age at which males can no longer be drafted in the United States

**26 Playing Cards:** The number of cards in a regular deck (26 red cards and 26 black cards).

**26 Oscars:** The largest number of Oscars awarded to one person (Walt Disney).

**26 Bones:** The number of bones in the normal human Foot and Ankle.

**26 Ganglions:** The number ganglions of the sympathetic system of the human bodies

### **26 In Mathematics:**

- 26 is the only single number between a square ( $25 = 5^2$ ) and a cube ( $27 = 3^3$ ).
- A rhombicuboctahedron has twenty-six sides.
- When a  $3 \times 3 \times 3$  cube is made of twenty-seven unit cubes, twenty-six of them are visible parts of the exterior layer of cubes.

- 2005:** Boxing Day shooting on a busy shopping street in Toronto.
- 2006:** The 2006 Hengchun earthquake with 7.1 magnitude hit Taiwan (Wikipedia, 2010).

## **The Nuclear Bible: The # 11 (Eleven)**

**11**

**Intro:** The number 11 along with the number 26 are so prevalent in *The Nuclear Bible*, that an entire chapter was devoted to each. Understanding the meaning of # 11 is key in understanding why certain dates are chosen for certain events, and who is ultimately responsible.

**Date:** September 11, 2001

**Source:** Wikipedia

**Title/Headline:** Eleven (Number)

**Abstract:** 11 (Eleven) is the natural number following 10 and preceding 12. **It is the first number which cannot be represented by a human counting their eight fingers and two thumbs additively.** Eleven is the smallest positive integer requiring three syllables in English, and it is also the largest prime number with a single-morpheme name in this language (although etymologically the word eleven originated from a Germanic compound \*ainlif meaning "one left". **The number 11 has been linked to mystery and power since ancient times.** All forms of number research and study, including Numerology, the ancient science of Gematria, and the secret wisdom of Kabbalah, all give significant importance to 11, and 11 derivatives - 22, 33, 44, 55, 66, 77, 88, and 99. The number 11 is considered a master number (Wikipedia, 2010).

**Dial 911:** The number 911 is the telephone number for emergencies in North America.

New York, USA

Songdo International City, South Korea

Frankfurt, Germany

Beijing, China

Kuala Lumpur, Malaysia

Torres de Santa Cruz, Canary Islands, Spain

Guangzhou, China

Port of Spain, Trinidad & Tobago

Cairo, Egypt

Zurich, Switzerland

Dubai, UAE

Istanbul, Turkey

**11 History:** In ancient Egypt King Tutankhamen's tomb had combinations of 11 in the jewelry he wore, and he had 11 oars placed on the floor surrounding his tomb. **The number 11, and particularly the number 33, have significance to Freemasons, and other secretive groups. In addition, there have been thousands of people worldwide who have recently expressed a strong feeling towards 11.** This has been widely reported for the last 5-10 years, and is now commonly referred to as the 11:11 experience, referring to the time of 11:11 **The overwhelming quantity of elevens, surfacing from the events, people, and places related to the 9-11-2001 attacks, is remarkable.** It is as if someone planned the events to occur around the number eleven. If it was not planned, then the coincidence of the numbers, seems even more mysterious and improbable (Unknown Source, 2010).

**The Holocaust (Auschwitz): 1.1 Million:** Auschwitz first commandant, Rudolf Höss, testified after the war at the Nuremberg Trials that up to three million people had died there (2.5 million exterminated, and 500,000 from disease and starvation), a figure since revised to **1.1** million, around 90 percent of them Jews (Wikipedia, 2010).

**Doomsday Clock: 11:00:** Being only one hour before 12:00—midnight—the eleventh hour means the last possible moment to take care of

something, and often implies a situation of urgent danger or emergency.

**H1N1: Swine Flu Pandemic:** On June 11, 2009, the WHO (World Health Organization) declared an H1N1 pandemic, moving the alert level to phase 6, marking the first global pandemic since the 1968 Hong Kong flu (Wikipedia, 2010).

**9/11 Terror Attacks (September 11, 2001):** NYC & Washington D. C.

**3/11 Terror Attacks (March 11, 2004):** Madrid Spain

**American Airlines Flight 11:** A Boston-Los Angeles flight, was the 1<sup>st</sup> plane to crash into the North Tower of the World Trade Center after being hijacked by terrorists on 9/11.

**On December 4, 2001, George W. Bush Stated:** “Well, Jordan (ph), you're not going to believe what state I was in when I heard about the terrorist attack. I was in Florida. And my chief of staff, Andy Card -- actually I was in a classroom talking about a reading program that works. And I was sitting outside the classroom waiting to go in, and **I saw an airplane hit the tower -- the TV was obviously on**, and I use to fly myself, and I said, "There's one terrible pilot." And I said, "It must have been a horrible accident." But I was whisked off there -- I didn't have much time to think about it, and I was sitting in the classroom, and Andy Card, my chief who was sitting over here walked in and said, **"A second plane has hit the tower. America's under attack."**

**On January 2, 2002, George W. Bush Stated:** “I was sitting there, and my Chief of Staff – well, first of all, when we walked into the classroom, I had seen this plane fly into the first building. There was a TV set on...”

**What TV channel in New York was carrying a “live” feed with a camera trained in on the World Trade Center at the moment of impact? Was Bush watching Whitehouse CCTV?**

**9/11 Numerology:**

- September 11th is the 254th day of the year:  $2 + 5 + 4 = 11$ .
- After September 11th there are 111 days left to the end of the year.
- March 11, 2002, marked 6 months since the attack, and fell in the 11th week of 2002.
- On March 11, 2002, New York City lit the sky with 88 ( $8 \times 11 = 88$ ) powerful GE bulbs that sent light beams into the sky from the World Trade Center site.
- The next morning, on March 12, 2002, 11 FDNY firemen were recovered from Ground Zero.
- The date of the attack:  $9/11 - 9 + 1 + 1 = 11$ .
- September 11 has 9 letters and 2 numbers:  $9+2=11$ .
- The Flight 11 call letters were AA11:  $A=1, A=1, AA=11$ .
- Four of the hijackers on flight AA11 have the initials A. A. for their names:  $AA=11$ .
- The fifth AA11 hijacker was the pilot, Mohamed Atta, 11 letters, and AA in last name.
- Flight AA11 had 92 people on board –  $9 + 2 = 11$ .
- Flight AA11 had 11 crew members – 2 pilots and 9 flight attendants.
- The target of Flight AA11 was in New York City -11 letters.
- The State of New York was the 11<sup>th</sup> State added to the Union.
- Manhattan Island was discovered on Sept. 11, 1609 by Henry Hudson -11 letters.
- Trade Center is 11 letters, and Skyscrapers is 11 letters.
- World Trade Center Towers is 22 letters –  $2 \times 11 = 22$ .
- The WTC Twin Towers – standing side by side, look like the number 11.
- The WTC Towers are each 110-storeys high.
- The first WTC tower hit (North Tower) collapses at 10:28 A.M.  $-1+2+8=11$ .

- The 1<sup>st</sup> Fire Unit to arrive to the WTC towers was FDNY Unit 1. Unit 1 lost 11 firemen.
- The WTC towers collapsed to a height of 11 stories.
- After 99 days of burning, NYC declares the WTC fires are extinguished –  $9 \times 11 = 99$ .
- The World Trade Center fires burn continuously for 99 days, between September 11, 2001 and December 19, 2001. The World Trade Center fire is the longest burning commercial fire in U.S. history.
- On September 7, 2002, NYC Medical Examiners announced the revised official death toll from the World Trade Center attacks was 2,801 –  $(2+8+0+1 = 11)$ .
- The plane that hit the Pentagon was United Airlines Flight 77 -  $11 \times 7 = 77$ .
- Flight 77 – 65 on board –  $6 + 5 = 11$ .
- One of the walls of The Pentagon collapses at 10:10 A.M.
- George W. Bush – 11 letters
- Colin Powell – 11 letters
- Bill Clinton – 11 letters.
- The target of Flight 77 was The Pentagon – 11 Letters.
- According to the FBI, earlier terrorists originally planned to hijack 11 planes.
- Mohammed, the prophet of the Muslim faith, died in 632 A.D. –  $6+3+2=11$ .
- The Taliban's Manual of Afghan Jihad (Holy War) is 11 volumes.
- 119 is the area code to Iraq/Iran –  $1 + 1 + 9 = 11$ .
- The League of Arab States is comprised of 22 Arab nations –  $2 \times 11 = 22$ .
- The suspected base of the terrorists is Afghanistan – 11 Letters.
- Osama bin Laden's birthplace is Saudi Arabia – 11 letters.
- Ramzi Yousef – convicted of orchestrating the 1993 WTC attack – 11 Letters.
- The Prime Minister of Israel – Ariel Sharon – 11 Letters.
- Deputy PM, & Minister of Foreign Affairs for Israel – Shimon Peres – 11 Letters.
- The US Secretary of State – Colin Powell – 11 letters.
- Independence Day in the USA is July 4<sup>th</sup> –  $7 + 4 = 11$ .
- The US President's plane is Air Force One – 11 letters.
- George W. Bush's Air Force One is numbered "29000" on the tail –  $2+9+0+0+0 = 11$ .
- George W. Bush & Bob Beckwith (11 letters) Fireman #164 –  $1+6+4 = 11$ .

**Osama bin Laden & 11:** We also note that the September 11 attacks were not the only plane crashes related to Osama bin Laden. In 1968 Osama bin Laden's father, Mohammed Awad bin Laden, died in a plane crash. Osama, born in 1957, was 11 years old at the time. Osama's oldest brother, Salem bin Laden, then took over the family business. Twenty years later in 1988, Salem also died in a plane crash. The plane that crashed was a BAC 1-11. Father and brother die in plane crashes. There is a notable eleven year cycle in Osama bin Laden's life that begins at 11, when his father dies in 1968. This is the age that Osama "turned to God." Eleven years later, in 1979, when Osama is 22, Russia invades Afghanistan. Osama says, "I was enraged and went there at once." Another eleven years later, in 1990, when Osama is 33, Iraq invades Kuwait, and American forces land in Saudi Arabia. Again Osama was infuriated, he forms al-Qaeda, and says that American troops were now "in our most holy lands." Another eleven years later, in 2001, when Osama is 44, Osama's organization attacks America in New York and Washington. The four life changing events in Osama bin Laden's life occur in an 11-year cycle beginning at 11 and continuing every 11 years. Osama's defining moments occur when he is 11, 22, 33, and 44. Life follows an 11 year cycle at ages 11, 22, 33, and 44. Osama bin Laden notices dates. The bombings of the USA Embassies in Tanzania and Kenya, occurred on August 7, 1998. The American troops landed in Saudi Arabia, bin Laden's homeland, on August 7, 1990.

**911 Lottery:** On September 11, 2002, exactly one year after the 9/11 attacks, the winning numbers drawn in the New York State Lottery for September 11, 2002 were: 9, 1, 1. The lottery is called "Numbers" and was broadcast live on television.

**Date:** September 12, 2002

**Source:** Associated Press, Michael Virtanen

**Title/Headline:** *Eerie 9-1-1 Lottery Draws Interest*

**Abstract:** Officials say it was just a coincidence, but many people found it chilling nonetheless: **On the anniversary of Sept. 11, the winning numbers in the New York lottery were 9-1-1. Lottery officials said Thursday that 5,631 people had selected the tragic numbers. They won \$500 each.** "The numbers were picked in the standard random fashion using all the same protocols," said lottery spokeswoman Carolyn Hapeman. **"It's just the way the numbers came up." The 9-1-1 combination was picked so often, it reached the lottery's set limit for combinations and sold out by Tuesday evening, Hapeman said.** On any given day, seven to 10 sets of numbers are "closed out," she said. For the drawing, which is televised live, the lottery uses numbered balls circulating in a machine. When host Jolanda Vega pushes three levers, three balls pop up randomly. On Wednesday evening, there wasn't the slightest trace of a quaver in Vega's voice as she read out: "Nine ... one ... one." **There is a 1-in-1,000 chance of the numbers 9-1-1 coming up in the lottery. "I'm a bit surprised, but I wouldn't characterize it as bizarre,"** said Christopher Rump, a probability expert at the University of Buffalo. "People tend to read into these things. I'm sure that whatever numbers come up tonight will have some special meaning to someone, somewhere." Lottery players said the eerie number sequence didn't make them think the draw was rigged. "It's not that unusual," said Bob Matusiak, who bought a ticket Thursday at a convenience store. **A similar coincidence occurred Nov. 12 when the numbers 5-8-7 came up in the New Jersey lottery the day American Airlines Flight 587 crashed in New York City.** Lottery ticket vendors said some people seemed reluctant to try their luck on the sequence even as they bet on it. **"I think some people were disgusted with the idea of playing that number because it represents a black day in the history of America,"** Farzad Khosravi said. Hapeman said Wednesday was the first time in more than a year that the 9-1-1 combination had come up in the New York lottery (Virtanen, 2001).

**11 Meaning:** In Basque, hamaika ("Eleven") has the double meaning of "infinite", probably from amaigabe, "endless", as in Hamaika aldiz etortzeko esan dizut! ("I told you infinite/eleven times to come!"). Basque is the region of Spain where the alleged terror group ETA resides.

### **11: Money Symbols:**

**11 Cricket Players:** There are eleven players on a soccer team on a cricket team. Within a school or college, the phrases "the first football XI" and "the first cricket XI" generally refer to the first (best) team currently playing. Other teams are often referred to as "the second XI" etc. In cricket, the eleventh batsman is usually the weakest batsman, at the end of the tail. He is primarily in the team for his bowling abilities.

**11 Soccer Players:** Also in soccer, in the German language (and possibly others, in countries that predominantly use the metric system) a penalty kick is referred to as "Elfmeter" because the penalty spot is approximately 11m (precisely 12 yards) from the goal line. Historically, in the Pyramid formation that position names are taken from, a left wing-forward in football wears number 11. In the modern game, especially using the 4-4-2 formation, it is worn by a left-sided midfielder. Less commonly a striker will wear the shirt.

**26 Bones:** The number of bones in the normal human Foot and Ankle.

**Maybe that's why in Europe they play "Football", and in America the play "Football".**

**11 Football Players:** An American football team also has eleven players on the field at one time during play. 11 is also worn by quarterbacks, kickers, punter and wide receivers in American football's NFL. The only NFL team that has retired the #11 is the New York Giants, in honor of quarterback Phil Simms.

**11 Field Hockey Players:** There are eleven players in a field hockey team. The player wearing 11 will usually play on the left-hand side, as in soccer.

**Blackjack 11:** In the game of blackjack, an Ace can be counted as either one or eleven, whichever is more advantageous for the player.

**11 Points:** The stylized maple leaf on the Flag of Canada has eleven points

**11 Sided Coin:** The Canadian one-dollar coin is a hendecagon, an eleven-sided polygon.

**11:00 O'Clock:** Clocks depicted on Canadian currency show 11:00.

**11 Currency Dominations:** Canadian large currencies (bills)

**11 Crowns:** Due to Canada's federal nature, eleven legally distinct Crowns effectively exist in the country, with the Monarch being represented separately in each province, as well as at the federal level.

**Atomic Number 11:** The atomic number of Sodium

**Group 11:** In chemistry includes the three coinage metals copper, silver, and gold known from antiquity. It also includes the super heavy element Roentgenium, which was discovered only recently.

**Atomic Number 111: Roentgenium:** A synthetic radioactive chemical element with the symbol Rg and atomic number 111. It is placed as the heaviest member of the group 11 (IB) elements, although a sufficiently stable isotope is not known at this time that would allow its position as a heavier homologue of gold to be confirmed (Wikipedia, 2010).

**11 Space-Time Dimensions:** The number of space-time dimensions in M-Theory (String Theory)

**Apollo 11:** The 1<sup>st</sup> manned spacecraft to land on the Moon. The USA skipped sequence numbers on the Apollo moon missions to ensure it was Apollo 11 that landed on the moon.

**11 Year Sunspot Cycle:** The approximate periodicity of a sunspot cycle is 11 years.

**11<sup>th</sup> Sign of the Zodiac:** In Astrology, Aquarius is the 11th astrological sign of the Zodiac.

**NGC 11:** The New General Catalogue object NGC 11, a spiral galaxy in the constellation Andromeda

**Saros Series 11:** The Saros number of the solar eclipse series which began on -2511 December 26 and ended on -1158 March 18. The duration of Saros series 11 was 1352.2 years, and it contained 76 solar eclipses. The Saros number of the lunar eclipse series which began on -2389 June 19 and ended on -1037 September 8. The duration of Saros series 11 was 1352.2 years, and it contained 76 lunar eclipses.

**11<sup>th</sup> Moon:** The 11th moon of Jupiter is Himalia.

**11<sup>th</sup> Cord:** The interval of an octave and a fourth is an eleventh. A complete eleventh chord has almost every note of a diatonic scale

**November 11:** World War I ended with an Armistice on November 11, 1918, which went into effect at 11:00 am-the 11th hour on the 11th

day of the 11th month of the year. Armistice Day is still observed on November 11 of each year, although it is now called Veteran's Day in the United States and Remembrance Day in the Commonwealth of Nations and parts of Europe.

### **The U.S. Military & 11:**

- Occupational Specialty (MOS): Designators given to US Army Infantry Officer as well as to enlisted personnel (AKA 11 MOS Series, or 11B, 11C, 11D, 11H, 11M, etc.)
- **11:** The number of General Orders for Sentries in the Marine Corps and United States Navy.
- **11:** The number of guns in a gun salute to U.S. Army, Air Force and Marine Corps Brigadier Generals, and to Navy and Coast Guard Rear Admirals Lower Half.
- **11:** A page in the Service Record Book of an enlisted Marine for writing down disciplinary actions

### **UNIX®**

- The windowing system for Unix computers is known as X11.
- Computers of the PDP-11 series from Digital Equipment Corporation were informally referred to as "elevens".
- In Mozilla Firefox, Opera, Konqueror for KDE, and Internet Explorer 4 [3] for Windows, the function key F11 key toggles full screen viewing mode. In Mac OS X, F11 hides all open windows

**11 Oscars:** Three films -- **Ben-Hur** (1959), **Titanic** (1997), and **The Lord of the Rings: Return of the King** (2003) -- have each won 11 Academy Awards, including Best Picture of their respective years. In Tolkien's The Lord of the Rings, the number 11 is described as a curious number, and reaching your 111th birthday is an event.

**Ocean's Eleven:** Finally we note that the new Hollywood version of Ocean's Eleven is released only weeks after September 11, 2001. (The film was completed prior to 9/11). The star-studded film was so anticipated that the film opening topples the record-breaking Harry Potter movie from the #1 position at the movie box office. We also note the day of the film, which is clearly shown on the theatrical poster as "12-7-01" ( $1+2+7+1 = 11$ ).

## The Nuclear Bible: Obama's Super Bowl Party

**Intro:** As is he did in 2009 and 2010, Barack Hussein Obama will host a Super Bowl Party for Super Bowl XLV, which will be played at Cowboy Stadium in Arlington (Dallas), Texas, on February 6, 2011. Along with members from his Cabinet, Senators, Congressman, and a host of other people, Obama will be allegedly be watching the game. Should a nuclear attack occur at the Super Bowl, Obama and his "A TEAM" will already be in place to handle the crisis. Those surrounding Obama are from every ethnic origin and background, and will flank Obama in this time of peril, thus giving America and the World the illusion that Obama speaks for the American people and that he represents all races, nationalities, and religions. If Obama's 2010 Super Bowl Party is any indication, his team will consist of every Cabinet member relative to a nuclear attack, thus leading to the conclusion that the nuclear detonation was a premeditated act. **Most importantly, Obama WILL likely stage a military coup in the aftermath, in that he will suspend the rule of law, and therefore have to answer to no one.**

### A Few Questions:

- Why would the U.S. President feel the need to assemble a massive posse on Sunday, let alone on the Super Bowl, America's biggest party day?
- Who will be in attendance for Obama's 2011 Super Bowl Party?
- What exactly is going to happen at the Super Bowl?

**Date:** January 30, 2009

**Source:** The Huffington Post, Nicholas Sabloff

**Title/Headline:** *Obama Super Bowl Party Guest List*

**Abstract:** President Obama, who revealed Thursday that he will be rooting for the Pittsburgh Steelers during Sunday's Super Bowl--"Other than the Bears, the Steelers are probably the team that's closest to my heart"--will also be hosting a bipartisan Super Bowl party at the White House.

Senator Bob Casey (Democrat-Pennsylvania)

Senator Dick Durbin (Democrat-Illinois)

Senator Amy Klobuchar (Democrat-Minnesota)

Senator Arlen Specter (Republican-Pennsylvania)

U.S. Congressman Elijah Cummings (Democrat-Maryland)

U.S. Congressman Artur Davis (Democrat-Alabama)

U.S. Congresswoman Rosa DeLauro (Democrat-Connecticut)

U.S. Congressman Charlie Dent (Republican-Pennsylvania)

U.S. Congressman Mike Doyle (Democrat-Pennsylvania)

U.S. Congressman Paul Hodes (Democrat-New Hampshire)

U.S. Congressman Patrick Murphy (Democrat-Pennsylvania)

U.S. Congressman Trent Franks (Democrat-Arizona)

U.S. Congressman Raul Grijalva (Democrat-Arizona)

U.S. Congresswoman Eleanor Holmes-Norton (Democrat-District of Columbia)

U.S. Congressman Fred Upton (Republican-Michigan)

**Date:** February 6, 2010

**Source:** The Washington Post, Ed O'Keefe

**Title/Headline:** *Half Of Obama's Cabinet Coming Over For The Super Bowl*

**Abstract:** Nine Cabinet secretaries and several lawmakers will join President and Mrs. Obama to watch Sunday's Super Bowl, the White House said Friday.

Housing and Urban Development Secretary Shaun Donovan

EPA Administrator Lisa Jackson

Education Secretary Arne Duncan

Homeland Security Secretary Janet Napolitano

Attorney General Eric H. Holder Jr.

United Nations Ambassador Susan E. Rice

**Health and Human Services Secretary Kathleen Sebelius**

**U.S. Congressman Andre Carson (Democrat-Indiana)**

**Veterans Affairs Secretary Eric K. Shinseki**

**U.S. Congressman Brad Ellsworth (Democrat-Indiana)**

**Agriculture Secretary Tom Vilsack**

**U.S. Congressman Baron Hill (Democrat-Indiana)**

**U.S. Congressman Xavier Becerra (Democrat-California)**

**U.S. Congresswoman Barbara Lee (Democrat-California)**

**U.S. Congressman Rick Boucher (Democrat-Virginia)**

**U.S. Senator Christopher Dodd (Democrat-Connecticut)**

**U.S. Congressman Joseph Cao (Republican-Louisiana)**

Cao, Carson, Ellsworth and Hill hail from Super Bowl states Louisiana and Indiana, home to the New Orleans Saints and Indianapolis Colts. Veterans injured in Iraq or Afghanistan and their families will also attend Sunday's party (O'Keefe, 2010).

**Conclusion:** It appears that Obama & Co. will all be positioned for the nuclear crisis and the eventual military coup of America. Obama is likely to suspend the rule of law, and declare himself dictator. More than half of America will be intoxicated, and it is likely that there will be mad chaos and anarchy as people think that the end of the World is approaching. At this key time, SWAT teams, DHS personal and foreign troops will make gun sweeps across the nation. Americans who don't go along with the new fascist program will likely be shot on site or taken to the FEMA concentration camps for detainment and eventual extermination.

## The Nuclear Bible: Pakistan & Nuclear Proliferation

### Date

### Pakistani Nuclear Event

|            |                                                                                                                                                                                                              |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1982       | China gives HEU to Pakistan (Smith & Warrick, 2009).                                                                                                                                                         |
| 1987       | Pakistani A.Q. Khan starts international nuclear smuggling operation with alleged sales of nuclear information to Egypt, Saudi Arabia, Nigeria, Sudan, North Korea, Iran, and Libya (World Net Daily, 2005). |
| 1989-1991  | Pakistani scientists sell nuclear secrets to Iran (Gauhar, 2003).                                                                                                                                            |
| 1997       | Pakistani nuclear scientists meet with North Korea to exchange nuclear technical assistance in return for long-range missile technology (Allison, 2004).                                                     |
| 05/28/1998 | Pakistan tests 1 <sup>st</sup> Nuclear Bomb (Kerr & Nikitin, 2010).                                                                                                                                          |
| 2000       | Pakistani nuclear scientists Bashiruddin Mahmood and Abdul Majid meet with Osama Bin Laden (Blakely, 2009).                                                                                                  |
| 2001       | Just before 9/11, Pakistani nuclear scientists Bashiruddin Mahmood and Abdul Majid meet with Osama Bin Laden for a second time (Blakely, 2009).                                                              |
| 2001       | A Pakistani nuke is smuggled out of Pakistan by Al Qaeda and shipped to America (De Borchgrave, 2001).                                                                                                       |
| 2004       | Pakistan buys (3) Agosta 90Bs Nuclear Submarines giving Pakistan "second strike nuclear capability" (Bloom, 2004).                                                                                           |
| 02/04/2004 | A.Q. Khan admits selling blueprints for nuclear weapons to Libya, North Korea and Iran (World Net Daily, 2005).                                                                                              |
| 12/28/2007 | Pakistani President Benazir Bhutto Assassinated (MSNBC, 2007).                                                                                                                                               |
| 2007-2009  | Terrorists attacked Pakistan's nuclear facilities 3 times at 3 different locations (Blakely, 2009).                                                                                                          |
| 02/05/2009 | Pakistani A.Q. Khan freed from house arrest (Warrick 2009).                                                                                                                                                  |
| 12/01/2009 | Obama declares war on Pakistan, a fully nuclear state (Tarpley, 2009).                                                                                                                                       |
| 01/22/2010 | Pakistan rejects U.S. and U.N. nuclear disarmament attempts (Nebehay, 2010).                                                                                                                                 |

**Title/Headline:** *Al Qaeda's Nuclear Agenda Verified*

**Abstract:** Pakistani intelligence officers were assisting Osama bin Laden's al Qaeda organization to develop the ability to build a "dirty" nuclear device, U.S. and Pakistani intelligence agencies have concluded. Intelligence officers in Washington and Islamabad, speaking on the condition of anonymity, said they are now convinced that al Qaeda was attempting to put together a "nuclear device in the dirty bomb category." Documents uncovered in Kabul and the interrogation of nuclear scientists who were frequent visitors to Taliban-ruled Afghanistan - ostensibly to perform humanitarian work - have produced conclusive evidence of the fact, the officers said. **One Pakistani general who has seen the evidence described the device as a "dirty nuclear weapon," meaning one in which radioactive materials are wrapped around conventional explosives. Such a device can contaminate an area of several square blocks with radiation. The general said he also believes bin Laden obtained such materials on Russia's nuclear black market.** The International Atomic Energy Agency in Vienna is aware of 175 cases of trafficking in nuclear materials since 1993, including 18 that involved highly enriched uranium and plutonium pellets the size of a silver dollar. **There are 18 million potential delivery vehicles that could be used to smuggle a nuclear device into the United States. That is the number of cargo containers that arrive in the country annually. Of them, only 3 percent are inspected, and bills of lading do not have to be produced until the containers reach their destination, according to current regulations. An unidentified former chief of Pakistan's Inter-Services Intelligence (ISI) agency is believed to be the man who coordinated bin Laden's nuclear ambitions. One local intelligence source speculated that before September 11, a dirty bomb could have been smuggled out of Afghanistan in a truck all the way to Karachi and then shipped out in a cargo container.** That could be the weapon Taliban chief Mullah Mohammed Omar was referring to when he said, after the U.S. bombing started Oct. 7, that America would soon have to face extinction. Allowing for hyperbole, he may have known what bin Laden was planning next. Another ex-ISI chief, retired Gen. Hameed Gul, predicted after September 11 that one day there would be a single Islamic state that would stretch from Saudi Arabia to Pakistan and Afghanistan and that would have nuclear weapons, as well as control of the Gulf's oil resources. The general is an ISI legend, and still popular among the agency's present crop of leaders who were his junior officers in the late 1980s. Gen. Gul, a Muslim fundamentalist, is vehemently anti-American. He acts as "strategic adviser" to Pakistan's extremist religious parties, and spent two weeks in Afghanistan just prior to September 11. Gen. Gul is slowly emerging as the spokesman for the combined opposition of Islamic fundamentalists. In Urdu-language newspapers on Friday, he was quoted as saying: **"No one can tell us how to run our nuclear facilities and nuclear programs. This is being done in the interest of Pakistan, not the United States. Taliban will always**

remain in Afghanistan, and Pakistan will always support them. He was presumably referring to the Taliban in its guerrilla mode, following the fall of Kandahar. Gen. Gul's only daughter runs VARAN, the public transportation bus company that enjoys a monopoly in Islamabad and its twin military garrison city of Rawalpindi. Gen. Gul himself lives in "Pindi" in an army compound housing development earmarked for retired generals. **Officially, the Pakistani government has accepted the explanation of three nuclear scientists about their "innocuous" relationship to the Taliban. Privately, however, some Pakistani officials, working closely with U.S. colleagues, said their activities "cannot be described as innocuous by any stretch of the imagination."** On a brief visit to Islamabad early this month, George Tenet, director of CIA, conferred with President Pervez Musharraf on what was described as the need for "more and better intelligence" from ISI. **The CIA has reportedly submitted a list of six more nuclear scientists whom it wants to probe for suspected links to al Qaeda. Two of them, Dr. Suleiman Asad and Dr. Muhammad Ali Mukhtar, are now in Burma doing undisclosed research with local scientists.** Apparently anxious to avoid further U.S. probes into Pakistan's ultrasecret nuclear weapons program, these two scientists have been advised by the government to remain in Burma until further notice. Dr. Sultan Bashiruddin Mahmud, former director of the Pakistan Atomic Energy Commission (PAEC), and Chief Engineer Dr. Chaudry Abdul Majeed have been questioned by a joint FBI-ISI team. According to PAEC sources, the CIA wishes to conduct a separate interrogation based on documents seized in Kabul. Dr. Mahmud is a close associate of Gen. Gul. **They were colleagues when Gen. Gul ran ISI. Dr. Mahmud is one of three scientists who befriended Taliban leaders. He is an expert in enriched uranium and plutonium, having lectured all over Pakistan with odes to the Taliban as "the wave of the future for Pakistan."** Dr. Mahmud and two of his colleagues were detained in late October as a result of U.S. questions about Pakistani "relief" organizations active in Taliban-run Afghanistan, including an agricultural project near Kandahar. **They admitted to meeting with al Qaeda associates of bin Laden and were officially cleared of passing on nuclear secrets. Dr. Mahmud says publicly that plutonium production is not a state secret, and advocates increasing plutonium output to help other Islamic nations build nuclear weapons.** After the start of the U.S. bombing campaign, Gen. Musharraf ordered an immediate redeployment of Pakistan's nuclear arsenal to six new secret locations, including separate storage facilities for uranium and plutonium cores and their detonation mechanisms. **Army colleagues now say privately that Gen. Musharraf was fearful of assassination by extremists who were already accusing him of betraying Islam and selling out to the United States. There were also rumors of a coup by hard-liners in the military. The officer corps is 20 percent fundamentalist, according to a post-September 11 confidential survey by military intelligence separate from ISI. Pakistan's community of nuclear scientists is held to be "profoundly fundamentalist" and anti-American. They are particularly resentful of U.S. economic and military sanctions against Pakistan as punishment for their country's nuclear weapons program.** The community's guru is Abdul Qadir Khan, the scientist who devised Pakistan's first nuclear weapon. Pakistan now has an estimated 20 such weapons in its arsenal. ISI is still widely distrusted by Western intelligence agencies and by all levels of Pakistani society, from people in the street to top political leaders. **An ISI general who is regional director in one of the tribal areas told an important tribal leader known to this reporter that "after Afghanistan, Pakistan is next on America's list of countries to be conquered, and after Pakistan, Iran will be next. All that war talk about Iraq being next is just a smokescreen."** Gen. Gul has been touring FATA (Federally-Administered Tribal Areas) along the border of Afghanistan with much the same message about Washington's plans for conquest in the region. ISI is undergoing a traumatic shock in the wake of the Taliban's defeat, according to knowledgeable secular political party leaders. "They have lost thousands of operatives in Afghanistan," said one key politician who asked not to be named. ISI also facilitated the transfer to Afghanistan in the past two months of thousands of young religious school students who had been proselytized by their clerical teachers to volunteer to fight with the Taliban. **Gen. Musharraf had a dangerous precedent in mind: Six years ago, a group of Pakistani army officers was arrested for plotting to kill Army Chief of Staff Gen. Abdul Waheed. He had fired the ISI chief for secretly assisting Muslim rebels in several countries (De Borchgrave, 2001).**

**Title/Headline:** *Pakistani Nuke Scientists To Face Charges For Al Qaeda Contacts*

**Abstract:** Two detained Pakistani scientists will soon face charges for alleged cooperation with Osama bin Laden's Al Qaeda network, a source close to the investigation tells EurasiaNet. The scientists reportedly admitted to Pakistani authorities that they held discussions with bin Laden in August about nuclear and biological weapons. Sources tell EurasiaNet that the two scientists suspected of violating the Official Secret Acts are Sultan Bashiruddin Mahmood and Abdul Majid, both retired nuclear specialists. They have been in custody for almost two months, and subjected to extensive interrogation by Pakistan's Inter-Services Intelligence (ISI) and the CIA. If convicted, the pair face up to a seven-year prison sentence. **Mahmood has reportedly suffered breakdowns on several occasions, a source told EurasiaNet. The source revealed that "initially the main suspected collaborator, Bashiruddin Mahmood denied any such cooperation and made his investigators believe that there was nothing wrong in his cooperation with Osama's men and Taliban officials."** Pakistani officials insist that no potentially sensitive information was compromised, as neither of the two Pakistani scientists had any direct role in the production or processing of nuclear weapons in Pakistan. **Some sources said "academic information" was exchanged among Mahmood and Majid and several al Qaeda leaders, including bin Laden, during several meetings in Kabul roughly one month before the September 11 terrorist attacks. American and Pakistani officials say there is little hard evidence to substantiate claims that Al Qaeda possesses nuclear or chemical weapons. However, American officials stress bin Laden's network was working to develop capacity to carry out attacks involving weapons of mass destruction, and that given more time, the terrorist group might have succeeded.** Even now, some International Atomic Energy Agency (IAEA) experts do not rule out the possibility that al Qaeda may possess a few crude biological weapons. **Mahmood was first questioned by Pakistani intelligence agencies for alleged links with Taliban militia and Osama bin Laden in the third week of October. He was released on October 26 after being "cleared" by security agencies, but was again picked again on October 28 and has remained in detention since then at an unknown location.** Mahmood initially gained notoriety in Pakistan after writing several newspaper articles that protested Islamabad's consideration of signing the nuclear Comprehensive Test Ban Treaty in 1998. **US officials reportedly suspect that, in addition to Mahmood and Majid, other Pakistani nuclear experts and military officers had contacts with al Qaeda. Pakistani officials dispute claims of broader collaboration with bin Laden's terrorist organization, labeling such reports as disinformation. On December 12, Pakistani officials also rejected media**

reports that claimed the two Pakistani scientist had sought refuge in Myanmar to avoid the probe into their al Qaeda contacts. "This is absolutely false, fabricated news," Maj. Gen. Rashid Qureshi, a spokesman for Pakistani President Pervez Musharraf, told a press briefing. Qureshi said no scientists other than Mahmood and Majid were currently in custody in connection with the investigation into possible al Qaeda links. The spokesman did not exclude the possibility that other scientists might face questioning in the future (URASIANET, 2001).
